HYBRID FISH.—At the meeting of the American Fish Cultural Association in this city, March 30, Mr. R. B. Roosevelt read a paper on hybrids, in which he said that, since the creation of the fish hatchery commission several attempts have been made to cross varieties of fish, and with success in the following varieties: Salmon trout with white fish; salmon trout with brook trout; brook trout with freshwater herring, with California salmon, and with the California mountain trout; shad with striped bass and with herring. Of these crosses there are the young, now in the hatching-house, of the salmon trout brook trout, brook trout California salmon, and brook trout California brook trout. It is observable of all hybrids that they are usually more shy and wild than either of their parents, and that in appearance they generally favor their larger parent. The crosses between the brook trout and California salmon and the salmon trout and brook trout bid fair to be fine fish. Those now in the hatchery are eight inches long.

It was hardly to be expected that so wonderful a discovery as the creation of a new species could be made without trouble, and we should rather be surprised at the success already achieved in hatching the young of the cross at all. The number of combinations possible is very large, and the pains and care expended in improving plants, vegetables and land animals may yet succeed with fish.—Scientific American.

SHEEP AND DOGS.—Mr. Bourne says, in the Fruit Farm, that he watches closely and keeps plenty of bells on the sheep. The sheep-killing dog is a sly, cowardly scoundrel, and doesn't like noise. If we kept half of our sheep belled, he has no idea the flock would ever be molested by dogs.

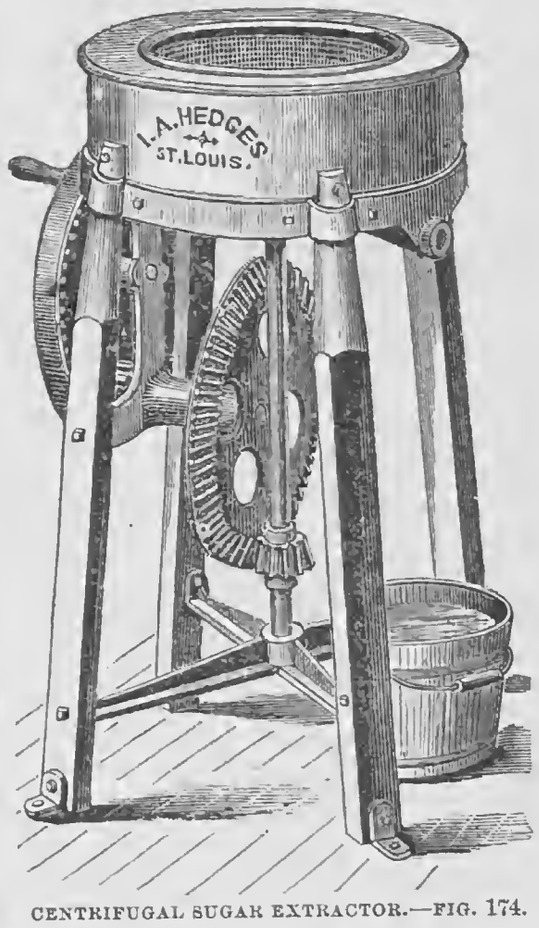
Mr. Grubbs.—A pet sheep turned out with the flock will whip a dog.

Mr. Miller.—Yes, I saw this tried the other day. A pet sheep was following me as I rode over the farm, and it ran at a dog and made him travel. I must not forget to mention their great value of sheep as scavengers. The clean out all the fence corners, destroy sassafras, briers, etc., and will soon make a farm clear.

Industrial Implements.

CENTRIFUGAL FOR SORGHUM SUGAR.

In the new industry of Sorghum-sugar making, one of the chief difficulties with beginners has lain in the absence of some convenient and effectual device for separating the sugar from the molasses. To meet this desideratum Mr. I. A. Hedges, President of the Mississippi Valley Cane-Growers' Association, has lately invented a hand centrifugal, a cut of which is



CENTRIFUGAL SUGAR EXTRACTOR.—FIG. 174.

herewith presented to our readers. A machine larger in size, but the same in design, is also made for power, with pulleys instead of the hand gear. Of this hand centrifugal Mr. Hedges writes us: "This little machine is serving the needs of our beginners in this industry, while learning lessons in the primary department. I send you a sample of sugar made from the juice of the Early Orange cane—a new hybrid—by Mr. J. W. Allen, of Jackson Co., Mo., who used only the most simple process, never expecting to make any sugar at this time; but he found it well crystalized, and upon getting a centrifugal and swinging it out, he found himself in possession of a quantity of sugar that excels any made from Sorghum, before tested by our sugar refiners.

The polariscopic test showed 97.2 per cent. As some of the readers of the RURAL may not understand this, it may be well to say that 100 per cent. indicates pure sugar, hence this lacks 2 4-5 per cent. of absolute purity. This certainly is highly encouraging, and great was Mr. Allen's joy to find that on the first working of his centrifugal, a bucketful of melado, or mush sugar, all swung out dry in less than five minutes, and this, too, in the presence of many who were skeptical about the production of sugar from that source."

Everywhere.

RURAL SPECIAL REPORTS.

CANADA, South Monaghan, Ont., May 10.—Nine-tenths of the winter wheat has been killed in this section, and farmers are plowing it up and sowing barley principally in its place. Some are harrowing in spring wheat. The acreage sown to wheat last fall was larger by far than for years before. We have heard no news about the Hessian fly so far.

W. H. S. M

FLA., Starke, Orange Co., May 6.—We had a very warm winter here, in fact no winter at all. We have had strawberries ever since Christmas, and many have had ripe tomatoes all winter. Through January we had no rain at all, and have had but little since, so that the ground is very dry. In some localities not far from here there has been no rainfall at all for a long time and people are losing most of their newly set orange trees. The long-continued dry spells, which are usually followed by just as long wet spells, are great drawbacks to general farming in this country. The last of March and first of April we had very cool weather, with light frosts, doing no harm to anything, however, except to young cotton plants; they will not stand much cold, and many had to be replanted. Most of the farmers in this section are planting more cotton than usual. The peach crop is an entire failure in this section. Plums and quinces are nearly so. It is an unusual thing for peaches to fail entirely here, and no one seems to have any idea as to the cause. Our Bananas are already putting out buds and fruit; they, as well as Guavas, have been growing all winter. Our Guavas were killed to the ground a year ago last January. They were then two years old from seed. They are now eight feet high, loaded with fruit and still blooming. I think the fruit is the most delicious we have, but it must be eaten where it grows, as it will not bear transportation except converted into jelly. It is rather early to judge of the orange crop, but it promises well at the present time. I attended the State fair at Jacksonville in February, and should have sent you an account of it at the time only that the exhibition was so meager it seemed hardly worth while. But there was one exhibit sent in which deserves mention. It was sent by a lady in Gadsden Co., and consisted of 360 sorts of preserved and canned fruits, vinegar, wines, jellies, etc. The exhibit included:—of brandied fruits 12 varieties; of wined, 11: of cordials, five; of wines, nine; of catsups, 27; of sirups, 11; of vinegar, five; of pickles, 69; of canned, 15; of jellies, 81; of preserves, 115. They were elegantly put up, and were all made within five months from fruits produced on her own estate.

I. S.

ILLINOIS, Ludlow, Champaign Co., May 6.—The month of April was favorable to wheat, grass and the spring crops, which here consist of oats and flax. There has been an unusual number of hard "blows" accompanied by thunder, and on the night of April 24 a hail storm with heavy rains, which made the ground too wet to work for the first half of the week. No material damage has been done, however, in this vicinity. A large breadth of flax was sown which generally is above ground, and now every available horse is at work plowing for corn. There were white frosts on the last night of April and the night before, but they were too light to do any damage. There are still promises of abundant fruit. Peach trees bloomed very full and are so far advanced as to endure pretty hard frosts. Cherry trees are a mass of bloom; and apple trees, except a few of the latest varieties, are out in pink and white. But if "figs in January betoken frosts in May," the fruit has still a narrow gauntlet to run. Some blossoms might be spared, however, and still a large crop remain. "G."

KAN., Parsons, Labette Co., May 5.—Corn planting is over. Four-fifths of it has been done two weeks. Owing to an unusual spring drought there is little of it out of the ground, and that little got damaged by frost, of which we had a touch several nights last week. Wheat and oats have been seriously damaged by drought, assisted in some cases by chinch-bugs. Rye is headed out. We had three-quarters of an inch of rain on Monday the 3d, which, with a temperature of 80°, has imparted verdure and growth to grain, grass and trees. Our farmers are selling the balance of their corn at 25 to 27 cents. It all goes to Texas. The Texans failed to raise a grain crop last year; but by the enhanced value of cotton, they are in a much more prosperous state than usual. It is intelligently reported that while they have paid three millions of dollars for grain and flour, they have received twenty millions additional for their cotton crop. By the way, there are unfavorable reports of injury to the wheat crop in Texas from rust. If I remember rightly, we have been out of the track of the several cyclones which the RURAL has reported as having prevailed in Kansas, Arkansas, Missouri, etc. In relation to the one that wrought such terrific destruction at Marshfield and neighborhood, in Mo., I have to say: On the Sunday evening on which this disaster occurred, I was sitting outside my house and noticed in the southeast continuously intermittent flashes of lightning. This I have learned is a sure sign of great atmospheric disturbance. At this moment a very violent wind that set in from the northwest, made me feel certain of a storm in the southeast. I determined, then, to see if a storm did occur at this time. I fixed the time at 7:30 P. M., and located the storm about Springfield, Mo., or in northern Arkansas. On Monday evening I was *just excited* when, at supper, one of our girls being just home from school, said, "Papa, there was a great storm at Marshfield in Missouri, last night; two to three hundred lives were lost." *Where* is Marshfield? I asked. "Fifteen miles from Springfield," she said; of course, I had for once made a prediction that was verified. I have scanned closely the time the cyclone passed Springfield, and think the time is not 15 minutes different from my observation. Of course, I could have no idea of the extent of the calamity. Two years ago, a tornado that occurred in Wisconsin, gave the same indications I have given, the electricity being fainter from being more distant, but accompanied by a most violently heavy wind from the south, which continued all night. The wind, of course, indicated a vacuum northward. By the way, nearly everybody here is exceedingly in dread of these things, which is quite unreasonable, as a cyclone is not fatally destructive outside of a space of, say, 100 to 2,500 feet. J. B.

KANSAS, Everett, Woodson Co., May 2.—The spring was cool, dry and backward; but wheat is in fine condition—from six to eight inches in hight. Oats need rain, but are not damaged by the drought yet. Corn planting is mostly finished and some fields are up. The prospect for an abundance of all kinds of fruit never was better. All young apple trees that are three and four years old have blossoms on, and small peach trees that were planted last year blossomed this spring. Stock is in good condition and in fair demand. The sheep craze has struck some of our farmers, and they are selling off their cattle, intending to buy sheep, after shearing, and get rich (?) in short order. J. J. D.

KY., Milton, Trimble Co., May 12.—We had a sharp frost this morning, which will about finish the fruit crop of this vicinity. The Ohio River is almost bankful. Wheat in some places looks quite yellow; but generally it offers the best prospect we have had for years. We are about half done planting corn; ten days earlier than usual. Distillery hogs are dying rapidly with the so-called hog cholera. Stock of all kinds on pasture are doing well.

S. E. H.

MINN., St. Paul, Ramsey Co., May 3.—Wheat seeding in the southern part of the State has been generally accomplished in good shape. The ground was pulverized nicely and the generous rains which fell during the past week have started the growth of the grain sown. Farmers are cheerful and hopeful. The acreage of wheat sown is fully equal to that of any year in the past. Along the line of the St. P. and Sioux City R. R., a road which traverses the State in a southwesterly direction from St. Paul, there will be a large increase in flax and Amber cane planted—it is safe to assume an increase of 100 per cent. over last year. Both linseed mills and individuals have loaned to farmers flax seed, and the favorable results of last year in special directions, have stimulated the farmers to turn their attention and energies to stock farming and to the cultivation of flax, Indian corn, oats, and Amber cane, and *less to wheat.* J. B. C.

N. Y., Greenwich, Green Co., May 3,—I have just returned home from a trip to the State of Nebraska where I spent a number of days at sundry places along the Union Pacific R. R. in the Great Platte Valley, visiting people formerly from Washington Co., N. Y. All seem to be pleased with the country, calling it the Garden of Eden of America. While at Waterloo, Neb., I met an old neighbor who went there last spring, and began to raise seeds. He raised, on one acre, 820 pounds of cucumber seeds; and what was remarkable to me, his squashes when eaten by the maggot in the root—which is sure death to them in the East—would root down at the joints and produce good seeds. He raised 2,200 pounds of squash seed. He said that by actual measurement the vines grew 14 inches in 24 hours, and that it was the finest country for all kinds of vegetables in the world. The immigration to that country this spring was immense. During the month of February last, 152 carloads of stock and household goods and 132 immigrant teams, averaging four persons to each team, crossed the Missouri River bridge at Omaha going west to settle. The Land Department of the Northern Pacific R. R. sold over 26,000 acres of land to 259 purchasers for over $126,000, at the average price per acre of $4.81; and since then the immigration and sales of land have been constantly on the increase. I don't wonder that Horace Greeley, after riding over, and taking a view of that great valley, said: "Go West, young man, go West, and grow up with the country;" for if a man can't make money in that country, he deserves to starve. O. K. R.

N. Y., Starkey, Yates Co., May 3.—After an unusually mild winter we got to work in earnest. Wheat on open soils is looking fine; on stiff soils it is not doing so well; on hard, clayey knolls, it is badly out; but if nothing adverse occurs, a better than average crop may be looked for. The breadth sown last fall was greater than usual. In this vicinity fruit blossoms seem all right. Peaches are forward and blossomed early. Grape vines seem all right, and grapes are a staple crop in this section. The subject of drying fruit by rapid evaporation, is receiving a good deal of attention; but not greater than it deserves. If the demand for this kind of dried fruit is to continue—and I do not see why it should not—it would be well for fruit-growers to cultivate varieties of fall apples on purpose for drying. Among the best, if not the best variety for this purpose, is the Clyde Beauty. It is not grown as much by nurserymen as it deserves to be. It is a large, fair apple: color, light straw, striped with red; flesh, very white, tender and crisp. It makes a much better dried apple than any winter apple I know of. Some seem to think that the demand for dried apples will soon be met, so that it will not be safe to extend it much. That may be true of apples dried in the old-fashioned way, but not of those dried by artificial heat. W. H. O.

OHIO, Westfield, Morrow Co., May 6.—On the last day of April we had a sharp frost which killed some fruit, but enough for home use is left. Wheat still looks fine. Young grass has come up and looks promising. Planting corn and potatoes is now the order of the day. J. B B.

PA., Corry, Erie Co., May 10th.—At present it is warm and pleasant, and farmers are busy putting in their crops. Fruit trees of all kinds are coming out in full bloom, and everything looks promising. Hay is worth $10 per ton; oats, 50c per bushel; potatoes, 25 to 30c; butter, 18 to 22c per pound; eggs 10c per dozen, and the market is not over-stocked at present prices. C. D. S.

TEXAS, Waco, McLennan Co., May 5.—Within the last week or ten days we have had exceedingly fine rains, and all kinds of vegetation are growing rapidly. Until then the wheat and oats began to show the need of rain, and a week more of dry weather would have cut off the oats almost entirely. Some oats in the sheaf are already on the market, and it is hoped it will bring down the price of corn, which sells at 60 cents per bushel. My Ennobled oats is growing finely, being now about 15 inches high; it was planted on the 1st of April, in drills, and it tillers beyond anything I ever saw in a grain. I counted as many as five shoots from one stalk. My mangels all came up, but I have lost all but a few from the ravages of worms and insects. My garden—the vegetable department—has been literally destroyed by them. Every imaginable kind of worm, bug, fly and flea, both great and small, seemed to sweep down on me, and to cut and slash until they ate everything worth eating in the vegetable garden. Then they made a detour upon my flower garden and left me there only a few Pansies and Phloxes. My choicest flowers seemed to be the daintiest dish for them. I have used every preventive I ever heard or read of to stop or check them, but they seemed bent on destruction, and no single article or application amounted to anything. I had a struggle to save my Cuthbert Raspberries and fine Grapes and Coffee plants, and only did so by covering them with gauze. My Strawberries were not interfered with, and are growing beautifully. Gen. Le Duc, our worthy and efficient Commissioner of Agriculture, sent me a few of the "Sharpless" and "Forest Rose" on Feb. 20, and on the 20th of April I plucked a few handfuls of large, luscious, berries from the vines. A Sharpless measured over five inches in circumference from a plant two months old from the pot. The planters are joyous over the prospects of large crops this year, as they have never had a more propitious season thus far. My Blount's corn is nearly head-high and still going up. A. S. S.

WASHINGTON TERRITORY, White River, King Co., April 30.—No winter wheat is raised in this section; double last year's area of spring wheat will be put in. E. H. A.

WIS., Necedah, Juneau Co,, May 3.—Spring grain about all sown. Season three weeks late. Had considerable cold rain. Grass coming on slowly, but cattle doing well, grazing—came through the winter in good condition. This is a great lumbering center. Cranberries are largely cultivated. Small fruits of all kinds do well upon our intervale lands. This region is especially a grazing district, while "considerable" of the land will make excellent farms. This is especially the case along Yellow River, from eight to twenty miles north of this village. We are building a schoolhouse, but we have but few neighbors, so I have concluded to donate 40 acres of land each to persons with families who will build and live upon the land—all convenient to school, rail-road station six miles off. Men and larger boys find employment in lumbering camps north of us all winter at good wages, young women and girls command from $1 to $3 per week and are scarce. Net cost of raising a three-year-old steer, about $15. They generally sell at from $30 to $35. Sheep are healthy and pay well. Hay is excellent and cheap—pasturage free. Timber of all kinds plentiful and to be had for little more than the hauling. We have no ague; no chills and fever; health proverbially good. Wheat, $1.05; oats, 40c.; corn, 50c.; rye, 70c.; barley, 60c.; potatoes, 30c. to 40c.; butter, 20c. to 25c.; eggs, 15c.; wild hay in stack $3 to $5; timothy and clover hay at Necedah, $8 to $10; common lumber, $8 to $10. THO. MCCONNELL.

[We are assured by the donor that the above is a *bona fide* offer, and therefore think it worth publishing; but we have no personal acquaintance with the writer or his belongings.—EDS.]

WIS., West Salem, La Crosse Co, May 5.—In regard to the device for preventing cows from sucking themselves, illustrated in the RURAL of April 17, and its being patented by some Yankee, I would say that I made and used a similar device more than 25 years ago to prevent calves from sucking cows. Winter wheat here is badly winter-killed—heaved out. There was a good deal sown last fall. Very little old wheat still remains in farmers' hands. Early-sown spring wheat looks good. W. J.

WIS., Louisville, Dunn Co., May 4.—Weather warm—87 deg. in the shade. Small grain nearly all sown. Winter grain all dead. Clover, ditto, except some of last year's seeding. Help plenty at $16 to $20 per month for the season. Wheat, $1 05@90e; corn, 40e; oats, 30c; potatoes, 40e; butter, 20c; eggs, 10e. Not as much wheat sown as last year. A great many farmers are sowing salt on their wheat. L.

The Querist.

ANSWERS TO CORRESPONDENTS.

[All queries must be accompanied by the name and address of the writers to insure attention.]

How to Rear a Motherless Colt.

W. H. B., Brydges, Ont., Canada, asks how to rear a colt whose ram died shortly after the little one's birth.

ANS.—There is considerable difference of opinion, and consequently of practice as to this. But the most successful way according to our experience, is to give it a sufficient quantity of cow's milk, fresh drawn and warm from the bag, to keep it thriving well. How much of this will be necessary per day, can only be ascertained by experience, as colts differ so much in size. As mares' milk is richer than cows' milk, the richest kind of common cow's milk should be sought for, to feed the colt. If it cannot be found sufficiently rich, a little pure sugar should be mixed with it, and always feed the milk warm. Perhaps Guernsey or Jersey cow's milk might be found too rich, and therefore be apt to make the colt too loose in the bowels. It used, and this sort of milk does this, change for that of a poorer quality. As soon as the colt can be tempted to eat oats, give a half pint mornings, noons and nights, and gradually increase this quantity to two or more quarts per day. After a few weeks, one-fifth of the quantity of wheat bran may be added to the oats, gradually increasing till mixed half and half. Some prefer oat-meal to whole oats, which may be better, if it does not scour the colt. To the above—for the first few weeks—add a tablespoonful of oil (linseed) meal, if to be had unadulterated; if not, then flaxseed; pour hot water enough on this to make a thin gruel; beat up an egg and mix it in. This is to be used every day, adding one-sixth of it to the cow's milk; which should be fed six times per day. If the colt scours, add a little more oil meal to its feed each day. The colt can be taught to drink the milk in the same manner as a calf. After being kept as above a month or so, some people boil clover hay and feed the water in which it is boiled to the colt. Always have it milk-warm when fed, and have it made fresh every day. Begin sparingly, lest it should scour the colt. Turn it out to rather a short, sweet pasture as soon as you please, and let it learn to nibble the grass; but be careful it doesn't eat much to begin with; gradually accustom the colt to it, or this will scour him. Never feed sour milk; always have it fresh and sweet, and see that the water used for the oil-meal gruel is pure and fresh, and also when the colt is old enough to crave it for drinking. When it rains or a strong, raw wind blows, shelter the colt well. When three or four months old warmed skim-milk can probably be gradually substituted for new milk.

Origin of Mineral Constituents of Aerial Plants.

E. S. C., Bergen Co., N. J., says: "In the ashes of air plants (Florida Moss, *e. g.*) we find potash, phosphoric acid, etc. Such constituents of plants cannot come from the atmosphere. Where do they come from?"

ANSWER BY PROFESSOR S. W. JOHNSON.

The Florida moss or aerial orchids and other parasitic plants derive their phosphoric acid and their mineral elements generally from the medium in which they are rooted. The Florida moss I have never had an opportunity to observe growing, but I suppose it lives upon living trees, and if so, probably it feeds, to some extent, on their juices. We have in our Northern forests a kind of lichen, commonly called moss, which grows upon dead pine or spruce trees, from whose branches it depends, often to the length of a foot or more. All our Northern forest trees and our fruit trees as well, support upon their old exterior bark, a large vegetable population of fungi, lichens and mosses. The outer bark of old trees contains no little amount of mineral matters, and is, in all essentials, a "soil" rich in humus, being as dead as the muck of a swamp, and only needing steady moisture to support vegetation. Some of the aerial orchids which grow upon a bit of dead wood, would appear to have very slender supplies of phosphates, alkalies, etc. Such plants are very succulent and really require and contain but a small amount of ash elements. It is not unlikely that a part of the mineral matters they need, is supplied by soil on the wing, *i. e.* the dust which is stirred up by every wind and from which the atmosphere near the earth's surface is never long free.

[We were not aware that Florida moss was attached to the trees upon which it grows.—EDS.]

Preserving Timber.

C. B. S., Langsville, Ohio, says that he has seen a recipe for preventing timber from rotting, which directs that the timber should be placed in a pit or vat with quick-lime around and between each layer. Then sufficient water should be used to slake the lime. It is said that timber so treated will be rendered almost indestructible, and our inquirer asks, how long should the timber remain in the lime; should it be seasoned or not previously; will a seasoned post last longer than a green one.

ANS.—The effect of caustic lime (quick-lime) upon timber is to coagulate and render insoluble in water the albumen of the wood. As albumen is exceedingly ready to ferment and decompose, this renders the timber more durable. The practice of using lime as a preservative of timber, used to be very common among ship-owners, who would fill the spaces between the inner and outer skins of the hull of a ship with lime, or else seek a cargo of lime for every new ship. For fencing the practice is to put the posts in a pit, intermingled with some quick-lime, and when the pit is filled, to apply water to slake the lime. The posts are left in the slaked lime for 20 days or thereabouts that they may become saturated. The heat of the slaking lime will aid in curing the timber, driving out air and water, which will be replaced with lime as cooling occurs. Thus green timber may be operated on better than seasoned, as the effect will be more thorough. A seasoned post unprepared in any way will last much longer than a green one.

Cutting Potatoes—Exterminating Poultry Lice.

W. H. B., Irving, Kans., asks, 1, if potatoes should be cut when planted or some time before; 2, are small potatoes as good for seed as large ones; 3, the name of the earliest potato; 4, the address of the national seed department at Washington; 5, some way of ridding a hen-house of lice.

ANS.—1, Varieties that contain much moisture should be cut at least a week or so before they are planted, so that the cut surface may dry somewhat; they will then be less liable to rot in the ground. If cut immediately before planting, the pieces should be rolled in plaster. 2, No. 3 Alpha is among the earliest, if not the earliest potato in cultivation. 4, In all matters relative to the Agricultural Department address Gen. W. G. Le Duc, Commissioner of Agriculture, Washington, D. C. 5, Remove all the bedding from the nests and burn it; put into an iron pot, in the center of the house, a pound of brimstone and with it a lump of iron heated red-hot. Close the house as nearly air-tight as possible and leave it so for a couple of hours; then open and ventilate. Dust out the house and sweep it thoroughly. Wash every part of the house and appurtenances with a solution made of a pound of potash dissolved in a quart of hot water. Go over everything again with kerosene applied with a paint brush which may be also used for the preceding operation. Put fresh bedding in the nests, and if any lice are on the hens they will soon get off on to the warm nests, and be killed. Too much trouble! Well, it is a trifle troublesome; but, then, it's very effectual.

Remedies for Spavin and Wind-sucking.

L. F. S., Delaware, Ohio, asks, 1, if anything can be done to alleviate the lameness caused by a very small spavin on a horse; 2, can any thing be done for a young horse just contracting the habit of wind-sucking.

ANS.—1. If within reach of a veterinary surgeon have him fire and blister the hock joint at once; then, after a rest of four to six weeks, if the lameness has not disappeared, repeat the operation or apply a strong blister (pulo cantharides, 1 oz.; lard, 6 oz.) well rubbed in, and as soon as the place on which it has been applied heals, repeat. A long rest (pasture), with a succession of blisters, will relieve the lameness. We should prefer the firing and blistering at once. 2. Wind-sucking and cribbiting go hand-in-hand, and are induced by indigestion and want of work. A strap placed around the neck tightly will sometimes prevent it; also keep salt in the manger to occupy the animal and improve digestion.

The Bunker Hill Monument.

E. W. B., Factory Point, Vt., asks when the Bunker Hill Mounment was erected, of what material is it made and its dimensions.

ANS.—The corner-stone of Bunker Hill Monument was laid by Gen. Lafayette during his visit to this country, on June 17th, 1825, the 50th anniversary of the battle it commemorates; but the structure was not completed until 1842, and it was dedicated on June 17th, 1843. Daniel Webster was the orator both on the occasion of the laying of the corner-stone and the dedication of the monument. It is an obelisk, built of Quincy granite, and measuring 221 feet in hight, 31 feet square at the base and 15 feet square at the top. Inside of the shaft is a round, hollow cone, seven feet wide at the bottom and four feet two inches wide at the top. It is encircled by a winding staircase of 294 stone steps, which leads to a chamber immediately under the apex, eleven feet in diameter. This chamber has four windows, which afford a wide view of the surrounding country, and contains two cannons, named respectively Hancock and Adams, which were used in many engagements during the Revolutionary war. The entire cost of the monument is something over $150,000.

Glycerine.

P. S. W., Newmarket, Va., wants to know what glycerine is made of, and if it is poisonous.

ANS.—Glycerine is a substance produced from animal fat in the process of soap-making. It consists of carbon, hydrogen and oxygen, and is not poisonous. Its soft, agreeable qualities fit it eminently for use in cosmetics and perfumery; it is used in many diseases and is an excellent ingredient in toilet soaps, hair tonics, etc. A glycerine ointment of much repute for chapped hands is made as follows: one-half ounce of spermaceti is melted together with a drachm of white wax and two fluid ounces of oil of almonds, by a moderate heat. The mixture is then poured into a wedgewood mortar, then a fluid ounce of glycerine is added to it, when it is rubbed till the ingredients are thoroughly mixed and cold. Nitro-glycerine, a powerful explosive, is formed by treating glycerine with concentrated sulphuric and nitric acids.

Birds and Cherries.

S. C., West Northfield, Mass., in RURAL for May 1, page 283, asks how to keep birds from destroying cherries and other small fruits. The best way I have found to do this is to plant so many trees as to have plenty of fruit for the birds and myself too. I have only a few acres devoted to fruits, but on them I planted, ten years ago, 24 cherry trees of various sorts and great quantities of the smaller fruits. The result has been that ever since the fruits began to bear well I have had all I wanted in abundance for my family and friends, and also for the birds. I love to see birds on my premises, and if for nothing else I would plant plenty of fruit in order to induce them to come and nestle in the trees and shrubbery around my cottage. I never permit a gun to be fired on the premises, and quail are so tame as to come often within 20 feet of my dwelling, and run all about the lawn and in the garden without fear.

A. B. A.

Evergreens for Cemeteries.

H. K., Bath, Pa., asks what ornamental evergreen trees, that do not grow high or spread much, are suitable for planting in a cemetery plot.

ANS.—There are numerous evergreens which are suited for this purpose. Of Arbor-vitæ, the varieties compacta, maculata and the Golden Oriental are very handsome shrubs. Juniper Canadensis pyramidalis, and the Swedish Juniper will also answer, and so will Golden Yew (Taxus elegantissima), T. stricta, several Retinosporas, the Sun-ray Pine, (Pinus Massoniana), if a specimen can be obtained, Rhododendrons, hardy Azaleas, and in any others. Select from a reliable nurseryman's catalogue in which descriptions are given of the different varieties, which will enable you to judge of what they are.

Shoulder Lameness—Stringhalt.

A. S. L., New London, O., has a horse stiff in the shoulders, and in warm weather his neck gets sore under the pad, but it will heal again on the advent of cold weather. On starting with a load, he dives forward and is hard to govern; 2, he also has a one-year-old colt troubled with stringhalt, and he asks for remedies for both ailments.

ANS.—1. The horse is of a nervous disposition and worries while at work, especially when starting a load, and requires a steady and careful driver to preserve his usefulness. Bathe the shoulders with a mixture of tincture of arnica and myrrh, equal quantities, nights and mornings; also procure a collar that will fit his peculiar neck. 2. Stringhalt is a hereditary disease, and is only an illustration of the importance of breeding only from sound mares. There is no cure for it.

Speedy Cut.

W. L. M., Zanesville, Ohio, has a five-year-old horse with a good deal of speed in him; but when going fast he hits one knee with the opposite fore-foot, while at a slower gait he hits lower down, and he asks for a remedy.

ANS.—This sort of interfering is called speedy cut, and is seldom, if ever, entirely remedied. It may, however, be partly prevented by special attention to shoeing, and dealers in saddlery and other horse-furnishing goods sell caps or straps, especially intended for application on the knee, as well as speedy-cut boots, in which there is a pad buckled on the inside of the leg, reaching from the knee to the fetlock.

Shrinkage of Corn Ears.

J. J. S., Mendham, N. J., asks what should be the shrinkage in 21 loads of corn ears put into the crib in the fall and taken out the following April.

ANS.—Newly gathered, sound and ripe corn will shrink in the crib 25 per cent. in weight and 15 per cent. in bulk from November to April. Therefore, if 21 loads were put in, about 18 should be taken out, or a loss of about one-seventh would occur. If the corn is partly unsound, with many nubbins in it, the shrinkage will be proportionately greater.

Miscellaneous.

J. W., Westfield, N. Y., has a farrow cow seven years old, that two months ago lost her appetite for a few days, then got down and could not get up again for 18 hours. For three weeks afterwards she got up occasionally with great difficulty, but for the last five weeks she has been unable to rise at all. She is in good store condition with an excellent appetite, but appears to be unable to use her hind-quarters, and our friend asks what ails her and how to treat her.

ANS.—The cow should be assisted to rise and supported for a time, if unable to stand, by means of two strong sacks put under her and held by ropes fastened to beams above. What the trouble may be precisely is impossible to say without knowing more about the circumstances. It is possible and probable that the trouble arises from disorder of the spine and the nervous system of the loins and hind-quarters, which center in the lower part of the spinal cord. But to indicate any other treatment than to assist the cow as above and feed her well, would be somewhat delusive, and might be dangerous.

TO MANY INQUIRERS.—The articles on Sorghum, the milk trade, and on the Osage Orange were written to answer a number of inquiries more fully than the space that can be spared to an answer in this department, would admit. It frequently happens that when queries on any subject accumulate, or come so fast as to show a general interest in the subject, we publish an article telling all the truth about it, and so answering several questions at once. In such cases, of course, no special answers are needed. By the way, it's a good idea for our friends to tell us just what they want, for it's not at all unlikely they know what this is at least a trifle better than even we do; and we wish them to fully understand that the paper is theirs, and that it is our endeavor and ambition to make it all every one of them can reasonably desire.

New Publications.

White Robes! White Robes!

For a long time, no sweeter and better collection of music for SUNDAY SCHOOLS has appeared. If we consider the Hymns, we find the best and most original SUNDAY thoughts expressed in pure poetry of good lyrical character. Such phrases as "Pitying Savior, look with blessing," "Trust him ever," "The better years begin," "Only a little while," "Precious love," "Ere the sun goes down," "The Eden hills," and "A home, weary pilgrim," taken almost at random SCHOOLS! from its pages, indicate its tenderness and beauty. There are 125 songs; all good ones. WHITE ROBES will be mailed to any address for 30cts. (stamps.) By A. J. ABBEY and M. J. MUNGER. Price 30cts., or $3 per doz.

TEMPERANCE JEWELS. (35cts., or $3.60 per dozen.)
TEMPERANCE LIGHT. (12cts., or $10 per hundred.)

These are extra good Temperance Song Books, differing in price and size, but not in quality. *Temperance Jewels* is by *J. H. Tenney* and *Rev. E. A. Hoffman*, and *Temperance Light* is by *Geo. C. Hugg* and *M. E. Servoss*.

THE SUDDS' NATIONAL SCHOOL FOR THE REED ORGAN. By W. F. SUDDS. ($1.50.)

Mr. S. is well-known as one of our best composers for the Pianforte. His new School contains a great deal of fine music, and a good instructive course, and has the recommendation of a moderate price.

OLIVER DITSON & CO., Boston.
C. H. Ditson & Co., J. E. Ditson & Co.,
843 Broadway, New York. 1228 Chestnut St., Phila.

FREE! A MAGNIFICENT GIFT! We will send The Fireside at Home (a mammoth 8-page 40-column Illustrated Literary and Family Journal, size of *N. Y. Ledger*, filled with charming Stories, Sketches, Poems, Useful Knowledge, etc., for all) on trial three months for only 15 cents, and to each subscriber we will give, free, a copy of our new and magnificent Art Portfolio, entitled, "An Album of Artistic Gems," containing six exquisite stone engravings of American and foreign scenery, pleasing home subjects, etc., bound in handsome covers, the whole forming one of the most magnificent adornments for the parlor table that could be devised. This valuable premium is an Absolute Free Gift, to induce all to try THE FIRESIDE AT HOME for three months. Remember, only 15 cents for a three months' subscription to the paper and the premium free! The "Album of Gems" alone is worth three times the price. Postage stamps taken. Four subscriptions and four premiums for 50 cents, or 8 for $1.00. Address, F. M. LUPTON, Publisher, 27 Park Place, New York.

THE
RURAL NEW-YORKER.
PUBLISHED EVERY SATURDAY.

CONDUCTED BY
ELBERT S. CARMAN.

Address THE RURAL NEW-YORKER,
No. 34 Park Row, New York.

SATURDAY, MAY 22, 1880.

MR. H. W. RAVENEL, a well-known Southern botanist, lately found near Charleston a tree of Cornus florida, bearing reddish-purple involucres. Pinkish involucres of this species are not uncommon. Dr. Asa Gray, in reply to our inquiry, said that he had never seen them of a decided red and requested that we would forward specimens. Professor Meehan, on the other hand, thinks that he has seen them of that color. In any event they are not offered by nurserymen, and those desiring to communicate with Mr. Ravenel with a view of introducing the variety, may write to him at his home, which is Aiken, S. C.

PITTOSPORUM Tobira is an evergreen shrub with obovate, thick, glossy leaves and white, fragrant flowers in terminal clusters. We have lately seen hedges of this beautiful plant in the South, and for this purpose—if ornament alone is desired—we know of no other more handsome. It will bear cutting to any desired extent, grows luxuriantly thick, and is, during the entire year, of a fresh green color that delights the eyes. It is hardy in the climate of Aiken and Augusta, and probably for some distance northward—but how far we are not informed. We urgently commend it to our Southern readers either for ornamental hedges or solitary specimens. It grows freely from cuttings.

SHADE TREES by the road side are often set out with much care and at a considerable expense, then left to grow as they please, completely neglected. Thus they soon become unsightly objects along the road instead of adorning it. They should be invariably staked, if necessary, to keep them straight, the ground kept loose around them, and, if in any danger of suffering from drought, be well mulched. Above all, cut away all sprouts as fast as they appear, for they suck out the life of the tree, and are frequently the cause of its dying. Trim the trees nicely and artistically, as they grow, and in a few years they will make a grateful summer shade, and a magnificent adornment of the public road.

DURING the writer's late visit to the so-called "Thermal Belt" of North Carolina, we were much interested in the operations of an old Michigan gardener, Mr. A. Braman, who had purchased land upon the south side of Tryon Mountain, and was cultivating many kinds of fruits upon one of its "flats" which he had cleared. Among them the Grape was receiving a large share of his attention. He uses the roots of the native vines cut into three-inch pieces as stocks. A slit is made in one end of the root, the cion cut wedge-shape and inserted the same as in ordinary cleft-grafting. The cut portions are covered with wax and the completed graft placed in the soil of boxes which are kept in the cellar from early March, when the grafting is done, until mid-April, when they are planted where they are to fruit.

Sometimes he works the cions upon roots in the ground. Treated in this way they generally fruit the first season. We were shown a "French" vine that last year (the year of grafting) made a growth of 40 feet and bore several bunches of grapes. This "Thermal Belt," of which Tryon Mountain is a part, possesses a remarkable climate. Light frosts are rarely known, and freezing weather, owing to the dryness of the air probably, rarely injures fruit buds.

GEN LE DUC reports to Congress that since the first discovery of gold in California, in 1849, this country has paid to foreigners eighteen hundred million dollars for imported sugar, while the mines of the Golden State and of the other Western States and Territories have yielded only seventeen hundred millions, so that it has taken one hundred million dollars more than all the gold we have produced to pay for the foreign sugar we have consumed. If sorghum, and beets too, shall in the future add to our home production of sugar, even approximately as much as present indications promise, what an enormous amount of wealth that now goes to support other nations will be kept at home to enrich our own population, and of this no small proportion must find its way into the pockets of the growers of the crops—the farmers of the country. The possibility of producing sugar from sorghum is now as well established as the possibility of producing sugar from beets, but in both cases it still remains to be practically proved whether this can be done profitably in this country, as a general branch of business. The making of sugar from sorghum has at least this advantage over the making of it from beets, that to do the latter profitably requires several hundred thousand dollars of capital, whereas, from all accounts, as many thousands are sufficient in the former industry.

A JOINT resolution has been introduced into Congress instructing the Attorney-General to bring suit in the name of the United States, to cancel the letters-patent issued, in 1868 and 1871, to Nelson W. Green, for tube or driven wells. The resolution is based on the ground that Green was not the original inventor, and that this process of well making had been in use in many parts of the country, and had, consequently, become public property, for years before the success of other patentees of devices connected with it, suggested to Green the idea of claiming a patent for it. The groundless nature of Green's claims were fully set forth in the RURAL so long ago as Sept. 30, 1876, in the most exhaustive article that has appeared on the subject, entitled "The Tube Well and its History?" The large interest the patent beneficiaries have in the "rights," and the comparatively small tax each user of the well is forced to pay, can alone account for the continuance of this patent in force until the present day; for on this account the former are ready to incur the heavy expense inevitable in an appeal to the U. S. Supreme Court, an outlay rather than incur which the latter reluctantly pay the $10 royalty exacted. But though the individual tax is comparatively small—as are nearly all taxes—yet the manner of collecting it is so odiously exasperating, and the aggregate exaction so heavy that it is full time that the public, through its Representatives in Congress, should put an end to the baseless imposition.

POWER OF A GROWING TREE.

THE force exerted by a growing tree is well known to be very great. This fact, however, is worked to death by moralists, who are ever on the watch for a little fact upon which they can hang a moral. A worn-out example of this kind recently appeared, we regret to say, in the columns of a respected contemporary, with new embellishments and additions, which only served to make the story the more ridiculous. A mill-stone 5½ feet in diameter and seven inches thick—the size is extraordinary, but that only adds to the zest of the story—and having a central hole—why is it not called the "eye?"—11 inches in diameter, was laid in an orchard and then forgotten. A filbert—formerly it was a little acorn, from which a great oak may grow; but now a little filbert, from which only a poor, weak, dwarf shrub could grow—was dropped by accident in the eye of the mill-stone. This was in 1812. As the trunk grew within the hole, many persons came and saw and pondered wisely as to the probability that the stone would be carried up in the air by the growing filbert, or would the "filbert tree" die in the attempt. And actually in 1868, we are told, the tree lifted the ponderous stone and raised it in the air. This exemplifies the power of perseverance, patience, pertinacity, modesty and close attention to one's business, with a single eye to attain some great end. That is a very good moral. Never mind about the truth of the story or that it includes errors of fact. A Filbert is a shrub and never attains the thickness of 11 inches. Moreover, the growth of the trunk of a tree is in thickness and not upwards, and the lifting of the stone in the way mentioned is an impossibility for a giant oak, much less for a poor, weak hazel bush.

TARIFF REVISION.

LAST week we announced here that the Congressional sub-Committee on Ways and Means in charge of the matter, had in their report to the full Committee recommended that the importation of foreign salt should be put on the free list along with several other articles. Since then, however, the salt monopoly of New York, Michigan and the Kanawha Valley has brought such potent influences to bear on the Committee that the article relating to salt has been stricken out of the tariff bill finally reported to the House, so that the duty on it still remains at twelve cents per 100 pounds in bags, and eight cents per 100 pounds in bulk. From present appearances, however, no definite action is likely to be taken this session on the subject of tariff revision—a complete victory for the protectionists. We cannot say that we are altogether sorry for this; for although it was proposed to place a few agricultural implements on the free list, yet the striking of salt from it greatly lessened any benefit the revised code might confer upon agriculture, while the lowering of the duties it proposed upon foreign wool and woolen goods was a very objectionable feature to the increasing industry of sheep husbandry among us.

As long as a protective tariff shall remain in force for the benefit of the manufacturers of the country, so long shall we strongly protest against the lowering of the present duties on wools and woolen stuffs; for while the manufacture of almost every article farmers use is fostered, to their loss, by protective duties, almost the only direct protection agricultural products receive or demand is that afforded to sheep husbandry by the present tariff. That this industry should prosper among us is of high importance, not to the stock owners of the country alone, but to the community at large, and to this prosperity it is essential that the conditions under which it is at present thriving should be permanently exempted from Congressional meddling and muddling. If, in revising the tariff, Congress shall insist on lowering the import duties on foreign wools and woolen stuffs—almost the only duties by which the agricultural classes are benefited—then must the agricultural classes insist on the lowering or entire removal of the duties on a multitude of other articles by the present high tariff on which these classes are seriously injured.

DISTANCE LENDS ENCHANTMENT.

A FEW days since we heard a man of culture, who was born in the City of New York, and whose life of half a century has been mostly spent here, remark that he knew more about the public institutions of Paris and London, of their locations, surroundings and contents, than he did about those in New York. This will seem strange to many of our readers, but we have no doubt there are thousands of them who can say the same truthfully.

Business men have their business to attend to, and postpone visits to places where they can, as they say, go at any time, until it is more convenient, and the writer of this is not an exception. There are many places of interest in the city to which our first visit was made in company with friends from out of town, whom we were glad to accompany on their round of sight-seeing. So, while we may seem to be censuring others for negligence in improving their opportunities, we will not try to hold ourselves blameless. Many spend a week in Washington, and although that time is only sufficient to give a hasty look into the places of interest with which that city abounds, to thoroughly study which would require months, they return better able to tell a stranger where and how to see the sights worth seeing than they are to direct him to spend his time to the best advantage in New York.

We have a friend living in Brooklyn who once told us he thought that instead of taking his customary summer trip to the country, he would take rooms in a New York hotel, and spend the time in seeing the sights of the City—and he could do worse. The truth is we are not sufficiently familiar with the things right about us, and this we mean to apply to our country friends as well as to dwellers in the cities. There is many a flower-garden, lawn and yard in the country stocked with plants and flowers of foreign origin, with whose names and habits the growers are more familiar than with hundreds of varieties of natives among which they have lived all their lives. Every year our florists import from Europe plants that are native Americans, only for the reason that their merits are appreciated there and they are raised for market, and can be imported cheaper than they can be purchased here, because no one makes a business of supplying the market.

BREVITIES.

WE have just received from Dr. McAboy, "the man of the Thermal Belt," (N. C.) a box of young peaches. They are about two inches in length and three in diameter. The Dr. says: "I send them to show you the 'Thermal Belt' still survives and is triumphant."

COULD potato cultivators have foreseen the mildness of the past winter, they would have done well to plant their potatoes last fall.

OUR correspondent from Waco, Texas, sends us the first report we have received as to the RURAL'S Ennobled Oats. He says: "They are growing finely, being now (May 5) 15 inches high. They tiller beyond anything I ever saw in a grain." That is good. We hope all reports may prove of the same tenor.

ADVERSE comment has been made upon our statement that young Tulip trees may be easily and safely removed by cutting back (or off) the entire stem to within an inch or so of the neck, leaving only the neck and roots to be planted. It is a pity that writers for the sake of writing will obtrude ingenious theories against ascertained facts. It is *the* way to transplant the Tulip, and the only way by which young trees may be removed with safety from the forests. We speak in this instance from an experience that makes us out of patience with the opposition of those who evidently don't know what they are talking about.

THE Editor of the Agricultural columns of the N. Y. Times says: "Every one who plants peas should select the sound ones and steep the rest in boiling water for a minute or two, which kills the weevils but not the seed." We think that in separating the two kinds, every weevil would creep out as fast as ever he could, and that none would remain to be killed by the boiling water. Again, if the weevil hole had not already destroyed the germ, the boiling water certainly would. Finally, what's the use of saving the weevil-eaten peas when less than ten per cent. will be found to be worth sowing?

THE reports on growing crops throughout the country, during the past week, are largely of the same favorable tenor as those of the week previous, except in the more southern parts of the trans-Mississippi region, in which drought and hot winds are said to be doing considerable damage, especially in the frontier settlements. The effects of these are reported to be particularly disastrous in western Arkansas and Kansas, as well as in New Mexico, Colorado and southwestern Nebraska. Throughout nearly the whole of this region great distress is reported, and greater expected; but, then, the advance guard of agriculture and civilization all over the West has always had to bear the brunt of a world of hardships.

DR. W. B. JONES of Herndon, Ga., sends us the following varieties of the Cow "Pea:" Tory, Little Black, Java, Red Ripper, Poorland, Blackeye Crowder, Goose, Goat, Early Favorite, Three-crop, Conck, and Little Lady. He says Tory, Black and Red Ripper are late varieties—will volunteer after oats and are almost as indistructible as Vetch. The other varieties are earlier. The Three-crop Pea is said to produce three crops from earliest to latest planting. The Lady Pea is a table variety. There are varieties in Florida called Conck Peas which bear vines from 25 to 50 feet in length, but they are late to mature and better suited to the climate of Florida. We were unable to give full separate accounts of the many varieties of the Cow Pea which we raised last year, for the reason that they were sown too closely together. We shall avoid this mistake the present season.

LAST week we told here of a remarkable sale of orchids in this city; on the other side of the continent, too, there was lately a notable sale of bulbs by Carlo Corilla, "Botanist to the Court of Brazil;" a man of very prepossessing appearance, gentlemanly demeanor and persuasive foreign accent, all of which readily gained him the confidence of a number of wealthy San Francisco ladies. To each of them he confided that the failure of remittances compelled him to sell some rare bulbs of Brazilian Lilies, which he had intended to present to Mrs. Hayes on his approaching visit to the White House. The flower we are told, was to be a great scarlet bell, with ecru ruchings on the petals, a solferino frill around the pistils and a whole bottle of perfumery in each stamen. He sold about 50 nearly worthless bulbs for four dollars apiece—and those trustful San Francisco ladies also.

SHIPMENTS from the West to the seaboard, by rail, during the past fornight have been lighter than for years, owing to the persistence of the combination of railroads in keeping up freight rates, while shipments by the lake routes have been proportionately heavy. It is consequently expected that the trunk-line managers will soon be forced to lower their rates in order to secure business enough to keep their rolling stock moving. It is reported that several of the southwestern lines are already violating their agreement by making special contracts with large shippers, and "cooking" fictitious way bills. Already Railroad Commissioner Fink has warned the Peoria road against this underhand practice; but the warning is hardly likely to prove effective, unless the general rates are soon cut. The public is likely to be benefited by this dissension among the railroads—isn't there an adage to the effect that when certain classes fall out, honest men are likely to get their due?

YEARS ago a floricultural journal was started in Brooklyn (N. Y.) by the seedsmen, Beach, Son & Co. Mr. James Hogg was made the editor, though for some reason his editorship was of short duration. Later the seed establishment and journal moved to New York, where both were continued until a few weeks ago, when the well-known firm of B. K. Bliss & Sons bought them out. The first number of the American Garden, as published by the Messrs. Bliss and edited by our esteemed friend and contributor, Dr. F. M. Hexamer, is before us. There are twelve pages in each number, about the size of those of its distinguished namesake, the London Garden. Four numbers are issued per year, and the price is 25 cents, or ten cents for each number. We have no doubt at all that this handsome little quarterly will meet with all the success it deserves, and from all we know of its editor and the enterprise of its publishers, its deserts will prove of no mean order.

For Women.

CONDUCTED BY MISS RAY CLARK.

COUNTRY GIRLS.

Up early in the morning,
Just at the peep of day,
Straining the milk in the dairy,
Turning the cows away—
Sweeping the floor in the kitchen,
Making the beds up-stairs,
Washing the breakfast dishes,
Dusting the parlor chairs.

Brushing the crumbs from the pantry,
Hunting for eggs in the barn,
Cleaning the turnips for dinner,
Spinning the stocking yarn—
Spreading the whitening linen,
Down on the bushes below,
Ransacking every meadow,
Where the red strawberries grow.

Searching the "fixings" for Sunday
Churning the snowy cream,
Rinsing the pails and strainer,
Down in the running stream—
Feeding the geese and turkeys,
Making the pumpkin pies,
Jogging the little one's cradle,
Driving away the flies.

Grace in every motion,
Music in every tone,
Beauty in form and feature,
Thousands might covet to own—
Cheeks that rival spring roses,
Teeth the whitest of pearls;
One of these country maids is worth
A score of your city girls.

FASHION NOTES.

Street dresses are all short.

Gold glitters and sparkles on everything.

A great deal of red is used on black dresses.

New suits of white nainsook are flounced to the waist.

Languedoc lace is much used for trimming evening dresses.

Crepe lisse ruchings are set inside the brims of small bonnets.

Heliotrope and cream is the favorite combination of colors this season.

New dress buttons come in two sizes—one intended for the coat and the other for the dress waist.

Plain colored French buntings will be combined with figured foulards for wear at watering places.

Wide round collars, a full frill of deep embroidery edged with wide lace, are the fashionable style for children's wear.

Narrow plaitings form a favorite trimming for the foot of skirts; these are each three inches wide when finished, and are made to lap an inch upon each other; the plaiting is then pulled out of its flat folds to look as bunchy as possible.

Surtout suits, consisting of long coats of elegant shape, slashed in the back nearly to the waist, lined with bright silk, provided with handsome buttons and worn with skirts finished by simple knife plaitings, are a favorite style for handsome walking dresses.

The cheviots of pure wool loosely woven are among the favorite fabrics for spring costumes that will also serve for traveling dresses during the summer. They have what was called last year the "flannel finish;" are evenly but loosely woven, and are without luster. They are in small pin-head checks of cream with brown, two drab shades, pale olive with darker green, and two shades of gray.

There is a great display of fancy in the matter of trimming for bonnets. Flowers, both larger and smaller than in nature, are used—gigantic violets and carnations, and Lilliputian chrysanthemums. The predominant trimming at present is of gold, in the form of galloons, cords and pins simulating large nails, and red in the way of ribbons, linings, feathers and flowers.

Pretty percales and cambrics have dark blue, lavender or gray grounds, strewn with white polka dots. They are trimmed with narrow gathered ruffles edged with Russian braid edging or with torchon. Tucked yokes are on some of these dresses and a band edged with torchon lace borders the yoke, while below the yoke the waist forms a side plaited basque to be worn with a belt. Bands of plain blue gingham border the ruffles of striped blue and white cambric dresses.

Buttons are a matter of great importance in modern toilettes. They are most fanciful and varied in style. Some are of enamel with flowers in the Japanese style, others of tortoise shell inlaid with gold, of carved mother-of-pearl, of engraved steel, steel cut in facets, cut jet, etc., but the most artistic are those of china, painted by hand and enameled. Some of these are quite little marvels, each button of the set being ornamented with a different pattern and becoming real works of art.

No. 175.—Square; cross and Italian stitch.

The square is worked in cross and Italian stitch—it is suitable for the center or corner of a serviette; or it may be inserted between other squares of guipure netting or satin, for antimacassars, sofa-cushions, &c.

"MOTHER USED TO SAY SO."

We often hear this said as a last and conclusive argument by grown people and heads of families "Mother used to say so."

Weary mothers, bearing the burden and heat of the day, striving to sow good seed in the minds of their children, often feel sick with discouragement that they can see no immediate result of their labors. If they could look into the future they would see abundant cause for rejoicing. They would see in the mature years of their children that their own steadfast adherence to right principles, had given a lasting bias to their young minds, all the more strong, perhaps, because their parents had lived uprightly from a pure love of virtue, and not merely "to have an influence."

A friend was not long since relating to me a wrong that some person had wilfully done her and persisted in, and which she felt like resenting in the same spirit "but," said she, pausing, "Mother used to say that it was better to suffer wrong than to *do* wrong," and as she said it her flashing eye became moist with tears, and her voice steady with quiet tenderness, and a mother's influence came back with power to soothe and bless the irritated spirit of the child who had now reached the years of womanhood, and was obliged in her turn to take up life's conflicts. Walworth Co., Wis.

FIXING UP.

It takes a great many more things in these days to make people comfortable, than it used to when I was young; but I must allow, that I like to see pretty things around a house, scattered here and there, provided they do not cost more than a family can afford to pay for them. If people are ingenious, and can make nice things themselves, at home; it is a fine thing and nobody's business either; and it is probable that they enjoy making them, full as much, as they do seeing and using them after they are finished And then, the idea that one can make such things, all themselves, with little expense, is certainly very satisfactory. I saw one of the neatest rooms, furnished handsomely with an outlay of a very little money. I have seen furnishings that cost seventy-five dollars, that did not look as elegant, as the fixings in that great chamber; and that did not cost five dollars. Now, as the young couple were just starting in the world, and neither of them had a penny that they did not earn themselves, I thought how commendable it was, that instead of feeling sad, and envious towards those who were better off, they should establish themselves so comfortably, in their own pleasant home. They were so happy in doing it all, that it seemed, as if pleasant memories and happy thoughts, were driven into their heads with every nail, and fastened there, with each stitch. If all young folks would be content to begin life as they did, and only get what is needful to begin with and only allow such luxuries as they could afford or make themselves, it would do to get married; but when they all think they want the best of everything and a house full of it too; and run in debt to start with, they had better live single to the end of the chapter; for it would be but worry and botheration all the way through, and when too late, they would discover their mistake.

Grandmother.

CRITICISM ON "SOAP BOILING."

I have thought of writing a few lines for our column for a long time, but have kept putting it off because I did not know what subject to write on. As the season for boiling soap is near at hand, I think of a piece I read last summer or fall on that subject that I think was almost absurd. The person, in telling of her way of making soap, said "she had a kettle that held 80 gals., and had her ashes fixed in such a way that the lye was weak, and then boiled it down until it was strong enough to make soap." Now I thought what we were all trying to do and find out was, to save as much time and labor while doing our work, as possible.

I do not think that standing around a kettle keeping up fire and smoking your eyes out, as is usual at such times (for who ever knew the smoke to go any other way than in your eyes?), is just as pleasant as it might be. As for myself, I am fortunate enough to have a husband who is willing to do most of the soap boiling. He always tries to have his lye strong enough to carry an egg at the beginning, then it takes but a few hours to make a kettle of soap.

I love the Rural and always read the letters in our department with great interest. I have a great deal of trouble to preserve the papers, for I have two little boys who like it almost as well as I do, but are not as careful about preserving it.

Fault Finder.

A NICE BED COVERING.

White bed spreads are the nicest outside coverings for a bed, as they can be easily washed, and when clean, are always good as new. A very pretty design for one is made by taking two breadths of unbleached, 40-inch cotton cloth, and sewing it together in the middle. Five yards and a half is a great plenty. A box of stocking yarn

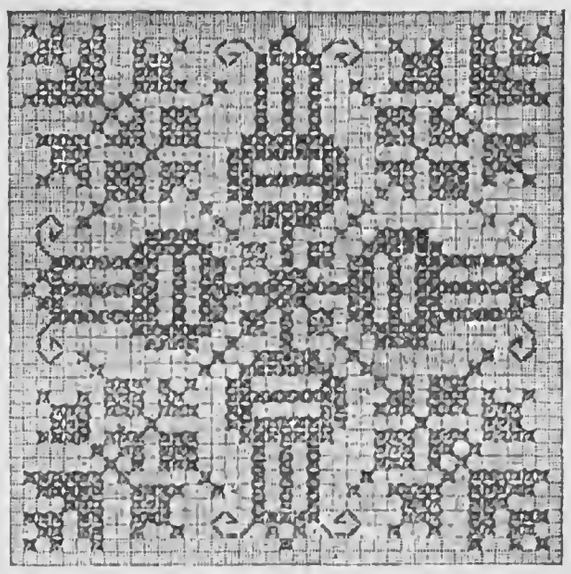

Fig. 175.

No. 8 is needed. Sew the cloth on quilting frames as you would a bed quilt. Stretch it smoothly, then with a chalk and line, mark it corner-wise, in diamond form, having the checks about an inch and a half in size, then with a large needle, and a yard of cotton yarn threaded, take a stitch half an inch in length, bring the needle back half way, keep the stitches close together, so it will look like a small cord; it is very rapidly done, if you like to do it. A knot in the center of each diamond looks pretty. A row of Roman heraldry all round the quilt, is a pretty finish. A hand hem finishes up the spread, and it is a nice, durable article that will last for years; is easy to wash, and is as heavy as is needed. S. H. R.

LOVING WISELY, BUT NOT TOO WELL.

"The man or woman who has never loved, hugged, kissed, played with, listened to, or told stories to a child, has missed one of the cardinal joys of life." Exchange.

Nothing truer was ever written. It is impossible not to love and caress a bright, healthy, laughing child, but it takes more than human wisdom to restrain such affection within its proper bounds; to love discreetly so as to be able to see and correct their faults gently, to have patience with their shortcomings, to restrain their wilfulness and to take a wise course between over indulgence and unnatural repression. This is truly an art. Blind affection springs from the selfish propensities and not from a development of the highest qualities of the mind. It is the purest kind of affection which sees the faults of those we love, although it is thought by some to be a lack of it. Do we not see daily examples of parents who love their children, if not too well, at least unwisely? It is a fault that wrongs all concerned, the little ones whose faults go uncorrected, and the older ones who indulge their selfishness at the expense of spiritual growth. B. C D

HINTS.

I would like to add something to "Grandmother's" advice relative to cleaning painted floors. The first time you wipe it up after it is newly painted, be sure to use only skimmed milk—that seems to render the paint very durable.

Perhaps some one would like to know how to utilize small pieces of canton flannel that collects so rapidly in a family. You can get rid of the long, narrow pieces by making wicks of them for kerosene lamps. Make them double, sewing the raw edges together. I have used no other for the past nine years.

Let me suggest to mothers who are making dresses and aprons for the little ones, to make the sleeves an inch or more longer than needed, letting the surplus length project at the arm size, and when the sleeve needs to be lengthened (and it seems to me that no part of a child grows as rapidly as the arm) it is so easily done by ripping out the sleeve and sewing it in again at the top of the sleeve. Mrs. P. C. C.

A Timely Suggestion.—Parents should teach their children to gargle their throats, for it may be the saving of their lives. It is easier to teach them this somewhat difficult and awkward feat while in health than to attempt it when they are prostrated by disease.

PARIS WIT AND GOSSIP.

Mme Woillez: Grief counts the minutes; happiness forgets them.

Sanial Dubarg: The more a woman is idle the more her heart is occupied.

Mme de Sartory: words are the key of the heart.

Suard: No woman speaks of women without thinking a little of herself, and never thinks of herself without thinking a good deal of others.

Mlle. de Seudery: A jealous man always finds more than he looks for.

A wife no more believes in business which takes her husband away from her, than a manager believes in the sickness of an actress, or a publisher in that of a writer.

Nicole: Ugliness and beauty depend upon the caprice and the imagination of men.

Mme de Genlis: Ugliness, after virtue, is the best guardian of a young woman.

Mlle de Seudery: One of the noblest effects of love, is to produce liberality.

Mme Staal Delaunay: Liberty is incompatible with love. A lover is always a slave.

Lemontez: The abuse of books kills the health and the modesty of women.

Adolph Ricard: To marry when you are sixty a beautiful girl of twenty-five is to imitate those silly creatures who buy books simply for the pleasure of their friends.

Bigniout: Beauty deceives women in making them establish on an ephemeral power the pretensions of their whole life.

Mme. d'Aulnay: Love, like fear, makes us believe everything.

Louis Desnoyers: Women who love are always afraid they are not loved. Women who do not love always flatter themselves that they are loved.

Mme. Deslordes Valmou: Nothing is so near love as pity.

Adrien Dupuy: In love, to give a portrait is to promise the original.

Mme. de Sartory: No conversation is more tiresome than that of a lover who has nothing to desire and nothing to fear.

Mme. de Coigny: A coquette who takes a lover is a sovereign who abdicates.

Mme. de Epinay: The trade of woman is very hard.

Segur: Men make the laws, women make the customs.

Fontinell: To be able to please is already a great advance toward persuading.

Literary Miscellany.

JOHN ASCOTT'S DAUGHTER.

BY CHARLES RICHARDS DODGE,
Author of "Louise and I."

(Continued from page 285)

CHAPTER VII.

IN THE TRACES.

"I declare, May, here is an idea," George remarked one evening, looking up from his newspaper.

"What is it?" she questioned.

"It's an article on tree-planting. Why can't I set out a lot of maples along Prospect road? Here's an old farmer that planted trees twenty years ago, not only in the public highway, but all over his farm, wherever he could find room for one, and he tells here how much his farm has enhanced in value, in consequence. I'm going to put that into practice."

"You ought to take two or three good agricultural papers, George; doubtless you will find new ideas every day."

"I know it," he answered, "but goodness me! I can't afford it."

"Yet you are always ready to put improvements on the farm," his wife made reply; "wouldn't it be well to profit by the experience of others, and perhaps save money enough to pay for the papers? I shall find them useful too."

"For covering the shelves in the pantry?

"Why, aren't you hateful? No, to assist me in getting up new delicacies for *you* to eat. Then there are always hints towards making home pleasant, and descriptions of little household elegancies innumerable. I saw in a paper a few days ago a clubbing list of journals that would be furnished at reduced rates if a number were taken at the same time, and I cut it out. I'll go and get it."

When she returned George took the list. Going over it together they selected four good periodicals, which it was found could be furnished at the price of three. He then made a memorandum of them in his note-book for future reference and their conversation was resumed. A few days after he was astonished at finding one of the journals in his box at the post-office. He asked May what it meant, but she merely made a remark about specimen copies and went on with her work. In a day or two there were two more, and he began to "mistrust" a mouse in the meal tub, and after the fourth made its appearance he suggested to his wife that there were two or three scientific periodicals he would very much like to take, provided he could be put on the free list.

"Seriously, May," he asked, "how did you subscribe for them?"

"Oh, I just wrote to one of the publishers," she answered, demurely.

"But the money?"

"I sent it by mail, of course."

"But where did you get it?"

"Oh, that's another question—where do you suppose?"

"I wish you wouldn't tease a fellow so."

"Well, then, I saved it."

"Out of what, pray?"

"Out of our regular monthly allowance for general housekeeping expenses."

"Why, May! Have you any more?"

"George Ashton, that is unfair. I shall object, as they say in law. But I will give you a piece of advice, the sentiment of which is as old as the hills, and which by applying to your farming operations, may enable you to purchase your own periodicals: *Save where you can—spend when you must.* Now that's real easy to remember, isn't it?"

"Easy enough to remember," her husband answered.

"Please remember it then, George."

They had been upon the farm just six months and the young farmer was beginning to realize that there was a deal of real hard work in farm life, with little time for play. At first he made many mistakes, and had to do some of his bad work over again, but in the main he felt that he was upon the right track. His college experience was no small help to him now, and he thanked his stars that he had been wise enough to study thoroughly two sciences: chemistry and zoology. He read up upon the subject of fertilizers, and with his previous chemical knowledge readily posted himself as to the exact value to him of the different kinds in the market, as well as the value of the manure made upon the farm. He then talked with

his rural neighbors, learned their experience, and after familiarizing himself with the particulars, endeavored to find out the peculiarities of the different portions of his farm, that he might put his crop where the conditions of growth would be most favorable. He had no experience of his own to assist him and little knowledge of the routine operations of ordinary farm life, so he was obliged to rely to a certain extent upon an Irish farm hand, who had been upon the place for several years. "Old Peter" generally hit the nail squarely on the head when he ventured an opinion, but he was never able to give the why's and wherefores, so the young proprietor usually conducted his "practice" after a formula of about equal parts of Peter's experience and his own reason, with a good, strong sprinkling of "science," as his father had called it.

His college lectures had given him knowledge of the principles of stock breeding, and although not a stock farmer, the knowledge was nevertheless useful to him. When the potato beetles first made their appearance, he was ready for them. He knew the whole tribe down to their forty-second cousins, and lost no time in declaring war against the small first brood as soon as they appeared. As a consequence he had a very small second brood to contend with, while his neighbors were eaten up before they were hardly aware of an attack. Then he discovered one day a new insect attacking his corn—he was always looking out for specimens for his cabinet—and the further he examined, the greater he found the damage. It was entirely new to him, it is true; but through his studies he had gained a knowledge of the family to which he clearly saw it must belong, and a remedy suggested itself at once. Not fully satisfied, however, he looked the matter up in one of his text-books, and finding that an allied species was often quite destructive in Europe, learned the means that had been employed to prevent its ravages there, and saved his corn crop. He was well posted upon the bird question, knew his friends from his enemies, and was content to have a little fruit spoiled for the sake of the benefit received from the presence of the saucy bipeds at other seasons. In short, he farmed with his eyes open, and sought to take advantage of everything that would save either money or time, for he early made the discovery that *time is money*.

His hobby was improvements, and wherever he saw an opportunity to add to the resources of the farm by the outlay of a little money, he put the money into it hoping to get it back again with interest in a year or two. Under-draining a swampy piece of ground was about the worst of his miscalculations, for having had no experience in such matters, and Peter never having seen the operation performed, he hired it done by the day and it cost him roundly. Even May suggested that he had better send the men off, and complete the work himself, after they had been employed a reasonable time, but George thought it ought to be done right—so they made a "job" of it. It was a great benefit to the farm, of course, for more hay was needed than the mowing fields could produce, and the swamp in its former condition was worth very little for any purpose. It would require the hay crops of a number of years to pay the cost, but in the end George thought it would be a gain.

Then he constructed a fish-pond at the lower end of the farm, beyond this old swamp, conducting the water of several springs into it. It was another of those nice little farm improvements, that, done cheaply are a source of profit in a very short time, but in this case the estimated cost and the actual expense when finished bore about the same ratio to each other as 1 to 3, and he charged himself with a heavy bill of "experience."

Fortunately the crops were good in his first year; he realized fair prices for what he sold, and altogether congratulated himself that he was a successful farmer. May wanted "to see the books for it." The accounts were therefore examined, and it was found they had barely made a living, the "working capital" was about exhausted, and the improvements had swallowed up nearly the entire profits of the summer's labor. Provision had been made for the winter, and George felt that with a little rigid economy and more careful management, another year he would certainly come out ahead. But for all this, many evenings were spent in figuring and in making calculations, which occupation May regarded ominously, though the young farmer said nothing.

CHAPTER VIII.

CLOUDS.

In all the months that the young couple had passed since coming to Maplewood, little had been seen of George's family. His brothers had each called once. Charlie's wife had been out to the farm several times to see May, for whom she professed a liking, the young wife returning the calls, after waiting as long as strictest etiquette would admit. It was during the last visit to S—— that an incident occurred which brought the first real unhappiness of her married life. Driving in from the farm one day to attend to some necessary purchases, she carried with her, at George's suggestion, a can of sweet cream for Charlie's wife, and at her own suggestion—unknown to her husband—a roll of delicious butter for old Mr. Ashton, though he had never deigned to show his face at the farm. She had about finished her call at Charles's, and left the package of butter to be sent to Mr. Ashton, when to her great surprise the old gentleman walked in.

"This is May, father," Sarah said by way of introduction.

"How d'ye do?" said he, politely, "I'm glad to meet ye."

"It gives me pleasure to meet you," she answered, pleasantly, "I think you hardly remember me as——"

"What name, please?—I'm a little deaf."

"May Ashton, father, George's wife," Sarah interposed.

"Oh, it's that Ascott gal, is it?" he replied, looking hard into her face, "I told George if he brought an Ascott into the family I would disown him, and I have."

May was ready to sink into the floor with mortification and astonishment. Her cheeks burned like fire and her eyes swam so that, for the time, she saw nothing. Composing herself in a few moments, she said as she rose to go, "Pardon me, sir, for intruding myself in your way; George did not tell me that or I should never have become his wife." Then holding out her hand to Sarah, she whispered, "good bye," and then started hastily for the door.

"Don't mind him, sister May," said Sarah, throwing an arm around the poor girl, as they stood alone in the hall, "it is all for the best, and *we* love you dearly. I will come and see you to-morrow. Don't think of it again," and kissing her tenderly, she led her to the carriage.

How she reached home, she never knew, for hidden behind her veil, pent up anguish found expression in blinding tears. Upon reaching the house, she sought her room immediately, and, throwing herself upon the bed, cried as though her heart would break, reproaching herself for not questioning her husband more closely regarding the difficulty with his father, 'ere she became his wife. In an hour she grew more calm, though the red swollen eyes and tear-stained cheeks, and the deep drawn sob, at regular intervals, told how poignant was her grief. In this condition, George found her, upon returning from his afternoon's work. Amazed and astounded, he approached the prostrate girl, throwing himself on his knees at the side of the bed.

"My darling wife, what is the matter? Tell me," he exclaimed, passionately seizing her hands, and looking into her face. She slowly turned towards him, her brown eyes resting pathetically a moment upon his own, and her lips attempted to speak.

"You—your—father—" she commenced, but a great choking sob refused her further utterance, and throwing her arms around her husband's neck she again gave herself up to her grief.

It was an hour or two before she could gain sufficient control over her feelings to tell what had happened, and thus George heard a recital of the brief words that had brought so much unhappiness to his household. At first his anger knew no bounds; he would resent the insult even if it had come from his own father. May entreated, and he changed his mind. Then he wrote a scathing letter covering an entire page and a half of foolscap. Finding this too wordy he tore it up and gave instead half a page of wholesome advice, in more condensed form; but he never sent it, for May said no, and he did not like to disregard her wishes. It was a bitter drop in the young wife's cup, and for a time the source of great unhappiness, causing the first real disagreement that had occurred in their wedded life. She reproached her husband for deceiving her when she had first questioned the state of old Mr. Ashton's feelings before their marriage, and he in turn used all the arguments in his power in a vain endeavor to make his wife view the matter in the light in which it appeared to him.

"Am I never to be forgiven, May, for the sin of marrying you in spite of my family? I thought I was giving you a proof of my devotion. It seems to me quite enough to have incurred my father's displeasure without having to lose my wife's affection into the bargain."

"It was a selfish devotion," she answered; "or you would never have subjected me to so much misery and unhappiness, as I have experienced in these last few weeks. It was *cruel*, George."

"Heaven and earth! May, you will drive me distracted. I, cruel and selfish, and toward you?—You for whom I would have made any sacrifice in the world—nay, did sacrifice friends, fortune, and nearly everything but my name, to show how deeply I loved you? Yes, perhaps I was selfish, selfish in the thought that I could not endure to live without you—and cruel in my selfishness by keeping from you the foolish prejudices of an old man who had never seen you. Had I loved you less, my course might have been different. You have often reproached me of late, and as often told me our marriage would never have taken place had you dreamed of such opposition. May I now ask you, kindly, in view of such a course where *your* love could have been?"

"Duty, George, may outweigh love."

"Duty to whom?"

"Duty to each other," his wife answered, adding, as she threw herself upon the sofa; better a hopeless love than an unhappy marriage."

"You are as unreasonable in your alternatives as my father—more so in fact—for he forced me to choose between the girl I loved, or a few paltry thousand dollars,—both supposibly desirable—you would have me choose between disappointed love on the one hand, and a life of wedded misery on the other. Thank you, I do not care to take either horn of the dilemma."

"You are hateful!" she exclaimed, rising hastily from her reclining posture, a vivid spot of carmine burning upon either cheek."

"Come, come, May! must we thus early in our married life set up a skeleton in the domestic closet? Forget my father's petulant words, and in your own consciousness of right, live above them."

"I can never see it as you see it," the young wife answered, "for you know little of a woman's nature, which cannot—no, *will not* bear insult and contumely from those that never have been wronged in thought or deed."

"Well,—all is if you prefer to hang up the skeleton, let it hang, I shall take precious good care not to rattle the dry bones, I assure you," and with an impatient toss of the head, the young man quitted the room and walked rapidly in the direction of the barn.—[To be continued.

Events are not in our power; it is always better to make a good of even the worst.—Berkeley.

NEW PUBLICATIONS.

The American Anthem Book, by A. N. Johnson, J. H. Tenney and A. J. Abbey. Published by Oliver Ditson & Co.

Things go by fashion, even in church worship, and the present fashion is something like this: the choir to sing one good anthem, by way of opening piece or voluntary, and, for the rest of the time, merely to lead the congregation in their well-worn and simple tunes.

It is evident, then, that we need a large variety of Anthems, such as average chorus choirs can sing; and average chorus choirs cannot sing difficult music.

The American Anthem Book is, we understand, principally the work of Messrs. Tenney and Abbey, who have been "saving up" anthems for it for years. The third author has contributed his valuable critical knowledge, and arranged the anthems to suit the needs of choirs, with which no one person is more familiar.

There are anthems for every Sunday for two years in the collection, and all seem to be in good form and fine taste, as well as easy.

Art Needlework for Decorative Embroidery: A Guide to Embroidery in Crewels, Silks, Applique, &c., with Instructions as to Stitches and Explanatory Diagrams. Containing also, A Short History of the Art of Embroidery. Reprinted with additions from the English. Edited by Lucretia P. Hale. Boston; S. W. Tilton, & Co.

Now that the decalcomanie fever has abated, and those who care truly for art have set themselves to make a study of it in one or more of its various branches, works like "Art Needlework" are necessities. The book is carefully edited.

Coligny. By Walter Besant, M. A. Published by G. P. Putnam's Sons. Price $1.25.

This volume endeavors to show how one man of indomitable patience, steadfastness and clearness of brain, brought together the Protestantism which lay scattered over the whole country. When the cause seemed really won, the Admiral was slain by an act of treachery, the equal of which has not been recorded. The author says, "other great men adorned that age of struggle and upheaval: he overshadows them all. It is in the earnest hope that his history may serve at once as an encouragement and an example that I send it forth."

The American Primer, No. IV.: entitled, The Throat and Voice. B. J. Salis Cohen, M. D. Philadelphia: Lindsay & Blakiston. Price 50 cents.

The author has aimed to explain in clear and concise language the structure of the throat, its ailments and their treatment; the production of the voice; its modifications, defects and preservation. This is an admirable treatise belonging to a series of works which must have value for everyone interested in science and hygiene. It gives the information that all should have, and still it is not pretentious nor detailed beyond the demand of every reader.

The Manliness of Christ, by Thomas Hughes. New York. Houghton, Osgood & Co., publishers. Price $1.00.

The motive of the book is truly a good one. It treats of the character of Christ in relation to every day life, showing a perfect life, the equal of which has never been attained. To preach merely of His divinity is not sufficient to reach the many who need a living example, or a knowledge of such.

Some Practical Hints on Wood Engraving, by W. J. Linton. Boston: Lee & Shepard, publishers. Price, $1.25.

This work treats of various modes of wood-engraving. Much information is given in a condensed form, but the reader will be rewarded with entertainment as well as mere facts.

MAGAZINES FOR MAY.

Lippincott's Magazine.—Lippincott's Magazine for May opens with an illustrated paper on Richfield Springs, which, besides an attractive description of this much frequented watering-place and much information that will be useful to all who think of spending part of the summer there, gives some interesting particulars about Fenimore Cooper and Judge Nelson, whose farms at Cooperstown lie within an easy drive from Richfield. A descendant of the famous novelist, Miss Constance Fenimore Woolson, contributes to this number a quaint and touching story entitled "Miss Grief." The first of a series of "Studies in the Slums," by Mrs. Helen Campbell, gives a striking account of the mission in Water Street, New York. The concluding paper of Octave Thanet's able discussion of the condition of "The English Workingman" deals with another and not less pressing social problem. "The Backwoods of Guatemala" are graphically pictured with both pen and pencil in Dr. Oswald's "Summerland Sketches." Nena Sturgis has an illustrated article on "Ancient Maskers and Modern Carnival." F. M. Osbourne gives an amusing account of a "Funeral in a Chinese Fishing Village," and Phebe D. Natt describes the methods of instruction in the various "London Art Schools." There are several short stories, including a lively sketch of negro life by Jennie Woodville; "Adam and Eve," by the author of "Dorothy Fox," grows in interest, and the "Monthly Gossip" is full of good things, embracing reminiscences of Charles Dickens and the Countess Ida Hahn-Hahn, with several short articles on social and literary topics.

The Herald of Health.—Contents: The Secret of a Clear Head. (5) By J. Mortimer Granville; Crooked Spines, by Dio Lewis, M. D: Paternity, by Julia Ward Howe; Our Dessert Table; Her Face is Her Fortune—The Dashing Waters' Sorrow—Believe and Trust—Happiness. Topics of the Month; Eat Slower; Supposed Cause of Intermittent Fever—Health Hints for May; The properties of a good Apple—Effects of a slight Wound—Milk Record of Hygienic Progress. Studies in Hygiene for Women; Womens' Dress; Benefits of a Cheerful Disposition—The Coming Woman—Neglecting Cold in the Head; Peevishness a Disease—Hindoo Girls—One Use of the Brain—Chilblains; Current Literature; Health Foods.

Supposed Cause of Intermittent Fever.—For a long time investigators have been seeking the cause of intermittent fever. In a recent number of a German scientific periodical are given the investigations of two eminent scientists which go to confirm Prof. Salisbury's investigations made in this country 20 years ago. These two investigators spent several weeks during the Spring of 1879 in the Agro Romano, notorious for so much of the worst form of ague and remittent fever.

They examined minutely the lower strata of air, the soil, and the stagnant water of the region and found in it in great abundance a microscopic plant of a peculiar shining color, longish, of oval shape, and capable of motion. In order to test the matter thoroughly, they filtered out a quantity of these plants, dried them, and then inoculated healthy dogs under the skin with the residuum. The result was the animals suffered with malarial fever, having it with all those peculiar features which are observed in human beings. While this is, perhaps, not conclusive, it certainly is very suggestive, and goes far to prove the truthfulness of the germ theory of disease at least so far as malarial fever is concerned. The spores were found not only in the water but in the soil and lower strata of air.

The hygienic lesson to be learned from these investigations is, to get rid of the stagnant water which is filled with them, by thorough drainage. There is nothing new in this; but old lessons must be repeated over and over again before they are learned by heart.—*Herald of Health.*

Sabbath Reading.

THE GOLDEN SIDE.

BY M. A. KIDDER.

There is many a rest on the road of life,
If we only would stop to take it;
And many a tone from the better land,
If the querulous heart would wake it.
To the sunny soul that is full of hope,
And whose beautiful trust ne'er faileth,
The grass is green and the flowers are bright,
Though the wintry storm prevaileth.

Better to hope, though the clouds hang low,
And to keep the eyes still lifted:
For the sweet blue sky will soon peep through,
When the ominous clouds are rifted.
There was never a night without a day,
Nor an evening without a morning;
And the darkest hour the proverb goes,
Is the hour before the dawning.

There's many a gem in the path of life,
Which we pass in our idle pleasure,
That is richer far than the jeweled crown,
Or the miser's hoarded treasure;
It may be the love of a little child,
Or a mother's prayer to heaven,
Or only a beggar's grateful thanks
For a cup of water given.

Better to weave in the web of life
A bright and golden filling,
And to do God's will with a ready heart,
And hands that are swift and willing,
Than to snap the delicate silver threads
Of our curious lives asunder,
And then heaven blame for the tangled ends,
And sit to grieve and wonder.

As to serving the Lord with cold hearts and drowsy souls, there has been too much of it; and it causes religion to wither. Men ride stags when they hunt for gain, and snails when they are on the road to heaven. Preachers go on see-sawing, droning, and prosing, and the people fall to yawning and folding their arms, and then say that God is withholding his blessing. Every sluggard, when he finds himself enlisted in the ragged regiment, blames his luck, and some churches have learned the same wicked trick. I believe, that when Paul plants and Apollos waters, God gives the increase; and I have no patience with those who throw the blame on God, when it belongs to themselves.—*C. H. Spurgeon.*

Christianity is its own best evidence. Give us more and more of real Christianity, and we shall need less and less of its evidences. "Ye are my witnesses," says Christ to His disciples. One truly Christian life will do more to prove the divine origin of Christianity than many lectures. Hence, it is of much greater importance to develop Christian character, than to exhibit Christian evidences.—*J. Monroe Gibson.*

God always has an angel of help for those who are willing to do their duty. How often have we been afraid to undertake some difficult work for Him; but as soon as we laid hold of it the rock of hindrance was removed. The tempter told us that if we attempted to save some hardened soul we should encounter an immovable adamant. We had faith enough to try; and prayer brought the power which turned the heart of stone to flesh. Evermore the adversary is busy in frightening us from labors of love for our Master.—*Theodore Cuyler.*

Meditate long, meditate humbly on what it is to have a Creator, and comfort will come at last. If broad daylight should never be yours on this side the grave, He will hold your feet in the twilight that they shall not stumble, and at last, with all the more love, and all the more speed as well, He will fold you to his bosom, who is himself the Light Eternal.—*F. W. Faber.*

Let us serve God in the sunshine, while he makes the sun shine. We shall then serve him all the better in the dark, when he sends darkness. It is sure to come. Only let our light be God's light, and our darkness God's darkness, and we will be safe at home when the great nightfall comes.—*F. W. Faber.*

THE success or failure to be a good and true man depends largely upon one's obedience or disobedience to the convictions of duty which every man at times feels.—*Golden Rule.*

THE world judges of benevolence by what it sees in the hand; God judges of benevolence by what He sees in the heart.—*John Cumming.*

REPENTANCE without amendment is like continual pumping in a ship without stopping the leaks. —*Palmer.*

Domestic Economy.

CONDUCTED BY EMILY MAPLE.

TIMELY HINTS FOR HOUSE-KEEPERS.—No. 1.

MRS. L. P. ROBINSON.

Before House-cleaning.

As house-cleaning time rolls round, I can but reiterate the oft-repeated advice, "Don't tear up the whole house at once; don't rush things; don't overtax your strength at first and then drag through the remainder half sick, but go moderately about it."

Take some warm, sunny day and begin with the garret. Once a year—and spring is the most convenient time—overhaul every bag and basket, every box and barrel, unrolling and shaking out the contents of each. In this way the accumulation of useless articles will be prevented and all moths destroyed. You will probably discover some garments that you had forgotten, that, with a little ingenuity, can be made over for Jessie or John, and do nicely for spring wear. Place all such articles together in a basket to be conveyed to your sewing room, so that when an opportunity presents itself they may be at hand, and so prevent delay in hunting them up.

You will find good cleaning cloths, both cotton and woolen, and these should be laid in some convenient place. You will look into your carpet-rag barrel, fastening the ends of the balls neatly and putting the uncut rags where they can be easily picked up, to be cut and sewed in odd moments; they should all be sewed up once a year. My grandmother instructed me in the art of cutting carpet-rags; everything must be cut lengthwise, almost by a thread. I have since learned that it answers equally well to round the corners of coarse, firm material, and cut around the whole piece, leaving it in one length from beginning to end. In this way I can make a ball with but very little sewing.

The paper rags must be assorted, the white ones kept carefully by themselves, and placed in readiness for the rag-man.

The piece baskets should not be neglected, but subjected to the same scrutiny. The new remnants of worn-out cotton garments give to Jessie for her patch-work, the woolen scraps roll together, to be cut in narrow bias strips, and knit into a pretty hearth-rug at your leisure. Empty the box containing the dried fruit. Shake the bags and turn them wrong side out, or, what is better, have clean ones; then, after a careful examination, if no sign of worms be found, put them again in the bags. As apples are more liable to be affected than other fruits, it is safest to put them in a dripping-pan in the oven and heat them hot.

Carry out and destroy everything that you are sure can be of no further use—things that will find their way into a garret, such as broken dishes, leaky tins, old dilapidated furniture, old boots and shoes. By the way, old leather makes a bright, hot fire, and is just the thing for a quick blaze in case of an emergency.

All old carpeting or bedding should be hung out in the wind, and the fur robes also, before packing them away in tansy and ailanthus seeds or tobacco, to prevent the ravages of the ever-present moth.

Some one has recommended—and I heartily indorse the suggestion—that every house should hold a trunk containing half-worn clothing, sheets and pillow-cases, in readiness for sickness. For this purpose a double-gown, made of two calico dresses, might prove serviceable, as well as some soft handkerchiefs, bandages and lint; also, plenty of linen, cotton and woolen pieces. While overlooking the various receptacles of such articles, it would be well to remember this timely hint, and collect them against a time of need.

After having accomplished so much, you will then be prepared to clean in earnest, sweeping down the cobwebs as far as practicable, washing the windows and mopping up the floor; then, when the boxes, baskets and barrels are once more in the corner, if you have worked according to the preceding suggestions, you can calmly rest upon your oars until the weather grows warmer, in full consciousness of having faithfully performed a most disagreeable task.

CANNING TOMATOES IN TIN.

IN the early days of our house-keeping we firmly resolved that all our fruit, tomatoes, etc., should be canned in glass, and nothing else—fruit so preserved was so pure, could always be seen, admitted of no chance of becoming poisonous, etc. Well, that resolve was persevered in for the first five years, and in that time I do not think that we ever saved one-half dozen cans of tomatoes. All other articles, except peas, kept well enough; but the tomatoes would either sour, or become tasteless, although they looked bright and fresh. Some one advised a change to Rockingham ware as the nearest approach to glass. That was tried with a little better result. Next stone-ware received a trial, but that also, sometimes failed. As a last resort tin was tried and since then no trouble is experienced. Our tomatoes are just as good as need be. Being very fond of them sliced we made an attempt to preserve them for that purpose for winter, during our last canning season. The tomatoes, Golden Trophies, were pared the same as apples without scalding, and cut in thick slices into the cans, holding one quart or a little more each. The cans were then placed on the stove and slowly heated through, no water was put with them, and when hot enough to raise steam the lids were pressed on and fastened down with putty. Those tomatoes were a treat to us all through the winter. They came from the cans in whole slices and were eaten with vinegar, salt and pepper. Why any one should desire tomatoes to keep better than they did in tin is a problem. M. F. M'CLOUD.

DOMESTIC RECIPES.

Orange Sherbet.

Four quarts of water; four pounds of granulated sugar, four beaten eggs, the juice and grated rinds of four oranges and juice of two lemons. Beat the sugar and eggs together, then add the water and grated rind. Freeze like ice cream. The strained juice of the oranges and lemons should not be added until the mixture begins to freeze.

Strawberry Meringue.

Make a good pie crust, roll out quite thin, cut out round as large as a pie plate and bake on a flat tin. When a light-brown, take out, lay strawberries rolled in sugar over it, and cover with a meringue made of the whites of four eggs and four tablespoonsful of powdered sugar. Return to the oven and bake until the top is browned. Eat cold.

Strawberry Ice-Cream.

Three pints of thin cream, two pounds of powdered sugar and three pints of *ripe* strawberries. Mash the fruit, strain through a fine wire strainer, add the cream and sugar and freeze as rapidly as possible.

Excellent Lemon Pie.

Two cups of granulated sugar, four eggs, two lemons, two and a half tablespoonsful of corn-starch, two tablespoonsful of butter, two cups of boiling water. Beat yelks very smooth, add the corn-starch, stir into the boiling water, add the sugar, juice, grated rind and butter. Let thicken over the back of the stove; then pour into pie-tins lined with good paste. Bake until you think the under crust is well browned. Beat the whites until a stiff froth, add four tablespoonsful of powdered sugar; spread over the top and return to the oven until slightly browned. MARY B.

Raspberry Shrub.

Place red raspberries in a stone jar and cover with good, although not too strong, cider vinegar, and let stand over-night. In the morning strain, and to each pint of this juice allow a pint of sugar. Boil 10 minutes, then bottle and seal at once. MRS. C.

Raspberry Vinegar.

Fill a stone pot with raspberries, either red or black; cover with the best of vinegar; set in a cool place and let stand for a week. Strain the whole through a thin bag, crushing out all the juice from the fruit. To each pint of this liquor add a pound and a half of lump sugar; boil until the sugar is dissolved; remove any scum and take from the fire. When cool bottle and cork tightly. Two tablespoonsful of this vinegar stirred into a tumbler of ice-water makes a most refreshing summer drink. MRS. A. L. M.

Pickled Cauliflower.

Separate into small clusters. Make a brine, bring to a boil, skim, put the cauliflower into the boiling water and *simmer* five minutes. Take out into a pan of very cold water. Prepare vinegar for pickling with mace, black and a little cayenne pepper, celery salt or seed and a few cloves. Pour over hot. A. P.

Asparagus.

It is much better to roll up the bunches in muslin than to depend upon a string. Boil in salted water until very tender. Toast some slices of thin bread, dip into the water in which the asparagus was boiled, butter plentifully. Take up the asparagus and place upon the toast. Two or three tablespoonsful of melted butter may be turned over it and a little vinegar added, if liked.

Miscellaneous.

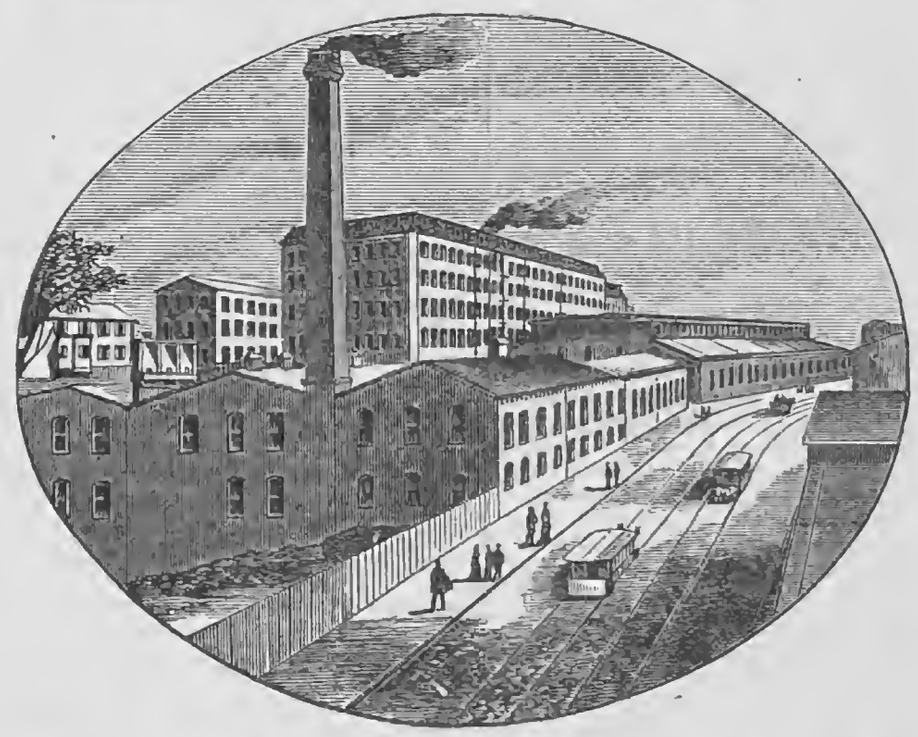
Trade **LONDON PURPLE.** Mark.

Valuable insecticide for the extermination of the COLORADO BEETLE, COTTON WORM and CANKER WORM. For Prices, Circulars and opinions write.

HEMINGWAY'S LONDON PURPLE COMPANY, (Limited) 90 Water St., New York.

Professor C. V. Riley says: London Purple can be more effectually sprinkled or sprayed on to the plant than Paris-green, by virtue of its greater fineness.
Professor C. E. Bessey says: It promises to be a most excellent remedy. It quickly kills both the Larva and the Winged Insects.
Professor J. L. Budd says: A single application placed every one of the pests on their backs over the ground, either dead or in a dying condition, in less than six hours.

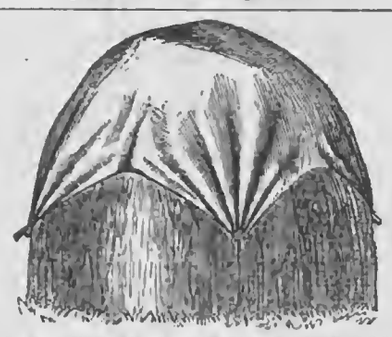
CARPETS.
SAVED BY PURCHASING DIRECT FROM



We have now open an immense stock of the most approved varieties of CARPETS and FLOOR COVERINGS
MANUFACTURED BY OURSELVES
Expressly for this season's Retail Trade, consisting of AXMINSTERS, WILTONS, VELVETS, BRUSSELS, INGRAINS, &c., &c., in
New Styles and Designs.
These goods will be found to combine in an unusual degree, Elegance of Appearance and Positive Wearing Qualities, and are well worthy of the inspection of intending purchasers.
We also offer a Full Line of TURKISH and EAST INDIAN RUGS and MATS, CHINA MATTINGS, OILCLOTHS, &c., &c., AT THE LOWEST POSSIBLE PRICES.
Special Inducements offered to Churches, Steamers and Hotels.
J. & J. DOBSON,
CARPET MANUFACTURERS AND RETAILERS,
40 & 42 WEST 14th ST., N. Y., Near 6th Av. Elevated R. R. Station
JOHN VAN GAASBEEK, Manager.

The Aquapult (in operation.)

W. & B. DOUGLAS,
Middletown, Conn., U. S. A.
BRANCH WAREHOUSES: 35 & 37 John St., N. Y., 911 Lake St., Chicago, Ills.
Manufacturers of
PUMPS,
Hydraulic Rams, Garden Engines, Pump Chains, Curbs, etc.
Highest Awards at all the World's Exposition.
WORKS FOUNDED IN 1832.
The cut represents our **Aquapult** a newly-improved brass hand force pump, Fire Extinguisher, Garden Engines, Window and Carriage Washer, will throw water 60 ft. Sent to any address C. O. D., price $9. Illustrated Catalogue on application.



HAY CAPS AND STACK COVERS,
Tents, Awnings, Covers
FOR
Horses, Wagons or Goods.
And Everything Made of or Finished with Cotton Duck.
FLAGS AND BANNERS,
OF SILK OR BUNTING,
FOR ANY SOCIETY OR NATIONALITY.
GILBERT HUBBARD & CO.,
202-208 South Water Street, Chicago, Ill.

INGALL'S PAT. LINK AND CHAIN
Will make or mend your chains, of all sizes, without tools. Inquire at your Hardware store or address

INGALL'S MFG. CO., Providence, R. I.

AGENTS WANTED EVERYWHERE to sell the best **Family Knitting Machine** ever invented. Will knit a pair of stockings, with **HEEL**, and **TOE complete**, in 30 minutes. It will also knit a great variety of fancy work for which there is always a ready market. Send for circular and terms to The Twombly Knitting Machine Co., 409 Wash'g'n St., Boston, Mass.

EGGS FOR HATCHING.
Light Brahmas, Buff Cochins, Plymouth Rocks, White and Brown Leghorns, Pekin, Rouen and Cayuga Ducks.
$2.00 FOR 13.
Packed in baskets and sent to hatch. Stock second to none. ECHO POULTRY YARDS,
East Williston, N. Y.

COTSWOLD RAM
For Sale.
Address, DAVID S. WHITE,
Mayor's Office, New York City.

IMPORTED CLYDESDALES
ALSO,
HAMBLETONIANS,
and other desirable strains of **Trotting Stock**, for sale, **cheap**, and on **easy terms**. All stock guaranteed as good as represented. Catalogues sent free Correspondence solicited. Address
POWELL BROS.,
Springboro, Crawford Co., Pa.

HIGH CLASS POULTRY, Grape Vines, Sm'l Fruits, finer than ever.
Send for circular. GEO. S. JOSSELYN, Fredonia, N. Y.

AUTOMATIC FRUIT EVAPORATOR. The Cheapest and best in market. For cut of Evaporator and Descriptive Circulars, address, DODGE & HINCKLEY, Fredonia, N. Y.

KIDNEY-WORT
The Only Remedy
That Acts at the Same Time on
The Liver, The Bowels and The Kidneys
This combined action gives it wonderful power to cure all diseases.
Why Are We Sick?
Because we allow these great organs to become clogged or torpid, and poisonous humors are therefore forced into the blood that should be expelled naturally.
KIDNEY-WORT WILL CURE
Biliousness, Piles, Constipation, Kidney Complaints and Diseases, Weaknesses and Nervous Disorders.
by causing free action of these organs and restoring their power to throw off disease.
Why Suffer Bilious pains and aches?
Why tormented with Piles, Constipation?
Why frightened over disordered Kidneys?
Why endure nervous or sick headaches?
Why have sleepless nights?
Use KIDNEY-WORT *and rejoice in health. It is a dry, vegetable compound and* One package will make six qts of Medicine.
Get it of your Druggist, he will order it for you. Price, $1.00.
WELLS, RICHARDSON & CO., Proprietors,
(Will send post paid.) Burlington, Vt.

News of the Week.

HOME NEWS.

Monday, May 17, 1880.

The New York Chamber of Commerce held its 112th annual banquet lately at Delmonico's, this city. Two hundred gentlemen sat down to the feast among whom were John Sherman, the Secretary of the Treasury, R. W. Thompson, Secretary of the Navy, and many other statesmen and celebrities. Secretary Sherman in responding to the toast, "the Financial Prosperity of our Country," commented highly on the prospects of the nation. The domestic commerce is so large that all modes of transportation by land and by water are fully employed. Production in all branches of industry is greater than ever before. Great crowds of immigrants are daily arriving on our shores, and it is now established that the mineral resources of our country are greater than the wildest imagination would a few years ago have dared to conjecture.... The permanent exhibition in Fairmount Park at Philadelphia was re-opened last week, on the anniversary of the opening of the Centennial Exhibition in the same building. An address was delivered by Col. Forney.....There has been a bloody fight in Tulare county, southern California, between the squatters on some railroad lands and the officers sent to dispossess them by the company. Six men representing both sides were killed, and the squatters thus far are the victors. .....Victoria's band of savages continues its career of murder and ravage on the isolated Arizona ranchmen, while it is reported that a party of 25 miners, prospecting in the lower Gunnison valley, near Indian creek, were attacked by Ute Indians on the 7th and 12 of them were killed.....The corner-stone of the new hall to be erected as an addition to Wellesley College is to be laid on the 27th by Mrs. Valeria Stone of Malden, N. Y., who gave $100,000 for the building, and Mrs President Hayes has accepted an invitation to be present and assist at the ceremony, and possibly the President himself will attend. President Porter of Yale college will make the address. The new building will be called Stone Hall, and is intended as a dormitory principally, and suited to accommodate one hundred students. It is to be fitted up with every convenience, with chambers, music-rooms, parlors and four small dining-rooms..... The reduction of fares by the Boston and Albany and the Southern road comes at the same time with a general reduction in all parts of the country. The Chicago and Alton, Illinois Central and other leading roads in Illinois have cut down rates from four to three cents a mile. Other Western roads have taken the same course, and the Atchison, Topeka and Santa Fe, which dropped from six to four cents a mile a year ago, reports that its passenger business "fully justifies the reduction." The New York Central has always protested against the fixed rate of two cents a mile imposed by law on that line, but it is not improbable that the exceptional cheapness of passenger fares over that road, by stimulating travel and the growth of a rural population, has been one important cause of the prosperity of the Central. Some railroad manager by the adoption of a uniform rate of 3 cent a mile will yet fill his cars and increase his profits,...A severe storm visited portions of Ohio and Illinois Sunday and Monday of last week. The village of Olsey, near Winchester, Ill., was almost destroyed by the wind, 20 buildings being wholly or partly demolished; loss over $25,000. In McLeon County $100,000 worth of property was damaged. Twelve buildings and an 160-acre orchard in Arrowsmith township were destroyed. Mr. and Mrs. Edward Reese in Empire township were carried a quarter of a mile in their bed and set down in a corn field. ....Cremation is being practiced more and more, and Washington, Pa., seems to be the accepted place in which to convert the frail mortal remains into ashes. Last week one Augustave Poetz was cremated at that place. In less than three hours the incineration was complete. The ashes will be taken to Europe by a daughter of the deceased.... We have several times during the last couple of months noticed in the News the terrible forest fires that have long been raging in Pennsylvania and New Jersey. But on the 14th the fire fiend put an awful climax on his destructiveness. The whole thriving little town of Milton, Pa., was destroyed by the flames. The fire is supposed to have originated from sparks from the saw-mill attached to the car-works. In all 666 buildings were burned. Only two places of business escaped destruction. The vaults and books of the banks are uninjured. The people of the town are almost wholly destitute. The total loss of property amounts to nearly $2,000,000....The forest fires in the above named States are still raging, although the inhabitants of the ill-fated districts are fighting the fire with great determination. Pitiful accounts are given of the desolate condition of the country over which the fire has swept. Timber to the value of hundreds of thousands of dollars is destroyed.

A bill has been introduced in Congress as an amendment to the "Morrill Act" of 1862, adding 10,000 acres of land for each Senator and Representative, based on the census of 1850, to the endowment already given agricultural and mechanical colleges....The case of the colored cadet Whittaker, at West Point, upon whom an outrage was perpetrated, which we have heretofore noticed, seems at last to be clearing up. A note of warning to the effect that an outrage would take place was found in Whittaker's room. Five different experts in handwriting employed by the court declare that this note was written by Whittaker himself. Moreover, this note was written upon half a sheet of note paper and the other half, upon which he had begun a letter to his mother, was found in his room, and a microscopic examination of the edges establishes as a fact that the two pieces were once connected. Whittaker still denies that he did it himself.

AGRICULTURAL NEWS.

RUSSIA has half a million acres under sugar beets and 300 factories for working the roots up into sugar. Four years ago she made her first exportation of beet sugar—half a ton. She now exports 65,000 tons yearly. Beet culture *is said* to give there a net profit of $30 per acre.....The Kentucky Legislature has appropriated $500, to be used under the direction of Col. Bowman, State Commissioner of Agriculture, in analyzing artificial fertilizers offered for sale in that State. Firms dealing in commercial fertilizers are required to submit samples for analysis, and the article sold must come up to the sample in quality.....The will of Lewis Clapp of Lee County, Ill, leaves $150,000 for the endowment of an agricultural college on condition that the county add $100,000 to the amount.....The U. S. Senate patents committee has decided to report the bill providing that no costs shall be recovered against innocent users of patents where plaintiff does not recover damages of $20 or over.....The anti-discrimination bill, having passed the House of Representatives in Albany, is still before the Senate Committee on railroads. By lengthy arguments and other tactics, the managers of the roads are doing their utmost to delay action upon it until it shall be too late for the Legislature to interfere during the present session.....A A new creamery has been organized at Waterville, Onedia Co., N. Y., with P. B. Haven for Pres. and F. S. Risley for Sec. It will be on the Fairlamb system—that is, the patrons of the company will skim their milk at home, the cream only being taken to the factory. Thus all will have at a moderate cost the advantage of an experienced butter maker; the trouble and expense of churning at home are avoided; the skimmed milk is kept for home use; an agent of the factory collects all the cream and returns the buttermilk, thus saving an immense deal of travel on the part of the farmers.. ..A discussion has arisen in British official circles concerning the necessity and expediency of existing restrictions upon importing cattle, especially from the United States. The rarity of cases of infectious or contagious diseases discovered in the cattle imported hence in 1879, is pointed out in a recent article in the Pall Mall Gazette. It refers sympathetically to the efforts of Evarts and the United States, and says that the most of such cases might well be the result of the hardships of an Atlantic passage and possibly avoidable by the improvement of transit facilities. The Gazette further says: "As prominent Liberals objected to the course adopted by the Privy Council at the time the restrictive cattle orders were issued, and as the present Vice-president of the Council is one of the most outspoken opponents of the act on which the orders are based, it seems highly probable that a reconsideration of the prevailing policy will not be long delayed....

PRESIDENT HAYES.

The validity of Mr. Hayes' title may always be questioned, and his administration criticised, but the payment of one dollar gives a valid title to one bottle of Dr. Pierce's Golden Medical Discovery, and its administration can never be criticised in cases of coughs, colds, incipient consumption, and general debility, for leading physicians of all schools indorse the Discovery and prescribe it in their practice. Sold by druggists.

Creameries on Trial.

THE manufacturers of The Ferguson Bureau Creamery announce that they will send out their Creameries on trial.

This apparatus has given such universal satisfaction for the last three years, and they have such confidence in its perfect adaptation to the wants of all dairymen, that they freely offer to send one to any reliable party, of such size as they need, on 30 days trial. If it does not work satisfactorily it may be returned.

In the last year they have sent out over two hundred Creameries on these terms and NOT ONE has been rejected.

Particular attention is called to the fact that the Creamery can be used with either ice, running spring water, or cool well water, and that it is especially useful in cold weather. After a person becomes accustomed to it, they will be able to use it nearly the whole year without artificial cooling, by taking advantage of the cool night air, according to the directions.

No other Creamery is offered on such liberal terms, and no dairyman in justice to himself and to his wife, (for they are especially adapted to dairies where women do the work) should buy any apparatus until he has given the Bureau Creamery a trial.

They also offer to send their Concussion Churn on the same terms.

Messrs. Wells, Richardson & Co., the well known manufacturers of the Pefected Butter Color, are largely interested in The Ferguson Manufacturing Company, and we have their guaranty that all the business of the Company will be done in the most honorable manner.

We advise all our readers in want of milk setting apparatus to correspond with the The Ferguson Manf'g Co., of Burlington, Vt.

FOR COUGHS, COLDS, CATARRH and Throat Disorders, use "*Browns Bronchial Troches*," having *proved* their efficacy by a test of many years.

Frank Leslie, Esq., of the "Illustrated Weekly," says: For some time past I have been using BURNETT'S COCOAINE, and think it far preferable to anything I have ever used for the hair."

Thousands of ladies to-day cherish grateful remembrances of the help derived from the use of LYDIA E. PINKHAM'S VEGETABLE COMPOUND. It positively cures all female complaints. Send to Mrs. Lydia E. Pinkham, 233 Western Avenue, Lynn, Mass., for pamphlets.

As a Cure for Piles

Kidney-Wort acts first by overcoming in the mildest manner all tendency to constipation; then, by its great tonic and invigorating properties, it restores to health the debilitated and weakened parts.

OUR readers will do well to notice the advertisement of Hermon W. Ladd, XX Col, in our paper this week. Here is a good bed for a little money, and it is appreciated, as the enormous sales of the past year fully proves.

The Markets.

SPECIALS FROM ALL CENTERS.

Until Saturday, May 15.

So little of last harvest's products still remain in the hands of the farmers, and so few are the purchases they have now to make in quotable commodities, that we shall, for an interval, suspend most of our quotations in markets outside of New York, substituting therefor, matter of more interest to our readers. When our market reports are fully resumed, we shall have completed arrangements for making them more complete and trustworthy than they have been even in the past.

Boston.—BUTTER—The prices have tended in buyers' favor, although the receipts have been sold up closely. The weather has been so warm that the receipts have been affected by it, and the butter is not in so good shape as in cold weather. The market is weak at lower prices at the close. NEW BUTTER—Choice Northern dairy, 19@21c; fair to good Northern dairy, 16@18c; common and bakers', 15@16; choice Western creameries, 22@24; good, 20@22; choice Western dairy-packed, 18@20; choice Western ladle-packed, 17@18; common and bakers', 15@16. CHEESE.—The demand is light. New whole milk, 14@15; new half skims, 11@12c; new skims, 8@9c. EGGS.—There is a generally dull tone to the market, and a good supply of Western and Northern. There are not so many Eastern eggs, and they are firm at quotations. Eastern, fresh, 12@12½c, ₰ doz.; Northern, fresh, 11½@12c; Vermont and N. H., 12@12½c; Western, fresh, 10½@11c; P. E. Island, 11½@12c; egg oats, 38@42c.

Chicago.—WHEAT irregular; options higher and cash lower; No. 2 Chicago spring, $1.18 cash and May; $1.13½@1.15¾ June; $1.08 July; No. 3 do at 96½@97c; rejected, 80@88c. CORN steady and firm at 37½c. cash and May; 36⅞. June; 37½c. July; 37½c. August. OATS quiet, but firm at 30¼c. cash; 30¼@30½c. June; 28c. July. Pork easy at $10.30@10.35 cash; $10.32½@10.35 June; $10.45@10.47½ July; $10.57½@10.60 August. Lard easier at $6.92½@6.95c. cash; 6.95c. June; 6.97½@7c July. Bulk meats in good demand and a shade higher; shoulders at 4¾c.; short ribs at 40c; short clear at 6.60c Eggs were quoted at 8@8½c. per doz. The inquiry was only fair. BUTTER.—The demand continues moderate, buyers not caring to stock up at present prices, a further decline being looked for. Sales to a fair aggregate were effected at the following quotations. Creamery, 19@22c; good to choice dairy, 16@19c; medium, 14@15c; inferior to common, 8@10c. CHEESE.—There was a weak and unsettled feeling in this market. Fine mild grades still find buyers at outside quotations, but most of the trading is at inside to medium figures. Full cream, new, 13½@14c; part skim, new, 10½@11½c; full skim, new, 8@10c; low grades, 6@8c. HOGS—Market weaker and 50 lower than yesterday; common to rough mixed at $4@$4.30; good to choice mixed at $4.34@$4.45; choice heavy at $4 50@$4 60; light at $4.20@$4.50. CATTLE—Market firmer for good; common to fair shipping at $4@$4.25; good to choice at $4 40@$5; butchers' quiet and slow; bulls at $2@$3; cows at $2@$3 50; stockers and feeders active and firm at $3@$4.20. SHEEP—Clipped in good demand at $4.50@$5.10; wool at $5.75@$6 per cwt.

Milwaukee—WHEAT opened unsettled, advanced ¼c. and closed dull; No. 1 Milwaukee hard and soft nominal; No. 2 Milwaukee, cash and May at $1.12¾; June at $1.12; July at $1 08¾; No. 3 do. at 98½c.; No. 4 do at 91c.; rejected at 85c. CORN quiet but firm; No. 2, 37½c. OATS firm; No. 2 at 30¾c. RYE firmer at 80c. for No. 1. BARLEY firm; No. 2 spring at 69c. PROVISIONS quiet, but firm. Mess pork quiet at $10.25 cash and May; $10.35 June. Lard—Prime steam at 6.90c. cash and May; 7c. June. Hogs firm and unchanged at $4.25@4.40.

St. Louis.—WHEAT unsettled; No. 2 red fall at $1.12@$1.12⅛ cash; $1.12⅛@$1.12 7-8 May; $1.05⅞@$1.05¾ June; 85½c, July; 92@92½c, August; No. 3 do., $1.07½ bid. CORN at 35⅛@35⅜c cash; 34 7-8@35c, May; 34½c, June; 35 5-8@35¾c, July. OATS firm at 31 1-8@31½c, cash; 30 7-8c, May; 30 5-8c, June; 35¾c. July. RYE firm at 90c. PORK strong at $10.50 cash; $10.60@$10.67½ July. LARD held $6.90, asked. BULK MEATS firmer, shoulders at 4c; clear ribs at $6.25@$6.30; clear sides at $6.45@$6.50. BACON firmer; shoulders at 4 5-8c; clear ribs, $6.95; clear sides at $7.20.

Toledo.—WHEAT weak; No. 3 white Wabash, $1.17; No 1 white Michigan at $1.16; amber Michigan at $1.22; No. 2 red winter spot, at $1.22; May at $1.20¾; June at $1.15¾; July at $1.05; August at 99¾c.; No. 3 red Wabash at $1.13; western amber at $1 22; No. 2 red mixed at $1.17. CORN weak; high mixed at 42½c.; No. 2, spot, 41¾c.; May at 41¾c.; rejected at 40¾c.; damaged at 37½c. OATS dull and nominal.

Fertilizers.

Bone at $23.50@$24.00 per short ton for Texas and South American mixed, and $26@27 do. for skin and shank. Sulphate of ammonia continues firm at 3¾@3⅞c. per lb; some sales as high as 4c. have been made for the home market. Dried blood in good demand at $2.25@2 37½ per unit of ammonia for short ton. Tankiug in request at $3@3.12½ per unit of ammonia, phosphates gratis, per short ton. Ammonite, azomine, etc., in good demand at $2.62½@2.87½ per unit of ammonia respectively. Bone ash continues unchanged at $23@24 per short ton on the basis of 70 per cent phosphate of lime. No stock.

Nitrate of soda, 4¾c. Saltpetre, crude 6@6. The above are wholesale prices; at retail, goods are delivered at boat or cars at the following rates: pure ground bone 47 to 50 per cent. bone phosphate and 3 to 4 per cent. ammonia, $35@$40; dissolved bone black, 15 to 17 per cent. of soluble phosphoric acid $30@$35; dissolved bone 13 to 14 per cent. of available phosphoric acid $30; ammoniated superphosphate 10 to 11 per cent. of soluble phosphoric acid, 3 per cent. of potash, 3 per cent. of ammonia, $40@$45; German potash salts, 25 per cent. of sulphate of potash, $15@$18 per ton; muriate of potash, 80 percent. 2@2½c per lb. land plaster 7.50; dried blood, 10 per cent of ammonia, $35@45 per ton; fish guano dry and ground fine, 10 to 11 per cent of ammonia, 20 per cent of available bone phosphate, $40@45; fish guano, 8 per cent of ammonia, $45; unground fish guano, 6 per cent of ammonia, $25; castor pomace; $19@24; sulphate of soda ground, and in barrels, $15@18 per ton; sulphate of ammonia 4½c. ₰ lb; bone black, 70 per cent of bone phosphate, $30@32; ground South Carolina phosphate, 57 to 60 per cent of bone phosphate, $20 per ton; No. 1 Peruvian guano, 10 per cent ammonia, standard, $55 per ton; Lobos $46 per ton; rectified $65 per ton; guaranteed $56 per ton; nitrate of soda, 5¼@5½ ₰ lb.

FORRESTER'S potato manure, $47.50; cabbage, $50; oat, $47.50; lawn dressing, $47.50; turnip, $52; grass, $45; hop, $47.50; strawberry, $42.50; wheat, $45; rye, $47.50.

STOCKBRIDGE'S manures quoted: Potato, $50; cabbage, $50; strawberry, $40; corn $45; seeding down, $40; orange tree, $35; onion, $50—per ton each.

MAPES'S complete manures for clay soil, $25.50 per 1,000 lbs.; for light soils $25.50 per 1,000 lbs.; "A" brand for general use, $20 per 1,000 lbs.; fruit and vine, $18.50 per 1,000 lbs.; cabbage and cauliflower, $23.75 per 1,000 lbs.; corn, $24.50 per 1,000 lbs.; potato, $24 per 1,000 lbs.; asparagus, $25.50 per 1,000 lbs.; gypsum, Nova Scotia, ground, ₰ ton, $7.50.

BOWKER'S "Hill and Drill Phosphate" $45; Bowker's Phosphate $40 ₰ ton, each; Bowker's "Food for Flowers," 35c. ₰ package and $3 ₰ doz.; Bowker's "animal meal for fowls," $2 50 per cwt.; Ground oyster shells, $1 ₰ cwt.

BAUGH & SONS' prices for goods delivered at depot or boat, in bags and in 2,000 ₰ lots: Ammoniated dissolved bones, $35; pure bone meal, from raw bones, $36; Baugh's raw bone superphosphate $40; Baugh's $25 phosphate, $25; Baugh's A. A. nitrogen, 13½ per cent. of ammonia, $48.

PRODUCE AND PROVISIONS.

NEW YORK, Saturday, May 15, 1880.

BEANS AND PEAS.—Supplies of beans are light, but there are plenty in store. Prices are steady, but any attempt to add to present rates for good marks would check the limited demand of the season. Extra marks that are always held with a view with a view to hot weather trade are firm and not now pressed for sale. Quotations for the various grades of prime seldom run so equal as at the movement. Peas are steady. Wisconsin green $1.80 ₰ bush.; Southern S.E. peas at 95c@$1.00 ₰ bu. bag; Marrow beans, prime, $1.67@1.10; other, $1 45@1.55; medium, prime, $1.3.@1.40; other, $1.20@1.25; pea, $1.45@1.65; white kidney, $1.50@1.70; red kidney, prime, $1.30@1.60; black, (or turtle soup) $2.20 Lima, Cal., $5.

Receipts for week, 2,350 bush., exports, 375 pkgs.

BEESWAX.—There is little doing, with 24@24½ c quoted for Western and Southern.

Exports for week, 1,810 ₰s.

BUTTER.—Prices are extremely low and express a weak future. This, however, is the worst part of the year to quote when lots are so mixed. They now include white, white bottoms, experimente in coloring and a few pure grass invoices. Shippers are in market at the new rates, and want only upper grades when they pay 19@20c. Welsh tubs are a favorite purchase with them at present. Western does not arrive freely, as the state drops any further when quality becomes generally attractive there will not be much room for ordinary Western packed. Large shipments of Iowa creamery are promised. Few marks of creamery fill up their usual merit of excellence, and some of the best grocery buyers are rejecting some brands for selections of fine half tubs. Quotations: Creamery, choice, 23c.; fair to prime, 20@22c.; poor, 17c., State, pails and ht. tubs, choice, 20c.; other, 14@18c.; Welsh tubs, 14@19c.; Western imitation creamery, 15@18c.; do. dairy, 15@17c; do. factory extra, 16c.; other, 13@15c.; very poor, 9@10c.

Receipts, 29,300 pkgs.; exports, 5,064 do.

CHEESE.—Early in the week the maket broke sharply, to correspond with what is in the country; down to 12½c. has been accepted for fancy factories. The reduction in prices and the improved quality of the stock arriving brought a much freer export demand, and towards the close there was a steadier feeling. The exports for the week have reached 29,930 boxes.

Latest prices are at 12½@12¾c. for choice full cream, 11¾@12c. for good and fine; 10½@11c for fair, and 9@10c. for half skimmed. Ohio factory dat at 12¾@14¾c. for full cream; 10½@11½c. for fair and good lots; 9@10c. for half skimmed.

Receipts for week, 30,100 boxes; exports, 28,750 do. Liverpool cable, new cheese, 68s. Steam, 58s. 6d.

COTTON.—There has been an active business for export and prices closed strong; latest prices are for May, 11.67@11.68c.; June, 11.72c.; July, 11.79c.; August, 11.82c.; September, 11.38@11.39c.; October, 10.91@10.95c.; November, 10.71@10.76c.; December, 10.71@10.76c.

Quotations for spot cotton are based on American standard of classification, and on cotton in store running in quality not more than half a grade above or below the grade quoted.

DRIED FRUITS.—Apples have a fair jobbing demand and prices steady. Peaches are quiet and unchanged. Small fruits are slow and without quotable change.

Quotations are for N. C. apples, fair to good, at 7¾@8¾c.; choice, at 9@10c.; fancy at 10@10¾c.; Virginia at 7@8c.; New York State quarters sliced at 7¾@8¾c.; patent evaporated, in cases, choice, at 15@15½c.; good and prime at 14@14½c. evaporated, choice sliced at 13@13½c., and good do. at 12¼c. Evaporated peeled peaches, good to choice, at 27@28c.; North Carolina peeled, fancy, at 20c.; choice and at 17@18c.; Georgia prime at 16@17c.; fair to good at 14@15c.; common at 10@12c.; unpeeled halves at 7¾@8c.; do. quarters at 7@7¾c. Pitted cherries at 18¾@19c. Blackberries nominal at 11c. Raspberries at 28@30c. Plums at 17@18c.

EGGS.—Receipts for week, 18,450 bbls.; do. last week, 16,150 do. The demand does not prevent supplies from accumulating—a bad feature for spring when warm weather is near. The over stock is severely felt, and low prices seem settled ones. Buyers are urging loss off at this early date, and that fact makes holders anxious about stored stock. Good marks of Western have sold down to 10½c. Quotations:

Near Points, 12@12½c.; State and Penn. and Canadian, 11@11½c.; Western fresh, 11c.; poor or held, 10@10½c.; duck eggs are no longer a specialty, now counted in with hen. Goose scarcely wanted; 18@20c.

FLOUR—Trade is fair, well distributed on export and local trade account, with prices without important change.

Rates, prices are at $3.60@4 75 for inferior to very choice superfine State and Western; $4.40@4.75 for poor to good extra State, odd lots and lines; $4.75@5.25 for very good to fancy do.; $4.40@4.75 for inferior to good shipping extra Western, and $4.75@5.25 for good to fancy shipping extra do.; inferior to very good white wheat extras, $4.30@5.60; very good to fancy do. at $5.30@6.75; red and amber winter wheat, inferior to very fancy trade and family, at $4.75@6.65; round hoop Ohio, $4.85@5 35; and trade and family brands of do. at $5.40@6 65; St. Louis at $4.85@5.65 for inferior to good extra; $5.65@6.75 for good to fancy; Minnesota clear, inferior to fancy, at $4 75@6 65; Minnesota "straight," poor to fancy, at $5 40@7.25, and patent inferior to fancy at $5.50@8.50; unbound stock at from $2 60@5 00; city mill extra at $5.60@6.00 for fair to fancy West Indies; do. for England, $4.40@5.25 for poor to very fancy; do. trade and family extras, $6.25@7.00; do. for South America, $6.00@6.35; No. 2 at $2.75@4.00 for poor to strictly fancy.

Receipts for week, flour, 79,760 bbls.; wheat, 2,298,750

bushels; corn, 1,057,775; oats, 400,074; rye, 78,200; malt, 75,200; barley, ——; cornmeal, 2,100 bbls.; rice, 200; grass seed 1,175 pkgs.

Exports for week, flour, bbls., 56,600; wheat, bush., 1,078,253; corn, 411,160 oats, 44,601; rye, ——; malt, ——; barley, ——; peas, ——; cornmeal, bush., 3,250; rice, pkgs., 1,081.

FRESH FRUITS.—Apples are scarce, but demand is about over. The range is $3@4 for Russets to prime Baldwins. Norfolk gooseberries have sold at $7 per bbl. Strawberries turn out very irregular in quality, especially Norfolks. Maryland has begun to ship. Md., 20@25c.; Norfolks, 12@22c.; N. C., 20@25c.; Chas., 15@20c. Hot-house grapes, B. Hamburg, $1 per lb. Peanuts dull at the recent decline—N. Y. classification:—Va. hand-picked 5¼@5½c.; extra prime, 5c.; good to prime, 4¾@4¾c.; shelled, 5¾@5¾c.; hickory nuts 20c.@$1. Pecans are all in distributors hands.

Receipts of peanuts, 1,330 bags per week.

GRAIN.—Wheat has been active and showing frequent fluctuations, closing, however, strong. The receipts for the week reach 1,100,000 bush.; latest prices are for No. 1 white at $1.27½@1.28; No. 1 white, May, at $1.27½@1.27¾; do., June, at $1.25@1.25¼c.; No. 2 white at $1.25 ungraded white at $1.25@1.26¾; No. 2 red at $1.34½@1.35½; do. May at $1.35¾@1.35; do. June at $1.28@1.28¾; do. July at $ 1.17¼@1.17¾; No. 3 red at $1.26¾; ungraded red at $1.29@1.33¾; mixed winter at $1.29¾@1.30; ungraded amber at $1.25@1.30¼; No. 2 Milwaukee spring at $1.24; No. 2 Northwest spring, May option, at $1.24; No. 3 spring at $1.10@1.11. Rye at 87@91c. for State. Corn is active for export and rules strong in price; latest sales are of New York No. 2, regular inspection, afloat, at 51¾@52c.; do., May, at 51@51¾c.; do., June, at 49@49¼c.; do., July, at 49¼c.; New York steamer mixed, in lots, at 51@52c.; ungraded mixed Western at 50¾@53c.; No. 3 at 50¾@51¾c.; New York low mixed at 51c.; yellow Western at 53@55c. Oats are active and higher latest sales are of of No. 1 white 43c.; No. 2 white at 45½@47c.; No. 3 white at 44@45c.; New York No. 1 at 44c.; New York No. 2 at 43@44c.; do. May at 42¾@42c.; No. 3 at 42c.; ungraded white Western at 45@49c.; ungraded mixed Western at 42@45c.; white State at 49c.; mixed State at 43c.; No. 2 Chicago at 43c. bid.

HAY AND STRAW.—There is a fair trade and prices held steady.

Shipping hay quoted at 70c.; retail lots at 80@85c. for medium, and 85@$1, for better qualities; clover, 55@60. Straw at $1@1.05 for long rye; 65@70c. for short rye, and 50@60c. for oat.

Exports for week, 2,900 bales.

HOPS.—Export demand continues slack and trade from brewers moderate; prices show no decided change. Quotations are for:

	Cents per ℔
New York, fancy	Nominal.
New York, new crop, good and choice	33 @36
New York, new crop, medium	31 @33
New York, new crop, low to fair	27 @29
Eastern, new crop	27 @35
Wisconsin, new crop	27 @35
Yearlings	7 @18
Olds, all growths	4 @10
Pacific Coast, new	30 @35
Pacific Coast olds (nominal)	5 @10

LEATHER.—Sales at 23@25c. for light hemlock sole; 24@26c. for middle do.; 23@25c. for heavy do.; 21@23c. for good damaged.

MAPLE SUGAR.—Regular demand over.

OIL-CAKE.—Western is quoted at $31.50 per ton.

POULTRY AND GAME.—Dressed poultry is slow of sale, a good many course dressed, fresh killed, dry-picked offering. Frozen turkeys closing out at 10@12c. for best. Poor runs from 3 to 9c.

Turkeys, Phila., dry-picked, large, 8@9c.; capons, Phila. large, 22@25c.; capons, small, 20@21c.; slips, 18@20c.; chickens, Phila., small, 27@28c.; spring, Phila., ℔ lb., Rus3ic; fall, Phila., d.-p., 20c.; fowls, Phila., dry-picked, 12@14c.; Jersey, good to prime, 12@13c.; State, good to prime, 12@13c.; Western, good to prime, 11@12c., poor to fair, 5@9c.; squabs, white, ℔ doz., $2.50@2.75; dark, $1@1.50.

Live poultry has sold well, a Jewish holiday helping trade.

Chickens, spring, large, per pair, 70c.@90c.; spring, small, 40@50c.; fowls, Jersey, ℔ lb, 11@12c.; Western, 10@11c., roosters, old and young, 4@5c.; turkeys, mixed, 9@10c.; ducks, Jersey, N. Y. & Pa., per pair, 75c.@$1; Western, 60@75c.; geese, Jersey, $1.50@1.75; N. Y. & Pa., $1.25@1.50; Western, mixed, $1@1.25; pigeons, 30@40c.

Game is scarce; the most of pigeons is over, Penn. flocks having scattered. Prices double what they were three days ago. Snipe dull at 6c for English and plover. Sand, 50@60c. Pigeons, $1.00@1.75; squab, $1.50@1.62.

PROVISIONS.—There is a more active trading and a generally firm market mess pork quoted at $11.20 for May and June; $11.25@11.30 for July; $11.30 for August, and $11.35 for September. Bacon at $6.75 for long clear and $7 for short clear. Beef at for extra India mess $18@20 for city and $19 for Philadelphia, and at $10@10.50 for extra mess, and $9.50@10 for plain mess. Beef hams at $16.50@17. Lard—Western steam at 7.30 for spot lots; 7.30 for May; 7.30@7.35 for June and 7.35@7.37½ for July. Stearine at 8c. for choice. Tallow at 6c. for prime.

Receipts for week, pork, 6,600 pkgs.; beef, 1,150 pkgs; cut-meats, 32,500 pkgs; lard 19,600 pkgs. Exports for do., pork, 3,635 pkgs.; beef, 2,351 pkgs.; cut-meats, 5,140,625 lbs.

SEED.—Clover is firm at 6¾@7¾c for Western and 7@8c. for State. Timothy is quiet, quoted at $2.65@2.75.

TOBACCO.—There is no improvement in demand, with prices essentially as quoted for some little time back.

VEGETABLES.—The market is weak for old potatoes. None sell but sound selected. New are in fair demand with easier prices for better stock.

Bermuda, new ℔ bbl., $4.50@5.50; Chas. & Sav., new $3@4.50, Fla. new, $3@4.50 crate, $1.75@2; Early Ross, Maine, per d.-h. bbl., $1.50@1.75; State $1@1.25; in bulk per bbl. $1@1.25; Peachblow, State, white, per d.-h. bbl., $1.50@1.75; red, $1.00@1.50; N. J. per bbl., $1@1.25; Snowflake, State, ℔ d.-h bbl., $1.25@1.75; Peerless, do. $1@$1.12; bulk, ℔ bbl. $1, do Jersey, bulk, 50@75c.; Sweet potatoes, $3.00 Southern stuff is abundant with an easier tone. Asparagus plenty and dull. Cauliflower, Fla, ℔ bu. cr. $2@3. Bermuda ℔ box 50@60c.; cucumbers, Charleston and Savannah, ℔ crate $3.50@4.00; Fla, ℔ crate, $1.50@2; string beans, Sav. & Ch'n, $2@2.50; green peas, Md., ℔ bbl. $6@6.50, York river ℔ ½ bbl. $2; do. ℔ bbl, $3@4, Norfolk per ½ bbl. crate, $1.50@1.75; asparagus, O. Bay, per doz. bch., $2.; Mon. Co. $1.50@1.75 do. Bur. $1@2.25 do, Md. and Del., $1.25@1.75; kale, L. I. ℔ bbl., 75c.@$1; spinach, L. New York, New Hampshire and Vermont, X and XX, 45@48c.; No. 1, 55@57c.; No. 2 and common, 46@51c.; combing and De Laine, 50@53c.

Iowa, Illinois and Western, X and XX, 45@47c.; No. 1, 54@56c.; No. 2, and common, 45@49c.; combing, 52@55c.

LIVE STOCK MARKETS

NEW YORK, Saturday, May 15, 1880.

BEEVES.—Receipts for week, 12,868 head; do. last week, 13,755 do. The light supplies were easily handled; and though trade was somewhat slow at the close prices of Wednesday were well supported. Common to fair steers were sold at 8¾@9¼c., to dress 55@56 lb., and good to prime at 9¾@10¼c., to dress 56@57c. A large number of Texas and Colorado stillers changed hands at 8¾@9¾c. to dress 55@56 lb.

COWS AND CALVES.—Supplies are small, good cows being wanted in the interior. Nominal prices, $25@40. com. to fair; good, $45@50.

VEAL CALVES.—Demand good, but with plenty of stock prices are easy.

Live calves, N. J. and Bucks Co., choice, 6½c.; prime, 5½@6c.; State, choice, 6c.; do. prime, 5¾c.; fair to good, 4½@5c.; poor, 3@4c.; Mt. Holly, good to choice, 6@7c.; buttermilk, 3@3½c.

SHEEP AND LAMBS.—Receipts for week, 27,147 head; do. last week, 20,350 do. At larger supply for the week made the market drag considerably. Lambs very weak. For sprinkling Paris Green with water, or dusting plants with Paris Green mixed with plaster dry, or plaster alone. Both useful and simple machines, thoroughly tried last season, and gave entire satisfaction. Retail price of Sprinkler $1.00; of Duster, $1.50 each. Liberal discount to the trade. Send for circulars.

THE TROY STAMPING WORKS, Troy, N. Y.

STOCKBRIDGE MANURES For 1880.

Some years ago the Stockbridge Manures were only known to a few farmers in the Connecticut Valley. Now they are so extensively used in different parts of the country as to require two large factories, one in New York and one in Boston to manufacture them. This increase shows what farmers think of good fertilizers, and is not only due to the fact that they are reliable, well-made, and high-grade manures, but also to the fact that farmers have

FOUND THEM PROFITABLE TO USE.

Now that corn, and other farm produce is bringing such good prices, we anticipate that farmers will invest still more largely in our fertilizers.

Besides the Stockbridge Manures, we manufacture several high-grade Phosphates, and deal in first-class chemicals of all kinds. Farmers who intend to use Fertilizers of any kind, should

Reading for the Young.

DOUGH-FACES.

MRS T. H. GRIFFITH.

Did you ever see one? I never did except in one place where we lived, and there the young people made "playing the ghost" one of their principal pastimes, and as a dough-face was considered quite an indispensible addition to the ghostliness of the object, I became quite familiar with it, and often had a hand in the fun. Many a time, winter evenings, when the room was filled with young folks, chatting pleasantly before the brightly blazing fire, half a dozen of us slipped out, and, mixing up some flour and water into a stiff dough, made holes in it for eyes, nose, and mouth, and selecting one of the tallest of our group, fastened it on amid suppressed laughter, winding a sheet about the form to add to the horrible effect. Then slipping back into the room unperceived, we managed to darken it, so that when the ghost glided in, the effect would be to witness boys and girls, both, often times, running pell-mell from the room, in dire confusion, screaming as they went, and tumbling over each other in their eagerness to get away from what looked the exact image of a ghost. Of course we never intended any ill results, and thought of none; but, with the natural recklessness of youth, pursued "the fun of scaring each other," until something occurred which proved so serious in its results, that we entirely abandoned the abominable practice. It was a beautiful summer evening; just one of those quiet, calm, moonlight nights when to stay indoors seems a punishment. I had gone to stay over night with a friend about the same age, whose folks had gone away on a visit leaving her alone to take charge of the house.

Their house stood upon a main road, and was a large gloomy affair, with a wonderful growth of evergreens and shrubbery in front serving to hide it from the view of the passer-by, and extending the whole length of their yard. The road was extensively traveled, and as we sat together on the front portico, calling up to each other's remembrance the tricks we had daringly played on different people, an idea popped into my mischief-loving head, which I immediately developed in detail to my companion. No sooner was it laid before her than it was received with enthusiasm; and entering the house we began our preparations, emerging in about half an hour, wrapped in sheets, and peering out from the eyes cut in our wrinkled, dough-faces, ripe for mischief Our plan was to hide behind the dense shrubbery until we saw some one approaching, then we were to steal softly out into the road, beckoning and groaning, and if we succeeded in frightening them, we were to pursue them as far down the road as prudence would permit.

The first of our victims was a tall, dandy young man, who came along with independent stride, whistling a merry air, whom I instantly recognized as my sister's beau, but as he looked neither to the right nor left, we were unperceived. But, not liking to lose our fun, nor thinking it best to appear directly in front of him for fear of being recognized, we ran along the inside of the fence, shielded by the evergreens, until we reached the bottom of a little hill, where we climbed, or rather rolled over, as our winding sheets rather impeded the free use of our limbs, and waited his coming in a fence corner.

As he reached the top of the little eminence, we glided out and burst forth with our hollow groans. Answering us with a shriek of laughter, he bore down upon us, running so swiftly that we had no time to escape, but were forced to bear the severe pinches with which he tested us to see if we were flesh and blood, at last making us scream out for mercy, when he released us, saying, "That's it; stop shamming. I thought I'd make you squeal, although I must own you are a plucky kind of ghosts. I can soon put you into the way of a rich joke, girls. Old Finley's coming along back there on his mule. Stay right here in the fence corner, and walk out as he comes up. It may be possible you may succeed in scaring him out of the even tenor of his way. The effect of such a thing would be simply sublime." This little piece of intelligence put us into a perfect transport of delight, for be it known that "Old Finley," as he was familiarly called, was a "thorn in our flesh;" in fact, we had always considered it a great and undeserved kindness that he was permitted to live. Such a crusty old fellow as he was, never so much as giving you a civil "howdy" when you passed him on the road, and seeming to think the bony, vicious old animal he rode the only being, worthy of notice.

How he lived nobody knew, and I don't think, anybody cared. At least, however curious we might have been, not one of us had ever found the courage to approach the old log-cabin, guarded as it was, day and night, by the fiercest of dogs. All we knew was, that each night we saw him ride past on his old mule, and every morning, just at dawn, back again, and at no other times, never lifting his head to speak to a living soul, never looking any one in the face, but keeping on his lone, solitary way from choice, repelling all attempts at acquaintance with a gruff, "Don't know you, sir." And so, because he was surly, and old, and poor, we young folks hated him, and counted an opportunity to persecute him one of the choicest privileges which could fall to our lot.

He certainly was a queer looking object as he came over the brow of the hill, astride the long-eared, old mule; his broad-brimmed straw hat, tattered and torn, flapping over his yellow, wrinkled face, while every other moment, he would dig his heels into the poor creature's sides with a "Git along, b'y." Indeed, we found it a matter of great difficulty to preserve the decorum considered a necessary adjunct to a ghostly character; but by dint of half smothering ourselves with our shrouds, we were enabled to keep from betraying ourselves; although I laughed so hard that the tears flowed abundantly down my cheeks, wetting the dough into a very sticky and unpleasant consistency.

As he came slowly down the hill, we stalked from our hiding-place, and with a hideous groan, arrayed ourselves before him. We had no idea it would happen the way it did, of course, but as we appeared before the eyes of the mule old Finley was riding, the terrified creature stopped short, then wheeled about with a frightened snort, and clearing the low fence with a bound, galloped away, leaving his master in the middle of a frog-pond to look out for himself.

At first we laughed in triumph over our successful venture, but when two or three minutes had elapsed, and the old man still lay on his back where he had fallen, apparently motionless, our hearts grew still for fear, and we called Will, who had stopped to see the fun, and throwing off our encumbrances, helped him draw the dripping old man to a dry spot. To our horror we found that he had sustained a serious injury, and conveying him to the house, sent for a physician. And then, such a night as followed. Oh! how we worked, and how willingly we obeyed every command given, while our hearts failed us for fear of what might yet be. But when morning dawned, it found him much more comfortable, but uneasy and anxious to get home. "Jimmy will wake and fret," was his constant cry, and, at last, we were obliged to remove him to the old log cabin in the woods. And then the story of his steady tramping to and fro under cover of darkness was revealed. It seems that for many years he had sheltered and cared for an idiot brother, and, unable to leave him during the day, spent the hours of the night at work in the paper mill about four miles away, thereby earning sufficient to cover all their wants. Indeed, he had contrived to lay up quite a little sum, which, together with what our parents were obliged to furnish for damages, occasioned by our thoughtlessness, made the two quite comfortable for the rest of their lives. But we had learned a lesson we were not likely to forget, that sometimes true heroism hides beneath a ragged vest, and, you may be sure, that was the last of *our* dough-faces.

LETTERS FROM THE COUSINS.

Dear Rural Friends: "The spirit moves" me to write, and so here I am wielding a "quarrelsome pen." I have just finished reading the Rural of the 24th (of April), and felt like shouting when I came to Peaceable Bob's letter. Good for you; just what those girls need! Now, I will tell you that that girl, Frizzle Top, who wrote to you awhile ago is a relative of mine, and such a "cut up" as she is never was seen before. I think her equal to Madcap Mollie. One evening she, with two of her most intimate friends, dressed up as nuns. What looking things they were! Perhaps I can describe them to you. All three had on plain black skirts black waists, white bands around their faces, resembling a bandage for toothache; and capes pinned around their heads in a loose way, falling to the bottom of the dress.

The tallest one, who represented Lady Superior, had a large rosary and cross. Well, they walked up Euclid Ave., and no one knew who they were. When they came up to the C. church, they went up the steps and, as luck would have it, the vestibule door unlocked and actually they went in, and after a while came out and went to the cemetery, and knelt on some of the graves. It being such a public place, people could see them easily, and really believed them to be nuns, sent here to visit the Catholics. Now what do you think of that? She (F. T.) has just received about fifty plants from the greenhouse, and I suppose you will have a full report about her success with them, and the seeds you sent her, soon. I now sign myself for the first time, The Little Detective.

Willoughby, Ohio.

[Since the correspondent challenges an opinion I must say that I cannot sanction this "cutting up" of Frizzle Top and her fun-loving friends, and I advise them to read the story of the Dough-faces on this page and learn how they came to grief. Suppose some one should have discovered who they were and dismantled them before all the people in the cemetery, would they not have been thoroughly ashamed? Moreover, though these three thoughtless girls have themselves no respect for the Catholic religion, it is exceedingly bad grace to mock and ridicule, in that manner, what others regard with reverence.—U. M.]

BRIEFLETS.

The Pacific Rural Press reports strawberry blight in California. . . Robert Fortune is dead. He devoted his life to the enrichment of his country (England) with new and valuable plants. Our own country, as we have recently shown, is greatly indebted to the good man for many of our finest ornamental plants. . . The moles have given us no rest this winter. . . Mr. Griffin thinks the furniture made in New Zealand the most beautiful he has ever seen. It is made of Kauri wood. . . The gum from Kauri wood is so transparent that one can see through a block a foot in thickness. It looks like amber. . . There are 795,000 paupers in England, and the crown jewels, if turned into money, would feed them all.—N. Y. Com. Advertiser. . . The New York Tribune says oleomargarine is pronounced oleomarg*ah*reen, with the *g* hard. Nearly all the papers we have seen prononnce oleomargarine have pronounced it a fraud. And perhaps that is the best way, as it requires fewer letters and is much more easily pronounced.—Norristown Herald. . . Busy, busy, busy; busy as a bee. . . Those farmers who have best improved the winter months will find the most to do now. And they will do it with more pleasure and more effectually for the winter's study, . . Mr. S. B. Parsons read an essay upon "Woman in Horticulture" at the last meeting of the N. Y. Hort. Society. . . Pride of the Hudson Raspberry is again killed to the ground with us. . . The Rural New-Yorker thinks it has fully demonstrated that weevil-eaten peas are substantially worthless. We have yet to hear from Major Freas, of the Germantown Telegraph, however. It will be remembered that we have an immense wager with that veteran on the result of a test which he is to make. . . A sowing of bone-flour may now prove of much advantage to lawns. . . The curculio deposits her eggs on plums and most stone fruits when very small. The larvæ soon hatch out and eat into the flesh, when the fruit begins to decay and finally drop off. The only feasible method of saving the plum, apricot, etc., is by jarring the trees and catching the insects upon sheets spread out underneath. If there are plenty of curculios in your locality, kind reader, you need not hope to gather plums from your own trees, unless you are willing to adopt the above method of destroying the beetles. . . In sending us specimens, please write your name upon the packages. It is now permitted by the P. O. Dep't. . . Speaking of destroying the curculio, a fruit grower in New Hartford, N. Y., proposes to cut the ends of three-eights iron bolts square, and insert them in the trees, leaving the heads projecting an inch and a half or two inches, to receive the blow of the hammer. It will take the bark a good many years to grow over them. . . Mr. Allen tells us that chicken cholera usually comes from close, foul, dirty roosting houses, or small, dirty yards. Give them pure air, decent food and water and plenty of exercise, especially on grass, and the cholera will never come. . . The promise of the strawberry crop in New Jersey is that of a heavier yield than ever before. . . We read in a contemporary that Mr. E. W. Durand of Irvington, N. J., boasts of being the propagator (originator is meant, we suppose) of over 2,000 varieties of Strawberries. The public may be permitted to hope that out of so great a number, at least one variety will prove to be of some value outside of his own grounds. So far as we are informed the great splurge made over his varieties has been equalled only by the disappointment of the majority of those who have tested them.

CATALOGUES, ETC., RECEIVED.

Quarterly Report of the Kansas State Board of Agriculture for the quarter ending March 31, 1880. This first quarterly report is a volume of 120 pages. Of these the first 44 pages contain valuable tables, giving by counties, the value *per capita* of the products of the farm for 1879, the real value of the assessed property *per capita*, tax on each $100 of assessed valuation, number of school districts, school houses, teachers, average wages and value of school buildings and grounds in each county; the acreage of corn and wheat to the square mile ranked by counties, and the area in square miles of each county, besides a mass of other statistical information of use and interest to actual residents and emigrants seeking an eligible place of settlement. Its special feature, however, is an extended manual on swine husbandry, covering the remainder of the work, giving the practical experience of swine breeders for every county, and valuable facts concerning the treatment, breeding, and cost of raising pork for market, together with many and varied suggestions for the profitable care and management of swine. The work may be had by applying to the Secretary of the Board, J. K. Hudson, Topeka, Kansas.

Practical Artificial Incubation.—This handsome work, of 110 pages, is a *resumé* of the progress made in the past few years in artificial incubation in this country and in Europe, with a description of a score of leading incubators in successful operation here and beyond the Atlantic. It has also an instructive chapter on the care, management and diseases of young chicks, and is profusely illustrated. We have frequent inquiries with regard to incubators, and we would strongly advise all interested in this branch of poultry-raising to send for this exhaustive little work, which is by that adept in poultry keeping, J. F. Ferris, Editor of the Poultry Monthly and the Fancier's Journal, Albany, N. Y. Prices: 50 cents, in handsome granite covers; 75 cents, in durable cloth, and $1 in fine cloth, gilt edges. Sent, postpaid, on receipt of price.

The Native Flowers and Ferns of the United States. By Thomas Meehan. Philadelphia: Charles Robson & Co. We are now in receipt of Parts 21, 22, 23 and 24, Vol. II, Series 2, of this beautiful and valuable work. Among the most interesting of the colored plates of the present installment are Calypso borealis, Cassia nictitans (Wild Sensitive Pea), Cuscuta Gronovii (common American Dodder), Gentiana Andrewsii (Closed Gentian), Calochortus venustus (Mariposa Lilly); Butterfly Tulip, Pentstemon secundiflorus, Kalmia angustifolia (Dwarf Laurel) and many others. These parts close the second volume of the second series. May the next series speedily appear—when we shall take much pleasure in announcing the fact to our readers, many of whom we find are as deeply interested in the work as we ourselves are.

American Grape Growing and Wine Making, by Professor George Husmann; published by the Orange Judd Company, New York, price $1 50 Professor Husmann is a recognized authority in the cultivation of the Grape and in wine-making, and this new work is much to his credit. He describes briefly some of the old and most of the new and promising varieties under each of the three classes to which Grapes respectively belong, viz: Labrusca, Æstivalis and Cordifolia; and he also gives a concise but plain statement of the propagation of the Grape-vine, with the different modes of training and its care and culture at all seasons of the year. Some 50 pages are devoted to an excellent treatise on the manufacture of wine. The book contains 240 pages, is neatly printed on tinted paper and substantially bound in cloth.

Address by Horatio Seymour, before the N. Y. Agricultural Society, at the meeting of Jan. 21, 1880.

PERSONAL ITEMS.

Laurel, Del., has lost its centenarian in the person of Grace, a negress, who has just died aged 115.

An old lady, aged 96, of Carmel, N. Y., was the chief mourner, and went to the grave at the funeral of her daughter, aged 76.

Harry Skinner of Powell County, Ky., has thick hair coming on his bald head, and has lately cut several teeth, although he is nearly 90.

Gen. Garfield himself owns a thriving farm, his oldest brother is a Michigan farmer, and his two sisters are farmers' wives.

Mr. Brown-Jones-Robinson Smith, a Boston artist, painted an orange peel on the sidewalk so naturally that six fat men slipped down on it.

Congressman Dwight, of New York, who owns 25,000 acres of wheat land in Dakota, has organized a stock company for farming purposes.

Ruthia Simpers died in the Elkton, Md., almshouse, aged 110 years. She was born a slave, but had enjoyed fifty years of freedom, having been manumitted.

Mr. and Mrs. Bloomer, the latter the inventor of the Bloomer costume for women, recently celebrated their fortieth wedding day in Council Bluffs, Iowa. They formerly lived in Seneca Falls, N. Y.

Allsop, of pale ale celebrity, who was defeated in East Worcester by Mr. Gladstone's son, is to be made a baronet, and Guiness, of double X celebrity, now a baronet, is to be made a peer, under the title of Lord Ardilaun of Ashford, his seat in Galway.

No Charge For Consultation.

After more than ten years' experience in administering that new and remarkable remedy for chronic diseases, now so widely known as "Compound Oxygen," and after a careful observation of its action in the largest range of diseases, some of them of the most complicated and hopeless character, *we are now prepared to treat that special line of cases which are usually regarded by the profession as beyond the reach of medical skill.*

Not that we will promise a cure in any and every case that may come to us. But we invite a statement, by letter or otherwise, of the case of any of that large class of suffering invalids to which we have referred. This will be carefully considered, and compared with other and similar cases which we have had under treatment, and as honest and intelligent an opinion given us it may be in our power to render. *For this we will make no charge, whether, after consultation, the Oxygen Treatment be ordered or not.* Send for our Treatise on Compound Oxygen, which will be mailed free. You may find in it the record of a case just like your own, which we have successfully treated. Address DRS. STARKEY & PALEN, 1109 and 1111 Girard St., Philadelphia, Pa.

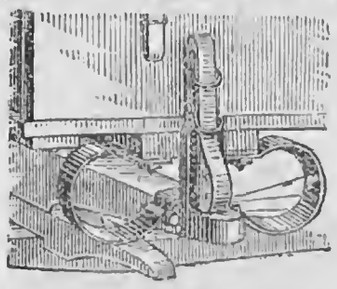
SOMETHING NEW!
PULLIAM'S PATENT
BOLSTERS SPRINGS for FARM WAGONS.



This valuable device is suited to wagons of any size—made of the best steel and warranted—are attached by four bolts through the bed—can be put on by any person. They remain on the wagon for all uses and work equally well whether with empty or loaded wagon. There is no use for a spring seat—they make a comfortable spring wagon out of a farm wagon—and save largely in wear and tear. We want Agents every where. Send for description and prices, and mention this paper.

MINNESOTA CHIEF!

The Best Thresher on Wheels!

It is not a vibrator, neither is it an apron machine, but the best points of both are combined, with new and original features of its own. It is wonderfully simple in its arrangement. It is admirably perfect in its threshing and separating qualities. It saves all the grain, and cleans it ready for market. It runs easily, is constructed durably, is finished beautifully, is the most economical, least expensive, and altogether the most satisfactory machine in the market.

It will handle wet grain as well as dry. In threshing Flax and Timothy it has no equal, threshing and cleaning both as well, and nearly as rapidly, as wheat, and requires no change except the sieves. It has more square feet of separating and cleaning surface than any other machine made, and cannot be overloaded. It is both over and under blast at the same time.

Our clover hulling attachment is a new and very desirable feature. It does the business more rapidly and better than an exclusively clover hulling machine.

Separators of the various sizes fitted for Steam or Horse-Power, as desired.

An Improved Pitts Power, an Improved Woodbury Power, and the Elward Equalizing Power, all mounted on four wheels, are manufactured by us, and are not surpassed by any in the market.

For Price-Lists and Circulars, address the manu'frs.

Eureka Drain Tile Machine

This Machine is substantial and durable in construction; simple in its arrangements; easy of access to its wearing parts; having STRENGTH THAT EVEN GROSS NEGLECT could scarcely BREAK,—leaving little to be desired as an EFFECTIVE TILE MACHINE.

We drive this Machine by either horse or steam power, being well suited to either. Our Tile dies range in size from 3 to 9 ins. in diameter; and in shape we vary them to suit the taste of customers. As a Brick Machine it is also a complete success. It is fully warranted as a Tile or Brick Machine. Send for circular.
CHANDLER & TAYLOR, Indianapolis, Ind.

THE FERGUSON BUREAU CREAMERY.

Surpasses all others in quantity and quality of butter made. It secures matured and ripened cream, which makes butter of the best texture, flavor, and of unequaled keeping quality. It excludes flies, dust and odors; is constantly at the correct temperature (58° to 60°); has room for the cream and butter, and saves three-fourths the labor. It can be used with either ice or water, and both summer and winter.

THE FERGUSON CONCUSSION CHURN is the best. It combines scientific principles with the best labor saving devices. No floats or paddles. Brings the butter in granular form, and secures the largest yield. Before buying any other Churn or Creamery or any pans, or cans, send for large illustrated circular to THE FERGUSON MF'G CO., Burlington, Vt. Reliable Agents Wanted.

Humorous

"TALK is cheap." Is it? Just hire a lawyer once.—Syracuse Herald.

ECCENTRIC old lawyer to new footman, "Now then, Patrick, call me a cab." Pat, who thinks this is a dodge to try his sincerity; "Och, no, yer honor, it's not mesilf that'll be callin' ye names at all."

"CONDUCTOR, why didn't you wake me up, as I asked you? Here I am miles beyond my station."

"I did try, sir, but all I could get you to say was, 'All right, Maria; get the children their breakfast, and I'll be down in a minute.'"

AFTER a telegraph pole had fallen on a Savannah negro's head he threw up his hands and shouted: "Don't hit me again wid your club, Mr. Policemen. It wasn't me that stole der chickens. It was Deacon Henry." Then he looked, saw what hit him and walked off: saying: "Golly, I'se in luck 'dis morning. I'spected dat de policeman had me shuah dat time."

"YOU must not play with that little girl, my dear," said an injudicious parent. "But, ma, I like her; she is a good little girl, and I am sure she dresses as pretty as I do, and she has lots of toys." "I can not help that, my dear," replied the foolish mother; "her father is a shoemaker." "But I don't play with her father, I play with her; she ain't a shoemaker."

A FRENCH traveler, arriving late at a railroad station in Paris, found the ticket-office closed and readily accepted the offer of a gentleman, who could not use the ticket he had purchased, and seated himself in the train just in time. Arrived at the collecting-station he presented his ticket, and was asked for "his own." His reply brought the question. "Did you think to travel by this ticket?" "Yes: why not? "Well, it is a ticket for a dog!"

A Kind of Lethargy

Of the kidneys and bladder is sometimes exhibited which it is very desirable to overcome in its incipiency, as this symptom is but the forerunner of disease. When these important and sensitive organs grow dormant they may be safely stimulated with Hostetter's Stomach Bitters, which in connection with its tonic and alterative, possesses useful diuretic properties. As it is through the kidneys that the blood is strained, surrendering certain liquid impurities injurious to health, it will be seen that by promoting the action of the kidneys, the Bitters serves the double purpose of keeping them from falling into a state of morbid degeneration, and also of depurating the blood. That fluid is also enriched by this supreme medicine, and the bowels, stomach and liver invigorated and regulated by it. As a general invigorant also it has the highest reputation.

OLEOMARGARINE.

What It is and How It is Made.

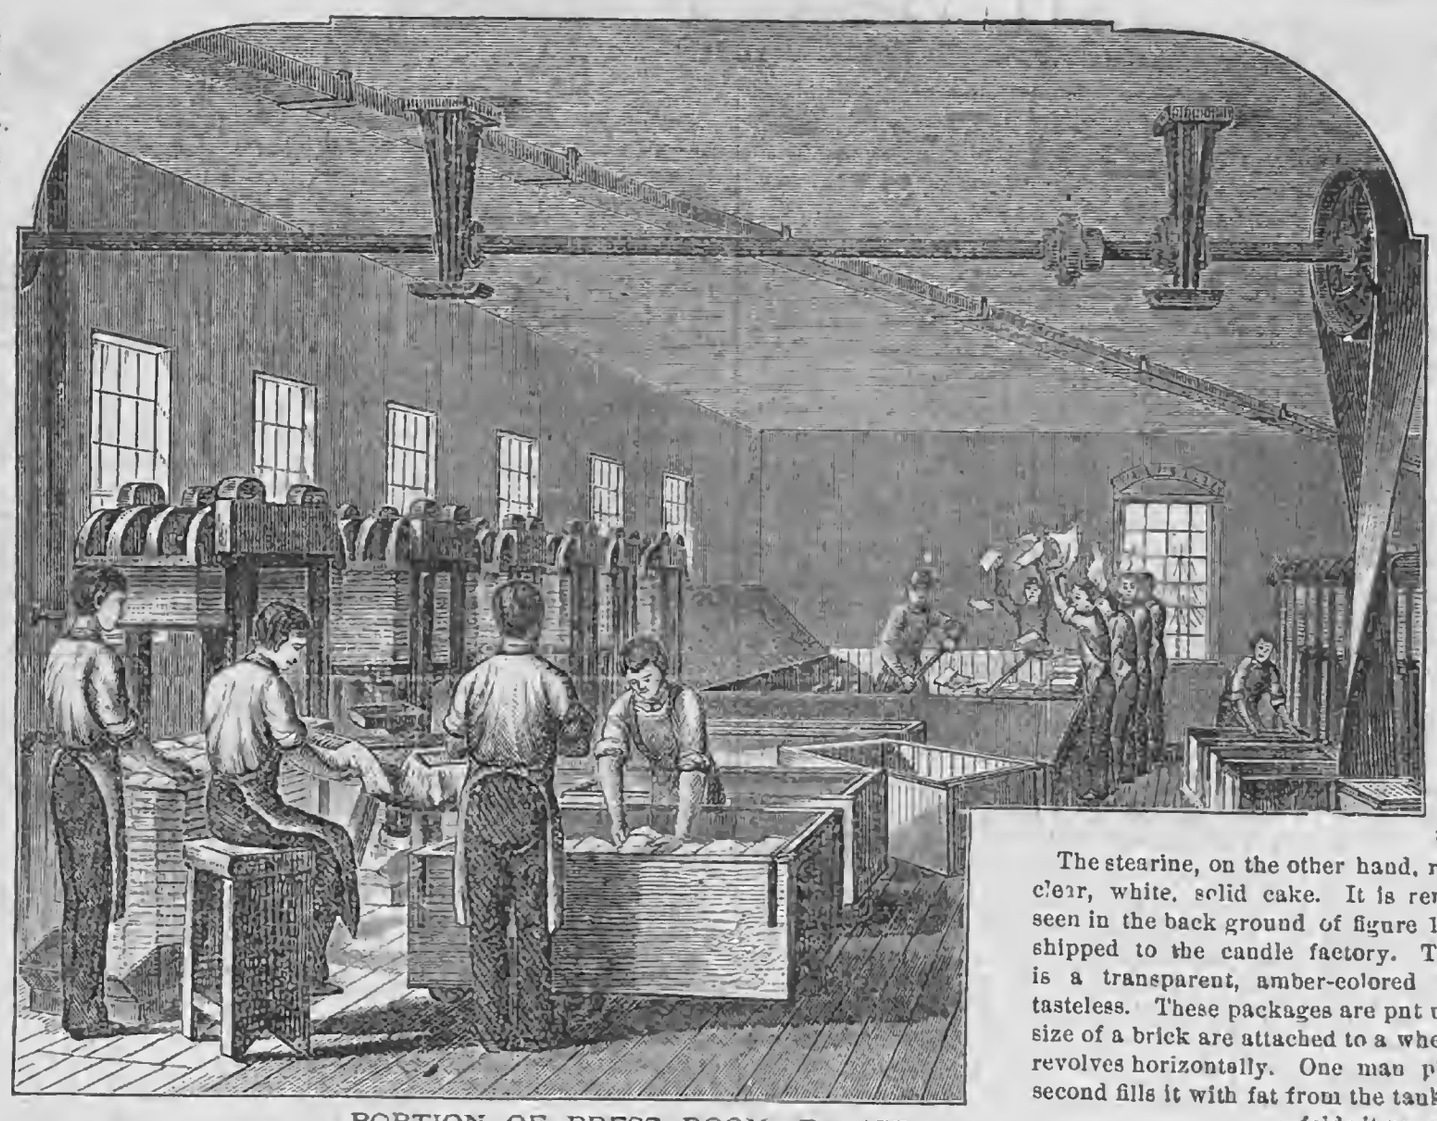
So much has been said about oleomargarine that our readers are quite familiar with the term, without, perhaps, having any clear idea of what the substance is and how it is produced. A brief description of the process of manufacture, with illustrations, will therefore prove alike interesting and instructive, especially as the article is just at present causing some agitation in the dairy world.

How It Originated.

The process by which oleomargarine is made was first discovered some ten or twelve years ago by the French chemist M. Mége-Mouries, who was commissioned by his government to investigate certain questions in domestic economy. He began work on the theory that the formation of the butter contained in milk was due to the absorption of fat from the animal tissues. Taking this as a hypothesis, he instituted a series of experiments with beef fat, which terminated in the production of a substance that greatly resembled butter and which is now known as oleomargarine. It is under the patent taken out on his process that the bulk of it is now manufactured. The extensive establishment in this city situated at West 48th St., North River, and owned by the Commercial Manufacturing Company, was commenced in 1876, and it has now assumed such proportions that it turns out, on an average, 45,000 pounds of oleomargarine a day. To fully comprehend the subject we will follow

The Process of Manufacture

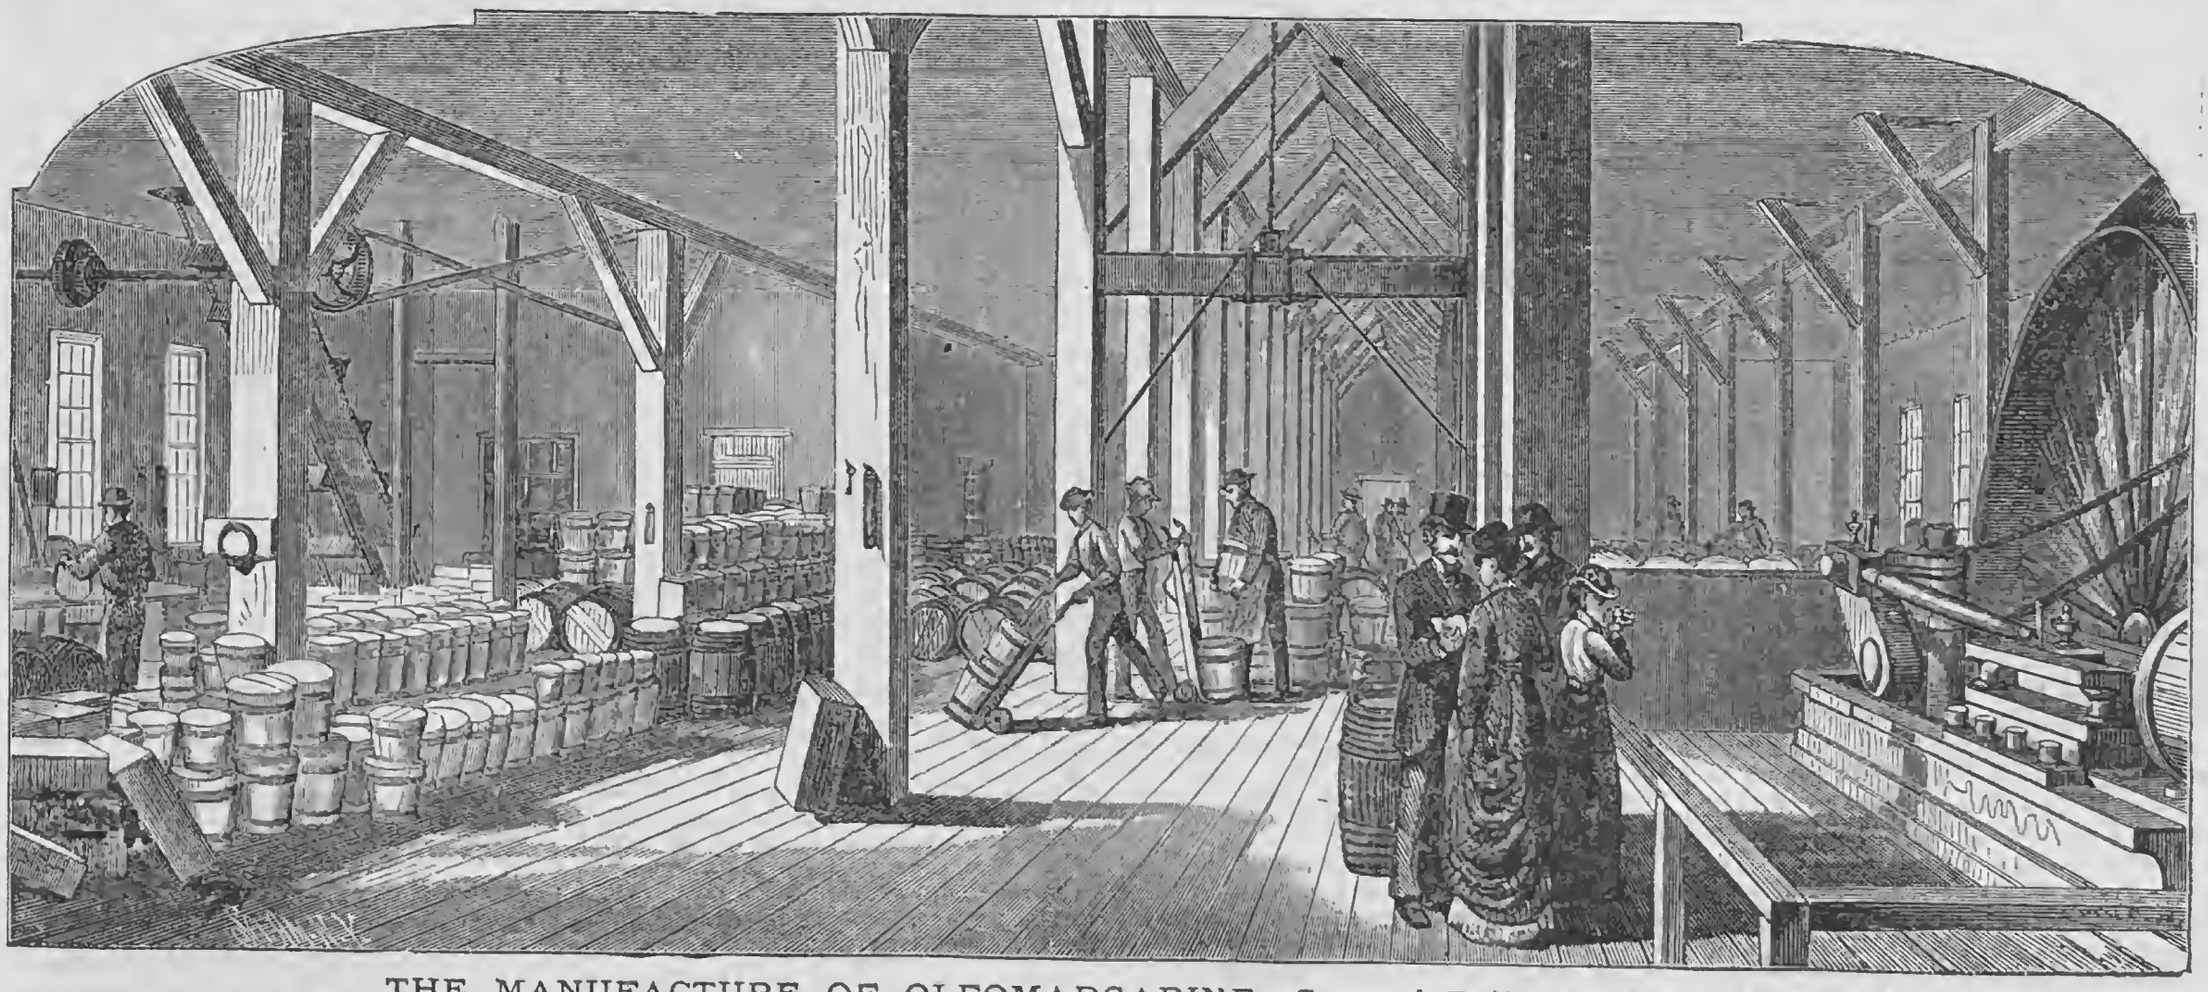
step by step, from beginning to end, and by means of our abundant illustrations it will be readily understood. The fat from the beeves killed during the day at the several abattoirs in the city, is brought to the factory each evening, where after having been weighed, it is thrown into large vats, thoroughly washed in several waters of different temperatures, and sorted. The pieces containing a comparatively small percentage of oil are separated for the making of soap, while the richer portions are thrown into an adjoining vat. In the next step of the process this selected and cleansed fat is elevated to the floor above, where it is thoroughly cut up by going through a hashing machine, and then melted. The object in hashing it is to break up the tissues so that the oil can be separated therefrom at a low temperature; if the fat were to be melted at a high temperature, the oil would be tainted by a rank, tallowy flavor which would render it worthless as an article of food. From the hashing machines the fat is conveyed to the melting tanks, shown at 4 in fig. 180. These consist of a series of iron kettles, or caldrons, raised some distance from the floor, and having double sides, the space between which is filled with hot water. The water is heated by steam and melts the fat at from 122° to 124° F. During the process of melting the fat is stirred by arms attached to a revolving shaft, which may be seen in the engraving; but when the melting is completed, this stirring ceases and the tissue settles to the bottom. The liquid portion is then siphoned off into square wooden tanks on wheels and drawn into the press room to rest and await the granulation of the stearine, which takes place in the course of about 36 hours. When thus granulated, the fat greatly resembles granulated clover honey, and is nearly odorless.



PORTION OF PRESS ROOM.—Fig. 177.

The next step consists in separating the stearine from the oil, or oleomargarine proper. This is accomplished by straining under pressure. The operation may be seen in fig. 177, which represents a portion of the press-room. To the left in the figure are seen several hydraulic presses under each of which is placed a series of galvanized iron plates. The now refined fat is removed from the tanks by the hands and packed in cloths of the heaviest duck. Some eight or ten of these packages are placed on each iron plate, and when all are thus filled, a slowly increasing pressure is brought to bear upon the packages under which the oil percolates out through the cloth, and is collected in a tin basin underneath, from which it runs into a tank fed by all the presses.

The stearine, on the other hand, remains in the cloth in form of a clear, white, solid cake. It is removed by a flirt of the cloth, as seen in the back ground of figure 177, and is then broken up and shipped to the candle factory. The oil, as it runs from the press, is a transparent, amber-colored liquid without odor and almost tasteless. These packages are put up very rapidly. Forms about the size of a brick are attached to a wheel which is raised on a stool and revolves horizontally. One man places the cloth over the form, a second fills it with fat from the tank-car standing by, while a third folds it up, and a fourth puts the packages under the press. Large quantities of the oil are barreled and exported to Europe, especially to Holland, where it is churned and made into oleomargarine. Following this comes the process of churning, the scenes of which are



THE MANUFACTURE OF OLEOMARGARINE.—General Delivery Room.—Fig. 176.

shown at 3 in the large cut. The oil is drawn from the tank into the churn which is provided with a rapidly revolving shaft. It is here mixed with the coloring matter and twenty per cent. of fresh milk. The milk is added to impart to the product the flavor of butter; for although the oil is richer in fat-globules than cream, it has but little of the volatile fats which give to butter its peculiar agreeable flavor. On the other hand the absence of these volatile fats enables oleomargarine to be kept much longer than butter without becoming rancid. Having been agitated in the churn for about forty minutes, a faucet is opened and the emulsion which is still a yellowish liquid, is drawn off into a tank-car half filled with broken ice. Unlike the churning of cream by which the butter is formed in the churn, this oil does not granulate by agitation, but when drawn from the churn on to the ice and thus suddenly chilled, it immediately granulates and partakes of the consistency and appearance of butter. This stage of the process is illustrated at 3 in the lower left-hand corner of figure.—While the liquid is pouring into the tank the men are thoroughly mixing it with the ice to perfect granulation. The beef fat has thus taken three important steps toward becoming an article of commerce; viz: first the melting whereby the cellular tissues containing the fat are separated: second, the separation of the stearine from the oil by straining under pressure; and, third, the churning and granulation. It is now a solid substance flavored by the addition of milk colored with annatto, and has every appearance of butter.

It is next placed on tables, as seen in the upper portion of figure—which represents one day's churning. The pieces of ice are carefully removed and salt is added, as in the case of butter. When an extra-good article is desired, it may be churned a second time with a larger quantity of milk. It will thus get a fair proportion of the butyric elements which give first-class creamy butter its delightful flavor, and, when properly handled, such oleomargarine may even be made more palatable than many grades of butter sold by the city retailers.

When a sufficient quantity of salt—about five per cent.—has been added, the oleomargarine is ready for packing and shipment. The packages are put up in two forms—either in tubs of about fifty pounds each, which process may be seen in fig. —, or in small packages of one or two pounds for the retail market. Figure — shows the general-delivery room of the Commercial Manufacturing Company, with tons of the product ready for shipment.

The wholesomeness of the product can hardly be questioned when made from fresh beef fat of healthy animals, *and from this only*. On this point, however, the law should make provisions, if found necessary. At the above-mentioned manufactory the strictest cleanliness is maintained throughout the whole process, not merely as a matter of choice, but as a matter of necessity; for if the many tanks and vessels, straining cloths, etc., were not cleansed at the end of each day's churning, they would soon become unfit for use and taint the oleomargarine to a degree that would impede its sale, which would be an unwise policy, as the object is to make it resemble butter as closely as possible.

Is it Butter?

Oleomargarine is *not* butter, and though it is a substitute for butter, which, on account of its cheapness may be appreciated by the poor in cities, it should under no circumstances be sold as butter or under any other name than oleomargarine.

The manufacturers neither wish nor are they able to sell it as butter, as they deal only with wholesale houses and commission men who are well aware of what they are buying, but the temptation to fraudulent dealing lies with the retailers, who may, and do, palm it off as butter. On this point the law cannot be too stringent. To sell it for what it is not, is to obtain money under false pretenses—a deliberate fraud, which should be severely punished; but, on the other hand, when given to the public for what it is, and the article is wholesome and nutritious, it will be a waste of effort to attempt to entirely suppress its manufacture.

THE MANUFACTURE OF BLOOD GUANO.

Before describing the process by which the refuse of the slaughter-house is converted into an article of great commercial as well as agricultural value, I will speak of the butchering of hogs after the fashion with which I am acquainted.

Poor piggy is first ushered into a pen where he is caught by a hind leg by means of a slip noose, and straightway suspended in the air, when he is ready to be "stuck" or bled. The "sticker," if seen in his panoply in the street, might remind one of a knight of old, clad in armor of rubber, except that there is no visor to his helmet. Suspended over a vat in which his gushing blood is caught, the hog receives his death wound, which is given so quickly and "scientifically" that the motion of the slayer is scarcely perceptible. When bled, the carcass is lowered into a tank filled with water heated by steam, and there scalded. Having been taken out of the scalding tank, it is laid on the scraping table, which is about 25 feet long, where it is scraped—that is the hair or bristles are removed. The "scrapers"

PACKING IN FIRKINS.—FIG. 178.

work in pairs, each pair having a particular part to scrape. When the hog reaches the end of the table it is devoid of bristles and outwardly as clean as it can be made. It is now ready for disemboweling; an operation performed by five cuts of the knife, after which it is washed. While the carcasses are on the "spreaders"—as the pieces of wood by which they are suspended are called—they are weighed, and according to their weights they are placed in "racks." Thus a hog weighing 162 pounds, dressed, would be called "160 pounds down," and one weighing 164 pounds, would be called "165 pounds up:" so that a person can tell within a trifle just how much the hog weighs when it is suspended in the "racks." From the time the carcass leaves the "stickers" until it reaches the "racks" generally occupies only about three minutes, although in timing the operations from the moment in which the animal ceases to bleed until it is in the racks, I have found they sometimes take only a single minute.

The entrails and other refuse, the removal of which formerly cost money, and the blood which used to be run into the sewer, are now carefully saved and conveyed by means of chutes to a lower story where the driers are situated. These are long, iron cylinders "jacketted;" that is, having one cylinder inside another, with a space of from one to two inches between the two. They have solid ends or "heads," through which run revolving, hollow shafts extending through the center of the cylinders, and from these hollow arms project at intervals connecting with hollow cross-pieces running parallel to the center shaft. All these are pierced with holes. On the top of the cylinder is a single large "manhole," or opening, through which the cylinder is "charged" or filled. This is fitted with an air-tight cover to prevent the escape of any vapor.

When the drier has been charged, steam is admitted into the jacket and also into the hollow shaft whence it escapes through the perforations in the connecting arms and cross-pieces, and as these revolve with the shaft, they serve to mix the "charge," which, when dried, is removed through the smaller manholes on the bottom of the cylinder.

The charge, when first put into the drier, is a semi-fluid conglomeration, but when it is removed it is as fine as flour. Unlike fish guano, blood guano emits no smell during its transformation, as the vapor is condensed by a "condenser" or a fan which draws the steam through water where the vapory part of it is condensed into water, and whatever air has been admitted with it is blown into the fire, where everything suspended in it is burned. A drier 15 feet long by five feet in diameter will hold about six tons of refuse, which will turn out about two tons of guano. The time occupied in drying a charge is about eight hours. The value of the guano depends mainly upon the amount of ammonia in it, which is determined by chemical analysis; but it is worth, on an average, $30 per ton. Blood guano is subject to the same adulterations as fish guano, but, even with these, it would burn any seed planted in contact with it.

OSAGE-ORANGE SEED.

How Prepared for Market.

As this plant—Maclura aurantiaca—has for a number of years stood in the front rank as a hedge plant adapted to almost every soil and climate of the United States, and as it is propagated chiefly from seed gathered in Texas in the fall and winter from the native Orange trees—Bois d' arc—a sketch from this place, where it is largely prepared, of the manner in which the seed is fitted for market, will probably interest many readers of the Rural and suggest to them a way of detecting spurious or old seed.

The seed is prepared by companies of mill-owners, each of whom obtains a permit for gathering it over a large section of country, often embracing 10,000 acres. The following is the usual form of permit:—

This is to certify that I have this day assigned my right and title to the *present crop* of Osage-Oranges, now growing on my League and Labor of land, situated on the waters of the Trinity River, Collin Co., Texas, to John Jones, of aforesaid Co., for and in consideration of $2, the receipt of which is hereby acknowledged. James Smith.
This 20th day of November, 1879.

Having received the permit, the company pays from $2 to $2.50 per thousand for oranges delivered at its mill on some convenient water-course, in pyramidal piles of not more than 10,000 in each stack of sound fruit of good size and color.

The mills used in primitive days were very simple, consisting of cylinders garnished with rows of teeth passing around them in screw-fashion, and inclosed in concave boxes, the insides of which were also armed with teeth that "meshed" with those on the cylinder, or rather acted as female screws to them. These have been succeeded by mills which press the oranges into pomace which passes through the strainers without injury to the seed, and is so fine that when the mass reaches the washer, the seed can be separated without trouble. The washing-box, about thirty feet long, three feet wide and as many deep, is sunk in the water, its top coming within a few inches of the surface. On this box rests the separator, with screens, rakes and pump. Water is pumped on to the mass of pomace and seed, which is worked up into a soft, watery pulp, from which the seeds drop down through the screen into the washing-box, while the pomace is floated away by the natural current in a running stream, or by an artificial current produced by the movement of a paddle-wheel in the rear of the box, if the latter is in "dead" water.

Now comes the "drying"—the most particular part of the business; for in this process if the seed is not carefully handled it turns black and on this account is rendered unsalable. Drying platforms should be erected at an inclination of 20°. to the south, and have an area of at least twelve square feet to the bushel. The seed having been carefully spread out, should be moved about often so that it may become of a bright brown color. After the drying has lasted three or four days—or until the seeds are thoroughly dry—they are sacked, weighed and branded, and are then ready for shipment.

The price of seed varies a great deal in accordance with the relation of supply and demand. When a short crop meets a brisk demand the price is high; when a large crop encounters a slack demand, prices are low; and, indeed, a large crop usually brings prices down to nearly cost, which is about $4.50 per 33-pound bushel at the mill. A thousand good-sized, sound oranges will yield one bushel of seed, if rightly handled and washed. A bushel contains 220,000 seeds, but in nurserying them I have always been satisfied if I obtained 100,000 plants. These sell from the nursery by the thousand, bringing from $2 to $2 50 per thousand according to the locality. In Kansas, Missouri and Nebraska millions of them have been sold at about the above prices, whereas, if farmers had bought their seed, and, having selected a choice plot of land, had raised their own plants thereon, many dollars could have been saved.

Worthless seed, caused by mill-men "souring" their oranges, can be detected by letting a small quantity drop into still water—if they sink they are sound: but if they rise and float on the surface, they have been heated, and it is advisable to let them "severely alone." One thing is remarkable about Bois d' arc timber—the longer it stays in the ground, as posts or pickets, etc., the sounder it seems to get. Near here a gate-post of this sort, put in 33 years ago, is perfectly sound and solid to-day.

Entomological.

METHODS OF DESTROYING THE TOBACCO WORM.

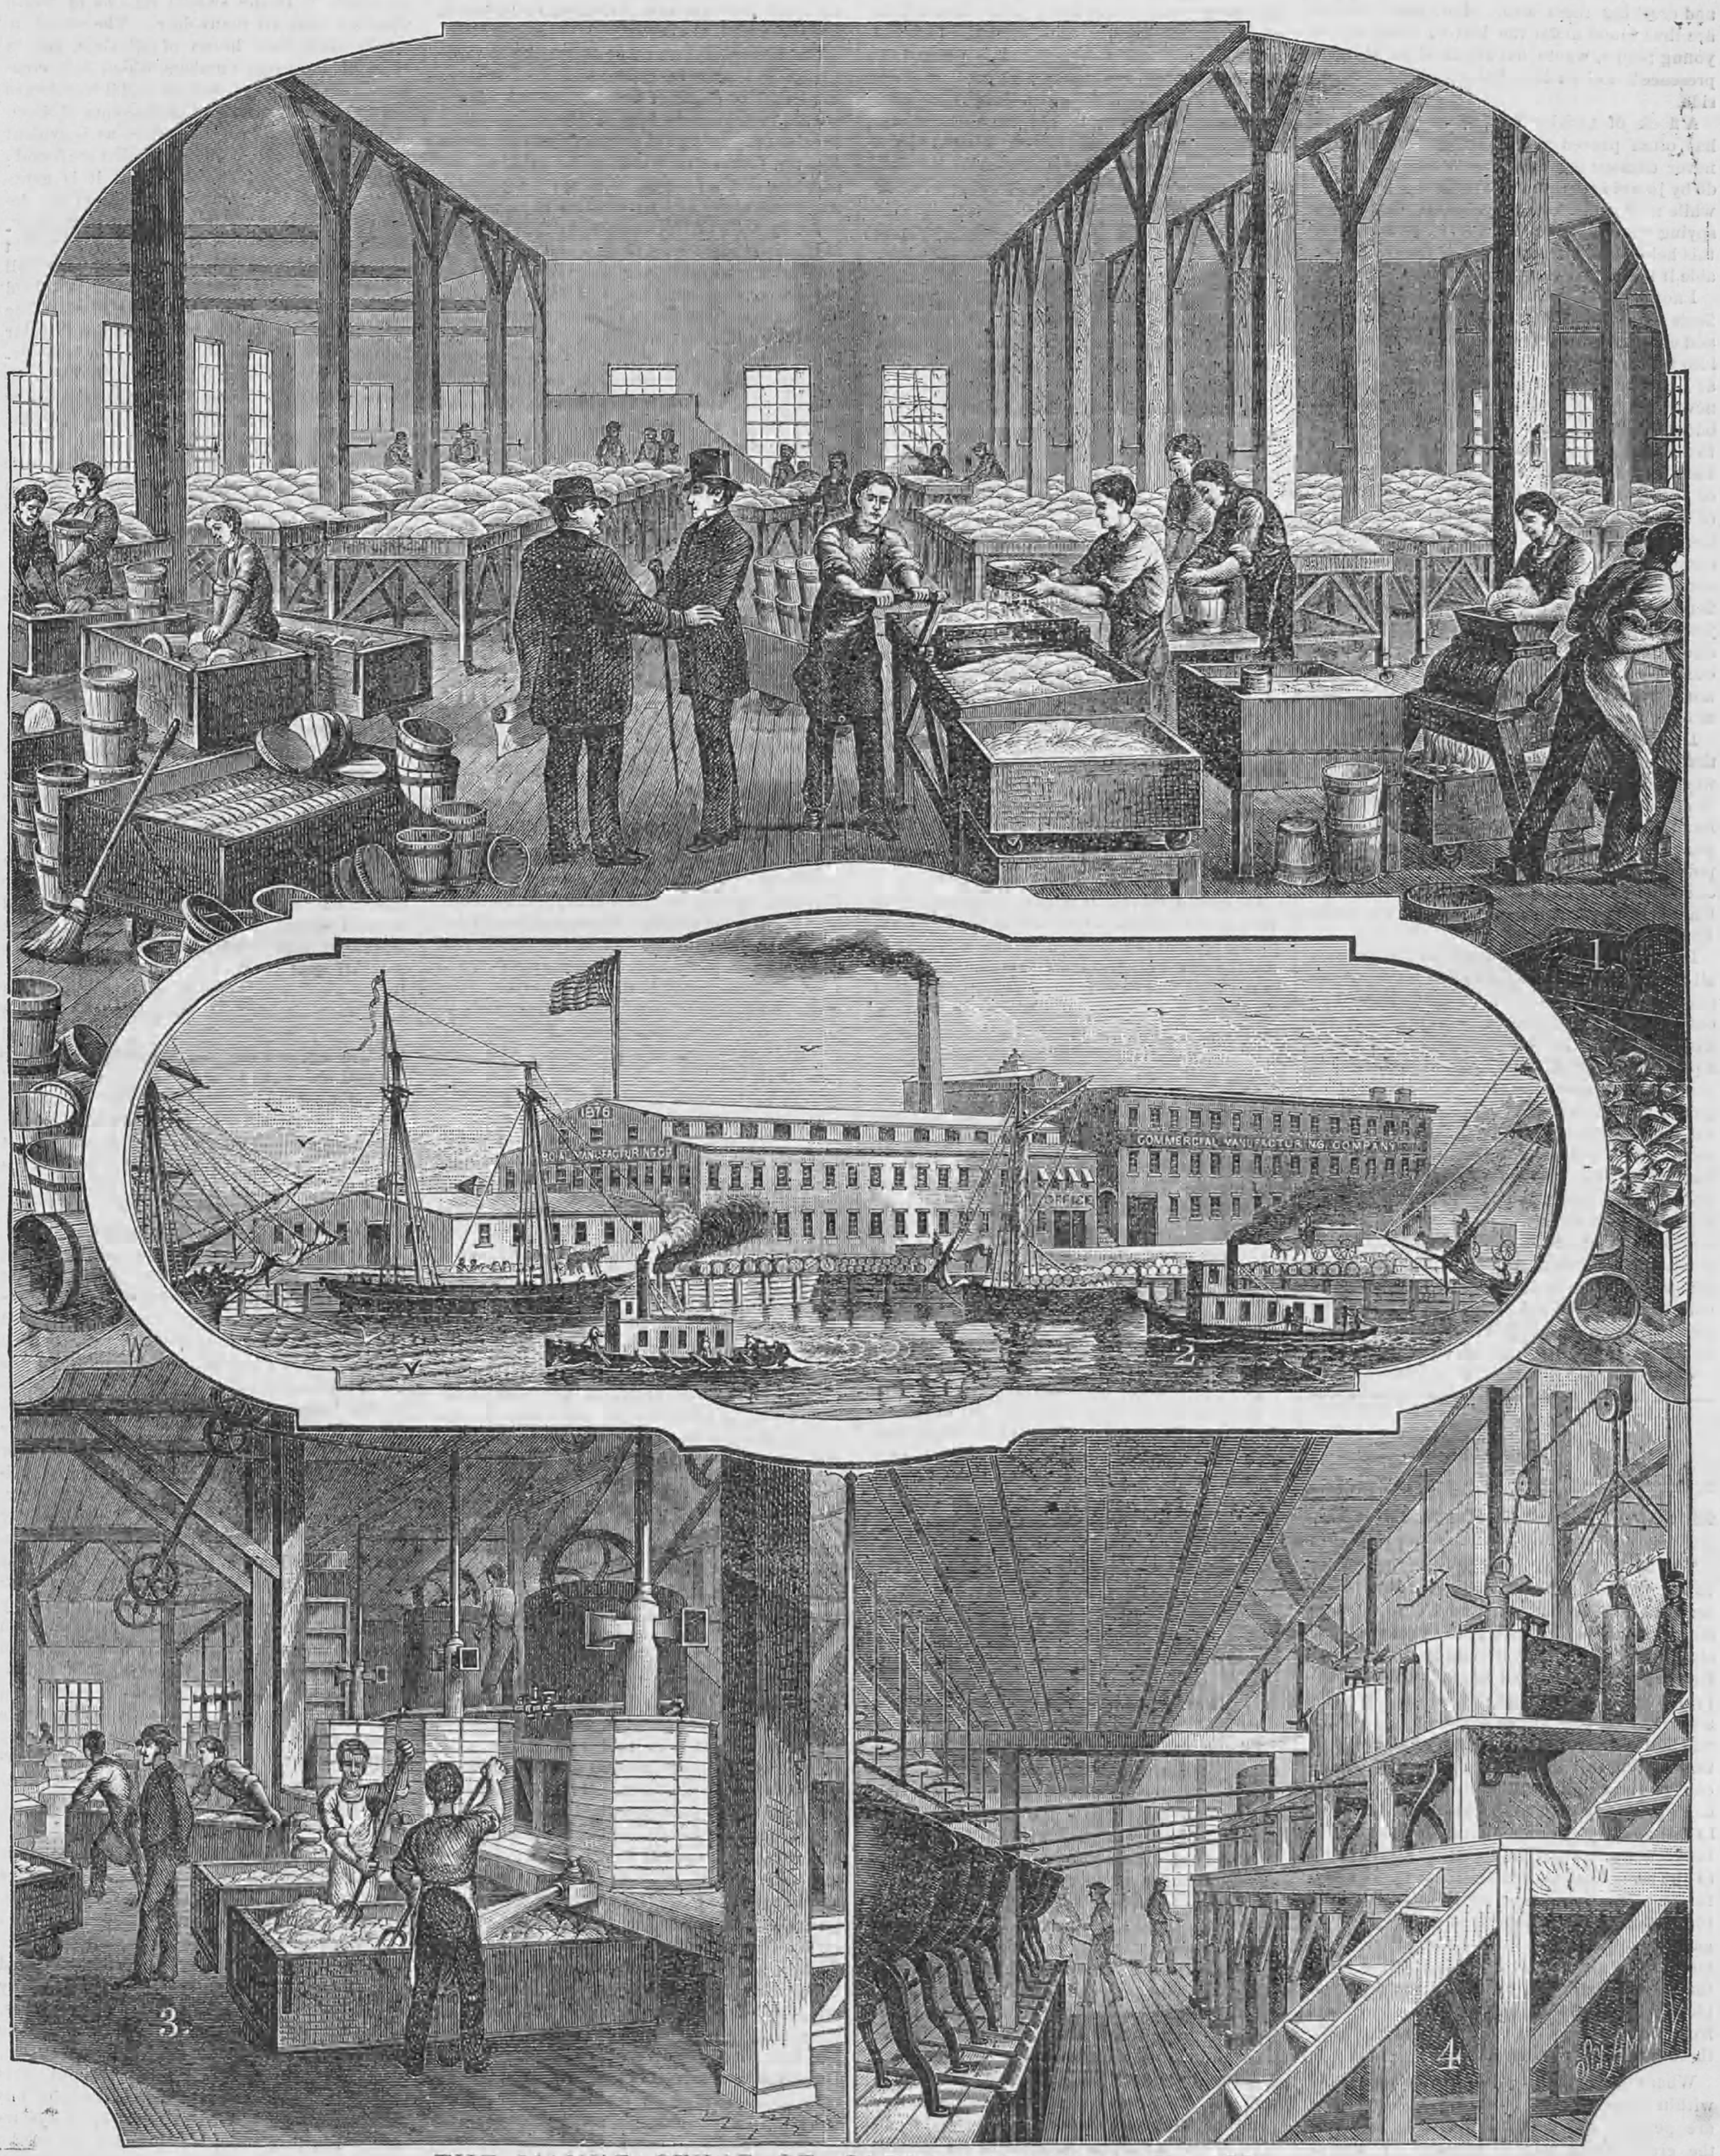
In the tobacco worm we have by far the largest insect known to be excessively injurious to crops In comparison with the little codling moth, it is a veritable monster. That an insect so large can for years increase in numbers in spite of all the efforts and devices of tobacco growers for its extermination, seems a trifle strange. The spread of this pest may be compared to that of the potato beetle. The enlarged area devoted to the "weed" and the introduction of the tomato into general cultivation have given it ample opportunity to multiply; for it may be held as a rule that undomesticated creatures of all kinds increase in numbers the more liberal and easily attainable is their supply of food.

The insect is pre-eminently a tobacco feeder, although it also eats the tomato; but this is merely its second choice. Under my observation last year the foliage of a field of tomatoes next to a tobacco field, was attacked only to a slight extent by the larvæ, while the tobacco plants were loaded with them. On the previous year no tobacco was raised on the farm, and the tomato field was full of worms which damaged and ate great quantities of even green tomatoes. In the Canadian Entomologist for Nov. 1878, Rev. C. J. S. Bethune, of Port Hope, Ont., says: "A market gardener who lives close by me, informs me that on one day during the summer, he and his assistants together gathered four bushels of the worms

off an acre and a quarter of tomatoes. During many days following, they seemed almost as numerous as ever, in spite of continuous hand-picking. I have never noticed them on potato plants. If they feed on this plant at all it is their third choice of food. To entirely prevent injury to the crop from these insects would demand an outlay of more labor and money than all the other requirements from the seed-bed to the tobacco shed.

In the vigorous war of extermination many measures have been resorted to, and among them the plan of growing clumps of Evening Primrose—Œnothera Lamarckiana—the flowers of which the moths resort to in great numbers at twilight, as they also do to the wild Evening Primrose—Œnothera biennis—and the Jamestown Weed—Datura stramonium. The former of these weeds grows everywhere and is so plentiful as to prove very noxious in many localities, especially on half-cultivated lands. It produces an abundance of blooms from which the moths sip their evening repast, with their long, flexible tongues. The fine, large varieties cultivated by seedsmen, produce larger and more numerous blooms, and therefore are sure to attract a large number of hawk moths every evening. At dusk the operator may arm himself with a long, flat bat or insect net, and proceed from clump to clump of the flowers, or station himself at a single one. If one is careful and knocks down his game at every attempt without frightening others, he will succeed in killing many, otherwise they will become very wild and difficult to reach. They are very aptly named "hawk moths" for no falcon is more dexterous in flight. Of course, every captured moth should be destroyed, as a female often contains thousands of eggs, whence others come. Seeds of the Œnothera may be sown during the summer, and the roots be planted out where desired the following spring. They will begin to blossom by the first of July, which is just the time the moths first appear on the wing. Seeds sown early in the spring in a hot-bed, will, however, produce plants which will bloom nearly as early in July as those from roots.

Another good way to kill the moths is to take a torch of any kind—a fishing jack filled with pitch pine, or an oil fishing light—and, while one carries this through the tobacco lot, an assistant, with shingle or bat in hand, can readily kill every moth which the light attracts or reveals, as they are busily engaged laying their eggs. Contrary to the statements of some entomolgists, who assert that they fly only in evening and morning twilight, they are actually found at any hour of the night, flying close to the ground among the young plants, carefully distributing their eggs here and there—a single one to the under-side of the leaf



THE MANUFACTURE OF OLEOMARGARINE.—Fig. 180.

1. One Day's Churning.—Working and Salting. 2. View of the Works from the River. 3. Churning Room. 4. Melting Room.

The way most followed in exterminating the pests, however, is to pick off the worms from the growing tobacco continually from the 10th of July to the final harvest, crushing the small ones between the finger and thumb, and throwing the large ones violently on the ground, or stamping them under foot. To this the thorough grower adds the precaution of looking on the under-side of the leaves for the eggs, and crushing them also. Many small worms are thus found under the leaves, especially of young plants, where but slight signs of their presence is noticeable by holes seen on the upper side.

A flock of turkies kept in the tobacco field has often proved most advantageous. They never damage the tobacco—as hens are apt to do by jumping up among large and tall plants—while they walk carefully among the stalks, spying out and devouring every worm. Thus this helpful fowl would prove doubly profitable if fed in this manner.

I notice that skunks prowl about the tobacco fields every night in cutting time, and dig out and eat a great many worms that have crawled into the ground to change into pupæ. As near as I can get at the truth about it, the skunk never touches the tobacco worm on the leaf, but after it reaches its full growth and resorts to the earth, it immediately becomes a delicious food for him. The number of fresh holes or cavities each morning denotes the reduction of tobacco moths that would otherwise have to be fought in the next year's campaign. The number of insects devoured by skunks is enormous, but, of course, they feed on beneficial insects as well as on those which are injurious to crops. The amount of worms destroyed by several species of microgaster and other parasites, is exceedingly small; neither are the worms ever attacked by any epizootic, at least as far as my observations have reached.

Dr. Hagen, of Cambridge, Mass., is confident that an epidemic can be started among the worms or moths by bringing a few specimens in contact with a yeast fungus, or by sprinkling prepared beer mash on the plants. This yeast, or batch of fungus spores, produces a poisonous mold in the insect, and spreads from one individual to another, until a fatal pestilence is in operation. This discovery was made by Dr. Bail, of Prussia.

In pursuing methods of destroying the worms all poisonous applications to the leaves of the plant, are very improper in this case. The only chance to use poison, in killing the pests without putting it on the tobacco, is to follow a plan published, I think, in the RURAL several years ago:—Place a mixture of any powerful poison and honey or sirup deep down in the tubes of the Evening Primrose flowers. Every moth which partakes of this will, of course, immediately die. But in my experiments with arsenic and honey, and cyanide of potassium and sirup, I did not observe a single moth approach any of the poisoned flowers. The experiments, however, were few and not very perfect. Any method to trap or kill the moths must be considered a very prudent measure, for striking down a moth is a *coup de grace* which kills thousands of worms at a stroke.

The Apiarian.

BEES AND THEIR PASTURAGE IN UTAH.

THE bee in Utah is quite a power, especially as we make sugar from neither maple trees, beets, nor sugar cane, and have only Chinese Sorghum and bees to help us to sweetening; all else is imported. Our climate is wonderfully free from moisture and rainfalls are rare, especially in southern Utah; these causes make a scarcity of bee forage growing wild within reach of bee industry. In the northern portion of the Territory, winter generally brings enough snow to make the wild flowers bloom more profusely than at this place (St. George). In this country the inhabitants live in villages between the foothills, and generally have to go to the river bottoms some miles away to make farms. The towns are provided with water for gardens, and here the bees are kept. The gardens and orchards furnish forage in a great measure, which together with wild flowers that bloom early, and the great American bee plant that grows on sandy wastes and blossoms from January till September, serve to keep these little honey gatherers busy.

Where the fields and lucerne meadows are within three or four miles from town, there are periods when at the blooming stage of the crops, great help is afforded in honey-making. In some sections the bee plant grows in tracts of many acres and often borders highways in such manner as to make bee forage plentiful and rich; in other regions the seed is sown to get it started, after which the plant reproduces itself without any further trouble. Where this grows abundantly there is no need of growing plants on purpose for bee pasture; where it is scarce we plant patches of Mignonette, sweet clover, and squash and melon vines and such garden flowers as are most productive of honey and pollen.

In my long experience of bee keeping I have found three plants superior to all others for the production of honey, viz:—the purple-flowered bee plant, next Mignonette, and third melilot, or sweet clover. The two last named will make honey so perfumed as to be far superior to that made from any other plants, and such honey brings fancy prices in markets where it is known and tested. Lucerne makes a nice amber honey and is worked on strongly by the bees, but it does not produce like the plants named above. The mesquite, a shrubby, sprawling tree of the Pulse family, produces a burden of bloom, often twice a year, similar to that of the Filbert and Chestnut, from which an immense crop of pollen is gathered and some honey also.

The Lycium and several other honey plants are abundant here. Our average yield of honey would perhaps be about 50 pounds, each season to the colony. Our varieties of bees are Italians and hybrids. In northern Utah the bee industry has been greatly retarded by thousands of cases of foul brood—no case has as yet occurred in southern Utah.

At its last session our Legislature passed a law providing for the destruction of colonies affected with foul brood, which will materially lend encouragement to the industry. The bee-moth is very destructive here to weak and queenless colonies, but in strong colonies there is no danger. Thus far there have appeared no other serious enemies.

To beginners in the business I offer this bit of valuable advice:—don't be in too great haste to increase your colonies or to eat honey—you will get on much faster by going slowly; that is, never weaken your colonies by dividing, or by robbing them of honey: when not rich with honey and full of bees, then two frames taken out from a full hive at a time, will give room to work. I started here with one hive for which I paid $15 In six years I had 200 colonies; and had lost, by improperly weakening the colonies for increase, an equal number. Had I been more patient, I doubt not I might have had 500 strong colonies, and lost none.

In case a colony becomes queenless, it is quite probable that there are but few, if any, young bees in the hive—now, the young bees are the wax workers, and unless there are some in the hive you cannot get a queen cell made: the old bees won't do it. When, therefore, a frame of eggs is put into a hive that a queen may be made, be sure to put in also a good quantity of young bees, or the work is profitless. This I have learned by dear experience. A fertile worker is a great nuisance, and difficult to get rid of, but it can be done as easily as anything else: thus, remove the hive containing the fertile worker several rods from the old stand, and on the old stand place another hive, with a frame of brood and a queen; now take all the frames out of the removed hive, and brush off all the bees and return the frames of stores to the hive in the old place. The workers will return to the old home, accept the queen, and it is done. J. E. JOHNSON.

Washington Co., Utah.

[We can indorse the caution given above in regard to weakening colonies too much by division. Every colony should be kept buzzing full of bees throughout the season. One strong, active colony will gather more surplus honey during the season than two weak ones, and suffer less from moths and other bee enemies.—EDS.]

Field Crops.

SELECTING SEED CORN.

IN the selection of seed corn there are, I think, certain rules which may be safely followed by growers of all sections, whether North or South. First, the ears chosen for seed should be sound and well filled out at the tips. Then, from among ears passing this examination, those should be selected having the greatest depth or length of kernel combined with smallness of cob. These two conditions should, I think, be constantly kept in mind as having a certain relation to each other. If we select ears supplying the former conditions only, we shall find our corn growing earlier, smaller and more flinty. If we regard the latter condition only, we shall find it growing larger but later and deficient in weight. In order to obtain the maximum yield the variety, whatever it be, should employ as long a time as possible in its growth and development, reaching the stage of perfect ripeness only on the verge of frost, and in selecting according to the above rules, I think the grower in each latitude will obtain the variety best suited to his soil and climate.

As is well known, every latitude has its own peculiar variations in respect to size of stalk, and depth and hardness of kernel; but the maximum yield per acre does not materially differ in all the great corn-growing sections, showing that there must be a relation between grain, stover and space occupied, and that only a certain amount of grain can be expected from a given area, no matter what the length and size of stalk or number and size of ears. But to obtain a maximum yield in a given locality, a variety adapted to that locality by long and careful selection must be employed. The flint varieties of the North and East will not reach their greatest perfection in the South and West, and *vice versa*.

The distance for planting should be in proportion to length of stalk, length of season, and length or depth of kernel, and all efforts toward improvement may be lost by planting too closely. In regard to length of ear, there does not seem to be much to be said, as the advantages in a long ear are not very apparent, particularly as length seems to be gained at the expense of thickness and depth of kernel. Two short ears to the stalk generally yield as much as one long one, and often more. But among dent varieties it is thought desirable to eliminate as much as possible the flinty tendency and select the rougher ears, and the duller creamy shades of color. Among the flint varieties it might be advisable to select those ears showing the dent, should any be found that are well filled out, thereby encouraging the tendency toward improvement in quality for feeding purposes, since the dent in the kernel means softness and sweetness. "G."

Ludlow, Ill.

SOWING CORN FOR FODDER.

ON many farms there are places where spring crops cannot be effectually planted. These spots may be found in poor places in the meadow where the grass is light, or in a portion of a new seeding where the seed has failed to "catch," or perhaps in some hollow which was too wet for early plowing and planting. In such cases it will be profitable to sow the ground with corn for fodder for next winter, or for feeding green next August or September.

It is a very common mistake in sowing corn for fodder to use too much seed. If sown too thick, the stalks will be slender, with few leaves and nearly destitute of saccharine matter. In thick sowing we get a heavy, bulky crop; but it is of poor quality. Doubtless one bushel per acre will yield a crop of more value in real nutriment than if double the amount of seed is used. The best way is to drill in rows about three feet apart, so that horse culture may be employed. When thus grown, the stalks will be highly nutritious as stock food, and the nubbins that will grow on the stalks will add greatly to the feeding value of the crop.

For summer feeding corn should be sown as early as it will germinate quickly. For fall feeding it should be sown at intervals of about ten days, and seeding continued until late in July. The late sowings may follow any early crop which may have been removed, as early potatoes, peas, etc. G. A. GOFF, JR.

Chemung Co., N. Y.

Sorghum halepense in Ohio.

Mr. Batcham writes us that the experiment of leaving this plant without protection the past winter at his place, in northern Ohio, was tried, as promised in his article in the RURAL of April 24, and succeeded perfectly—not a root seems to be injured. But the past winter was so mild that frost did not enter the ground more than about three inches, and owing to the drought of last summer, all the roots were below that depth. Mr. B. repeats the belief that stock farmers may find this plant of real advantage in seasons of drought in southern Ohio, Indiana, Illinois, etc., as well as farther south, by protecting it a little in winter as suggested in his article. He thinks those who have the roots or seeds for sale would do well to advertise them in the RURAL.

During our recent visit to the South, we met one farmer who said that if he were obliged to cultivate Sorghum halepense, he would throw up his farm. He had planted a small patch two years ago, and was digging up every root he could find. It spreads with wonderful rapidity both by the root-stocks and by the seeds which birds drop everywhere. In another part of the South, it had so taken possession of a garden, that it was necessary to destroy or remove many Roses and Shrubs, an asparagus plantation and a strawberry patch, before the grass could be exterminated. In another place, it had so taken possession of a raspberry plot that the owner has found it impossible to hoe or dig it out. Hogs had been turned in and even they, though evidently relishing it, seemed to find it hard work to root it out.

Now is the time when the weeds are likely to gain a foothold on the farm among the field crops, and now is the time that the most desperate and determined effort should be made to extirpate them. Keep the cultivator going in the corn field and among all other crops where a cultivator can be used. One day's thorough work when the weeds are just starting will prove of more avail than three days' hard labor when they are four inches high.

The Herdsman.

STOCK NOTES.

Bone-Chewing by Cattle.

I HAVE just seen, in the RURAL of May 15th, Prof. Storer's remarks on "Bone-chewing by Cattle." In the swamp regions of South Carolina there are many deer. The bucks annually shed their horns of all sizes, yet, in spite of the great numbers which fall, comparatively few are picked up, and it has always been a standing puzzle what becomes of them. Many are gnawed by squirrels, as is evident from the tooth-marks on the few that are found; others are buried by beetles. But it is generally believed there that most of them are destroyed by cattle, which are often seen chewing them, as described by Prof. Storer. But the point is that it is a *limestone country* full of springs, so that most of the water obtained by the cattle is strongly impregnated with lime salts. (See an article by me in the Popular Science Monthly for June, 1876, on "Subterranean Springs in South Carolina.") This militates strongly against Prof. Storer's theory that the cattle are satisfying a craving for lime. Mr. Henry W. Ravenel, whose article on the Japanese Plum appears in the same number of the RURAL NEW-YORKER, was, in his younger days, an ardent deer hunter as well as a planter and botanist, and, if my memory serves me, it was he who first called my attention, years ago, to the fact which I have mentioned. Perhaps he can throw some light on the subject. ROBERT WILSON.

Talbot Co., Md.

IN REARING CALVES, after a fortnight old, skim-milk may be gradually substituted for new milk, by adding a table-spoonful of flaxseed, well boiled, to their allowance mornings and nights. If flaxseed is not to be had, then substitute oil meal. Steep one-quarter of a pound of this in boiling water, and add to each gallon of skim-milk fed to the calf. As the animal increases in size, gradually increase the quantity of flaxseed or oil-meal. Take special care that the milk be sweet, and feed it blood-warm. After a while, oatmeal or fine middlings may be added to the milk, and as the calf gets to be two or three months old, Indian meal and wheat bran, mixed half and half, may be used instead of oat meal and middlings; but the flaxseed or oil meal should be kept up, and the calf carefully watched to see that this change does not scour it, and if so, go back to the oat meal and middlings again. Let the calf run in a good grass pasture if convenient, and after a proper time it will take gradually to grass as a part of its rations.

HAIR ON THE LEGS OF CLYDESDALE HORSES.—One of the good points for this breed of horses, is to have abundance of long, coarse hair on the inside of the legs, from the knee-joint down to the fetlocks, as it is contended that this indicates greater vigor in the animal than if it showed less. In order to have his horse take a prize at a late exhibition in Scotland, a farmer attached false hair to the fore-legs of his horse. After the judging was over the false hair was detected, and the exhibitor lost his prize and got a severe public reprimand from the President of the Scotch Society.

As for hair on the legs of a horse, we say the less the better. Long, thick fetlocks, when the ground is muddy, get so heavily loaded as to greatly impede the action of the horse and compel him to carry such an extra-heavy weight attached to his ankles as to tire him much sooner at his work than if he had clean legs and pastern joints. Moreover, this superabundance of hair often causes "grease," a very disagreeable and injurious disease. The most vigorous, muscular and hardiest of heavy farm and cart horses are the French Percherons, and they have nothing like as much hair on the legs as other large European breeds.

TEXAS CATTLE.—The number of these seems to be increasing astonishingly, as we may judge from an article in the San Antonio Express. It says the drive into the bordering States this year, was not less than 300,000, The largest percentage of these were one and two-year-old past steers, which are already contracted for in advance, at good prices, with the more Northern ranch-men. The animals are said to be in extra-fine condition, and the drive began much earlier this spring than usual, as the mild past winter has been extra-favorable for the growth of pasturage. Yearling steers commanded $6 on the average; two-year-olds and cows $9; three-year-olds $10; beeves, $13. The average worth when market is reached, is estimated at $11 per head, making $3 300,000 for the lot—a goodly round sum for the Texan ranch-men to realize in a single year for their cattle.

THE NORTH AMERICAN AYRSHIRE REGISTER, Vol. IV, is now being prepared and will soon be issued. Ayrshire cattle whose pedigrees

trace back to importation, will alone be received. Eligible pedigrees should be sent in at the earliest moment to E. Lewis Sturtevant, So. Farmingham, Mass.—terms one dollar for each pedigree accepted.

Sheep Husbandry.

THE BEST BREED OF SHEEP FOR THE WEST.

HENRY STEWART.

THERE is perhaps more disappointment in regard to sheep than any other sort of live stock. With the exception of swine, no other stock is so easily impressed by breeding and feeding as sheep. Therefore, a skillful shepherd may soon get up a model flock, as regards size, healthfulness and fleece, which *enraptures* (there is no better or truer term for it) the ordinary sheep-man and impels him to go and do likewise. But he soon finds that is not so easy. The model flock has been skillfully bred and tended, generously fed with roots, grain, oil-cakes and rich pasture, and they are plump and covered with a silky wool of great length, closeness and beauty of staple. The envious beholder picks out and purchases a few sheep from this flock and intends to astonish the natives at home and sweep all the prizes at the fairs. He puts them in a good pasture (for him), but a poor one for the sheep, feeds them liberally with grain, but gives them too much; keeps them sheltered from every wind of heaven lest it might visit them too roughly; and in a short time finds his pets looking downcast about the jaws, dull about the eyes, with a dry, harsh fleece; some of them begin to cough, run at the eyes, take on diarrhea and, in general, the flock becomes what the old poet knowingly remarked "*infelix pecus*." By and by the model sheep "go to the dogs," literally and otherwise, and the owner says, "Oh, these high-bred sheep will not thrive in this country; they are too tender for our very changeable climate; the food is not right and, in short, they are exotics which require the best of nursing."—And he is right.

We have imported the finest South-Downs, Leicesters, Lincolns, Cotswolds, Hampshire-Downs, Oxford-Downs, Shropshires and black-faced Scotch, and have tried them here and there, and where are they now? A few flocks have become acclimated, pulling through the trial "by the skin of their teeth," and with the aid of the most careful management; and the *farmer*—"as is a farmer" and not a breeder—is yet to be seen who has been able to keep a pure-bred flock up to the standard which he hoped to attain. In the East, in small flocks and upon highly cultivated farms, there have been some successes which, however, have been in general narrow escapes from failures, and these have been owing to a concatenation of favorable circumstances.

For the West, with its spare herbage, its dry summers, its hot sun, its windy and dusty plains and its fluke-infested swales and marshes, none of these heavy-bodied breeds of sheep will be found satisfactory. I do not think even the hardy South-Down can there be kept in good condition; certainly not any of those of the Walsingham breeding, which are brought into this country looking "as pretty as a picture" and as if modeled by an artist and dressed by a fashionable barber; but which are too artificial for common use. I might here except from the general term "West," those delightful fields found in the blue-grass region of Kentucky where Mr. Robert Scott, the originator of the Improved Kentucky sheep, resides. There the Cotswold and other kindred (in every sense) breeds may thrive to perfection; for climate, soil and herbage cannot be excelled anywhere.

In reply to J. W. S. who, in the RURAL of May 15, asks for the information, I would say that the Improved Kentucky sheep is the offspring of selected native ewes crossed with Merino, Leicester, South-Down, Cotswold and Oxford-Down rams for 40 years past. The foundation is seen to be a grade Merino—and I would here remark that the grade Merino is the best possible basis upon which to found a flock in the West; the better for the better selection of the native ewes chosen for the first cross. Now J. W. S. says there is a *dash* of Merino blood in this breed. But the dash is a very heavy one, because it is the foundation cross. What is this *dash* of blood that is so often talked of? It is a cross which makes a half-bred, and unless it is diluted by returning to the former breeding, it remains a half-cross and not a dash at all. The line of breeding of Mr. Scott has been peculiar. He has taken all the best breeds and has crossed until he has procured a type that suited him, finishing with the large body, long and lustrous wool and close fleece derived from the imported sorts upon the hardy and already acclimated half-bred Merino and best native sheep. These he has interbred and made into a breed that will do for Kentucky and other favorable localities; but for the open prairie States and the plains which are called the West, I have some doubts of even these.

The Merino is the sheep for the West, upon which to found a hardy, successful and profitable flock. The common native—which is a run-down, close-bred, Spanish sheep, originally of Merino blood mixed with some modern Merino—is hardy, cheap, and to the manner (and the manor) born. It can be purchased for $1.50 to $2.50 a head. When crossed with pure Merino, the second cross produces a grade of wool that often sells for more than that of the pure-bred. It herds well, is content with poor fare upon which a big sheep would starve; its fleece is a coat of mail, water-proof and almost air-proof, with its close, well-oiled and yolked surface; and it may be enlarged in size, weight and length of fleece, by selection of rams of the best kinds. Profit is what we work for. Beauty of form and size are nothing as compared with the market value of the produce. And I will venture to say that 99 per cent. of the money made in the West is made from sheep of Merino blood, and 99 per cent. of the losses is made from flocks of the pure-bred, long-wool breeds.

Lastly, in the nearer West, where sheep are kept on farms, and necessarily in small flocks, the best success will be with native sheep or high-grade Merinos, crossed with long-wool or medium-wool sheep, Cotswold, Oxford-Downs, Hampshire-Downs or Shropshires; or with grades of these crossed with Merino rams. But, if in England—a small pocket country compared with ours—it is found necessary to vary the kinds of sheep for different localities, how much more necessary must it be in our vast expanse, to find different varieties of sheep to suit the peculiar circumstances of widely differing localities? No one variety can be the best everywhere.

TREATMENT OF SHEEP.

FROM the breaking up of winter to the settled weather of early summer is the most critical period of the year with sheep, and they require more attention during this time than at others. There are the yeaning of the ewes, the care of the lambs, the washing and shearing of the flock, the turning out to pasture, which last is so abrupt a change from dry to green, succulent food that it is apt to give scours for several days, proving often quite injurious, especially to the ewes and lambs. To obviate this, the sheep should be turned out for only an hour or so to begin with, gradually increasing the time till they can graze the whole day without subjecting them to looseness. If not previously fed a little flax-seed or oil-meal daily, two to three or four tablespoonsful should be given now to each animal, according to its size, early in the morning and again at evening. This tends to keep the bowels in good order, assists in digesting the food, and adds to its nutriment.

In respect to washing sheep, flock-masters are often tempted by a few warm days in May to do this too early. It must be recollected that river and pond water is still quite cold, and if too much so, it gives such a shock to the system as to prove injurious to the condition of the sheep for some time. After washing, be particular to turn into a perfectly dry and well-littered yard, or on to a dry, clean pasture; otherwise the sheep will gather up more dirt into its fleece before shearing than was washed out of it in the general ablution.

Shearing now is the most dangerous change of all; and if warm, dry weather does not follow, the sheep are apt to take severe cold, resulting in inflammation, and perhaps death. To be exposed to a raw easterly wind or a rain-storm till several weeks after shearing, is particularly dangerous; and on the expectation of any such, the flock ought to be well sheltered till the wind shifts to a more favorable quarter, or the rain ceases. The change from a thick, warm fleece to a bare skin, is as great for a sheep as for a man to cast off heavy winter clothing, for a light, thin summer dress; and it is equally dangerous, unless the poor animals are well protected from raw, chilly weather.

Be careful to keep the sheep well salted, for this not only improves their appetite and condition, but is also a preventive of various diseases. Some flock-masters assert that by the free use of salt, they have prevented rot, which otherwise would have occurred, and even after an attack of this loathsome and dangerous disease, have thus cured it. Some breeds of sheep want much more salt than others; and again when feeding on different kinds of grass, or in wetter or drier pastures, a greater or less quantity of salt is required to keep them in good condition. For these reasons the sheep should have free access to at all times to salt, to take little or much, the same as man does according to the craving of the appetite.

The best kind of salt for this purpose is the Liverpool rock, which ought to be placed in large lumps in open boxes in different parts of the pasture, where the sheep can come and lick it as often as they choose. In this way they will never take an excess. This salt costs a higher price than common salt, but the giving of it is attended with so much less labor that we think it the cheapest in the end. The best way we have found to give fine, common salt, is to take long troughs, smear the bottom of them with tar, and sprinkle it with as much salt as will stick to the tar. Sheep cannot then well take an excess of this, and the little tar they get with it is very healthful for them.

The Swine-Herd.

CHESTER WHITES.

COL. F. D. CURTIS.

Origin and Good Qualities.

THE most ancient breed of American pigs is the Chester White, or, as it was formerly called, the Chester County White. The Chester county, where they originated, is in Pennsylvania, south of Philadelphia. The late Paschall Morris informed me that Chester Whites were started by crossing native hogs of the county with a Bedfordshire boar imported by Captain James Jeffries in 1818. It will be recollected that the Bedfordshire hog was one of the numerous families of the Yorkshire bred in England. In the early breeding of these crosses with this imported boar, two families were started, one with more of the Yorkshire type, with small, erect ears; and the other inclining more to the native, with large, lopped ears. Subsequent crosses were attempted with the Suffolk and Berkshire breeds. These latter crosses were not followed up, the best breeders continuing to breed in a straight line with the original cross. The presence of black or blue skin spots, with an occasional fleck of black hair in some instances in Chester Whites, goes to show that there is still a taint of Berkshire blood running in some families. When Joseph Harris wrote his work on the pig, the Chester Whites were so mixed and uncertain in their breeding, that he did not think they were sufficiently established to be called a breed. A number of years later, in 1872, at the National Convention of the swine breeders, they were admitted as a breed, with the following standard and description:—

Head, short and broad between the eyes; ears, thin, projecting forward, and lopping at the point; neck, short and thick; jowl, large; body, lengthy and deep; back, broad; hams, full and deep; legs, short and well set under the body for bearing the weight; coat, thin, white and straight—if a little wavy, no objection; tail, small and with no bristles.

Chester Whites, when they breed closely to this standard, are entitled to be recognized as thoroughbred. They do not seem to be as popular now as they were a few years ago. The chief reason why they have lost reputation has been from the fact that in the absence of any authenticated and recognized standard of characteristics, cross-bred pigs of all sorts, if they were only white, have been sold and sent out through the country as "pure Chester Whites." These impositions naturally caused distrust and disgust with the breed, as the innocent purchasers supposed their pigs to be of genuine blood.

There always have been careful breeders of these pigs in Chester County and elsewhere, and in their hands they have become valuable. They possess the merit of desirable color (white), and of being capable of making a large growth. They are exceedingly hardy and vigorous. The young pigs are strong and active. The mothers are very prolific and remarkable for their supply of milk. These qualities, together with docility, make them exceedingly profitable breeders. There is no better breeding sow, all things considered, than a Chester White. For profit to breed pigs to make pork, there is much improvement when a sow of this breed is crossed with a Suffolk or a Victoria, or other boar of fine qualities. The pigs from such a cross, for fattening, will be as near perfection as it is possible to make them—more perfect than if either breed had been bred by itself. The reasons to an experienced breeder are well known. From the sire are obtained fineness in bone and quality in general; from the dam, constitutional vigor which carries with it a strong appetite, strong digestion and rapid growth, with the benefit of bountiful suckling. Chester Whites rank with the large Yorkshires and Poland Chinas in size, being coarser in bone than the standard of either of these breeds. They have good coats of hair, which fit them better for the American climate than the Yorkshires.

We should much prefer the use of a Chester White female rather than of a male in crossing with other breeds. The use of such a male with a smaller breed would not be sound philosophy, or satisfactory in the results. Where a large growth and heavy weight are desired, Chester Whites will meet the demand, since, when full-grown, they may be made to weigh from 500 to 600 pounds, or even more. The pigs at nine months of age, will reach 300 pounds. The flesh is not so fine as that of smaller breeds, and on this account it is an improvement to cross the females with more refined stock.

The Poultry Yard.

Profit in Poultry.

Last spring I had 14 pure Buff Cochin hens. I sold $23 worth of eggs and chickens and have 18 fowls on hand—four more than I started with, which at the least market price, would be $1.50. I have kept no account of the eggs and chickens used by a family of six. The fowls had the run of the farm where they found most of their feed. I think the eggs paid for their feed, leaving *gratis* the chickens we used at home.

Nelson Ritter says in RURAL of Jan. 31, that it doesn't pay to raise high-priced poultry. I have not found it so. In the first place, the Buff Cochins lay all winter when eggs sell for the best price, and they are ready to sit early in the spring. They are so gentle and tame that they make the best mothers; they don't fly off the nest and break their eggs when I go near them, as the common varieties do, and they are as large as two of ordinary sorts, my cockrels weighing ten pounds when seven months old. We sell our chickens by the pound, five cents live weight being the most paid last season. Eggs were from five to 15 cents per dozen. The common chickens would only bring $1.75 per dozen while the Cochins sell for $4.00 per dozen. M.

Hamburg Fowls vs. Crow's Meat.

MY excellent friend, Col. Curtis, says, in the RURAL of May 1, that Hamburgs are not much better for the table than a *crow!* As I have never been so lucky as to get a taste of crow's meat, I cannot tell as to its quality, and am not therefore able to dispute the assertion. But as I have kept a considerable lot of White Hamburg fowls for several years past, and have had any number of them cooked for my table, from four-month-old chickens to two-and-a-half-year-old hens, I can vouch to their making as savory a meal as anything in the fowl line, outside of Games and Dorkings. I have also kept White Leghorns, and find their meat is of the same quality as that of the White Hamburgs, and not a whit better. I fancy the Colonel was unfortunately served up with a *very ancient* "*biddy*," or had a very poor cook. I should be glad to have Col. Curtis sit down to a Hamburg dish with me some convenient day.

A. B. ALLEN.

HOW MANY EGGS PER ANNUM will the best non-sitting varieties of hens lay? We have heard of single Hamburg and Leghorn hens producing 250 to 300 eggs each per annum; but what we would like to know is, can a flock of 10 up to 50 average this? There is no doubt with proper care in selecting to breed from, and in time, such a flock could be brought up to this great average. The difficulty, however, in selecting breeders from a flock, is to ascertain which hens out of it lay the most eggs; for there are some, even among the non-sitters, that lay few; and if their eggs are hatched, the chickens, like their mothers, would probably grow up poor layers. In order to increase the average laying of a flock, eggs for hatching must be selected from those hens which lay the greatest number. Now, who will go into this, and give us hens that we can depend upon, every one, to lay an assured number of eggs per annum, as with cows which will give a certain quantity of milk or butter per annum. Yet to be certain of this, the former, like the latter, must be kept separate. Who will take the particular trouble to do this? It would be well worth one's while; for he could rapidly sell the chickens thus produced, at a large price.

Miscellaneous.

WHAT OTHERS SAY.

THE CENTRIFUGAL CREAM SEPARATOR.—The following extracts from the address of Mr. Edward Burnett, of Southboro, Mass., before the last convention of the American Dairymen's Association, as given in its fifteenth annual report, give a description of the operation of this device, of which Prof. Arnold said, in a late RURAL, that it was the most complete account he had ever seen:—

All dairymen know that the separation of cream from milk is the result of gravitation; the fat globules being of less density than the watery portions of the milk, rise to the surface. Now the centrifugal machine produces a very powerful and forced gravitation, which develops this separation almost instantly and with great rapidity. At 120 revolutions per minute a weight six inches from the shaft, would be equal to two and one-half times its specific gravity.

At	600	revol's	per	minute=	61½	times its spec.	grav.
"	1,070	"	"		170	"	" "
"	2,000	"	"		684	"	" "
"	3,000	"	"		1,537	"	" "

MY own machine, patented in September, 1868, by D. M. Weston of Boston, has probably the largest capacity of any in the world, the

basket being about two feet in diameter with a 12-inch opening on top and a depth of about ten inches. It is constructed in every particular like a centrifugal hydro-extractor, with the exception that instead of the cylinder being perforated, it is perfectly tight, with a top flange extending inward towards the center. In this cylindrical basket are ten floats or dams from top to bottom, for the purpose of compelling the fluid or milk to travel with the machine. This is substantially all, and it can be used for separating various fluids or solids of different specific gravities. Our first experiment was at 1,200 revolutions a minute, running about twenty minutes, then stopping the machine slowly, and, when at rest, skimming off by hand the cream which lay on the surface in large, thick patches, and of the consistency of clotted cream. At a subsequent trial we used a bent tube, and scooped off the cream while the machine was in motion. Now I have adopted a simple arrangement by which I catch the cream thrown over the flange already described, in a stationary pan, on top of the curb, which surrounds the basket, and lets off the skim-milk by valves in the perpendicular wall, which are perfectly controlled, even when at full speed. This enables me to use it as a continuous machine, and I now handle with it about two tons of milk daily. Having increased the speed to 1,500 revolutions per minute, we run about eighty gallons per hour.

The most favorable results are obtained when the milk is warm from the cow; it then throws off the thickest cream in the shortest space of time. Let me here state that the pressure exerted on the walls of this cylindrical basket is 200 pounds to the square inch, or fifty pounds greater than a government inspector requires on a new high-pressure steam boiler, so that a machine must not only be constructed of the best material, but in the most thorough and workmanlike manner. Mr. Weston is still experimenting and hopes to improve on this simple method which I am now using; and lately I have seen one of his new continuous machines for delivering both the cream and skim-milk at the bottom.

With this short description of the machine I will now give you a few results from my various experiments. On the 4th of last June, mixing thoroughly all my morning's milk, 704 pounds were run into the centrifuge and yielded 35 pounds, 8 oz., or one pound of butter to 19.83 pounds of milk. This was churned in an old-fashioned barrel churn, after twenty-four hours, at a temperature of 50°, and the butter came in exactly seventeen minutes. Of the same milk 660 pounds, set tweny-four hours in deep pails immersed in water at 45° and skimmed very carefully by hand, yielded 32 pounds 4 oz., or one pound of butter to 20.46 pounds of milk. This was churned, after standing twenty-four hours, at 60°, and it took fifty-three minutes to bring the butter. I wish to call your attention to the difference of temperature in the churning of the two different lots of cream, 10° in favor of the centrifuge; and the length of time occupied with that cream was only seventeen minutes, against fifty-three with that from the pails. About these same results, in favor of a slight gain for the machine, were obtained from many subsequent experiments, but a neighboring farmer and butter-maker, who had rather laughed at "Burnett's new-fangled machine," after a good deal of persuasion on my part, this winter divided his milk, setting one-half, or eighty quarts, in small pans twenty-four hours—his usual method—and placing these in a cold, damp cellar at a temperature of about 55°. The other half in ten or fifteen minutes was separated by my machine and yielded eight and three-fourths pounds of butter against five and one-fourth in the pans. Making a second experiment at my suggestion and using a tank and some of my deep pails with the same quantity of milk (eighty quarts), he obtained 6¾ pounds of butter from the machine and six and one-fourth pounds of butter from the pails. He also found, on churning, a great saving of time with the machine cream, which occupied only eleven minutes against one hour with the cream set in deep pails. I cannot vouch for the accuracy of this experiment, but will simply say that he is a very good farmer, and one that naturally would take great pains in doing it thoroughly. Wishing to try the effect of old milk, I took, July 1st, and set a portion of the morning's milk thoroughly mixed in pails in a tank, the water at from 45° to 50°. The next morning, twenty-four hours afterward, 165 pounds run through the machine, yielded eight pounds, or one pound of butter to 20.62 pounds of milk; 126 pounds skimmed carefully in the pails by hand, yielded six pounds, or one pound of butter to twenty-one pounds of milk.

As you will observe, in all my trials there is a slight gain in favor of the centrifugal machine over the ordinary methods, and the Germans, with their repeated experiments, have also invariably found a gain of from three to six per cent. The cream obtained by this method is remarkable for its peculiar, sweet flavor and smoothness. Running it off slowly, then cooling below 50 deg., it is even thick enough to cut with a knife. I have obtained a ready sale for it in Boston at an advanced price, and send it down every night in glass pint and quart fruit jars. The skim-milk is very thin and blue, and has a hard peculiar flavor, although perfectly sweet and remarkable for its freshness, like the cream. After running off the last of the skim-milk we find a most offensive and greenish slime on the rear walls of the centrifugal basket, from 1-16 to ¼ of an inch thick. Of this the following is an analysis:

Water	67.38
Fat	3.25
Ash	3.88
Caseine	25.49
Decomposed products, etc.	100

Of it the analyzing chemist says:—"I do not know in what quantities you get this refuse, but the best use of it, I should think, would be for fertilizing purposes, as it is very rich in nitrogen and phosphate of lime." Hence it appears that the rapid centrifugal motion cleanses the milk or cream far more effectually than the best made sieve could do, and it is only natural to suppose that butter obtained from such cream should be proportionately finer.

THINKING, perhaps, that by the great force by which the cream is thrown off from the machine a breaking of the globules might take place, which would, in theory, account for the rapidity of churning, I asked my friend, Dr. E. L. Sturtevant, to come up with his microscope and spend the day at my dairy. His report says:—"The centrifugal cream has certain peculiarities as examined under the microscope. First—its absolute purity, each globule standing out distinct and round and no foreign material of any nature to be detected: second—contrary to my expectations there are no ruptured globules: third—there was a noticeable uniformity between the sizes of the globules of each sample, the first cream taken from the machine having larger globules than the last cream. When, however, the machine is run continuously this should become not so evident. The butter obtained from the centrifugal cream is like any other good butter, except that we have noticed a slight loss of color."

AN important fact lately developed by Dr, Sturtevant is its melting point, 98°, being remarkably high. He found exactly the same result, however, from my own dairy as from that of my neighbor, which furnished two samples from the same milk treated by the machine, and by the ordinary process, the points being 98° and 94° respectively. During the past few months I have had constructed a perforated basket for extracting the butter-milk by centrifugal force, and now treat all my butter by this method most successfully. After two or three rinsings in brine, it is removed from the churn while in small pellets and placed in a cloth. It is then put in the basket of the machine, which, in less than a minute after full speed is obtained, is brought to a standstill. The texture of the butter is fine and the grain uninjured and very solid.

WHAT IS THE VALUE OF GYPSUM TO THE FARMER? asks Geo. Geddes in the N. Y. Tribune. That eminent farmer, John Johnston, now nearly ninety years of age, crowned with the respect and love of all that know him, and surrrunded by a great circle of friends at his home in Geneva, N. Y., has said, more than once, that he would use gypsum on his farm if it should cost him $40 per ton. Some very carefully conducted experiments made at the Michigan Agricultural College showed that one bushel of gypsum sown on one acre of newly seeded clover and timothy, produced an increased yield of a ton of hay, in the two and a half years following, it having been mowed four times during that period. Supposing a ton equal to 25 measured bushels, and the gain to give $5 for this one bushel, we have $125 as the net gain from the use of a ton. Let prudent men cut down these figures till they think they are within proper limits, and then make some trials of this wonderful fertilizer. How does this mineral produce such wonderful results? No man can tell. The scientific man has taken it apart and determined exactly what it is, but why it produces such wonderful effects he has no more knowledge than any of us—and all he or we know on this point is what we have learned by trying experiments, marking results, and comparing notes with each other. The discovery of its power to make crops grow was an accident, and that discovery was made very recently.

There are some very strange things about gypsum, of which we farmers have not been able to learn much. In some places no good results can be seen from its use. On drained, muck swamp the effect is not discernible by the eye, and in some years, though rarely, farmers who are constant users of it say they see no good from it on any land. Farmers generally believe its great use is to mitigate the bad effects of a drought. After barley and oats have come up, and there is little or no rain, they sow their gypsum, and sometimes the effect is very marked. But if the season promises to be a wet one they do not often sow it on these crops.

REMARKABLE YIELD OF BUTTER OF A JERSEY COW.—In a series of interesting articles on Jersey cows in the Country Gentleman, by Mr. Kellogg (Hark Comstock, we wish he would drop this latter homely fictitious name, and hereafter use his real one in his writings), he speaks of one belonging to Mr. Sohier of Scituate, Mass., which made the astonishing weight of 705 pounds of butter in a single year. We hope there was *no mistake* in keeping the record of this great yield; but for fear of this, we think other trials should be made in the presence of at least two well educated and careful persons, from the milking to its straining, where set away, to the skimming of the cream, its churning, and finally to the weighing of the butter. The cows which excelled in various trials described by Mr. K., were of broken colors, generally of yellow, red, or fawn and white, as well as of solid colors. This shows the absurdity of trying for years past to make dark, solid colors, and black points, the criterion alone of the best-bred Jersey stock. It was an injurious, silly fashion, got up in England, and has tended to injure the breed in most cases whenever followed.

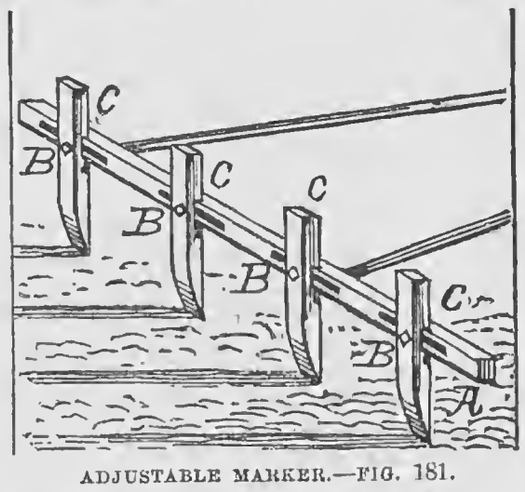
OKRA.—Mr. Hyde, in the N. Y. Times, says of this: "It must not be sowed till the ground is warm, and the land should be so rich that it will push the growth rapidly. It makes a very rich soup, and is also boiled, as asparagus is, and makes a delicious and wholesome dish. After being boiled it may be served on toast, like asparagus, or dressed as a salad. The young seed-pods are the edible part, and these may be cut into slices, strung on strings, and dried like apples for winter use. We trust the time is coming when okra will be considered a necessary in every farmer's garden. Nutriment and health are found in this vegetable. The dwarf and prolific varieties are the best."

ONE and a quarter pound of oatmeal, says Dr. Parkes, will supply as much nitrogen, and almost as much fat to the body, as one pound of uncooked meat of ordinary quality. A man gets quite three times as much nourishment at the same cost in oatmeal as in meat, and the oatmeal is more cheaply cooked. Indian corn (maize) is even cheaper, and one and a half pound of maize is equal to one pound of uncooked meat in nitrogen, and surpasses it in fat.

A SIMPLE ADJUSTABLE MARKER.

THE accompanying drawing represents a very simple, home-made, adjustable marker, which can be so constructed that any width of rows, within the limits of the particular implement, can be marked out. It can be made of any dimensions desired according to the use to which it is to be put, whether hand or horse, and with two, three, four or more teeth.

It is only necessary to describe the method of its construction. Through the horizontal square stick of timber, A, a series of slots B, B, B, B are



ADJUSTABLE MARKER.—FIG. 181.

made the width of the diameters of the bolts to be used. The slots may be from six inches to one foot long. Through these the bolts are passed and also through the "markers" C, C, C, C, their distance apart being regulated by sliding them to or fro in the slots. A notch, one inch in depth, and the width of the horizontal stick, should be cut across the face of the markers to keep them in a perpendicular position. Bolts may be put through the timber near the ends of the slots, perpendicularly to resist any tendency to split.

Ontario Co., N. Y. WILLIAM R. BROOKS.

WORMS IN PEACH TREES.—When the leaves roll up and look yellow, you may be sure there are worms at the roots. Pour boiling water around the stems of the trees near the ground—if soap-suds all the better—until the roots are completely saturated; don't be afraid of injuring the tree, and in a few days you will see the leaves unroll and turn green and the tree become thrifty again. I have tried this remedy for more than 23 years and never knew it to fail. J. F. C.

THE END OF THE RILEY CONTROVERSY.

Editor of the Rural New-Yorker:—Sir:—On account of the subscribers to your journal who have known me for a number of years, either personally or as a contributor to your columns, I call attention to the fact that Mr. Brisbin Walker stultifies himself in his letter in your issue for April 17th. He first asserts that my statements regarding him in my letter of Feb. 2d, are "absolutely untrue," and then admits their truth by confessing that he was engaged as set forth by me. He neither denies that he was paid for the work he was engaged to do while in Washington, nor explains why the letter which I addressed to him as the editor of the Washington Republic and which I reproduced, was never published. He contents himself with some malicious opinions and assertions which, as I have already told him to his face that he deliberately falsified for a purpose, I care not to further notice. Respectfully,

Washington, D. C., April 30. C. V. RILEY.

Industrial Implements.

FARM GRIST MILLS.

BY the first of July, Livingston & Co., Pittsburgh, Pa., expect to have ready one of the best cheap farm grist mills in the market. It will run from eight to ten bushels of feed per hour, and will be extremely simple and convenient. It will deliver straight into the bag and thus save much handling. It will shave the grain and leave the feed light, the peculiar construction of the grinding parts rendering its action on grain similar to that of the best burr. It is guaranteed to give satisfaction, otherwise the money will be refunded—price $30. Of their present grist mill—which retails, delivered, for $15—over 1,500, they tell us, were sold the past season; and for its price we know of none that surpasses it in merits. It can be run by hand or power, and grinds all sorts of grain fine or coarse. The grinding parts are made of hard, chilled iron and are self-sharpening. All parts that are broken can be replaced at small cost. Its capacity by power is from three to five bushels per hour, according to the speed at which it is run. Five or eight-inch pulleys can be furnished with it, as desired.

A Growing Industry.

The market for evaporated fruit, and the prices obtained, have been so profitable in the past as to merit attention, and the fact that a first-class article can be produced by the farmers themselves at a trifling cost for the necessary appliances, bids fair to soon revolutionize old methods. On a recent visit to Pa., one of our staff, as usual, personally examined the evaporator and its product, manufactured by the American Drier Co., of Chambersburg, and we strongly indorse its claims. As a cheap, portable evaporator for farmers' use it is the best we are acquainted with. The evaporation of fruits, berries and vegetables by improved methods is essentially an American idea, and the product has already acquired respectable dimensions in our export trade. It would be difficult to make even an approximate estimate of the annual value of our fruits and berries. Were they as carefully utilized as are our other crops and the statistics relating to them as accurately tabulated, the magnitude of the fruit business of the country would astonish even those who think they are well acquainted with it.

Everywhere.

NOTES FROM KANSAS.

THE month of April 1880, will be one not readily forgotten by residents of Kansas. It gave to those who have been dwellers in the State but a few years a faint idea of what the early pioneers of 20 and 25 years ago had to go through in making homes in Kansas, when it was then still "in the wilderness." Strong southerly winds, dry, and at times warm bringing with them clouds of dust, were repeated every few days throughout the month. They were fortunately more disagreeable than hurtful, and did but little damage, except in a few localities where light clay soils were blown away from the roots of the grain. Farmers were beginning to wear anxious faces and watch with interest every indication of rain. On April 28, their anxiety was relieved by a nice, soaking shower of several hours' duration and extending over the entire eastern half of the State, and again on May 8, another rain spread over about the same territory. These fine rains have brought much-needed relief to the spring crops, and were of great benefit to corn planting or corn already up; but they came too late to save all the winter wheat. The dry, open winter, with some severe freezing in the northern half of the State, followed by the dry winds of April, worked great dam-

age to our winter wheat crop. The early varieties, and more especially the Red May, had jointed before rain came, and is now heading quite short, and much of it is being replowed and planted in corn. The later varieties are very much improved since the rain, and will make a fair average in the eastern half of the State. That which was well put in, will be good; but under the most favorable circumstances, the entire wheat crop of the State cannot yield more than half an average. In the frontier counties lying just west of the center of the State, the wheat crop will be almost a complete failure.

Farmers are beginning to see the fallacy of depending altogether on one crop in a climate and latitude so favorable to the production of a large variety of crops and so favorable to stock raising and fruit growing. Hereafter wheat-raising will not be made so much of a specialty, and diversified farming will become more the rule. Every farmer now wants cattle and sheep, the demand for the latter being so great that sheep dealers cannot supply it.

The acreage of corn and forage plants this season will be greatly increased over that of previous years, and for these the season so far has been very favorable. The introduction of Doura, or Egyptian corn, into Western Kansas is one of the wonders of agricultural production. The past dry season has forced the farmers of that region to cultivate such crops as are best adapted to their climate, and Doura, Sorghum and Broom-corn, all of the sugar-cane family, seem to be specially suited to their wants, and this fact, coupled with the quantitative analysis made by the State Board of Agriculture, showing Doura to be superior to Indian corn and equal with wheat in nutritive qualities, has given an impetus to its propagation, that is scarcely credible. Pawnee county alone will plant 8,000 to 10,000 acres this season, where two years ago it was almost unknown.

The tenacity with which Kansas fruit clings to life is a surprise to all. Six different times during last winter and spring the fruit buds were reported by the farmers to be entirely killed, yet to-day the trees are well stocked with fruit, and the crop will be but little short of an average one. The weather for the past week has been warm—winds easterly and southerly, with almost daily thunder showers in some parts of the State. I have just learned that a fine shower of rain visited the upper Arkansas valley on the 12th, which will help the grass and bring joy to the hearts of the cattle men and sheep men of that portion of the State. Showers sufficient to benefit the grass have also visited some of the northwest counties in the past week. H. R. H.

Topeka, May 12.

RURAL SPECIAL REPORTS.

ILL., Highland, Madison Co., May 10th.—During these last two weeks we had very dry weather, but the rain is falling at last. The wind storms of last April have done some damage around here; houses were unroofed, apple trees uprooted, etc. Roads are in very good condition. Very little grain is being hauled to market, farmers being all too busy with corn planting—some corn planted a week ago is already up. Wheat is very fine, in some places the heads are all out. Many self-binding harvesters will be bought this season.

C. R.

KANS., Fontana, Miami Co., May 10.—The weather has been so dry here for so long a time that it has ruined the wheat crop with the help of the chinch-bugs. The prospect for fruit, however, is good at present. Apples, peaches, pears, grapes, blackberries, cherries and plums, will all be abundant. W. P.

NEW YORK, Elmira, Chemung Co., May 17.—With the exception of a few cold days the past week, with frosts on the nights of May 13 and 14, the spring thus far has been decidedly favorable for farmers. The weather has been good for doing all kinds of spring work, and farmers generally are well up with the season, spring planting having been pretty well finished. As far as I am able to learn, the frosts have done little harm, and if we escape having more the fruit crop in this section will be abundant. The successive hard frosts a year ago completely destroyed the fruit crops on many farms hereabouts, so that many orchards took a vacation last summer: hence they have blossomed unusually full this spring. On looking over our orchards, I find many blossoms destroyed; but many yet remain uninjured, so that I judge fruit will be plentiful. Indeed, I believe the frosts have been an advantage to our fruit growers, as they may have prevented an over-production, which is not to be desired. I speak more generally of Apples. Small fruits, especially Strawberries, have suffered some from the frosts, and the yield from many beds will be materially lessened, I believe. The tobacco crop of the '79's growth has been about all bought up and the unsold crops being so few and scattering, buyers have left the field. The crop generally has sold low, averaging, I believe, not more than 9 or 10 cents per pound. But despite the low prices farmers are preparing for an increase rather than a decrease in acreage. I am sorry for this, for a large acreage means poor crops and low prices. The tobacco-growing business has reached a stage, I believe, where only the best soil and culture will yield profitable returns to the grower. Not a few beginners make a serious mistake in planting out too many acres, thinking to get rich in a few years. Experienced growers have learned that one acre of good tobacco will yield more profit than two acres of poor. G. A. G. JR.

NEW YORK, Corning, Steuben Co., May 20.—Fruit prospects at the present time are good, as everything is blossomed full. On the night of April 30, the ground froze hard, and on the 9th inst., at 1 P. M., the thermometer marked 92 deg. in the shade. The condition of winter wheat is improving rapidly and promises a better crop than we expected. We have had a great deal of high winds this spring, and forest fires are doing much damage to forests and crops, and destroying many buildings and miles and miles of fence. Swallows made their appearance the 28th ult. I should judge from what I am able to learn, that a considerable area of Amber cane will be planted. A larger acreage has been sown to oats than last year. Planting is progressing slowly and work is crowding us, for we have to fight fire so much we cannot keep up. F. H. D.

TEXAS, Fredericksburg, Gillespie Co., May 8.—Owing to drought and cold spells last winter wheat crops have been looking bad, and will turn out below an average. No disease, except a little rust. No signs of the fly. Wheat is a very uncertain crop in this section. There has been no material increase of acreage under it this year. A. L.

The Querist.

ANSWERS TO CORRESPONDENTS.

[Every query must be accompanied by the name and address of the writer to insure attention.]

Corn Fodder, Hay and Corn Meal.

B. P., Jr., Corning, N. Y., asks whether corn-stalks can be cut fine enough to feed, without much waste, to horses, cattle, etc., what would be the relative value of dry stalks compared with good hay or ground corn.

ANS.—We suppose our correspondent intends to ask the comparative value of corn fodder when used as a part of the ration. It is not a complete food in itself, and although its value may be compared with that of hay and corn-meal, yet it is not to be inferred from this that it would be profitable to feed wholly upon it, as it is deficient in albuminoids; still it may be made an important part of the food for wintering stock.

In the following table we compare corn fodder in various conditions, as green fodder, dried when in tassel, and late-cut, dried corn stalks, showing the wide difference in value:

FOODS.		Water.	Ash.	Albuminoids.	Woody fiber.	Carbohydrates.	Fat	Albuminoids.	Carbohydrates.	Fat.	Nutritive ratio.	Dollars per 100 lbs.	Compared with av. Hay—$1.
		Organic substances.						Digestible nutrients.				Money value.	
GREEN FODDER.													
Norfolk White maize	85.7	0.8	1.1	0.9	4.9	7.4	0.3	0.5	7.4	0.1	14.9	0.69	0.14
Southern "	85.7	1.1	1.3	4.6	7.1	0.9	0.9	7.6	0.1	9.2	0.11	0.17
Hungarian grass	75.0	2.2	3.9	8.7	10.5	0.5	1.8	11.5	0.3	6.7	0.19	0.30
Average grass	70.0	2.1	3.4	10.1	13.4	1.0	1.9	14.2	0.5	8.1	0.33	0.36
HAY.													
Average hay	14.3	6.2	9.7	26.3	41.4	2.5	5.4	41.0	1.0	8.0	0.64	1.00
Dry corn stalks	15.0	4.2	3.0	40.1	36.7	1.0	1.1	37.0	0.3	34.4	0.39	0.61
Cured corn fodder	27.3	4.9	4.4	25.0	37.9	1.3	3.2	43.4	1.0	14.4	0.57	0.91
Corn meal	12.9	1.2	8.7	1.8	71.9	3.5	7.3	68.3	2.6	10.2	1.04	1.69

This table gives a good comparison of corn fodder in all its various conditions. Southern White, cut when in tassel, and having 85.7 of water, has a ratio of 1:9 2. as good even as corn meal; and then it will be seen that nicely cured corn fodder, cut at the right time, has a nutritive ratio of 1:14.4, whilst dry, common corn stalks, cut after the corn is ripe, have a nutritive ratio of 1:34.4—the former being nine-tenths as valuable as average hay, and the latter being a little more than half the value. The reader will understand that the nutritive ratio means that the food contains one of albuminoids, or muscle-forming matter, to so many of carbohydrates, or heat and fat-producing elements. Now for oxen at rest or store animals, 1:12 has been found sufficient; but for growing or fattening animals, or milch cows, about 1:5 is necessary to produce a good result, and it will be seen that corn fodder, in its best estate, is not rich enough in muscle-forming substance. The best clover hay has a nutritive ratio of 1:5, which accounts for its being so excellent in growing young stock. Average meadow hay keeps store stock well, but it will not grow young animals or fatten older ones fast enough for profit. Even these need some more nitrogenous food, such as wheat or other bran, oil or cotton-seed meal, or a mixture of the best clover hay.

Now, if corn is harvested early, say as soon as the ear begins to glaze, and put up in good-sized, well-bound shocks, the stalks may be used to good advantage by cutting them short and feeding with them two pounds of good bran to the bushel of cut stalks, or, better still, half a pound of oil meal and a pound and a half of bran to the bushel of cut stalks. Moisten the stalks and sift on the ground meal, stirring all together, and let it lie in a mass for a few hours and warm up, but not ferment too much.

The object of cutting the stalks is to render them more easily masticated, and by mixing the more palatable leaves and small stems with the coarser parts, have them all eaten together. The whole stalk should be utilized, and when it is shaved up into three-sixteenth inch lengths the tough rind is broken into shreds, and it all becomes palatable to stock, especially after mixing the bran, or oil-meal and bran with it, as above described. Don't allow any one to beguile you into cutting corn stalks two inches long, on the plea that the pieces will lie flat and not hurt the mouth. Stalks will be still flatter if you don't cut them at all. If it is an advantage to cut at all, the advantage continues in the same proportion down to a fine chaff. When shaved up as described, no animal's mouth will be hurt in masticating them. If the feeder has the advantage of an engine to cut with, he may go still further, and after he has mixed up the cut corn fodder and bran, place it all in a steam box and let on the steam and cook all soft. A thorough worker will report most favorably on the experiment. But it will be a cheap and good way to winter stock without cooking.

Queries About Sheep.

H. W. Huntingdon, Pa., asks, 1, which is the most profitable sheep—fine-wooled or coarse-wooled; 2, why does fine wool bring only the same price as coarse, when the clip is only half as much. Our friend remarks that if there is really no difference in price, farmers should ponder on the matter with a view to getting rid of their fine-wooled sheep. He sends us a sample of wool from what are supposed to be Merino-South-Down sheep, and asks 3, our opinion of it. The sheep are very hardy and clip five or six pounds of wool. Some of them have lately been worried by dogs that bit them under the fore-legs, making holes from the size of a buck-shot to that of a bullet. They bled very freely, mortification soon set in and they died; and he asks, 4, whether the presence of goats with the flock would be likely to prove a protection against dogs; and whether bells are of any real use in that connection, of which he is a trifle skeptical inasmuch as some of his worried sheep were so "protected," and he also wants to learn, 5, what is the best treatment for sheep bitten by dogs.

ANS.—1. There are several reasons why some farmers keep fine-wool sheep and some coarse-wool. "Many men of many minds," and many farmers could not keep long-wool sheep if they wished to. Long-wools are heavy-bodied sheep which require high feeding, the best of care and a good deal of skill for success, while any one can keep the fine-wool sheep which are able, in fact, to take care of themselves. Coarse, long wool is in request for the coarse, open-textured cloths that are now fashionable both for men's and women's clothing, and fine wool is used for the less used broadcloths and cassimeres, and the soft cashmeres and French merino still worn by ladies who are less demonstrative in dress than the majority at the present. The home woolen manufacture now uses every class of wool from the poorest Texan and Californian to the finest merino and the longest and most lustrous Lincoln; and there is opportunity for farmers to grow just what suits them best, and always be sure of a market. But while the fashions change suddenly and so greatly, there will always be differences in the value of wool, and one cannot always be changing his plans and his flocks. The most profitable sheep now are the cross-breeds. In England these are the Shropshires, Hampshires and Oxfordshires; and in America the grade Merinos, the Cotswold-Merinos, the Merino-Cotswolds and the Merino-South-Downs. 2. Some years ago merino wool was worth $1 a pound, and small 80-pound sheep sold then for $1,000 a head; but it became unfashionable to wear broadcloth and, suddenly, the fine-wool Merinos were worth no more than their skins, and the Cotswold and Leicesters took their place in the estimation of enthusiastic speculators and farmers. The reason why they have not "come down like a stick" after having "gone up like a rocket," is that these sheep are very difficult to raise and but few farmers can keep them with success. The probability is that long, coarse wool will always be 10 cents a pound higher than fine merino on this account, and because we cannot grow enough at home to supply our wants, and have to import it from Canada and England. 3. The sample of wool sent is an excellent medium clothing wool, and will probably sell for as much as the best full-blood merino, because it is used for such staples as flannels, blankets, and popular makes of cloth. 4. Goats are no protection to sheep nor are bells. The belief is a popular fallacy, entertained only by those who know nothing of dog-nature. 5, When a sheep is bitten by a dog, the wounds should be dressed thoroughly with turpentine to cause suppuration before healing takes place.

Remedies for Gapes in Fowls.

C. F., Troy, Ind., having been very unfortunate in losing chickens by gapes, asks for a remedy.

ANS.—An effective remedy for this thinner of the poultry yard is that described by Gen. Noble, in our issue of Jan. 25, '79. He slaked a barrel of lime-wash to about the thickness of paint, and into this stirred from ten to twelve pounds of sulphur flour. Into each pailful used, he mixed a tablespoonful of carbolic acid, and with a brush sloshed every part of the hennery, roosts, floor and walls with the mixture. This was repeated several times, especially with each new brood, to the entire disappearance of gapes from among his poultry. Of course, a smaller quantity of all the ingredients would suffice for smaller quarters for fowls. As related in a RURAL Brevity in our issue of June 7th, '79, a friend of ours has found an effective remedy in dry, caustic lime. A pinch of it was dropped into the bird's throat, which was then let go, and by next day it had recovered. That's about the easiest "cure" we know. A trifle more troublesome is that found out by an Englishman, as told in the RURAL, July 19th, '79. Taking two parts of sulphur and one of salt, he mixed them with water to the consistency of thick cream—using the finger to mix the sulphur, as it doesn't readily mix with water. Then having dipped a feather into the mixture he thrust it about three inches down the bird's throat, working it up and down a few times, and repeated the operation three or four times at intervals of a couple of days. A still easier remedy is one given in our issue of Aug. 9th, '79, by a correspondent who got rid of the pests by simply removing the chickens and their coops away from the house, and placing them under a tree in the orchard or meadow, having mowed the grass where there was any. In the RURAL of Nov. 8th, '79, Col. Curtis tells how he cured a chick of gapes by making it inhale tobacco smoke until it was stupified. This he did by placing the little wretch in a coop with a vessel by its side, containing burning tobacco, the smoke of which was prevented from escaping by means of a covering over the coop. The above is a condensation of the chief remedies for this ailment, given in the RURAL last year, and about as many are given every year, so that if our friend had saved all the back numbers, she would probably have saved all, or most, of her chicks too.

Timber Preservation.

C. B. J., Langsville, O., asks, 1, whether there is any better mode of preserving timber than by treating it with lime, as described in the "Querist" last week, cost considered; 2, is there any marked difference in the durability of timber cut now, in the fall, or in winter.

ANS.—1. There is no easier and better method, all things considered, than that with lime, for preserving timber, because it is so cheaply and readily practiced. There are many other methods, as saturating with creosote; sulphate of zinc; and other chemical antiseptic substances, known as "kyanizing," "burnetizing," etc., based either on the substances used or the inventors' names; but they need machinery, tanks, hydraulic presses, etc., which are not available for general use. 2. Timber cut in August or September, when in full leaf, is the most durable. The leaves should be left on to draw out the sap before the trees are trimmed. The timber seasons very rapidly afterwards. If the bark is removed from timber when it is cut, it seasons rapidly, and no "powder post" or other insect damage is incurred, because the surface hardens rapidly and the beetles find it difficult to bore into it to deposit eggs, or else find no shelter for them.

G. C. K., Picton, Ont., Canada, asks for the address of a reliable dealer in eggs in this city.

ANS.—An examination of our advertising columns—often an interesting and always an instructive part of the paper—will show the name of E. & O. Ward, 279 Washington St., whom we can recommend.

THE
RURAL NEW-YORKER.
PUBLISHED EVERY SATURDAY.

CONDUCTED BY
ELBERT S. CARMAN.

Address THE RURAL NEW-YORKER,
No. 34 Park Row, New York.

SATURDAY, MAY 29, 1880.

BEAUTIFUL NORWEGIAN PONIES.—We wish some of our enterprising horsemen would follow the example of the celebrated violinist, Ole Bull, and import a few of these for stud breeding in our country. They are of such handsome fancy colors, so fine of form, gentle, and at the same time spirited, that they would immediately become fashionable and command high prices. Two of Ole Bull's importations are of a light cream color, and two others of a bright salmon. The four have long white tails and beautiful flowing manes. They are valued at $1,000 to $2,000 each.

COMPARATIVE VALUE OF DIFFERENT MANURES.—Prof. Voelcker, of England, in analyzing these, reports poultry manure, fresh, as containing about two per cent. of ammonia; dried, a little over four per cent.; farm-yard manure, three-quarters per cent.; Peruvian guano from the Chincha Islands (all exhausted several years ago) used to yield 16 to 18 per cent., but that latterly obtained from other Peruvian islands only gives from three to eight per cent. of ammonia. The latter is richer in phosphate of lime than the former, containing as high as 40 per cent. Pigeon dung is richer than that of poultry when both are fresh, in consequence of more moisture and silicious matter being found in the latter. Soot unadulterated contains three and a-half to four per cent. of ammonia.

Many persons have heretofore thought chicken manure as rich as Peruvian guano from the Chincha Islands used to be; but from Prof. Voelcker's analysis above, they will see that it is only from one-eight to one-ninth as valuable as that, and about half as rich as the poorest quality now obtained from Peru.

BROOM CORN, as many of our readers may know, was introduced to this country by Dr. Franklin. He saw a seed on a broom, planted it, and the seeds from this single plant were the beginning of broom corn as an American agricultural product. The credit for the broom-making industry is due to the Shakers, who, raising the plants in their gardens, manufactured the brooms and sold them for 50 cents, or more, apiece. Immediately after the war, so great was the profit from its cultivation, that it was soon overdone and the many who had rushed into the business were soon discouraged and abandoned it. Now it is cultivated in all parts of the country. The stalks grow very tall; the seeds, if left to mature and ground with corn or oats, are deemed excellent for fattening cattle. But as the straw is brighter and more desirable if cut while the seeds are in the milk or dough state, the seeds are not gathered. These should be planted on good soil, in drills three feet apart, the seeds one foot apart in the drill.

THE WOOL CLIP in Great Britain this spring, on account of the great loss of sheep during the past year, it has been supposed by many would fall 25 to 30 per cent. short of an average. This, and even more, it is confessed, will be the case in some districts; but Mr. J. L. Bowles, of Liverpool, who has taken great pains to ascertain the loss of the whole United Kingdom, sets it down as not to exceed 10 per cent. Our own flock-masters should now take this into consideration, and be careful not to set so high a price on their w ol after shearing as to prevent manufacturers from purchasing freely. If it costs too much there will be no profit on their fabrics, and they must curtail their production. This will lessen the demand for wool, and consequently the price must fall. Wheat growers, or rather the purchasers, by advancing the price too much at one time last year, lessened exportation. Prices then declined, and many of them met with heavy losses.

ONE of the oldest and most respected agricultural editors of our country writes as follows:

"You cannot better edit the RURAL NEW-YORKER than by spending as much time as possible on your example crops. No other editors that I know are doing this, and your reports of the same will give your periodical a reputation and confidence with the public unprecedented in American agricultural literature."

Some force may be added to the above opinion when it is considered that the RURAL has no plants, or seeds, or implements, or, indeed, anything else except itself, for sale. We have only the truth to tell, and we have no interests to restrain or bias us in telling it. We earnestly desire to promote the interests of agriculture and horticulture by praising that which is good, and condemning that which is bad—and this we shall do in so far as we have judgment and knowledge to guide us.

WELLS FOR THE FAR WEST.

A PROPOSITION is before the House of Representatives, in the shape of an amendment to "the Agricultural Appropriation Bill," which provides that the Commissioner of Agriculture shall be empowered to contract for the sinking of artesian wells for the purpose of reclaiming the arid and waste lands of the West by means of irrigation. While it has justly been considered doubtful if wells can be made available for this purpose, yet the bare chance that they may be usefully and profitably employed is of such vast importance that it is to be hoped the amendment will prevail. The cost of making the experiment will be very small, and if one successful attempt is made under such circumstances as will show that the project is feasible, it will set at rest the question of the value of our vast territory in those regions that are now arid and waste. If the supply of water is of no greater volume than shall permit these at present worthless lands to be used for grazing cattle, the expenditure will have been a judicious one for the Government, for it will give a certain value to millions of square miles of land which is now utterly worthless. This is eminently a case in which the public funds may be justly expended and a business which may be very properly entrusted to the present Commissioner, who has proved himself both enterprising and energetic.

THE WEATHER.

REPORTS of drought are far more common in the West than in the region east of the Alleghanies, but this year complaints are beginning to be as loud in the latter region as in the former. May is a pivotal month, so far as agriculture is concerned, in the Northern States; for the rainfall, though not sufficient in itself for the crops, yet usually is considerably heavier than in June or July. In the Atlantic and Middle States the rainfall in May is usually about three and three-quarter inches, but the weather observations indicate that up to the present time during the month there has been a deficiency of about 50 to 60 per cent. Moreover, the prevailing winds have been of a drying kind, abstracting much of the moisture previously held by the soil, and so free of clouds or aqueous vapor of any sort has been the atmosphere of late, that the sun's rays have reached the earth with great absorptive power, robbing even the subsoil of its watery stores. The winter, too, was so unusually mild that the snow-fall on the Appalachian chain was comparatively light, and even the occasional spells of hot weather, sending the thermometer, now and then, up among the nineties, have failed to melt the snow enough to raise the streams flowing from the Alleghanies.

Mr. Austed, the English expert, in a late work shows, as the result of careful observations, that in England the average annual amount of water taken up from the exposed water surfaces is at least 17 inches, and in some districts as much as 30. Mr. Greaves, a distinguished civil engineer, concludes from a multitude of observations that the evaporation diminishes the supply afforded by the rainfall by 75 per cent. in the British Isles, and as the climate of the United States is drier than that of those islands, it is likely that the quantity taken up will be at least as great. The recent forest fires that are doing and have done such a world of mischief in New Jersey, Northern Pennsylvania and some of the other States, are, no doubt, largely due to the abnormal drought, and unless Providence soon sends us a copious downpour, it is more than probable our crops will suffer even more seriously than they are now suffering, from the same cause.

DEVELOP THE HOME CHEESE MARKET.

THE foreign market seems to have a strange fascination for dairymen. They are affected favorably or otherwise by any change in the market for cheese in England, and that market rules our prices here like a magician's wand.

There has been much written upon the necessity of developing our home market for cheese, of working for the greater market at our doors rather than for the smaller one three thousand miles away. But distance so "lends enchantment to the view" that no home considerations can be seen. The cheese is all made to suit the supposed taste and conditions of the foreign trade, and what can't be sold for that trade is worked off on the home market.

Cheese for long shipment must be made too dry to suit the best home taste, and thus all our cheeses are made so dry as to appear poorer in cream or butter than they really are. Such cheeses require long and skillful curing to develop all their good qualities, and our dairymen have not taken the trouble to construct proper curing rooms; they therefore push them upon the market as early as possible, calculating that they may ripen on the ocean voyage. Most of our cheese finds its way into the hands of commission merchants or dealers within 30 to 35 days after being taken from the hoop. These commission men have no proper facilities, even if they had the knowledge, for curing cheese. They do have them taken from the boxes and dressed a few times to keep them from spoiling, when held for a longer period than expected; but this is a matter of simple preservation and cannot be considered any proper curing. And in this questionable state they come to the retailers' hands and are disposed of to parties who need sympathy during their consumption.

It must be evident that this cheese is not likely to build up the home market, to enlarge the class of cheese eaters, but rather to discourage the consumption of this important article of food, which ought to be used in quantity second only to butter; whereas, while at least 600,000,000 pounds of butter are consumed annually by our people, not more than 150,000,000 pounds of cheese are consumed. From 120,000,000 to 140,000,000 pounds of cheese are yearly exported, and this fixes the price of all the cheese that is made in this country, while, if one-half of the effort that has been made to build up this foreign market had been given to suiting the taste of our own people, the home consumption might have been increased to a larger amount than the whole foreign trade. If the per capita consumption of our population should be increased simply one ounce per week, it would aggregate 140,000,000 pounds per year.

But the fact is not to be disguised that absolutely no general effort has been made to increase the home market. At the meetings of our Dairymen's Associations certain factory managers, who saw the importance of increasing this home market, have given the result of an effort in making cheese suited to this local trade and of presenting it before the people of the district. And in every case the increased consumption was equal to ten pounds per capita per annum for the district canvassed, an increase which, if extended among our whole population, would require double our present make to supply. All that was done to this end consisted in making a softer and apparently more rich and buttery cheese, and curing it better before placing it in the hands of the retailer. But in every instance the public appreciated the extra quality of the cheese, and extended its patronage accordingly. If the factories would co-operate in making a concerted effort to suit the home taste for cheese, not five years would pass before the price of cheese, as of butter, would be fixed in the home market and not in the foreign market. The latter would still be important, but it would not, as now, fix the price on home consumption. The first consideration in improving the home market must be an improved system of curing. The inability of a large proportion of factories to hold any part of their stock for more thorough curing is a serious obstacle to supplying the home trade with a strictly fine cheese.

BREVITIES.

WE are sorry to find that our specimen of the Blood Birch has been much injured by the past winter.

IN consideration of the partial or total failure of the hay crop in many parts of the country, fodder plants should be largely sown while there is still time.

WE have planted about one acre (not measured yet) of Blount's corn, 16 inches apart in the drills, these four feet apart. We propose to give it plenty of room.

A NOTE from the RURAL farm informs us that owing to the hot, dry weather of the past week, the hay crop is ruined. Wheat on high, sandy land is severely scorched in places.

WE have been reading what has been said of the value of the Soja bean, and fail to see wherein it is more desirable for cultivation than several varieties of our Cow-pea (bean).

IT is necessary that we should again state that the several Free Plant and Seed Distributions of the RURAL NEW-YORKER are closed. The next Distribution will be announced about Sept. 1st.

WE have always raised our sweet potatoes in ridges a foot high, setting the plants a foot apart. A friend who has tried both ways says he prefers hills. Four plants are set in each hill and the hills four feet apart.

PROF. COOK, (Rutger's College, New Brunswick, N. J.), reports the yield of Clawson 19½ bushels per acre; that of Foltz at the rate of 30½ bushels. This same marked difference has been found for three years in succession.

ZINC COLLAR PAD. We see this highly recommended as a cure for sore-necked cattle mules and horses. Can any of our readers who have long and faithfully tried this pad inform us as to its merits? It is said to act as an astringent and quickly cure sore shoulders.

AT the late show of the Ayrshire Ag. Association, a serious charge was made against the representative of the Duke of Buccleuch by the judges. Three of his finest cows were found to have had their teats tightly bound with tape, the object being to give a full appearance to the udder.

THE Japan Climbing Fern (Lygodium scandens) is a handsome vine and a fine acquisition among our newer plants. The trouble seems to be, as compared with Smilax, that it makes most of its growth in the spring. To be really profitable to the florist, each string ought to bring at least one dollar.

WE have been looking over a selection of new Pelargoniums, and have noted the following as the best: Victor Hugo, a dwarf; flower double, salmon color. Jealousy is a single of a yellowish salmon. The flower is very large and the petals imbricated. Le Candeur bears a small, but compact truss, nearly white at first, changing to rose. Mad. Thibaud is a violet rose, large, double. Naomi bears a a small truss, but the individual flower is remarkbale for its size and singular shape. Color pink with a dash of violet.

MANY of our readers have never even tried the experiment of planting corn in drills. We are much in favor of the plan from experience, and should feel sorry if obliged to go back to the old system of checks or hills. We are now using a corn drill which drops a grain every 14 inches and covers. The drills are four feet apart. This is for Blount's corn. For varieties that do not grow so tall and sucker less, 3½ feet would be a sufficient width for the rows. It "stands to reason" that four kernels planted 14 inches apart will grow and develop better than four kernels planted together. We doubt if the extra labor in cultivating is enough to be taken into account.

BY all accounts from that quarter enormous amounts of commercial fertilizers were this year used in the Southern States, especially in those that touch the Atlantic—more even than ten or twelve years ago. At that time thousands of planters ran heavily into debt for these means of restoring the fertility of the soil exhausted by the reckless cropping of the improvident days of slavery, and it took many of them years of anxiety and economy and the sale for a song of many of their acres to get rid of the load they had thus imprudently placed upon their shoulders, while not a few slipped from under it either through the bankruptcy court or across to Texas. It is to be hoped that the experience of those bitter days has taught the planters a lesson of prudence, for this is needed even in well-doing. As for the dealers, trust them to look out for their own interests without prompting.

THE forces that have controlled the grain market for several months have produced important changes in the routes of shipments, some of which will doubtless be permanent. By these New Orleans has certainly been the greatest gainer, and Boston probably the greatest loser. While the former has had a heavy surplus of grain beyond its capacity of storage and vessel room, the latter has had a great surplus of freight room, as well of storage capacity. During the month of March the Crescent City, indeed, ranked second only to New York as an export point. For this rush of business the Queen of the South is indebted mainly to the Father of Waters, and to Jay Gould who is vigorously sustaining the barge system, by which a large proportion of the Western products that formerly came eastward on their way to a foreign market, now seek it by this southern route.

WE find the following in the agricultural columns of our respected contemporary the Germantown Telegraph:—"Five hundred thousand dollars won! This is the amount, more or less, that we believe was wagered between the Telegraph and RURAL NEW YORKER as to the germination of weevil eaten peas. The latter proposed that not over fifteen out of a hundred planted would grow; and, having contested this point we secured the hundred hollow peas, which seemed to be mere shells; they were duly planted; and *forty* have made their appearance and look as vigorous as those untouched by the weevil. A check for the amount is now in order. When it is received and paid, those who furnished us with the seed may call upon us for their promised share. Meantime it will be also in order for the RURAL to acknowledge the corn, or pea just as it pleases." The test which the veteran editor of the Telegraph has made, shows a higher percentage of vitality for weevil-eaten peas than did our own tests or the many others which have from time to time been published in these columns. Granting that the Telegraph test was made in the best of faith, yet it is not unreasonable to suppose that the chance of winning so large a sum may have caused the young plants to seem more vigorous than they really were. We hold the editor in duty bound to tell us how many of the 40 plants bear fruit. Meanwhile, since an alternative is offered us, we freely "acknowledge the *corn*."

Literary Miscellany.

THE DELINQUENT SUBSCRIBER.

ONE day last week, while sad and dreary
As we wended, weak and weary,
Across the unswept floor:
We heard, at first, a gentle tapping,
Then it became an earnest rapping
At our sanctum door.

"Come in!" we said; yet while we pondered
And in silence we still wondered
What for us could be in store:
Then, the door-bolt gently turning,
In he walked. Our cheek was burning!
Thoughts of crimson gore.

"Are you the man who does the writing?"
(What word will rhyme with this but fighting?
Quickly thought we, o'er and o'er).
"Sir, we are," we gently told him,
Nodding to the boys to hold him,
If he tried to beat us sore.

"Then you'll please give me a credit
Opposite that little debit
For two dollars more;
I like your paper and will take it
As long as you strive to make it
As good as it has been before."

We jumped! he dodged! thus we missed him,
Or we should have surely kissed him,
No matter if the boys did roar!
So seldom treated in this manner,
We felt inclined to sing hosannah!
Only this and nothing more.

JOHN ASCOTT'S DAUGHTER.

BY CHARLES RICHARDS DODGE,
Author of "Louise and I."

CHAPTER IX.

"BOOK-FARMING."

ONE afternoon the proprietor of Maplewood was at work mending a bad fence at the lower end of the farm, where it joined the Wilkins' place. Silas Wilkins had lived on the "back road," as it was called, ever since George could remember, and when "young Ashton" took the reins in hand, old Silas presumed to give that gentleman a great deal of "necessary" advice as to the surest way for him "to make a livin' off o' such worn-out land." The pseudo-farmer was sharp enough to take it all in as law and gospel, but the advice somehow did not always receive a practical application, often to the apparent disgust of the elder farmer. Lately the old fellow was inclined to sneer a little, but he always kept his weather eye open when anything new was going on, noted the improvements, and croaked not a little about sinking the whole place.

"Seems to me you take a pesky sight o' trouble, George for them 'ere high-toned cattle o' yourn." The old man said as he appeared on the ground.

"I'm bound to have tight fences, Uncle Silas. I can't afford to lose any of my cows, they cost too much."

"Do you think I'd shoot 'em if they came on my land?"

"Of course not, but your fences are so bad I'm afraid they'd be in the highway before I could get to them."

"Thank ye—"

"No offense meant, I assure you," said George; "but it's so much cheaper and easier to keep things in repair than to build new, I often wonder you don't fix them."

"I suppose they orter be fixed," the old farmer answered, thrusting his hands deep into his pockets, "but there's so tarnal much of it to do, I can't find time to begin."

George thought to himself, "You had better be fixing them now instead of gassing here with me," for Uncle Silas would talk as long as there was anybody to listen to him. He loved argument, and would discuss politics or religion "until the cows came home," as the boys in the neighborhood put it. To-day the subject was feeding stock, though to the old gentleman's credit, let it be said, he showed little inclination to argue and for once was inclined to listen.

"Wall," said he at length, "you may feed accordin' to the book rules if you want to, but I tell ye a cow'll eat just so much anyhow, and in the long run I've found that feedin' medder hay, with a few turnips for a relish, comes about as nigh the mark as you can git."

"I agree with you fully," George answered; "good meadow hay is 'A No. 1,' and the roots are well enough for a relish, but supposing you could feed other things that didn't cost half as much, that would answer just as well, and so save a part of your hay for market."

"*What* is as good as medder hay that don't cost half so much?"

"You had a pretty large stock of oat straw last fall, didn't you——?"

"Neow, George! Oat straw as good as hay! Oh, ho, ho! that won't do."

"But I can *make it* as good as hay at a very little extra cost, and that is where the book learning, as you term it, becomes available."

"How?"

"Well, chemistry, or rather chemical analysis, shows just what are the constituent parts of hay, straw, roots, or, in fact, anything that grows upon the farm, and gives the quantity of digestible matters they contain. Taking good meadow hay as the standard, and knowing its constituents, we will call it worth, for feeding purposes, twelve dollars a ton. By the same means I find that the amount of digestible matter that is nutritive in straw is not so large, and that for feeding it is worth but seven or eight dollars. To make it worth, then, as much as good hay, I must find something to mix with it that has a much larger amount of digestible matter, such as oil cake, for example. Now, by taking 200 pounds of oil cake, and mixing it with 1,800 pounds of oat straw, I get a mixture containing digestible matters equal in feeding value to those in my ton of meadow hay."

"I never heard of that," Mr. Wilkins remarked

"Some farmers buy fish scrap and dried blood for the same purpose, and by their use, are enabled to feed all sorts of poor stuff like straw or corn-stalks, with as good results as they can get from feeding timothy or clover, even."

"That's 'science' is it?" asked the old man, leaning his elbows upon the fence, and supporting his head with his hands.

"Yes, that's one kind of 'book-farming' Uncle Silas."

"Wall, dum me, George, if I shouldn't call it *common-sense*."

"After you have learned it," suggested the other.

"But you don't mean to say that stock will eat *fish*?"

"Sheep will learn to eat it, and it goes as far as corn with them. I knew of a man that kept a large flock of sheep all winter on straw, by giving each animal half a pound per day of dried fish refuse from the fish oil manufactories."

"I don't know about that," the old man answered, shaking his head; it's agin natur'."

"How so?" George asked.

"Seems to me if the Lord had intended grass-eatin', animals to live on meat and sich, they'd a' been got up different—it certainly is agin natur'."

"As to that it is a part of the economy of nature for all animals to obtain nitrogen from their food—it is necessary for their very existence—and if we can furnish it to them artificially, or in other way than that to which they are accustomed, nature's ends are subserved, though by different means. However, that isn't 'science' as you call it, though it is through the application of scientific knowledge and principles that we are enabled to make a proper use of such things, and to farm economically. Come up to the house some time, and I'll give you a few books to read upon the subject."

"Thank ye, George; mebby I will—some day—but I'm 'frald it's hard larnin' old dogs new tricks. Howsomever, you had sich good luck with your fertilizers last year, I believe I'll try some this spring—if you'll tell me what you used."

"All right, come up some evening, and I'll tell you not only what I used but *how* I used it, and there's where a big slice of the 'luck' comes in. There, I guess that will do for to-day," the young man remarked as he drove the last nail, and picked up his tool-box and coat. "I'll fix the rest to-morrow."

"I'll talk with ye again some time," said Mr. Wilkins, turning to go. "Good-day—I guess there'll be snow to-morrow."

The young man started across the meadow in the direction of the house, but he had hardly proceeded forty rods when the old gentlemen's voice was heard calling after him. "I say, George, you needn't fix that piece of fence back of the pond, I'll tighten it myself in the mornin'."

May thought her husband was in a very good humor from some cause or other, as he came in ten minutes later, whistling right merrily, and she asked him the reason, but he only answered, "I've been trying to convince neighbor Wilkins of the error of his ways."

On his way home, farmer Wilkins reflected: "Book-farmin' ain't such a terrible thing after all; accordin' to young Ashton, it only means to *know* what you want to do, and then to *learn how to do it the easiest and cheapest way*. I guess the world has turned clean over sence I was a boy."

CHAPTER X.

SHADOW AND SUNSHINE.

THE cloud hung over the little household for weeks. May's feelings had undoubtedly been wounded deeper than her husband could possibly know, and it was hardly to be expected that she would forgive and forget in a moment. George was ashamed of his hasty words when he came to reflect upon them, and won his wife's forgiveness through a kindly and sympathetic manner towards her. Allowing time for the wound to heal, he again brought all his arguments to bear upon the case, appealing to her reason and good sense. Throwing the entire blame upon his father's obstinate prejudices, he finally reasoned her into the belief that it had been for the best—deceit and all, and the skeleton was banished. Sarah showed herself a true sister at this time, and was very warm and friendly, though Charles, her husband, kept upon as strictly neutral ground as policy would admit. Between William and George there was a decided coolness, so much so, they rarely met.

A visit from Blanche De Fondville brought a pleasant change to the young couple, relieving the monotony of winter farm life. She was lively and interesting, and when she entered the cozy little parlor upon her arrival, it seemed as though a whole basketful of sunshine had dropped into the midst of the little household.

"Why May," said she, with animation, "it seems so funny to see you at the head of an establishment, and such an establishment! It's so romantic a little place, even in winter, what must it be in summer? Love in a cottage, meadows and buttercups, purling streams and warbling birds—I think I shall settle here for life."

"We *are* very happy, Blanche; but our buttercups are only butter bowls, the cows feed in the meadows, and the warbling birds that most interest us are chickens."

"Or turkey gobblers," interposed George.

"Dear me! how very unpoetical. There! I'm all prose now. I should have said happiness in an old farm-house, cow pastures and milk pails, muddy brooks—where the geese and ducks feed—and noisy chickens. *Ahem!* I have heard of your farming operations, Mr. Ashton; papa says you are doing splendidly—are you?"

"That's a question I am asking, Miss De Fondville. It's hard enough work I know at present but they say 'it's a long lane that has no turning.'"

Blanche's coming was a bit of sunshine truly, and May, who had allowed herself no respite from the round of duty which becomes a part of a woman's existence upon the farm, now took time to sit down and enjoy life. Of course, Blanche was shown over the farm. The improvements were pointed out to her and dilated upon, stock put on dress parade and inspected; she was initiated into the mysteries of dairy farming and forthwith declared she would accept the first sensible young farmer that offered her his hand, heart and an interest in his broad acres.

"Provided his family have outlawed him," said George, grimly.

"With or without, if he only owns the farm."

George winced, but added, "and it isn't mortgaged."

Blanche was entirely ignorant of having hinted at anything personal, but she dropped the subject until May and herself were alone again.

"Did I step on anybody's toes yesterday when I alluded to owning the farm?" she asked, "Mr. Ashton suggested 'mortgage' so soon, I didn't know but I had given a thrust in the dark."

"Yes, Blanche, there is a mortgage of two thousand dollars on the place, which we will have to pay off one of these days. It could have been partly cleared away by this time, but it has cost so much to bring the farm up to George's ideas. Of course, you know all about old Mr. Ashton's shutting the door upon George when the farm was bought?"

"Foolish old man!" said Blanche.

"I never knew until a little while ago the true reason for

"Why, was there another reason than the one given?"

"Yes, I had it from the old gentleman's lips."

"Then you have seen him, May?—is he *very* cross?—do they keep him chained or only muzzled? But the reason?"

"Because his son married an Ascott!"

"May!!"

"Oh, Blanche, it has made me so unhappy. No one knows how cruel a stab he gave me, or how deep is the wound. Many and many a night I have cried myself to sleep, when George had been dreaming for hours, and many and many a time I have waked in the dead of night with his cruel words ringing in my ears. 'An Ascott!' My dear, gentle father was an Ascott, and the insult was more to him than to his daughter."

"Your father was one of Nature's noblemen, May. Do you remember an old friend of his named Stephen Hascall?"

"Yes, he was a near neighbor."

"Papa met him when in the West last fall, and learning he was formerly from S——, mentioned your name. The old gentlemen was delighted, of course, to meet a friend of "little May Ascott's," as he called you, and he gave papa the whole history of your family, down to the time when you went away from Maplewood. Your father and Mr. Ashton had trouble with each other regarding a money transaction, and that, perhaps, will explain his feelings toward you."

"An Ashton brought me back to my father's old home, and when I think of that I always feel like forgiving the old gentlemen his cruel words."

"My patience! I should be *for giving* the old, gentlemen a piece of my mind as often as circumstances would admit; but let us talk upon some pleasanter subject."

These few brief weeks of Blanche's visit were happy ones to May, and when they had passed and the parting hour had come, it seemed not only as though a member of the household had been taken away, but that a part of herself was gone.

"Parting is such sweet sorrow,"

Juliet lisped to her lover as she bade him "sweet good night" in the Garden of the Capulets. There is a sorrow in parting, and there is a peculiar sense of sadness, a pathetic yearning, that always comes at the close of a pleasant visit, or the end of an interesting novel, as we say good-bye to the characters, and resume again the thread of uneventful every-day life.

It was the second year upon the farm. Spring was backward, and things had gone wrong from the start. George was anxious to make a good season, and to hasten matters he put in his corn when the soil was too cold and wet, and it rotted in the ground. He had sold some of his hay about midwinter thinking there was enough in the "big bay," with other kinds of feed, to carry him through, and was obliged to buy in early spring at a high price. Peter broke his leg about this time, and his place had to be supplied by a raw hand who seemed to make more work than he performed. Farmer George was "down in the mouth," and began to realize that in farming, as in stock speculation, there must be margins—and that due allowance must always be made for contingencies. But he worked the harder, and adopting May's motto, saved when he could and spent only where it was absolutely necessary. In a month or two old Peter made his appearance. The crops were now doing finely, and as the skies brightened the young farmer began to think of one or two needed improvments that had been planned the year before, and to figure on the finance question. One of these was an addition to the barn that would enable him to keep more cows through the winter, and thus extend his dairying operations. He thought it all over, made close calculations as it seemed to him, and "the improvements went on." It turned out another *draining* experiment—it certainly drained his pocket—for the work cost more than the sum stated by the carpenter, and other estimates were sadly out of latitude.

The season, backward and cold at the start, was now making up for lost time with a vengence and in consequence everything suffered in a greater or less degree from drought. The corn grew well of course the wheat was almost ready to harvest but other crops suffered greatly, and the grass, particularly upon the upland, was badly burned. To make matters worse, when the needed rain made its appearance, it came just at harvest time, accompanied with violent wind and hail, and the grain fields were swept, the wheat lodging so badly in places it was hardly worth cutting. Altogether it was a bad season, and older farmers than George Ashton made calculations for a "snug" winter. He said little to May about his troubles, however, for he knew it would only give her needless worry, but he resolved to put no more improvements upon the farm in any way, shape or manner, unless there was the money in hand to pay for them and a good surplus in bank, besides, for contingencies.

In spite of it all, October brought a joy to Maplewood, though poor little May was shut in her room for over a month, and motherly Mrs. Briggs had to take charge of the housekeeping department, and direct Susan, the maid-of-all-work, in her, now arduous duties. George was as happy as possible under the circumstances, gladly giving his wife a large share of his company, now that the busy season had passed—and for a time his difficulties were forgotten.—*To be continued.*

SKETCHES OF GERMAN LIFE.

BERTHA A. WINKLER.

Cooking and Baking.

FEW travelers have thought it worth the trouble to bestow more than a parting glance upon the peasants' mode of living. They describe courts and princes, converse with diplomatists, dine with merchants and associate with the elite of the place; while the peasant, the bone and sinew of Germany, is but casually noticed or only mentioned as a droll, picturesque specimen of German curiosities. The few books which describe the home-life of the humbler classes are so fraught with error as to give the reader but a vague, confused impression of the real life and character of the people. For example, an author, describing the various German dishes, invariably mentions, in connection with black bread, coffee as being the favorite and indispensable beverage among all classes. Now, coffee costs from thirty to fifty cents, and sugar from fourteen to eighteen cents a pound, and the poor, pinched peasants who are obliged to eat this same black bread in one instance cannot afford to indulge in such expensive fare in the other. It is true that, notwithstanding their wine and cider, coffee is a favorite beverage among them, and but for the want of means to obtain it, would be in universal use. As it is, however, in rural districts, none but the well-to-do *burger* drinks his cup every Sunday morning. Among the poorer class, where coffee is only indulged in at weddings, Christmas and other festive occasions, a pound is made to last a whole year. "He is whittling a beggar's staff" is a common saying among them if they see one of their neighbors indulge in coffee or meat on week days.

There is a uniformity, a simpleness and frugality in their culinary department which deserves to be better known among Americans, whose pies and puddings would be considered a ruinous extravagance by a German housewife.

A peasant's breakfast in Wurtemburg, Germany, consists of a dish of boiled, unpeeled potatoes and one of bread soup, which is simply boiling water poured over thin slices of bread and flavored with onions fried in butter. At ten o'clock he has a lunch of bread and cider, or wine. At twelve a dish of vegetables mixed with flour or dumplings and boiled until it is a kind of thin pudding All vegetables are prepared in a similar way as flour is the substitute for meat. Very often a dinner consists of nothing but a mixture of flour, eggs and milk. It is then called "Mehl-speisse." Mush is a favorite dish, but the milk is poured into it while boiling and, in eating, the plates are entirely dispensed with, as the pan is placed in the center of the table within equal reach of all and each dips in with his spoon and conveys it direct from pan to mouth. Supper is only a repetition of the morning meal with the addition of a pot of sour milk to be eaten with the potatoes. On Sundays those who can afford it have coffee and white bread, others have only milk-soup for breakfast. The dinner is then cooked with meat, and supper consists of fried meal with potatoes or green salad according to the season. The large black loaf is placed upon the table at every meal for each to take a slice until it is gone.

This kind of food is certainly only confined to the peasantry. But the middle class, such as trades people and mechanics, do not fare as well as the common day laborer in America. It is only among merchant-princes, the nobility and in hotels that one can find the tables loaded with the richness and variety so often described by travelers

The cellar, which is always the pride and boast of the peasant, contains long rows of barrels filled with wine, cider and vinegar; huge piles of potatoes and turnips, and, of course, a barrel of sour-krout. Upon a shelf fastened in beams overhead, are from fifteen to twenty loaves of black bread, two feet long and half as wide and thick, with one or two white loaves for Sunday use.

In this locality it is not the custom to do the baking at home. Each village has one or two grand ovens, to which the loaves are transported after being kneaded at home. The baking is generally done every two weeks, and always at night when the field work cannot be attended to and the occasion can be turned into general merry-making by the young folks who always continue to drop a hint to their friends that the baking would be done on a certain night. By a sort of prearrangement unknown to the old folks who would not consent to such nonsense, some five or six chaps and as many damsels drop into the bake-house successively for a chat. By-and-by a fiddler, apparently all unconscious of the group that is so anxiously expecting him, passes the door playing his fiddle as merrily as possible. The sound of the violin brings them all to the door. The old folks begin to see the *trick* and moved by the

shower of entreaties which meets them from all sides and perhaps the recollection of their own youth, give their consent and the fun begins. But such a dance! the girls short skirts forming a perfect balloon as they are whirled around and around by their partners, whose gymnastic feats of throwing their feet in the air and kicking some lady in the side, rather hightens the excitement, as each one strives to outdo the other in agility. At half-past nine the bread is baked, the dance ceases, some one runs for a jug of wine and the fresh-baked loaf is attacked with pocket-knives amidst jokes and laughter, while the place is filled to suffocation with tobacco smoke, which does not seem to annoy anyone in the least. In another half hour each one, after helping to carry the loaves to the owner's house, goes home very likely with feelings similar to those of our young folks at house-warming or carpet-rag parties. For we hear that many a tender union looks back for its commencement to a merry evening in the bake-house.

In strange contrast to such gatherings are the evenings when an old person takes possession of the bake-house. Then all the old women of the neighborhood congregate and the place becomes a regular repository of village gossip. Little then but what undergoes a thorough process of investigation. From the coffee-pot, which always stands on neighbor so-and-so's fire-place, down to the broom-stick, on which some other mysterious neighbor is supposed to journey to the witches rendezvous. But, singularly enough, nobody seems to think long about it. One neighbor greets the much-talked-of other neighbor in the usual friendly manner. Everybody appears to know they have been the subjects of similar tales. It seems to be a subject of chronic disease among village gossips, and these bake-houses are just the place for them. Imagine a dark night, a black low-roofed building, within the dim, fitful glimmer of burnt-down logs, shadows deepening on the wall and in corners, and a group of women talking in low tones and starting at every crackling cinder, and you will not wonder that the evening's conversation is wound up with some wierd account of ghosts and witches. The Germans are imaginative, and if the grandmother has ever been frightened by an oddly branched tree at night the grandchildren are sure it was the headless rider of some ruined castle.

Apropos of castles, I hear there is an old ruin in this vicinity once the fortress of a powerful count, and we will pay a visit to it in the coming season.

BRIC-A-BRAC.

THE cattle on a thousand hills
Contribute to the milkman's wealth,
So does the water from the rills
That's slipped into the cans by stealth.

IN England young gentlemen speak of their fathers as "the Governor," "pater," "the overseer," etc. Here we are more civilized. We say "dad," "the boss," or "the old man." In heathen countries they say "father," but they are away behind the age.—New York Commercial Advertiser.

THE poet Tennyson is worth $1,000,000, and we don't see what use there was in his writing "Come not when I am dead." They'll be on hand, every one of them, when the will is opened.—*Cincinnati Enquirer.*

A SONG OF SPRING.

"Oh, whad is dthe use of repidig?
Drive care ad sorrow away,
Do-morrow dthe sud bay be shidig,
Aldough id is raldig do-day."

Theodore Martin has omitted some of the minor episodes of domestic life of the Queen and Prince Albert, which would, perhaps, have cost him his spurs, had he related them in his "Life of the Late Prince Consort." When the august pair were first married, although the match was one of love, at least on the Queen's part, Her Majesty could not always control her temper, and on the occasion of one of those trifling quarrels which occur even in the best regulated families, she threw a teacup at the Prince's head. He, excessively indignant, retired to his apartments and locked the door.

The Queen's anger having somewhat abated, she thought him sufficiently punished, and knocked at his door. To the question, "Who's there?" she replied in imperious tones, "The Queen." Prince Albert did not answer, and she went away. By-and-bye she thought she would try again, and to the "Who's there?" answered "Victoria." Again there was complete silence, and she again retired. With the perseverance characteristic of a woman alarmed at the trouble to come, she determined to try a third time, and in response to "Who's there?" replied, sobbingly: "Your own loving wife." This brought Prince Albert to terms, and peace was re-established. It is said there was no more teacup throwing in the happy family.

CHEW caramels, with false teeth in;
Untie your shoes with mittens on;
Throw bowers away, and try to win;
Take passage when the train is gone.
You may do all of these, indeed;
And 'twould be nearly as surprising
As 't would be, if you should succeed,
In business without advertising.

A YOUNG woman from Springfield, Mass., who is teaching the Indians, at Hampton, Va., was recently drilling a company of girls on the hymn, "Yield not to temptation," and trying to explain to them the meaning of the words. Some time after the class was dismissed a pupil came to her and said, "Me victory!" meaning that she had gained a victory. Being asked to explain, she said: "Indian girl, she big temptation to me; I no yield; I fight her."—Price Courant.

For Women.

CONDUCTED BY MISS RAY CLARK.

BLUE FLOWERS.

You ask which flowers I love the best,
When spring calls forth her pretty train,
And each in pretty garments dressed,
She sends them forth o'er hill and plain?
Give me blue flowers
To grace my bowers,
"The perfect color"—heaven's own blue,
Meek violet,
In emerald set,
And glistening with the fragrant dew;
Or by the brook,
With downcast look,
The nodding harebell's fairy form
I love to see
Where lowly she
Doth bend her head to meet the storm.

Blue flowers! Oh, give me the fair blue flowers,
So pleadingly their azure eyes
Uplook to mine at morning hours;
Taking their color from the skies;
Of heaven they learn,
To heaven they turn
Their opening bells at break of day;
And heaven doth shed
On each fair head
And blessing on them where they lay—
A blessing meet,
For flowers so sweet,
A portion of her glory bright,
Our prayer should be,
Oh, thus may we
Be "clothed upon" with robes of light.

SIMPLE HOUSEHOLD ART.

IN nothing has our age shown more rapid progress than in household decoration and the desire to make our daily life beautiful. Not in any respect is the change more striking than in the increased love for rich and bright colors, and appreciations of their glowing harmonies.

Formerly, only the wealthy and highly cultivated evinced such tastes, and the middle or lower classes either chose the gaudiest and most glaring mixture of hues, or clung to sober drabs and grays and somber blacks as most genteel.

Now, every eye is being subtly trained by the patient teaching and the open scroll of Nature through the flower garden. Even the narrow window-ledge has space enough for the boxes of geraniums—a dazzling mass of scarlet and green almost as radiant as the light that nourishes the blossoms into perfection.

The side of an old fence will support an airy and light tapestry of swinging morning-glories, white, purple and rose-colored.

The kitchen gardens glow with the velvety splendors of nasturtiums, or the soberer and more delicate borders of thyme and parsley and other low-growing herbs for scent and savor.

One of the visitors at the White Sulphur Springs last year went often in her rambles to the poor homes in the neighborhood, trying to interest the people in the cultivation of beautiful flowers, and doubtless in one or two more years the fruits of her kindly lessons will be richly evident. Indeed, one need only visit a market stall with its prettily-arranged vegetables, the crisp, green lettuce, the crimson radishes, the silvery white onions placed side by side, to see how far the delight in color has spread and grown.

In-doors the change is seen in the rich, dark colors of the stained floors, and the more artistic designs of even the least expensive carpeting. There is an appreciable saving of time and labor also in the oiled or stained floors, which can be so easily kept clean.

If one is not able to afford the money needed for the purchase of center carpets or rugs, they can be manufactured with exercises of a little taste and industry.

First of all, a strong foundation of coarse cloth—a coffee or salt-bag or some such strong material is needed. Then the colors should be chosen and the pattern carefully drawn off before the work is is begun.

The outside border is prettiest of crimson, as the red lights up the room and contrasts beautifully with the dark floor. Then dark-gray and black as a background (so to speak) to the brighter colors, and a narrow line of buff running between the two will often light up a pattern charmingly.

The softer rugs are made of strips of flannel or cloth cut in narrow pieces three or four inches long, stitched through the middle, and both ends turned over, leaving a fluffy, thick surface, pleasant to the tread of tired feet.

This is a very simple household art, but if it makes home beautiful, it is worth much.

Perhaps the daintier arts of embroidery and panel-painting may scarcely touch the affections as much as that homeliest but indescribe air of comfort and welcome which some very simple rooms may wear. It is like a smile of joy on a plain face, brightening it into positive attraction.

It is astonishing when one once begins the work of making home beautiful how constantly material may be found for accomplishing it.

Scraps of bright or dark-colored clothes, tiny pictures, almost anything can be used. From the world of wood and meadows one may gather at will a rich store of mosses and ferns and scarlet berries for all sorts of rare, picturesque grouping.

Then it is always safe to trust Nature with the delicate traceries and intermingling of tint and color and finer shade.

By living much out-doors one learns unconsciously the secrets of these, although it may be impossible to render a reason, the hands will grow more skillful, the eye and ear truer to all that is beautiful. E. F. M.

DAHLIAS.

As everyone has some one particular flower that they love or prize above all others, we expect each one to "sing" the praises of their favorite. While Mr. Vick is bringing his Phloxes to perfection, and Mr. Bliss his Pansies, and Mr. Henderson his Roses, why don't some one grow eloquent over the "Dahlia." As it is my particular flower, and as no one else seems disposed to tell of its beauties, virtues, etc., I shall begin by telling how easily they are grown.

Unlike some flowers, the very choicest double Dahlias bear seed as readily as the more single ones, and as they sport in endless varieties of color it is always a surprise to grow them from seed. After they bloom, no trouble is experience in keeping the young tuberous roots over winter. The bloom ripens them and they remain hard and plump, with no more signs of decay than in older ones that have grown for years.

They are very susceptible to frost both while growing and when stored away, and the light colors more so than the darker ones. They can be multiplied in endless numbers as they can be divided to the single eye, which is all that should be left to each root. They also grow from cuttings readily, this is the way the pot grown roots sold by our florists, are propagated.

After years of experience in cultivating them in large numbers I have never known one to change color or degenerate. A good flower once, is a good flower always. Seedlings sometimes improve in form for five years, but they never vary their color.

They revel in a damp, rich soil, and always bloom better in a shady cool location, the north side of a building, or fence, suits them exactly, if damp enough; in such a location they will begin to bloom early in June and last until frost.

Of manures, cow manure well rotted seems to suit them best. For lawn planting, they are well suited as the sod may be cut and turned back, the plant set in and the sod turned again to its place, and grass and plant both grow finely. Our finest specimens are grown in this way.

For winter storing pile them up in the same way as potatoes and keep them from frost. There is no need of packing in sand, sawdust or anything else if the roots are ripe. Being very bulky it is something of a job to pack them in boxes.

MARY F. MCCLOUD.

USEFUL HINTS.

TO CURE A FELON.—Do not put the fingers in hot water or put on hot poultices. Apply cold poultices. The third or fourth day after a felon makes its appearance it should be opened with a sharp, penknife, making a short, deep lengthwise cut. This will cause it to discharge, and it may continue to do so for two days or more. Put on *cold poultices* until the discharge stops, and keep them on until the wound heals. The finger or hand should be carefully wrapped up for two weeks afterward, as it will be tender. Treated in this manner, a felon will not deform the finger or hand. It will require courage to bear having a felon cut, but in a short time the relief afforded by it will be so great as to call forth feelings of gratitude.

A SUFFERER.

OLD newspapers will put the finishing touch on newly cleaned silver, knives and forks and tinware, better than anything. Rub them well and make perfectly dry. They are excellent to polish stoves that have not been blackened for a length of time. For polishing windows they may be used to advantage, and for linings of carpet. As all housekeepers know, these are but a few of the many ways to utilize old papers.

REMOVE all dust from a garment every time it is worn. Black especially should be treated in this way. Shake it thoroughly and brush with a brush or old silk, or other material, being particular that the dust that settles in the folds is all removed.

THE wings of turkeys, geese and chickens should never be thrown away. This, probably, is needless advice to country ladies, but many may not have utilized them in any way but that of brushing the stove-hearth (an established custom). An exchange says that they are excellent for cleaning windows, and, of course, much more economical than chamois. They are also useful for putting on paste when papering walls. The country housekeeper will find this suggestion timely when about to present her walls with a new coat, and finds, after purchasing the paper, the needed brush has been forgotten and the store miles away.

ABOUT WOMEN.

MRS. A. C. BOWSER won the prize of one hundred dollars for the best poem on the Centennial of Nashville.

MISS ALCOTT entertained at Concord last week all the women-students of Boston University, and several of the professors.

THE seventieth birth-day of Mrs. Ann S. Stephens, the well-known novelist, was recently celebrated by a dinner given in her honor by Edward Dickerson. Mrs. Stephens still seems as hale and hearty as an English woman of fifty.

STEPHANIE, the bride of the good and clever Austrian Crown Prince, is shortly to have a foretaste of her future honors. A Vienna Musical Society is going to Brussels by special train simply to serenade her pretty young ladyship.

MRS. FRASER, the venerable mother of the bishop of Manchester, to whom he has recorded himself as owing most of what he is, intellectually and morally, has just died of paralysis. She was nearly ninety.

FELICITAS VON VESTVALI, the lady who for twenty years was known and admired in Germany for her representations of Hamlet, Othello and other Shakespearean characters upon the stage, recently died at Warsaw. She possessed a singularly strong bass voice and a strong cast of features.

MARY CUSTER lives alone in a shanty at Sioux Falls, Dakota, surrounded by books, which a careful education enables her to enjoy; but she earns her living at a washtub, refusing all offers of higher employment, and declaring that she only wants to be let alone.

MISS LOUISA ALCOTT has no regular study, and is said to be indifferent to her surroundings when at work. She uses whatever pen, ink or paper is nearest, composes rapidly, and writes in a free, back-sloping hand, never copying her MS., and rarely going back to make alterations.

A NOVEL feature was recently introduced into a "Class Social" at Lasell Seminary, Auburndale, Mass., where all the members of the class wore dresses cut and made by pupils in the dressmaking department; and a simple supper was offered, prepared from knowledge acquired in the cooking department, presided over by Miss Parloa.

MRS. ANNE THACKERAY RITCHIE is the mother of a baby son. About the little fellow, says the New York Tribune, will centre good wishes fromt the world over; for in whatever region English literature is read there will be kindly thoughts for the grandson the great and beloved Thackeray would have so rejoiced in, could he have lived to see him.

MAY AGNES FLEMING, the novelist, was only thirty-nine years of age when she died last March. See was a good, true woman, devoted to her children, and a prolific writer of novels, which were always interesting, humane in motive, and free from injurious tendencies. She will be greatly missed in the line of popular literature. She supported and educated her children mainly, and managed to save out of her earnings about twenty thousand dollars, which is divided among them.

She was to have sailed on the 19th of April for Europe, to be absent for a while, her health having suffered for some time previous to her decease, though she never relinquished her work or her cares.

Sabbath Reading.

A SABBATH PRAYER.

BY MERRY MAY.

"There remaineth, therefore a rest for the people of God."

Lord, I thank Thee for the Sabbath,
A sweet rest upon my way;
Help Thou me to keep it holy,
As becometh Thine own day.

For this week of tender mercies,
Showered upon me full and free,
Let me now in true thanksgiving,
Show my gratitude to Thee.

For the week just dawning, Father,
Guide in righteous word and deed
Hold my hand and let me follow,
Wheresoever Thou may'st lead.

Every hour and golden moment,
I will consecrate to Thee,
Help me use them for Thy glory
I am Thine while Time shall be.

When my earthly work is ended,
Be my dying moments blest;
Be Thy smile as I shall enter
The long Sabbath of Thy rest.

A TRUE INCIDENT.

WHEN the Boston train came steaming into the depot, the crowd rushed for seats. As a band of recruits mounted the platform, they shouted back to their friends who had accompanied them to the train the various slang phrases they could command, interspersed with an oath now and then. As the train moved off they pushed each other into the car, where many ladies were seated, including a Mrs. B—— and her two boys. Then the oaths came out thick and fast, each one evidently trying to outdo the others with profanity. Mrs. B—— shuddered for herself and her boys, for she could not bear to have their young minds contaminated by such language. If the train had not been so crowded she would have looked for seats elsewhere, but under the circumstances she was compelled to remain where she was.

Finally, after this coarse jesting had continued for nearly an hour, a little girl, who, with her mother, sat in front of the party, stepped out timidly from her seat, and going up to the ringleader of the group—a young man whose countenance indicated considerable intelligence—she presented him with a small Bible. She was a little, delicate-looking creature, only seven or eight years old, and as she laid the Book in his hands she raised her soft eyes appealingly to his, but without saying a word went back to her seat.

The party could not have been more completely hushed if an angel had silenced them. Not another oath was heard, and scarcely a word was spoken by any of them during the remainder of the journey. The young man who received the Book seemed particularly impressed. He got out of the car at the next station and purchased a paper of candy for his little friend, which he presented to her. He then stooped down and kissed her, and said that he would always keep the little Bible for her sake.

The little girl's mother afterward told Mrs. B—— that her child had been so troubled by the wickedness of these young men, that she could not rest until she had given her little Bible, which she valued so highly herself.—*Christian Advocate.*

WE live in the midst of revelations. We are continually receiving what we ordinarily call inspirations. There is hardly ever a complete silence in our souls. God is whispering to us well nigh incessantly. Whenever the sounds of the world die out in the soul, or sink low, then we hear these whisperings of God. He is always whispering to us, only we do not always hear, because of the noise, hurry and distraction which life causes as it rushes on. F. W. FABER.

There is a great significance in the name "Gethsemane."

It means "oil-press," and indicated that the

orchard or garden was a place used for the manufacture of olive oil. This was done by crushing the berries and expressing the juice. That process typifies the crushing of our Lord under the awful weight of sin and the wrath of a holy God which, voluntarily assumed by Christ, broke him down in indescribable agonies of body and soul and crimsoned the soil of the garden with his bloody sweat.

What sacred, and yet what sorrowful, memories center there.

"Gethsemane, can we forget
Thy struggling agony,
When night lay dark on Olivet,
And none to watch with Thee?"

LEARN to entwine with your prayers the small cares, the trifling sorrows, the little wants of daily life. Whatever affects you—be it a changed look, an altered tone, an unkind word, a wrong, a wound, a demand you can not meet, a change you can not notice, a sorrow you can not disclose—turn it into prayer, and send it up to God. Disclosures you may not make to man you can make to the Lord. Man may be too little for your great matters; God is not too great for your small ones. Only give yourself to prayer, whatever be the occasion that calls for it.—*Winslow*

LET me urge upon Christian households to hold social Bible-parties, as the world holds social dancing-parties. Why should not a score of young Christian folks gather in a parlor, and each read and explain a portion of Scripture, prepared for the occasion? Why should not ice cream taste as good, and music sound as good, and greetings be as agreeable, after that, as after a silly gossip and a "dance?"—Howard Crosby.

HIS words had power, because they accorded with his thoughts; and his thoughts had reality and depth, because they harmonized with the life which he had always lived. It was not mere breath that this preacher uttered; they were the words of life, because a life of good deeds and holy love was melted into them. Pearls, pure and rich, had been dissolved into the precious draught.—Nathaniel Hawthorne.

Domestic Economy.

CONDUCTED BY EMILY MAPLE.

ABOUT WASHING DISHES.

MARGUERITE.

MY thoughts went moralizing this morning over the dish-pan and about it as well as on the subject of housekeeping in general. The reading of the RURAL, for April 24, with its helpful talks, started a train of thoughts. How often have I declared my hatred for dish-washing and felt it, too, to such an extent that I sighed because I was born a woman. Now I'm ashamed of this—heartily so—and would be far from confessing it, if I were not in hopes of helping some one else. As I grew to womanhood I wanted to like the things I had to do, even if they were homely duties, and then there were such glorious texts to help me: "Whatsoever thy hand findeth to do, do with thy might;" and "Do all things to the glory of God."

If we do our work with our might and for the glory of God, we certainly must do it well. I believe half the trouble over the dish-pan is because mothers draft the girls into service without the proper drill.

Dish-washing can be made pleasant work, and no harder on hands that many other things that need to be done. Let me tell you of my equipments, which are simple: An iron sink, low enough so that I can sit down and work easily—for I am not one of the strong ones. It stands on legs, which makes it easier to do this. A large, flat pan in which to wash the dishes; a flat, six-quart pan in which to rinse them, and a long, shallow one in which to drain them. Pure linen cloths are ready to wipe them, three-fourths of a yard long, and shelves ready cleared and wiped, upon which to place them, with plenty of hot, soft water, to be used for the purpose. A little system in getting dishes in order for washing, and shelves neat and clean to place them upon, and dish-washing is nothing to be dreaded by anyone.

"Oh, but the kettles!" some one exclaims.

Kettles need not be hard to wash, if good management is used. Take them off the stove the moment they are emptied, and fill them with cold water, and they will be as easily washed as a dish. Never use soap in dish-washing, except in extreme cases. I consider it too impure for dishes off of which one eats, unless a very thorough rinsing follows.

"Why?" some one asks.

Because parts of the ingredients of soap are very filthy indeed. Better use borax. I have stepped into people's kitchens many a time to help with dishes when I felt as if my service would be acceptable, and afterward I was thankful the duty of eating came first, else I would have had no appetite. Sometimes a piece of "factory" would be given me, full of stains from former service, to wipe them with; or they would be washed in soap-suds without rinsing; or the same wet cloth was mopped and re-mopped over a quantity of plates; or the dishes were cold, and I would return to my easy-chair feeling as if something disagreeable had occurred. Hundreds of mothers and mistresses put girls to the work without ever a thought of teaching them to have pleasure in it, or how to do it well, while there are hundreds more that do not know themselves how to do the work comfortably. I never intend my daughter shall hear me say I dislike the work, and although she is not six, she helps me over many a tired place by washing them for me, with her sleeves pushed above her elbows and standing upon her stool. She does her work well and is very apt in learning, and careful, too; besides, she is so happy because "she is such a help to mamma."

When done, always rinse the wiping cloth in clean water, or if of necessity soap must be used, rinse out carefully and hang up to dry, that it may be ready for the next time. A goodly supply of cloths for this purpose should be provided, and, of course, used only for this. I have a set of sleeves of the cloth, made straight, with a cord around the wrist to be drawn over the arms and secured by elastic. So if I'm wearing lace or cuffs that I cannot easily remove, I can don them and help Bessie with the dishes any time, and while this lightens her labor, at the same time I am overseeing my household and becoming acquainted with its needs.

HARMLESS HAIR-DYE.

MRS. J. B. H., asks for a recipe for darkening the hair. She does not wish to use a patent hair-dye, but thinks there must be something that will have the desired effect without doing any injury. All hair-dyes contain more or less sugar of lead, nitrate of silver and other injurious ingredients and we know of nothing harmless that will help our questioner. But some of the RURAL readers may be able to offer the desired information.

NOTE.—Dr. Hoskins says that solution of iodide referred to in his article upon goitre, in the RURAL of April 7, was that of the United States Pharmacopœa.

DOMESTIC RECIPES.

Cherry Pudding.

One quart of scalded milk, not quite a pint of Indian meal, a scant half pint of sifted flour, four well beaten eggs, two teaspoonsful of baking powder, a teaspoonful of salt and a pint of whole, ripe cherries. Let the milk stand after heating until tepid; stir in the meal and flour, reserving a tablespoonful to mix the baking-powder with; add the eggs and salt, then the cherries and baking-powder. Turn into a pudding mold or bag and steam two hours. Eat with sugar and cream or butter-sauce.

Strawberry Farina Pudding.

Fill coffee-cups loosely with strawberries and pour over farina of a consistency thin enough to fill the interstices between the berries and yet thick enough to be firm when cool—three tablespoonsful to a quart of milk is the quantity of farina I use. Turn out on to a flat dish or arrange in a large glass dish. Eat with cream and sugar flavored as liked. This makes a pretty as well as healthful dessert.

MRS. A. B.

Blackberry Cordial.

Put eight quarts of ripe blackberries in a preserving kettle and cook slowly until well scalded through. Strain, pressing out all the juice. Tie up in a bag two ounces of whole allspice, one ounce of cinnamon bark, one ounce of whole cloves and one nutmeg. Measure the juice and to each quart allow one pound of loaf sugar. Put juice, spice and sugar together and boil fifteen minutes. Skim, let cool, then add of pure good brandy one pint to three pints of juice. Bottle and cork. This is excellent for diseases of the bowels.

MRS. J. M.

Breakfast Cakes.

One coffee-cupful of new milk, one of water, the beaten yelks of three eggs, a teaspoonful of sugar, one of salt, four tablespoonsful of potato yeast and sifted flour to make quite a stiff batter. Stir well and put in a warm place to rise over night. In the morning beat whites to a stiff froth and stir in. Bake on a griddle. These are excellent. MRS. B. D.

Veal Cutlets.

Make a batter of a cup of milk, a beaten egg, pinch of salt and flour with a half teaspoonful of baking-powder mixed in. First fry the veal a nice brown in drippings or butter, then dip into the batter and fry again brown. Any batter that may be left may be dropped by the small spoonful into the hot fat, turned and when browned placed on the meat. The veal should be cooked thoroughly—three-quarters of an hour, at least, over a moderate fire. Serve with a few slices of lemon. A. E. M.

Horse-radish Sauce.

The following method of preparing horse-radish we have found an excellent relish with cold ham, corned-beef or eggs. One tablespoonful of melted butter, one of prepared mustard, three of grated horse-radish one of vinegar, one teaspoonful of sugar, and half a teaspoonful of salt. Beat together until thoroughly mixed. This will keep for two or three days. E. K. S.

Miscellaneous.

Trade **LONDON PURPLE.** Mark.

Valuable insecticide for the extermination of the COLORADO BEETLE, COTTON WORM and CANKER WORM. For Prices, Circulars and opinions write.

HEMINGWAY'S LONDON PURPLE COMPANY, (Limited) 90 Water St., New York.

Professor C. V. Riley says: London Purple can be more effectually sprinkled or sprayed on to the plant than Paris-green, by virtue of its greater fineness.
Professor C. E. Bessey says: It promises to be a most excellent remedy. It quickly kills both the Larva and the Winged Insects.
Professor J. L. Budd says: A single application placed every one of the pests on their backs over the ground, either dead or in a dying condition, in less than six hours.

CARPETS.
SAVED BY PURCHASING DIRECT FROM

INTERMEDIATE PROFITS.

THE MANUFACTURERS.

We have now open an immense stock of the most approved varieties of CARPETS and FLOOR COVERINGS
MANUFACTURED BY OURSELVES
Expressly for this season's Retail Trade, consisting of AXMINSTERS, WILTONS, VELVETS, BRUSSELS, INGRAINS, &c., &c., in
New Styles and Designs.
These goods will be found to combine in an unusual degree, Elegance of Appearance and Positive Wearing Qualities, and are well worthy of the inspection of intending purchasers.
We also offer a Full Line of TURKISH and EAST INDIAN RUGS and MATS, CHINA MATTINGS, OILCLOTHS, &c., &c., AT THE LOWEST POSSIBLE PRICES.
Special Inducements offered to Churches, Steamers and Hotels.
J. & J. DOBSON,
CARPET MANUFACTURERS AND RETAILERS,
40 & 42 WEST 14th ST., N. Y., Near 6th Av. Elevated R. R. Station
JOHN VAN GAASBEEK, Manager.

500 Male and Female Agents wanted immediately for an honorable, light, local business. An article of consumption needed in *every family*. Large profits. Thousands of patrons. C. L. VAN ALLEN, Albany, N. Y.

WANTED—Salesmen for each State. Salary $75 to $100 and expenses. Goods sold by sample. LA BELLE MANUFACTURING CO., Chicago, Ill.

$777 A year and expenses to agents. Outfit Free. Address P. O. VICKERY, Augusta, Maine

AGENTS WANTED EVERYWHERE to sell the best Family Knitting Machine ever invented. Will knit a pair of stockings, with HEEL and TOE complete, in 20 minutes. It will also knit a great variety of fancy work for which there is always a ready market. Send for circular and terms to The Twombly Knitting Machine Co., 409 Washington St., Boston, Mass.

20 New Styles Chromo Cards, 10 cts. Best ever sold. Stamps taken. J. B. HUSTED, Nassau, N. Y.

20 Gold and Silver Chromo Cards, with name, 10c. post-paid. GEO. I. REED & Co., Nassau, N. Y.

WE ADVISE YOU TO INSURE YOUR property in the
AGRICULTURAL INSURANCE CO.
Of Watertown, N. Y.,
The largest Company in the country which insures only farmers' property and residences. Over twenty-six years old.

Capital	$200,000 00
Net Surplus, over	$235,153 81
Assets, Jan. 1, 1880	$1,137,549 73

XX COT (not painted, White Duck) $2.

Makes a perfect bed. No mattress or pillows required. Better than a hammock, as it fits the body as pleasantly, and lies *straight*. Folded or opened instantly. Self-fastening. It is just the thing for hotels, offices, cottages, camp-meetings, sportsmen, etc. Good for the lawn, piazza, or "coolest place in the house." Splendid for invalids or children. Sent on receipt of price, or C. O. D. For 50 cents extra, with order, I will prepay expressage to any railroad station east of Mississippi River and north of Mason and Dixon's Line. For 75 cts. in Minnesota, Missouri and Iowa.
HERMON W. LADD, 108 Fulton St., Boston; 207 Canal St., New York; 165 North Second St., Philadelphia; 94 Market St., Chicago, Ill. Send for Circulars.

Trees, Seeds, Plants, &c.

Springboro, Crawford Co., Pa.

HIGH CLASS POULTRY, Grape Vines, Small Fruits, finer than ever.
Send for circular. GEO. S. JOSSELYN, Fredonia, N. Y.

Fertilizers.

STOCKBRIDGE MANURES
For 1880.

Some years ago the Stockbridge Manures were only known to a few farmers in the Connecticut Valley. Now they are so extensively used in different parts of the country as to require two large factories, one in New York and one in Boston to manufacture them. This increase shows what farmers think of good fertilizers, and is not only due to the fact that they are reliable, well-made, and high-grade manures, but also to the fact that farmers have

FOUND THEM PROFITABLE TO USE.

Now that corn, and other farm produce is bringing such good prices, we anticipate that farmers will invest still more largely in our fertilizers.
Besides the Stockbridge Manures, we manufacture several high-grade Phosphates, and deal in first-class chemicals of all kinds. Farmers who intend to use Fertilizers of any kind, should

Send for our New Pamphlet,

which contains a large amount of reliable information, beside prices for 1880.

MAILED FREE TO ANY ADDRESS.

BOWKER FERTILIZER CO.,
3 Park Place, N. Y.

News of the Week.

MISCELLANEOUS.

Monday, May 24.

Who shall be the next President is the conundrum that politicians everywhere and of every party and shade are now puzzling their brains to solve. The screws are being tightened more and more on the party machine. An extraordinary amount of lobbying and wire-pulling is going on, and voters are gradually being whipped into the ranks. This is about all that can be said of the politics at present. The same speech-making, lobbying and demonstrations, that take place in one part of the country or in one neighborhood, are repeated with only slight variations in all cities, towns, villages and neighborhoods all over the Union....A Western national fair is to be held at Bismark Grove, Lawrence Co., Kans., from the 13th to the 18th of Sept. next...One thousand and ninety-six miles of railroad have been built in the United States so far this year, against 391 miles for the corresponding period last year....A meeting of the National Watchmakers' and Jewelers' Association was recently held in Chicago. The president read an address in which he showed that 3,000 watches per day are required in order to supply the demand in the United States. The daily production from the several watch factories throughout the country is as follows:—The Waltham, 750; Elgin, 500; Springfield, Ill., 80; Hampden Watch Company, 90; Howard, 20; Lancaster, 56; Rockford, 40,....

The new rules recently adopted permitting ferry boats in Eastern waters to carry distinctive lights in addition to the regular lights required, were approved by the Secretary of the Treasury Friday, to take effect at sunset on June 1....The House Commerce Committee have instructed their chairman to attempt to pass the River and Harbor bill Monday under a suspension of the rules. The committee also voted to authorize Mr. Deuster (Winconsin) to report favorably to the House his bill "To regulate the carriage of passengers by sea." It specifies the amount of vessel space which must be allowed each emigant passenger, the size of his berth, hospital accommodations, the carriage of explosive or other dangerous articles on emigrant passenger vessels, etc. . . A volunteer company of one hundred men has been organized at Leadville, Col., to go into the Ute reservation. All are old soldiers, under command of experienced leaders, well equipped and thoroughly armed for the summer. The leader of the expedition is Maj. Kline, formerly of the celebrated Bucktail regiment of Pennsylvania. There is a rumor that Indians have been seen in the vicinity of Roaring Forks, but it can be traced to no reliable source. ....It is stated, that, for some reason or other, ex-convicts have a decided preference for life in Chicago; the average arrivals of this enterprising class of society is estimated at about 10 a day.

AGRICULTURAL NEWS.

In this State the measure known as the tramp law became a law last week by expiration of the time it remained in the hands of the Governor. By its provisions all roaming beggars and all vagrants without visible means of support are held to be tramps; and any act of vagrancy by a person not a resident of this State shall be evidence that the party so acting is a tramp. The entering of a building against the owner's will, or the injury of another's property or person, or threats thereto, although short of actual burglary, felony or misdemeanor, shall cause the offender to be guilty of acting as a tramp, and on conviction thereof, imprisonment in the State prison at hard labor for not more than three years will follow; but the lower grades of offense are punishable with imprisonment not to exceed six months. Any person may ap prehend a tramp; but the Act does not apply to those under sixteen years of age nor to blind persons, nor to those who do not stray outside of the county in which they belong. This is the same bill that Governor Robinson vetoed.....The flock owners of most parts of New Mexico are much depressed, owing to the great mortality among their sheep, and especially among the newly dropped lambs, owing to the severe drought that has prevailed in that section for months back. Fully 20 per cent. of all this season's lambs have died south of the Arkansas River, and still heavier losses are expected, unless rain comes soon. The wool, too, is depreciated in value, owing to being dried up.. The Mich. Wool Growers' Association, at a late meeting, recommended that all the samples of wool for exhibition at the State, District and County exhibitions of agricultural societies be placed on black cambric with the breeder's name and post office address attached to the sample, the weight of the fleece, the number of days' growth, the sex of sheep, and where practicable, the weight of the carcass; also that the samples be stitched to cloth, so that it may be folded up or rolled, and thus kept from dirt or dust ... The chief of the Bureau of Statistics says that during April the total value of our exports of breadstuffs was $21,679,115 against $14,168,630 last year. For ten months ending April 30 last, we sent abroad breadstuffs to the value of $207,306,-16 against $149,085,266 in the corresponding period in '79....Com. of Agriculture, Killebrew, of Tenn., says the wheat yield per acre in that State will be only two-thirds of that of last year, but the acreage is larger than ever before. The tobacco fly has injured the tobacco plants very badly. Cotton promises well. Fruit is a failure....The appropriation made by Congress for the Agricultural Department for the ensuing year amounts to $213,000,.... The cattle men of Northwest Texas have formed a combination, the object of which is to place all cattle to be shipped at disposal of the railroad that will make the best rate. If the freights are not sufficiently low the cattle, amounting to upwards of 2,000 car-loads, are to be driven to Kansas..... Reports from Texas, Kentucky, Indiana, Ohio, Wisconsin, Missouri, Michigan, Nebraska, Minnesota, Iowa and Illinois, show that winter wheat has greatly improved in Southern Illinois since the late rains; early varieties in head. Spring wheat generally needs rain, except in Minnesota. Oats and flax are a good stand with large acreage. Corn in Kansas is all planted; in Illinois not yet finished. Fruit is coming to market in large quantities.... .Immense shipments are daily being made to western points by our agricultural implement manufacturers.....In western Pennsylvania and Eastern Ohio the fruit crop has not been injured by the frost, and an abundant yield is confidently expected. Cereals in many instances promise a larger yield than known for several years ... Twelve hundred analyses of fertilizers, feeding stuffs, etc., were made during the past year in the laboratory of the Royal Agricultural Society of England....There seems this year to be a regular sheep "craze" all over the country, but especially in the West ...The pleuro-pneumonia is prevailing to some extent in the State of Delaware. A few days ago Mr. John S. Harrington, of Milford hundred, killed three head of valuable cattle that had been attacked with the disease. This is the surest way to check the spread of this plague if done in time.....In a recent address in England, Mr. Gladstone stated that the country annually imports $25,000,000 of foreign fruits. The exports from the United States to England are steadily increasing, among which apples and cucumbers are two of the leading kinds....The New-Jersey State Board has appointed Dr. William R. Newton, of Paterson, Milk Inspector. He will visit various sections where milk is sold and test its quality by approved instruments. Adulterated milk will be forfeited, and fines imposed...

His Last Dose.

Said a sufferer from kidney trouble when asked to try Kidney-Wort for a remedy: "I'll try it, but it will be my last dose." It cured him and now he recommends it to all. If you have disordered urine do not fail to try it.

Thousands of ladies to-day cherish grateful remembrances of the help derived from the use of LYDIA E. PINKHAM'S VEGETABLE COMPOUND. It positively cures all female complaints. Send to MRS. Lydia E. Pinkham, 233 Western Avenue, Lynn, Mass., for pamplets.

The Age of Miracles

is past, and Dr. Pierce's Golden Medical Discovery will not raise the dead, will not cure you if your lungs are half wasted by consumption, or your system sinking under cancerous disease. It is, however, unsurpassed both as a pectoral and alterative, and will cure obstinate and severe disease of the throat and lungs, coughs, and bronchial affections. By virtue of its wonderful alterative properties it cleanses and enriches the blood, thus curing pimples, blotches, and eruptions, and causing even great eating ulcers to heal. Sold by druggists.

A COUGH, COLD, CATARRH or Sore Throat requires immediate attention, as neglect oftentimes results in some incurable Lung Disease. "*Brown's Bronchial Troches*" will almost invariably give relief. Imitations are offered for sale, many of which are injurious. The genuine "*Brown's Bronchial Troches*" are sold *only in boxes*.

The Markets.

SPECIALS FROM ALL CENTERS.

Until Saturday, May 22.

Boston—PRODUCE—The market is well supplied with the various articles under this head, which are selling at moderate prices. The following prices are paid by receivers: BUTTER—New York and Vermont—choice creamery, 21@23c ℔ lb; Franklin Co., Vt., dairy, 20@21c; New York and Vt. dairy choice, 19@20c; fair to good, 16@18c; Western—choice creameries at 22@23c; choice dairy packed, 18@19c; do. ladle packed, 16@17c; ladle packed, fair to good, 14@15c. CHEESE—very quiet—New choice full cream, 13@13½c ℔ lb, fair to good at 12@12½c, and common at 9@10. EGGS—Eastern are selling at 12 cents, Northern 11½@12c, Western 11@11½c ℔ doz BEANS—Northern handpicked Pea at $1.80@1.85 ℔ bushel; do do Western at $1.70@1.75; do common $1.60@1.65; medium choice $1.45@1.50; common to good at $1 30@1 35; Yellow Eyes $2.10@2.25; Red Kidneys at $1.40@$1 50. Canada Peas 80c@$1.05 ℔ bushel for common to choice. Green Peas $1.50@1.85. POTATOES are very dull; we quote Houlton and Maine Central Rose 40@45c ℔ bushel; Houlton Jackson Whites at 30@35c, Maine Central Jacksons at 35@38 Vermont Rose at 40@45c, do Jackson at 30@35, Peerless at 35@38, and Prolifics at 40@45c ℔ bushel. ONIONS $4@4 50 ℔ bbl. and Bermudas $1.75 ℔ crate. APPLES at $2.50@4.25 ℔ bbl, according to quality. DRIED APPLES are quoted as follows: East and North, new sliced, at 6@7c @ lb; do do, quartered, at 5@6c; old quartered and sliced at 3@5c; evaporated, choice new, at 14@15c; do good, at 12@13c.

Chicago.—BUTTER—For the better qualities of creameries and dairies there is about the usual local and shipping demand at former prices, but common stock is slow sale and weak. Roll butter is about out of the market. We quote: Choice to fancy creamery 20@21c ℔ lb; fair to good 18@19c; fine to fancy dairy, nearly equal to creamery, 17@18c; good to choice dairy 15@17c; light-colored but sweet, or packing stock, 12@13c. CHEESE—Trade is slow almost to dullness in this market, and the feeling is one of weakness, the demand having fallen off heavily of late, while stocks show considerable of an increase. Eastern markets were reported lower, and all are anticipating a further decline. Prime full cream cheddars were quoted at 12@12½c ℔ lb, and sour stock 7@8c, fair to good flat shapes selling slowly at 9@10c for part skimmed and poor lots not wanted. Hard skimmed stock was quoted at about 6@7c. EGGS—We quote the market firmer and stronger under light receipts, and sales were readily effected on yesterday at 9½c ℔ doz. in cases, with loose quoted at 9c.

Cincinnati.—BUTTER.—The receipts have materially increased during the last few days, but with a better local demand the tone of the market is stronger and prices of the better qualities of creamery and dairy are fully sustained. As regards creamery, some dealers ask and obtain 23c for single packages of selections, but there is scarcely a quotable price the great bulk of the sales being at 22c and under. There is no surplus supply of fine butter but there is more of the medium and lower grades than the local demand requires, and packers are taking these quite freely within range of the quotations. Fancy creamery sells at 20@22c. choice Western Reserve and dairy at 15@17c; prime Central Ohio 12@13c. medium do. 9@11c and inferior 6@8c ℔ lb. CHEESE—The arrivals are steadily increasing and the market is easier for prime to choice factory at 10@11c per lb, and inferior ranges down to low prices. EGGS—Have advanced under light receipts and a better local demand to 12@12½c per dozen, but the market closes dull and a decline is imminent. POULTRY—The receipts have increased largely and although there is a fair demand prices rule lower. Prime to choice old chickens sell at $2 75@$3, and only a few extra hens bring $3 25 ℔ dozen; small spring chickens are steady at $1.50@$2, but prime half-grown sell at $2.50@$3. Ducks are dull at $2 50@$2.75 per dozen. Geese are not wanted; turkeys sell at 6c per lb. WOOL.—The Price Current of the 20th says:—There is considerable activity in wool notwithstanding the adverse reports from the Eastern markets where the demand from manufacturers is unusually light, and it is mainly supplied by the foreign production. The receipts here are rapidly increasing and prices have suffered a further decline of 1@5c. per lb the large decline being on tub and fleece washed which is beginning to come in from Southern Ohio and West Virginia. There are liberal receipts of unwashed from Kentucky, Indiana, Illinois and some from Wisconsin. Dealers are buying freely at quotations which are 6@8c. per lb. higher than they were a year ago, and are even higher than they were at the beginning of last winter and they seem to be quite satisfactory to producers. Considerable wool which has contracted at 37@40c on the sheeps' backs in Kentucky early in the spring has been resold in this market at 31@32c. Producers got the benefit of the higher prices and speculators had to stand the loss. The fact is that comparatively little wool was taken by consumers at the high prices which have prevailed the latter part of the winter and early in the spring the trading being mainly between Eastern dealers who are really responsible for running prices up to the point which attracted large imports of foreign wool which glutted the market and took the edge off the market for the new clip. The impression here is that wool is now at reasonable prices, but if the Eastern dealers and manufacturers hold off much longer it may go lower. Burry and fleece grown wool is relatively lower than usual, also dealers do not care to handle it.

PRODUCE AND PROVISIONS.

NEW YORK, Saturday, May 22, 1880.

BEANS AND PEAS.—There has been an active export demand for marrows for Europe and Havana; a few red kidney also going to Cuba. Marrows have only a fair spring trade. Light receipts help to stiffen or steady the general stock. Green peas are pressed for sale and with something off in quality. Wisconsin are lower; quoted $1.72½@1.75, with sales for export at $1.75. Southern B. E. peas quiet at $1.90@1.95 ℔ 2 bush. bag; marrow beans, prime, $1.62½; other, $1.45@1 57½; medium, prime, $1.40; other, $1.20@1.30; pea, $1.45@1.65, white kidney, $1.50@1.70; red kidney, prime, $1.45@1 50; other, $1.30@1 40. Receipts for week, 3,775 bush. beans; exports, 3,450 pkgs.

BEESWAX.—Small sales have been made at 24@25c. for Western and Southern. Exports for week, 2,460 lbs.

BUTTER.—The market has not passed its spring ordeal wherein uncertain values and reluctant trade perplex the seller. With best qualities named down where they are, it is not surprising that white, streaked or under grade lots tend to accumulate or offered at figures which they would settle to, if allowed to accumulate. Receipts from very near points are light, owing to short grass consequent upon the dry spell, and the increasing city use for for milk. Creamery butter, as a rule, is not more attractive than fine grass half tubs. The Producers' price current substantially remarks, "that the extended use of patent dairy processes among farmers has sent many packages into use marked 'creamery', which are not up to the standard organized creameries." It's all right that such packages are so marked, but shippers must learn that quality under the stencil plate is what decides trade in New York. The sending of imperfect stock in this way will only tend to make standard brands the stronger, and if dairymen want to compete with the established grades, they must put forth their best manufacturing efforts. Western butter contains few straight parcels; factory, which takes the place of old-fashioned store packed, seldom makes upper figures. Shippers pay full rates for both State and Western when quality meets their taste. Quotations: Creamery, choice, 22@23c.; other, 16@20c.; State, pails and hf. tubs, best, 20c., other, 14@17c.; Welsh tubs, 16@20c.; Western imitation creamery, 14@17c; do. dairy, fresh, 10@13c.; do. poor to prime, 13@15c.; do. factory extra, 14@16c.; other, 10@14c.; very poor, 8@9c. Receipts, 29 825 pkgs.; exports, 8,585 do.

CHEESE.—The receipts have been quite full this week, and shippers have shown a considerable degree of interest. The fancy factories have been taken up close to the offerings and at the close there is a firm feeling as to prices. Sales generally have been at 12½c. for fancy to 12¾c. for special lots and at 12@ 2½c. for grades about choice. The exports for the week are 38,300 boxes. Latest prices are at 12½c. for choice full cream; 11@12c. for good and fine; 10@10½c for fair, and 8@10c. for half skimmed. Ohio factory flat at 11¾c. for full cream; 10@11c. for fair and good lots; 9@10c for half skimmed. Receipts for week, 43,388 boxes; exports, 41,351 do. Liverpool cable, new cheese, 68s. Steam, 38s. 6d.

COTTON.—There has been less export demand but the market closed strong at for May, 11.16@11.58c.; June, 11.61@11 66c.; July, 11.70@11.76c.; August, 11.73@ 1.75c.; September, 11. 55@11.16c.; October, 10.68@10 69c.; November, 10 50@10.51c.; December, 10 50@10.51c.

DRIED FRUITS.—Apples have a light demand and other articles have only a jobbing trade. Prices are unsettled and rather nominal. Quotations are for N. C. apples, fair to good, at 7@5½c., choice, at 9@9¾c.; New York State quarters sliced at 7½@7¾c.; patent evaporated in cases, choice at 14@15c.; old and prime 13½@14c.; evaporated, sliced at 12@13c. Evaporated peeled peaches, good to choice, at 20@22c.; North Carolina peeled choice, 16@17c.; Georgia prime at 15½16c.; fair to good at 13@14c.; common at 10@12c.; unpeeled halves at 7@ 8c.; do. quarters at 6@6½c. Pitted cherries at 17@18c. Blackberries nominal at 13@13½c. Raspberries at 28@ 30c. Plums at 17@17½c.

EGGS.—Receipts for week, 15,000 bbls.; do. last week, 18,450 do. Daily supplies are smaller, but there is accumulation enough in store to deaden the market, and our rates are as full as have been obtainable during most of the week. Hardly anything now sells at mark, and losses in count will be quite numerous, with an extra summer month as May has turned out. Near Points, 12@13c.; State and Penn., 11½@12c.; Western fresh, 11@11½c.; Canadian, 11½@11¾c; held Western, 10@10¾c.; goose, 18@20c.

FRESH FRUITS.—Russet apples are closing out at $2.50@4 ℔ bbl. Strawberries are in demand, but the quality of most lots indicate dry weather and few make top rates. Md. range 12@20c.; N. C., 12@16c.; Norfolk, fair order, 10@12c.; poor, 5@8c.; Chas., 8@10c, choice Southern cherries, 14@20c. ℔ lb, other, 6@10c.; Gooseberries, 5@8c. ℔ quart. Hot-house grapes, B. Hamburg, $1.00 per lb. Peanuts dull and weak; Va. hand-picked, 5½@5¾c.; extra prime, 4¾@5c.; good to prime, 4¼@4¾c.; shelled, 6½c., best; hickory nuts, 90c.@$1.

FLOUR.—There has been more life to the market, but buyers having the advantage with full offerings. Lates prices are at $4.60@4 75 for inferior to very choice superfine State and Western; $4.40@4.75 for poor to good extra State, odd lots and lines; $4.75@ 5.25 for very good to fancy do.; $4.40@4.75 for inferior to good shipping extra Western, and $4.75@5.25 for good to fancy shipping extra do.; inferior to very good white wheat extras, $4.90@5.60; very good to fancy do. at $5.60@6.75; red and amber winter wheat, inferior to very fancy trade and family, at $4.75 @6 65; round hoop Ohio, $4.85@5 35; and trade and family brands of do. at $5.40@6 65; St. Louis at $4.85@5.65 for inferior to good extra; $5.65@ 6 75 for good to fancy; Minnesota clear, inferior to fancy, at $4 75@6 65; Minnesota "straight," poor to fancy, at $5 40@7.25, and patent inferior to fancy at $5.50@8.50; unsound stock at from $2 60@5 00; city mill extra at $5.60@6.00 for fair to fancy West Indies; do. for England, $4.40@5.25 for poor to very fancy; do. trade and family extras, $6.25@7.00; do. for South America, $6.00 @6.35. No. 2 at $2.75@4.00 for poor to strictly fancy. Receipts for week, flour, 77,000 bbls.; cornmeal, 375 bbls.; wheat, 769,700 bush.; corn, 514,000 bush.; oats, 167,500 bush.; rye, 10 900 bush.; malt, 55,700 bush.; rice, 330 pkgs. Exports for week, flour, 58,800 bbls.; cornmeal, 3,775 bush.; wheat, 1,575,300 bush.; corn, 1 079,300 bush.; oats, 3,450 bush; peas, 2,875 bush; rice, 1,575 pkgs.

CORN MEAL.—Sales at $3@3.15 for Brandywine and $2.60@$2.75 for yellow Western.

GRAIN.—Wheat has been arriving moderately well the demand has been less active and prices have tended lower; latest prices are for No. 1 white at $1.26½@1,26; No. 1 white, May, at $1.25¾@1.26¾; do., June, at $1.23@1.23¼c.; No. 2 white at $1.24¼; ungraded white at $1.20@1.25; No. 2 red at $1.31@1 32; do. May at $1.31@1.31½; do. June at $1.25@1.25¾; do. July at $1.14½; do. August at $1.10@1.11; ungraded red at $1.23@1.30; ungraded amber at $1.28¾@1 30; choice Green Bay spring at $1.22; No. 2 Chicago, Minnesota and Milwaukee spring at $1.20¼ @1.21; New York No. 2 spring at $1.13; No. 2 Northwest $1.12½; No. 3 spring at $1.05¾@1.12¾. Corn has been fairly active and closed steady at New York No. 2 at 55¼@55¾c.; do., May, at 52@53¼c.; do., June, at 49¾@50¾c.; do., July, at 49¼c.; New York steamer mixed, at 54¾c.; ungraded mixed Western at 53@ 55¾c.; No. 3 at 54c.; No. 2 white at 56@57¼c. Oats have been active and closed strong; latest sales are of of No. 1 white 48@48¾c.; No. 2 white at 46¾@47c.; No. 3 white at 45@45¾c; New York No. 1 at 46¼c.; New York No. 2 at 46@46¾c.; do. May at 43¾c.; do. June, No. 3 at 41c.; ungraded white Western at 43¼@46c.; white State at 45@48¾c.; mixed State at 45c.; No. 2 Chicago at 46¾c.

HAY AND STRAW.—A good steady trade noted and prices generally strong. Shipping hay quoted at 75@80c.; retail lots at 80@85c. for medium, and 90@$1.10 for better qualities; clover, 55@60. Straw at $1@1.10 for long rye; 65@70c. for short rye, and 50@60c. for oat. Exports for week, 3,500 bales.

HOPS.—Trade is confined to small lots, and the situation generally is essentially as last week, no disposition shown to give way in prices. Quotations are for:

	Cents per ℔.
New York, fancy	Nominal
New York, new crop, good and choice	33 @36
New York, new crop, medium	31 @33
New York, new crop, low to fair	27 @29
Eastern, new crop	27 @35
Wisconsin, new crop	27 @35
Yearlings	7 @18
Olds, all growths	4 @10
Pacific Coast, new	30 @35
Pacific Coast olds (nominal)	5 @10

LEATHER.—Quotations are for hemlock sole, 23@25c for light; 23@26c. for middle; 23@75c. for heavy; 21@ 23c. for good damaged.

OIL-CAKE.—Western is quoted at $31.50 per ton.

POULTRY AND GAME.—In dressed the demand is mainly for choice fowls and good weighty spring chickens. Carefully iced State and Western have sold well. General wants of trade not large. Turkeys, choice small, 10@12c.; fair to good, frozen, 6@8c.; do., poor, 3@5c.; Phila., dry-picked, 8@10c.; capons, Phila. large, 13@15c.; small, 20@21c.; slips, 18@ 20c.; chickens, spring, Phila., large, ¾ lb., 33@36c.; small, 30@31c.; roasting, d.-p., 21@23c.; fowls, Phila., d.-p., 13@15c.; Jersey, good to prime, 12@13c.; State, good to prime, 12@12½c.; Western, good to prime, 11 @12¼c; poor to fair, 5@9c.; ducks, spring, large, 33@ 35c; Phila., dry-picked, squabs, white, ℔ doz., $2.50@3.62; dark, $1.25@1.50. Live poultry is steady, with an occasional cross exceeding top prices. Live turkeys hardly pay for shipment, the lower price is for Southern. Chickens, spring, large, per pair, 70c.@90c.; do., small, 40@45c.; fowls, Jersey, ℔ lb., 12c.; Western, 12@ 13½c.; Southern, 11½@12c.; roosters, per lb., 4@5c.; turkeys, mixed, 6@9c.; ducks, Jersey, N. Y. & Pa., ℔ pair, 60@75c.; Western, 45@55c.; Southern, 40@45c.; geese, Jersey, $1.50@1.62; N. Y. & Pa., $1.25@1.37; Western, mixed, $1@1.12; pigeons, 30@45c. The leading item is wild pigeons. They were scarce early in the week, but have dropped to 75c. @$1. Wild squab, 60@75c. English snipe and plover (ice house), $2.25@2.50.

PROVISIONS.—Hog products have less active and closed weak. Mess pork closed $11.15@11.20 for May $11.20@11.35 for June; $11 25 for July; $11.25 for August, and $11.30@11.35 for September, and $11.40 for October. Bacon at 6¾c. for long clear and 7c. for short clear. Beef hams at $16.50@17. Beef—Extra India mess quoted at $18@20 for city and $19 for Philadelphia, and at $10@10.50 for extra mess, and $9.50@10 for plain mess. Tallow at 6¾c. for prime. Stearine at 8c. for choice Western. Lard—Western steam at 7.17½ for contract grade on the spot; 7 17½ for May and June deliveries; 7.22½ for July; 7.27½ August, and 7.32½ for September. Receipts for week, —— pkgs.; beef, 350 pkgs.; pork, bbls., 2 050; cut-meats, 32,850 pkgs; lard 13,000 pkgs. Exports, beef, 2,175 pkgs.; pork, bbls., 4,200; cut-meats, lbs. 14,210,581; lard, lbs., 5,845 200.

SEED.—Clover is firm; Western is quoted 6¾c., and State at 7@8c. Timothy is quiet at $2,65@2.75. Flaxseed sold at $1.65.

TOBACCO.—The export demand is moderate, and trade from local sources very light; prices are unchanged.

VEGETABLES—Old potatoes are fast being turned into a general stock. Low grades of any variety offered at $1 and selections are show at $1.50@1,75. New pot toes have a better movement with the natural improvement in quality. Bermuda, $5.00@5.50; Chas. & Sav., red, $4@4.50; do. peerless, $3@3 50; Fla. $3@4; culls, $1.75@2. For green stuff. Southern and near by, the market is active, but the sales are mostly in small lots, and that fact keeps prices tame when receipts are likely to be steady and near point stock tops Southern. Tomatoes, Fla, ℔ bu. cr., $1.50@2; Bermuda, ℔ box, 50@65c.; cucumbers, Charleston and Savannah, ℔ crate, $3@ 3.50; Fla., $1@2; string beans, N. C., ½ bbl. crate, $4@ 4 50; Sav. & Ch'n. round, $1.75@2; Sav. and Ch'n, flat, $1.25@1.50; green peas, Md., ℔ bbl., $3.50@4.50; York river, ℔ ½ bbl., $1 50@1.75; Norfolk, large, ℔ ½ bbl. 75.@$1; asparagus, O. Bay, per doz. bch., $1.50@2; Mon. Co., per doz., $1.25@1.50; Bur., 75c@$1 Md and Del., 75c.@$1.25; spinach, L. I., ℔ bbl., 50@75c.; turnips, Norf., new, ℔ 100 bchs., $1@3; beets, Norf., $2@3; Jersey, $7@8; radishes, near-by, 75c.@$1; rhubarb, 40@ 50c. lettuce, per bbl., $1.75@2.50; cabbage, Norfolk, $2.25@2 75; rhubarb, L. I. & Jersey, ℔ 100 bunches, $1.00@1.25; onions Bermuda, new, ℔ crate, $1.75; turnips, Russia, ℔ bbl., 75c.@$1.25; carrots, $2.00@3.

WOOL.—There has been very little interest shown by buyers through this week, and the feeling is rather weak. Ohio, Pennsylvania and Virginia fleeces quoted at 48@50c. for X, and XX,; 52@54c. XXX and picklock; 51@53c. for No. 1; 48@50c. for No. 2. N. Y., Michigan, Indiana and Wisconsin, at 45@ 47c. for X and XX 52@54c. for No. 1; 41@46c. for No. 2. Iowa, Vermont and Illinois at 43@45c. for X and XX; 50@53c. for No. 1; 44@45c. for No. 2, and 50@55c. combing.

LIVE STOCK MARKETS.

NEW YORK, Saturday, May 22, 1880.

BEEVES.—Receipts for week, 14,574 head; do. last week, 12,857 do. The week has been a steady one in beef cattle and prices close firm without any upward tendency. Sellers claimed that present prices do not pay Western owners, and seemed to want butchers to divide some of the improvement that has developed in dressed beef. There was, however, no holding for an advance price Wednesday last. About a dozen car-loads of Illinois and Ohio stillers were sold at 8¾@9¾c., to dress 56 ℔; common to fair native corn-fed steers at 8¾@9¾c., to dress 55@56 lbs., and good to prime at 9¾@10c., to dress 56 lbs.

COWS AND CALVES.—Supplies will be likely to enlarge, if pastures hereabouts does not recuperate.

Sales during the week have ranged at $25 to $55 for common to prime cows.

VEAL CALVES.—The demand has ruled fair and a choice grade of live would have met a brisk market. Such lots as have arrived, are regarded as well sold as follows:

Live calves, Jersey and Bucks Co., choice, 6c.; prime, 5@5½c.; State, choice, 5¼@5¾c.; do. prime, 5@5¼c.; fair to good, 4@4¾c.; poor, 3@3½c.; Mt. Holly, fair to choice, 5½@6¼c.; buttermilk, 3@4¼c.

SHEEP AND LAMBS.—Receipts for week, 28,674 head; do. last week, 27,147 do. There was a good export demand for heavy wethers, but light and medium butchers's sheep sold rather slowly at about previous prices. Lambs also slow, and the advance obtained Monday was barely maintained. Choice sheep were sold to exporters 6¼@6½c., but most transactions were at 5¾@6c.; two loads of Virginia lambs were sold at 7¼c.; a deck-load of Penn. do. at 8@8¼c., and several lots of Jersey do. at 9@9¼c.

SWINE.—Live nominal at $4.50@4.80 per 100 lbs.; northern unsold at close. City dressed, State, 6¾@7¼c'; western, 5¾@6¾c.

$1000. REWARD

For any Washing Machine that will Wash Cleaner, Quicker, with Less Labor and Wear and Tear of Clothes than the

ROBBINS FAMILY WASHER AND BLEACHER, Pat'd Oct. 3, '71.

THE ORIGINAL AND ONLY PERFECT SELF-OPERATING WASHER IN THE WORLD.

No rubbing required. No more yellow clothes nor hard work on washing day. No more rubbing clothes full of holes. Seeing is believing, and if you will try it once you will never again wash without it nor use any other washing machine. IT IS THE BEST IN THE WORLD, and will wash anything from a lace curtain to a horse blanket, and cannot get out of order.

Good Agents wanted, both Male and Female, to whom Liberal Inducements are offered. Agents can make from $10 to $100 per week.

INDISPUTABLE EVIDENCE.

It is now nearly a year since we made the above offer to the public; up to this date we have not had a single application for the money. During this time we have shipped thousands of our Washers to all classes of men and women in every State and Territory in the Union, and the universal verdict is, "It does all you claim for it." "We would not be without it at any price." "The longer we use it the better we like it." &c., &c. We have advertised extensively in nearly all the large and influential newspapers, which upon investigation have never failed to indorse us as well as our WASHER. In fact, we are so well known to the press generally, that we take pleasure in referring to the following prominent journals, all of which have given us flattering editorial mention, viz.:

New-York American Agriculturist.
New-York Weekly Sun.
New-York Weekly Witness.

And many others.

When the newspaper reader considers the thousand things that appear in the advertising columns of his paper, set forth in the most glowing style—which too often, we regret to say, result in great disappointment, not to say disgust, to those who answer them—we cannot but expect that there are thousands who would look upon us and our statements with considerable doubt and incredulity, were it not for the fact that the evidence we offer is unparalleled in the history of advertising. Would the papers we name lend their influence to deceive and injure their readers? Besides the testimony of the press, we have thousands of commendatory letters, many of which we have from time to time published in our advertisements.

If you want good paying employment, send for a sample Washer; try it first, and then go to work canvassing your neighbors. You can soon build up a good, profitable business. If you want to lessen the labors of your mother or wife, send for one, and, above all, if you want clean and snowy-white linen, send for one. A trial will more than satisfy you.

No. 1 works in boiler holding 10 to 15 gallons. No. 2 works in boiler holding 15 to 25 gallons. Price No. 1 $3.50; Price No. 2 $5.00.

WE SEND SINGLE OR SAMPLE No. 1 WASHERS, PREPAID, TO YOUR NEAREST RAILWAY EXPRESS OFFICE, in any part of the United States east of the Mississippi and Missouri Rivers, also in Kansas and Nebraska, for $3.50. West of that line as follows, viz.: In Dakota, at Bismarck or Yankton; in Wyoming, at Cheyenne; in Louisiana, at New Orleans; in Arkansas, at Little Rock and Texarkana; in Texas, at Denison or Sherman, for $3.50; in California, at San Francisco, Sacramento, Marysville and San Jose; in Colorado, at Denver and Pueblo, and in Utah, at Ogden, for $4; in Idaho, at Franklin City, and in Texas, at Corsicana, for $4.50; in New Mexico, at Santa Fe or Las Vegas, for $5. Our reason for so doing is to induce people to investigate this matter, feeling assured that a trial will secure an agent for us.

TALK ON BOTANY.—NO. 2.

UNCLE MARK.

Roots.

IN the last talk on botany I spoke of the seed and how it begins to grow. We noticed that when a sound seed is put in a place where it gets the necessary amount of moisture and warmth, it begins to swell up, the embryo breaks through the seed-coat, and it then grows in two directions, one part rising upward into the air, the other going downward into the soil. The portion that grows upward, forming the top of the tree or plant, we learned was called the ascending axis, and the portion growing downward, forming the roots, we named the descending axis. In this talk we will follow the descending axis, or, in other words, the roots, and try to find out what they really are, and what service they render the plant.

In the first place what is the root? "Why," you say, "the root is that part of the plant which is under ground." That is a very good answer, and true in a general way, but it is too sweeping. It takes in too much. Not everything of a plant that is under ground can be classed as roots, and, besides, some plants have roots that do not enter the ground at all. A potato, for example, is not a root, though it grows under ground, nor is a Lily bulb, and the bulb of the Tulip. A peanut, too, is developed under ground, but it is a fruit—a very different thing from a root. At this stage of our progress, I shall not tell why these things are not roots, that will all be clear to you in due time. It is difficult to get a short definition for the root, such as you could easily remember and which would fit the case exactly. I shall therefore only tell how it may be known from the stem. A stem is characterized by bearing buds which develop into leaves and branches, the root usually has no such buds. But the most distinctive difference lies in the mode of growth. The stem, when young, lengthens throughout every part; the root does not; it lengthens only by additions to the tip.

The office of the root is twofold. It serves to hold the plant fast to the ground or other support, and it also absorbs nourishment for the sustenance of the plant, just as animals and people must eat in order to live and grow. In figure 182, we see the ordinary form of the root of a young tree. The point indicated by the dotted line at *a*, is called the *crown*. It is the point of division between the root and stem, and is usually at the surface of the earth. The smaller roots at *b b*, are called rootlets, and the very small ones at *c c*, are called fibers. This is the most usual form of the root, but there are many modifications, and in order to understand these more readily they have been classed together in groups, like everything else in science, and each group received a name whereby it may be known. Different botanists class the roots somewhat differently in some respects, but we will here notice only the simplest and most common forms.

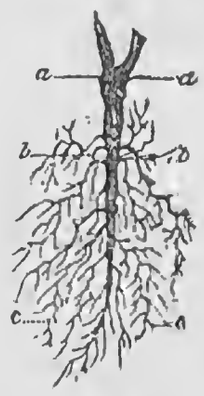

FIG. 182.

According to their mode of growth they may be put under two principal divisions, which for ease of understanding we will call, 1st, those that form a *tap-root*, and, 2d, those that have no tap-root. The tap-root is very marked in the figure above. It is the thick root proceeding from the *crown* and growing straight downward, and from the sides of which smaller roots, or branches are sent out. A large number of the *dicotyledonous* plants, (what is the meaning of that word?) have this kind of root in more or less marked degree. The maple, beet, carrot, turnip are good examples. The *monocotyledonous* plants, on the other hand, do not, as a general thing, have a tap-root. Indian corn and all other grasses, the Lilies, etc., are examples of this.

Again, roots are classified according to their shape. Thus the root seen in figure 184 is spindle-shaped or *fusiform*; the root in figure 183 is turnip-shaped or *napiform*, while the Dahlia root shown in figure 185 is said to be *fasciculate*, because it grows in a cluster. Some peculiar forms, like those in figure 186 are sometimes met with; *a*, is the root of a Pelargonium with the fibers enlarged at regular intervals, a style that is called necklace-like, or *moniliform*. At *b*, is figured a root of a Spiræa with enlargements at the ends of the fibers; this form is called *nodulous*. It is convenient to remember these last names, and when you get so far that you can analyze plants it is necessary that you should know them, but in the case of very young botanists I shall, at the present stage, not insist upon their being remembered. You have noticed in nature that some roots are greatly thickened and fleshy, while others are merely fine threads. These fleshy roots characterize more particularly *biennial* plants, or plants that live two years. This fleshy material consists principally of starch and is nourishment stored up for the future use of the plant. In many instances such roots have an agreeable taste and are very wholesome; they are then used as food. Radishes, beets, turnips, carrots, parsnips, etc., are all familiar examples.

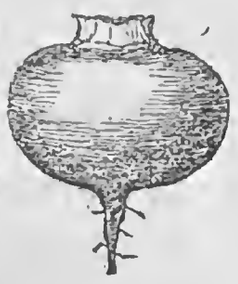

FIG. 183.

But we will now pass on to a highly interesting part of our subject, that of how roots grow and how they manage to absorb food for the plant. All plants, and every part of a plant, the leaves, the twigs, the wood, the roots, are made up of a multitude of separate cavities or little chambers, called *cells*. These cells are so small that

FIG. 184.

they cannot be seen by the naked eye, but under a microscope they become quite apparent. They are packed closely together side by side, forming a structure, not unlike a honey-comb. If you can imagine a number of little pill boxes, all having the lids on, being piled up side by side, and one on top of another, in some regular order, then you can get an idea of how these little cells are united together to form the fabric, or *tissue*, of which

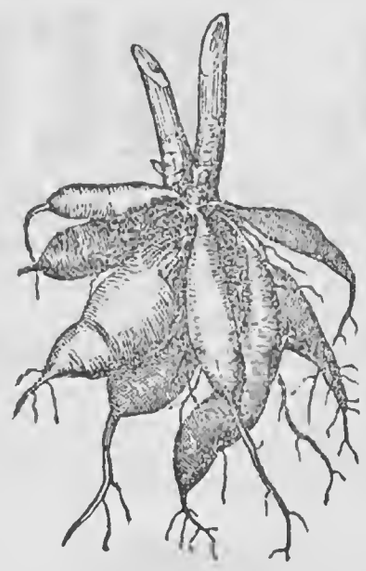

FIG. 185.

plants consist. All growth is simply a multiplication of cells, and to whatever portion of the plant these cells are added there it will increase in size, that is, it grows. Thus when the tree grows in thickness there is a formation of cells under the bark; when the young shoot grows in length there is a formation of cells in the young and tender part of it. So, also with the root, when it grows in length and thickness it is because there is a formation of

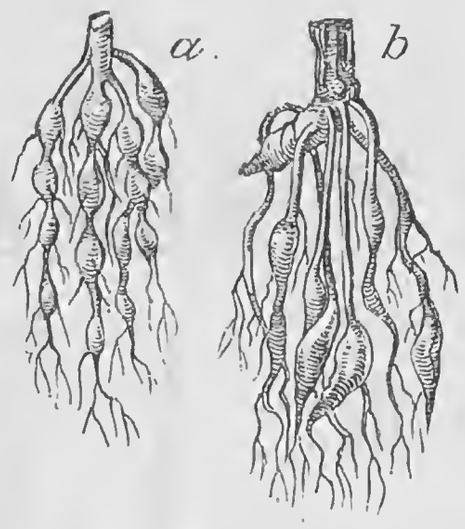

FIG. 186.

new cells which are added to its tissue. Figure 187 represents the tip of a root of a young maple much magnified. The little hairs you see are called *root-hairs*, and the little meshes are the cells. Both the *root-hairs* and the cells are also seen in figure 188 which is a much more highly magnified portion of the root. I said above that roots did not lengthen throughout the whole body, but grew only at the tips, a characteristic which dis-

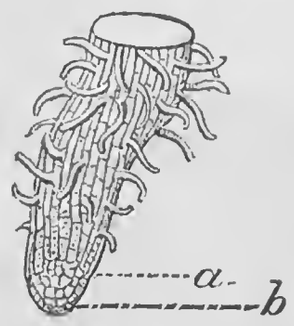

FIG. 187.

tinguished them from the stems. The root, however, does not grow at the very end, but the new formation of cells takes place a little distance from the end as at *a*, (fig. 187) while *b* is a cluster of older and more hardened cells. Why this is so is readily understood. As the root pushes its way into the ground it meets with much resistance, and the cells that are just forming would be too soft to bear the hardship of penetrating the hard soil.

The absorption of plant food takes place through the root-hairs or fibrils, plainly seen in figure 188. These little organs are so small that they can seldom be seen with the naked eye. There are no openings or mouths on the roots through which the food passes. The nourishment must all be dissolved, that is, in a fluid or watery state, so that it can be imbibed through the thin walls of the root-hairs. You will see from this that plants live by drinking rather than eating. The liquid that is thus imbibed is called *crude sap*, and passes through cell after cell as it rises upward to the leaves of the plants, where it is assimilated and then used for the building of new cells. The root-hairs are only found on the young fibrous roots; when the skin becomes too crusty the root-hairs perish. They also perish in the fall when growth ceases, which indicates that the proper time to transplant trees and shrubs is in the fall and winter, when there are but few root-hairs to be injured.

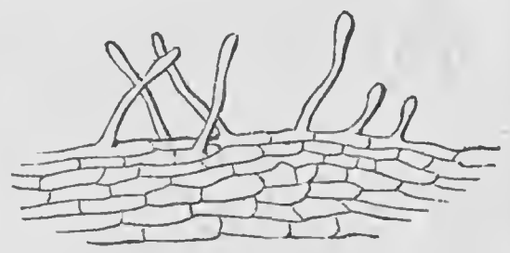

FIG. 188.

There is yet much to say about the roots, but we will save the rest for another issue.

LETTERS FROM THE COUSINS.

DEAR UNCLE MARK:—Having seen my other letter in print I will write again. I told you when we joined your Horticultural Club that our plot was fenced with Currant bushes, I want a little instruction about pruning these bushes; will you please tell me whether it is the old wood or the young shoots that should be taken out? Father received his package of seeds all safe, and he wishes me to thank you for them. Mother has saved the Bebb's Aquilegia, Iris and Hybrid Pentstemons. Dear Uncle Mark, my patience is almost exhausted waiting for the grape seeds to come up. They have been sowed nearly three months, but have not showed their heads out of the earth yet. I love gardening, and rejoice that it is nearly time to sow my seeds. There has been scarcely any snow here this winter. I am afraid my letter is getting too long. I remain your ever loving niece,

Bruce Co., Ont. AMANDA M. BURNHAM.

[Since you want your Currants to form a kind of hedge about your garden, all the pruning that will be necessary is to take out the old dead wood, and to trim the strongest of the young shoots so that the hedge will make an even and moderately close growth. I am sorry that the grape seeds are trying your patience so hard; but you must not give up. Remember, that I said at the time they were sent, that it might take three months or more before they would grow. I have received reports from many of the members telling how finely theirs are growing. The seeds were all of the same lot.—U. M.]

DEAR UNCLE AND COUSINS:—I have long been thinking of writing to the dear old RURAL, and to-night I have a few spare moments which I shall improve by writing. I have seen from the letters that most of the cousins are members of the Horticultural Club, and I hope that you will put my name on the list. I received the seeds from the free seed distribution, about a month ago; and planted them in a box, I don't know whether it was the proper way to plant them or not, but I hope it is. I am a great admirer of flowers, but don't have very good luck with them. Last year the chickens destroyed them for me, but I don't think they will this summer. I wish the cousins would write oftener, especially those who write the best letters. Please tell me if I did wrong by planting those seeds in a box. Ever a true Rural Cousin. ZEREPHA.

Fayette, N. Y.

[There was nothing wrong in planting the seeds in a box; but if you leave them to the care of "good luck" for the future, you may have reason to bemoan a failure in their cultivation.—U. M.]

DEAR UNCLE MARK:—I have for a long time thought I would like to join your Horticultural Club; will you please accept me as a member? I have not seen many letters from Wis. Will some of the cousins tell me a pretty way to make a stone heap? Do flowers do as well on them as in low beds? I wish "Will O'The Wisp" would send some of those pretty shells up to us poor mortals who never saw the ocean. I went "May flowering" yesterday and found a lovely bouquet of sweet flowers. FANNIE L. ATWOOD.

Sheboygan Co., Wis.

Various.

BRIEFLETS.

A GOOD RURAL friend from the Far West writes us as follows: "Hope your new location will prove to be a pleasant one. You are near the City Hall, Post Office and Park, and up to your eyes in the Newspaper Kingdom. Park Row is a sort of type-ical paradise; a leaden heaven with devils (var. printers) to match; a sort of black hole from which issue daily rays of light to enlighten us dim specimens of the human race divine. . .

Our politicians always swear,
Just when they've planned their biggest steal,
The public weal's their greatest care;
But they've a wheel within that weal.—*Puck.*

Okra can be raised in the North as well as in the South. It is strange so much is thought of it there and so little here. . . Sow parsnips early. Long Smooth or Hollow Crown and Sutton's Student are the best sorts. . . It is a wise fly that knowns the difference between oleomargarine and butter.—Hackensack Republican. . . Did you ever see a cherry's spit? Yonker's Gazette. Did you ever hear a peach's stone?—Saratoga Sun. . . "Emma R." asks the Springfield (O.) Tribune this extraordinary question: "Do you think it right for a girl to sit on a young man's lap, even if she is engaged to him?" Whereupon the editor gets off a very extraordinary falsehood "We have had no experience in the matter referred to" he says. Why didn't he say, "If it was our girl and our lap, yes; if it was another girl and our lap, yes; but if it was our girl and another fellow's lap, never."—Chicago Tribune. . . Mr. Vick's magazine for May gives a colored plate of Coleus. Few plants are more showy—few possess a wider range of brilliant leaves. Mr. Vick selects for his specimens Hero, Multicolor, George Bueyard, Garnett, Souv. de Lierval, Kentish Fire, Prince Albert, Seventy-six, Verschaffeltii major, and the old Verschaffeltii which is still one of the best. . . How to get rid of Couch Grass (Tritlcum repens)—just bury it! Nothing is easier. . . Young trees should now be washed with lime and soap or something of the kind. Color with mineral paint or lamp-black. It is now the season when the borer deposits its eggs. Our experience is that such washes are distasteful to this insect, for which reason trees so treated are passed by. . . Mr. Ives uses gypsum on manure heaps thinking that the sulphuric acid in the gypsum unites with the ammonia in the manure, forming sulphate of ammonia which is not volatile. . . Mr. C. A. Green thinks that it will pay to lay a board between the rows of Strawberries for the pickers to walk on and to keep the soil beneath moist and loose. . . Mr. Vick says, for squash-bugs, use a teaspoonful of saltpeter to a gallon of water.

CATALOGUES, ETC., RECEIVED.

PROCEEDINGS of the Davenport Academy of Natural Sciences, Vol. II, Part II. July, 1877–Dec., 1878. J. Duncan Putnam, Corresponding Sec., Davenport, Ia.

F. R. Pierson, Tarrytown, New York. Illustrated catalogue of seeds, plants, fruits, trees, for the greenhouse, garden and farm. This will be sent free to all applicants. It is a sort of resumé of what farmers and gardeners most need at this season, including many novelties of tested merits.

REPORT of the Second Annual Fat Stock Show held by the Illinois State Board of Agriculture in the Exposition Building, Chicago, Nov. 10-15, '79; also premium list of the third fat stock show to be held under the same auspices and in the same place Nov. 15-20, '80 S. D. Fisher, Sec., Springfield, Ill.

SEED-TIME AND HARVEST.—A new illustrated quarterly magazine devoted to the improvement of our American gardens, edited and published by our occasional contributor, Isaac F. Tillinghast, La Plume, Lackawana Co., Pa. No. 2 of this useful pamphlet is before us; it contains some 24 pages, with descriptions and illustrations of some flowers and vegetables and a price list of seeds. We think this enterprise will prove a success, chiefly because of the good judgment the publisher possesses, which, among other ways, is manifested by the very favorable opinion he expresses of the RURAL NEW-YORKER.

THE Secretary of the Missouri State Horticultural Society has sent us a circular to the effect that a convention will be held in St. Louis, Mo., on the 8th of next September for the purpose of effecting an organization to be called the MISSISSIPPI VALLEY HORTICULTURAL SOCIETY, the particular place and programme of meeting to be hereafter published. To this convention all persons interested in the horticultural growth of the country are invited, without regard to locality. An extensive horticultural exhibition will also be held at the Merchants' Exchange, St. Louis, Mo., on September, 7th, 8th and 9th, for which premiums to the amount of $2,500 are guaranteed. The convention is called by the Presidents and Secretaries of most of the State Horticultural Societies of the Western States.

A list of premiums, too long for publication, is added. The highest premium, $200, is offered for the best collection of horticultural products by any State Horticultural Society. Liberal premiums are offered for collections of apples, pears, peaches, grapes, plants and flowers, and other garden products.

Information, premium lists and circulars may be had by addressing the Secretary, S. M. Tracy, at 600 Olive St., St. Louis, Mo.

PERSONAL ITEMS.

"Goldsmith Maid," the famous trotter, has a fine colt.

Birmingham, England, though only a borough, is represented by two Cabinet Ministers—Messrs. Bright and Chamberlain.

President and Mrs. Hayes slept recently, at Mount Vernon, in the bed used by President and Mrs. Washington, and the guardian of the place says that all the Presidents have been accustomed to occupy that bed from time to time.

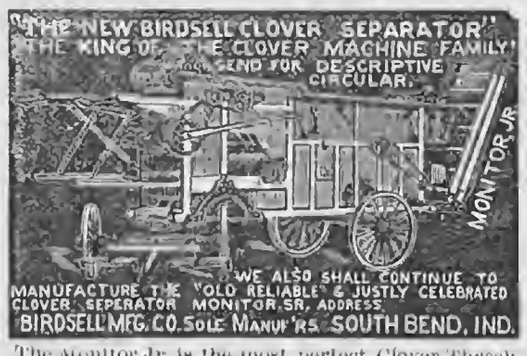
W. Harry Rouscoe was sent to put down a carpet in Mr. Houser's house at Fort Wayne. He was a stranger to Mary Houser when he began, but before he got through he was her accepted lover, and that night they eloped and got married.

Mr. Edward King, the well-known correspondent and magazine writer, is described as a short, burgher-shaped blonde of thirty, who looks as though his diet might be a judicious mixture of New England codfish and Old England beer, the one for brain nurture, the other for adipose.

Mr. Gladstone is said to be the best Greek scholar in England, if not in Europe, and when High Commissioner to the Ionian Islands, in 1859, he addressed the local parliament in modern Greek with much fluency and eloquence, to the intense astonishment of the natives.

The German papers tell this story in connection with Baron Rothschild's death:—A meets B, weeping and sobbing aloud. Says B, "Why do you weep?" "Because he is dead—the powerful, the rich Baron." "But," replied A, "why do you cry so much? he was no relation of yours!" "That's just what I am crying about," howled B, more affected than ever.

Implements and Machinery.



The Monitor Jr. is the most perfect Clover Thresher, Separator, Huller and Cleaner in the world. The Threshing and Hulling Cylinders run under-shot. They also continue to manufacture the old "Monitor," with *Threshing* and *Hulling* Cylinders running *over-shot*. Send for price list, terms, and descriptive catalogue. Address as above, and say you saw this in the RURAL NEW-YORKER.

DEATH TO POTATO BUGS
AND OTHER INSECTS.

Sprinkler and Plant Duster.

For sprinkling Paris Green with water, or dusting plants with Paris Green mixed with plaster dry, or plaster alone. Both useful and simple machines, thoroughly tried last season, and gave entire satisfaction. Retail price of Sprinkler $1.00; of Duster, $1.50 each. Liberal discount to the trade. Send for circulars.

New Publications.

White Robes! White Robes!

For a long time, no sweeter and better collection of music for SUNDAY SCHOOLS has appeared. If we consider the Hymns, we find the best and most original SUNDAY thoughts expressed in pure poetry, of good lyrical character. Such phrases as "Pitying Savior, look with blessing," "Trust him ever," "The better years begin," "Only a little while," "Precious love," "Ere the sun goes down," "The Eden hills," and "A home, weary pilgrim," taken almost at random SCHOOLS! from its pages, indicate its tenderness and beauty. There are 125 songs; all good ones. WHITE ROBES will be mailed to any address for 30cts. (stamps.) By A. J. ABBEY and M. J. MUNGER. Price 30cts., or $3 per doz.

TEMPERANCE JEWELS. (35cts., or $3.60 per dozen.)
TEMPERANCE LIGHT. (12cts., or $1.0 per hundred.)

These are extra good Temperance Song Books, differing in price and size, but not in quality. *Temperance Jewels* is by *J. H. Tenney* and *Rev. E. A. Hoffman*, and *Temperance Light* is by *Geo. C. Hugg* and *M. E. Servoss.*

THE SUDDS' NATIONAL SCHOOL FOR THE REED ORGAN. By W. F. SUDDS. ($1.50.)

Mr. S. is well-known as one of our best composers for the Pianoforte. His new School contains a great deal of fine music, and a good instructive course, and has the recommendation of a moderate price.

Humorous.

A GREAT many men who start out to reform the world leave themselves off for the last job. —*Middletown Transcript.*

"WILL the action lie?" inquired the anxious client. "Yes," replied the facetious attorney, "the action will lie if the witnesses will."

A TALL man having rallied a friend on the shortness of his legs, the friend replied: "My legs reach the ground—what more can yours do?"

THE puzzle blocks originated in Philadelphia, where the blocks of houses are so much alike that a man is puzzled to know when he gets home.—*New Orleans Picayune.*

WHEN President Lincoln was taken down with measles, he wrote to Colfax, that he might let the army of office-seekers approach, as he had now something that he could give them.

"I KNOW a victim to tobacco," said a lecturer, "who hasn't tasted food for thirty years." "How do you know he hasn't?" asked an auditor. "Because tobacco killed him in 1850," was the reply.

"MAMMA," said Henry Thomas, a bright little fellow over in Algiers; "Mamma, have my toes got eyes?" "No, my darling; why do you ask such a foolish question?" "Because my foot's asleep."

A SCHOOL teacher who had just been telling the story of David ended with, "And all this happened over three thousand years ago." A little cherub, its blue eyes opening wide with wonder, said, after a moment's thought, "Oh dear, marm, what a memory you have got!"

A Nerve-Quieting Tonic.

Restless nerves are usually the unfortunate possession of persons whose digestion is impaired, whose blood is thin and watery, whose system lack the vitality essential to health. To restore nerve quietude, the circulation must be fertilized through the medium of improved digestion and assimilation. Experience has long shown that Hostetter's Stomach Bitters is fully adequate to the task, and that in numberless cases where opiates, sedatives and mere nervines failed to produce the desired effect, this benign tonic was sufficient for the purpose. Of course there are cases where a narcotic may be necessary, but such remedies never touch the origin of the trouble. Restore digestion, a regular habit of body and active bilious secretion with the Bitters, and nervous symptoms will disappear.

THE MISTLETOE.

TAKEN out of the region of romance and song, the Mistletoe loses the charm which poetry has thrown around it. Among its fellow plants it bears decidedly a bad character. Botany has put the mark of disgrace upon its name, as a thief and robber—Phoradendron. It is the very pirate of plants. Many plants are parasitical; those like the Dodder and Dutchman's Pipe, in a weak, lazy way, seeking, like beggars and tramps in the vegetable kingdom, what they can get from the elaborated sap of others, but this thing begins life with an apparatus of green leaves purposely to work up and appropriate the nourishment which it intends to extract from some host. With "malice aforethought," and provided with ready-made tools designed for robbery, the criminal stands confessed. How the predaceous habit became developed and inherited from a line of honest ancestors, the evolutionist must determine.

We have but one species of Mistletoe east of the Mississippi, infesting various trees. Whether it has a special partiality for, or an aversion to any particular host, does not seem to have been accurately observed. I have seen it more abundant on the Water Oak than on any other tree. In the pine forests on the seaboard of this State, where the flats and damp depressions are occupied by the Pond Tupelo (Nyssa aquatica), almost every tree is infested. So also is the Black Gum (Nyssa multiflora) a favorite, but I have never seen it on any resin-bearing trees—Pines, Junipers, etc.

The plant is dioecious—blowing in April, and maturing seed about November and December. The pearly-white berries each contain a single, oval, flattened, pointed seed, surrounded by a transparent viscous fluid. In dropping from the tree, they adhere to any limb on which they fall, and thus propagate and increase, so that, after a while, a tree may almost be robbed to death by these greedy parasites.

In December last I crushed some of the berries on a limb of our European Cherry—Cerasus Caroliniana. There they have remained up to this time—May. On gently removing the inclosing membrane of the seed, I find small, green plantlets about one-fourth of an inch long, with a thickened disc at the base, adhering closely to the bark.

The Mistletoe has no roots. It has no use for them, as it makes the roots of its host do service for both. Its connection with the host is rather a grafting process, as may be seen by examining a section just at the point of union, where the amalgamation of the woody tissue is complete. The crude sap ascends into the Mistletoe branch as it does into that of the host, and is there elaborated by its own machinery of leaves, etc.

H. W. RAVENEL.

Aiken, S. C.

THE UNION OF THE MISTLETOE WITH THE TREES UPON WHICH IT GROWS.—We have procured half-a-dozen or more of the branches from which this parasite grows and sawed them in two lengthwise. The union, as Mr. Ravenel remarks, is similar to that of a cion with its stock, and so perfect tha it is impossible to determine where the one begins or the other ends.

THE MISTLETOE (Phoradendron flavescens).—From Life.— Fig. 18

USEFULNESS OF SHELTER BELTS.

IN the RURAL of May 15, a quotation is made from M. B. Bateham, to the effect that, as he thinks, wind-breaks are rather injurious than beneficial. Highly as I respect the opinion of Mr. Bateham on the subject of horticulture and kindred matters, and true and weighty as are the reasons given in the quotation in question for the conclusion he announces, I may be allowed the remark that there are two sides to the question, and that, while it is quite possible to plant trees about our dwellings and farms so in excess as to create the objectionable conditions he deprecates, it is not only possible, but lamentably true, that the reverse is almost universally the actual condition of affairs.

To demonstrate the fallacy of Mr. Bateham's position, in its application to the ordinary practice of our people, I need only call attention to the well-known fact that in his own State (Ohio), as well as in our State (Michigan), where there is one person (outside of cities and villages) who plants trees in excess, there are hundreds who neglect planting almost wholly, if not altogether.

My reason therefore for this note of dissent grows out of the apprehension that the qualified objection of Mr. B. is very liable to be accepted by the average land-holder as a reason for the neglect of planting. In view of all the circumstances, I will venture to the opposite extreme, and refer the reader to the well-known facts underlying the science of meteorology, that in the early history, not of Ohio and Michigan only, but of all the northern timbered States, the exemption from drought and from extremes of temperature, before the clearing away of forests, was so decided that the change has, to a greater or less extent, driven some of the more tender fruits quite out of cultivation over extensive stretches of territory; and that some of them are yet grown in other regions only in a very precarious and unprofitable way, but slightly better than absolute failure. That this condition of affairs is mainly, if not wholly, due to the wholesale destruction of the original forests will, I think, hardly be questioned, since the results are the outcome of meteorological principles well understood and generally recognized. Indeed, a very slight knowledge of the laws which control the relations of heat and moisture, will serve to establish the fact that the free admission of all winds to the surface of the land, without the restraining influence of a timber covering, will rapidly dissipate the surface moisture, and that this drying of the surface proceeds at a rate greatly dependent upon the velocity of the wind. The first and the most observable result of such exposure is the hastening of drought or the increase of its intensity.

There is, however, another and a less obvious, although no less certain and calamitous result of this drying process; and this is the result, indeed, from which the fruit culturist has everything to dread. I allude to the fact that the moisture thus summarily seized upon and dissipated has carried with it a certain and definite portion of the heat of the soil, leaving it cooler, and hence just so much more easily reduced during cool nights to and below the freezing point, with results such as we too frequently witness.

I am the more alive to the danger of misapprehension on this subject, from the fact that during my fifty and more years' residence in lower Michigan I have seen this problem fully wrought out under my own eye, and all the calamitous results I have spoken of demonstrated fully and unmistakably, and I cannot too strongly urge that even the real qualifications of Mr. Bateham, if urged at all, be put forth with a consciousness that, as the rule, the danger lies in the opposite direction.

T. T. LYON.

ERIOBOTRYA JAPONICA.

IN the notice of this tree by Mr. Ravenel, in the RURAL of May 15, there are two or three mistakes, not on his part, but in the popular traditions concerning it at the South. It was not introduced into the Southern States by the Wilkes' Expedition, but was grown there as far back as 1828 at least; for it was noticed previous to that date by the Agricultural Society of South Carolina, in their Desiderata. It was grown by the late Wm. Prince, of Flushing, and the late Thomas Hogg, of this city, nurserymen who had a considerable trade with the South at that date, and through whom it, no doubt, was introduced into many private collections in that section of the country. It fruited in Mr. Hogg's greenhouses many years ago. The popular name of Japan Plum is a misnomer, as the tree is a species of Medlar. The real Japan Plum was fruited by me, and described and figured in the Agriculturist some seven or eight years ago. I had three varieties sent to me by my brother, Mr. Thomas Hogg.

JAMES HOGG.

Care of Newly-set Trees and Shrubs

IN view of the drought which prevails in many parts of the country and its unusual severity over extensive districts, we would suggest to those who have planted trees or shrubs the past spring that there is one method, and so far as we know, only one, by which they may be protected against injury or death from that cause. Surface watering has been shown to do more harm than good. The ground is made hard and compact, thus becoming a better conductor of heat while it becomes less pervious to air and moisture. A portion of the surface soil should be removed, and then pailful after pailful of water thrown in until the ground, to a depth of two feet and to a width about the stem of not less than three feet in diameter, has become saturated. Then, as soon as the water has disappeared from the surface, the removed soil should be well pulverized and returned. A covering of boards, straw or hay, or even of sand or gravel, may then be applied, and the tree or shrub, thus treated, will pass through ten days of additional drought in safety.

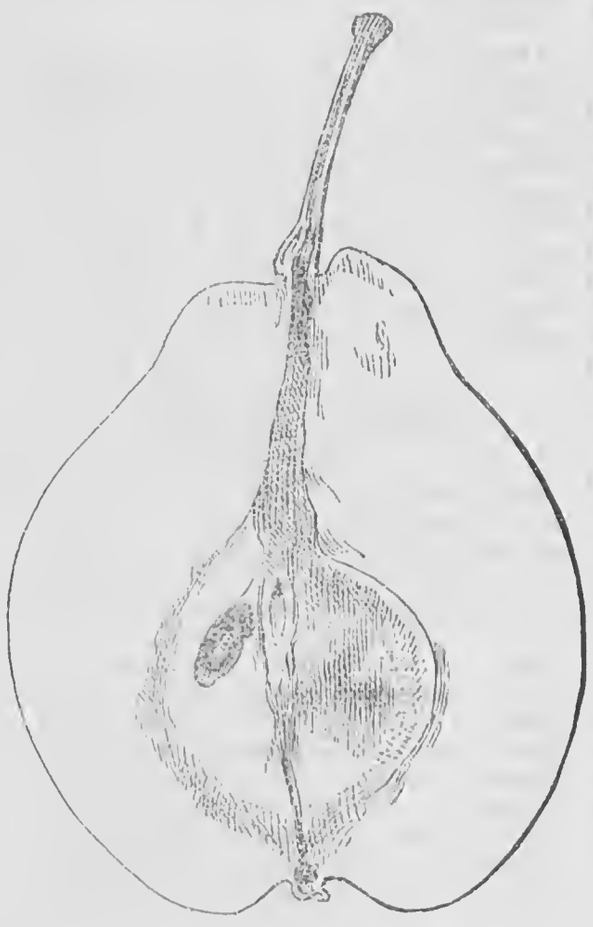
As soon as rain comes to wet the earth thoroughly, we think it is better to remove the mulch. Nothing is then gained by permitting it to remain. Mellowing the surface soil about the trees, thus keeping it free from grass and weeds, is then the most that is needed. We would repeat that the present is the season when the female borer deposits her eggs on the stems of fruit trees, and the wash of lime, potash, sulphur, etc. (darkened with lampblack), should now be applied and re-applied during June and July, as soon as washed off by rain.

Pomological.

THE SEEDLING PEAR—IRONS'S FAVORITE.

This new Pear was first brought to my notice in 1877, since which time I have been watching it somewhat critically, and am happy to state I have yet found nothing to dissipate the favorable impression made on first seeing it. A plate of this pear on exhibition at the annual meeting of the New Jersey State Horticultural Society, last January, received marked attention and commendation from those present.

Its chief points of value are its superlative keeping qualities, one gentleman asserting "it required no more trouble to keep it than so many potatoes," and its handsome showy appearance. In size and form it is very like the Bartlett, as will be seen by referring to the engraving below, which, while giving the general outline with striking accuracy, is rather below the usual size. In color it possesses the rich golden yellow of a well ripened Bartlett, and although it does not ripen until March and April, yet, strange as it may be, it assumes its brilliancy of color even when hard and quite unripe.



IRONS'S FAVORITE.—FIG. 190.

Regarding its early history and the growth of the tree, Mr. H. E. Ackerson, Hazlet, New Jersey, an experienced and practical fruit grower, who has had trees of this Pear in fruiting for some years, writes:—"The Pear called Irons's Favorite originated on the farm of Mr. James Irons, on the shore of Barnegat Bay. It was first discovered in a swamp near at hand, and was removed, when a very small tree, to Mr. Irons's yard. How many years it has been in bearing I don't know; but it is now a large tree and has borne as high as five barrels, or fifteen bushels, of fruit in one season. In growth, the tree, to some extent, resembles the Bartlett, but is rather more spreading. The foliage is a light green, and remains on the tree until very late in the season—being in this respect the most remarkable of any Pear that I have yet seen. The pears are very regular in size and are very evenly distributed throughout the tree. It is an *excellent keeper* and requires no more care in handling than an ordinary apple, and does not come in season until March. The tree has, with me, been a hardy, healthy grower and a good bearer, and has never shown the least disposition to blight. Although not of the best quality in flesh or flavor, I esteem it, taking all things into consideration, the best *winter* pear I have ever seen."

The principal features of this Pear may be therefore summarized in the following manner: The tree is of free growth; an early, regular and prolific bearer, and thus far free from blight, it never having been known to blight at all. The fruit is of fair size, very handsome and showy, and an exceedingly good keeper, but decidedly inferior in quality. Since, lamentable as it is, it is yet a fact that appearance counts for much more than quality in the markets, I am satisfied this will prove a highly profitable pear to the fruit-grower; but can never become popular with amateurs, except as a fruit for culinary purposes. In this last regard it has a marked resemblance to that prince of culinary fruits, the quince, and is said to approach it more closely in this respect than any other pear. Having never tested it except as a dessert fruit, I cannot vouch for this; but can testify to its resemblance to the quince in the consistency of its flesh and, like that fruit, in its abundance of what is now termed, "bouquet."

Little Silver, N. J. J. T. LOVETT.

Horticultural.

INTRODUCTION OF PLANTS THROUGH COMMERCIAL AGENCIES.

JAMES HOGG.

Apart from those who make a speciality of botanical studies, few persons are aware of the great number of plants introduced into our country through the indirect agencies of commerce, especially in the neighborhood of our seaport towns. Some thirteen years ago, a gentleman given to botanical investigations published an article on this subject in the Proceedings of the Academy of Natural Sciences of Philadelphia. This drew the attention of other gentlemen of similar tastes to the subject, and lists of the foreign plants they found in the ballast grounds of Philadelphia and Pensacola, were published in the previous-named work and in the Botanical Gazette. In 1878 and 1879 several members of the Torrey Botanical Club in this city, took up the subject and investigated the various wharves, ballast grounds, and fillings-in of lands in the neighborhood of this city, with some very curious results.

About the year 1868 the Central Railroad of New Jersey commenced filling in about 300 acres of marsh land extending southwesterly from Jersey City to Communipaw. The tract was about three quarters of a mile in length and about half a mile in breadth. It was filled in to about two feet above the highest tide level with all sorts of materials—sand, earth, gravel, ashes, cinders, garbage, city refuse, dredgings from the docks and such ballast material as could occasionally be obtained. In 1878 from the middle of May until the end of October it was visited by some of the members of the Torrey Club every two weeks, and the result was that they collected sixty-eight species of plants not indigenous in this section, and, with three or four exceptions, all natives of Europe, the East Indies and South America.

Extending their explorations to other localities in the neighborhood of the city, they last year made frequent visits to Hunter's Point, the Atlantic Docks, Gowanus Creek, Hoboken, Weehawken, the Harlem Flats, and the northerly end of the Eighth Avenue, and were rewarded by being able to collect 190 more species which they were able to determine, making 258 species collected in two years, which were foreign to this section.

Besides those which they were able to determine, they also collected a number of others which, up to last January, they had not been able to make out. The species found, were mainly natives of Britain, Germany, and the Mediterranean region; a few were from the West Indies, Central and South America, the Southern States, and one from the Cape of Good Hope. In some few cases only a single specimen was found, but several were found in large quantities, and evidently had come to stay, if they could withstand the severe cold of our winters.

Some of them were uninteresting weeds; uninteresting to any but botanists, except that in a few years they may become pests to our farms and gardens. If once thoroughly established in this section, it will not be many years before our cultivators will be wondering whence came some troublesome weed, which they had never seen before, taking possession of their cultivated lands. Some of them, however, were plants which we cultivate in our gardens and greenhouses, and others, although not cultivated, were, nevertheless, plants of some beauty or useful in the arts or in manufactures.

HOW TO SAVE STRAWBERRIES IN A DRY, HOT SEASON.

Just as our strawberries began to ripen one season, a very violent, hot, southern wind prevailed, which dried up the ripening fruit and began to shrivel the green. Having an abundance of clean, coarse, water-meadow hay in a stack, we took from this and spread it about three inches thick over the strawberry bed, and let it lie there till the evening of the third day. We then raked it off the outside row and found the berries filled out large and full as in cool, calm weather. We picked the ripened fruit from this row, and the next evening raked off the hay from the second row to cover the first, and thus proceeded from day to day till rain fell and the weather became cooler. Then we removed all the hay from the bed, except what was wanted to mulch under the vines, to keep the berries clean from the ground.

If the fruit of two rows were wanted, one for tea at evening and the other for breakfast the next morning, we raked off two rows, leaving one uncovered during the night, as it seemed all the better for getting the dew, and the berries were fresher and finer for picking in the morning than even those were in the evening.

Clean straw, we presume, would have been just as effectual as hay, and either of these, scattered thinly at night over a bed of strawberries, would preserve them from frost. It would be prudent for those who grow only a small patch of strawberries for their own eating to have a little straw or hay on hand with which to cover them in case of severe drought or frost.

Farm Topics.

WESTERN FARMING—VI.

W. I. CHAMBERLAIN.

Drought.

The great enemy to successful farming in some parts of the West is drought. Nearly all parts of our land are more or less subject to it, but some parts of the West are peculiarly so. In such regions two questions become important:—first, can we, as individual farmers, so plan tillage and crops as to counteract the disastrous pecuniary effects of drought? Second, can the farmers of an extended region subject to drought, by concerted action so change the physical conditions and features of the region as to make droughts less frequent and less severe?

The first question is most easily answered, and I will try to answer it by specific reference to a certain drought region with which I am most familiar, and whose lessons I have learned to my cost. Experience is an expensive teacher, but she teaches very thoroughly. The region to which I refer is the Ohio Western Reserve. It lies in the north-eastern part of Ohio, and is about 125 miles long, east and west, by about 50 miles wide, north and south. Most of the soil is clayey except near the rivers and creeks, and dairying has very largely predominated in its agriculture, and as pursued here has, I doubt not, increased our liability to severe droughts; and I believe and shall try to show in another article, that a general concerted change in our style of agriculture will greatly diminish their frequency and severity. But such general change is difficult to secure, and it therefore becomes the individual farmer to shape his own farming to the existing state of things. We have been badly pinched again and again, and surely ought to learn wisdom. Probably three years out of four we have quite a severe May drought. Sometimes it begins by the middle of April and extends till after June 1st.

The lake, especially after a severe winter, when the ice is slow in thawing, is cooler than the adjacent land, and prevailing north winds are the rule. And north winds are not the rain-bearers here, in May at least. By about June the first, other more complicated meteorological causes change the prevailing currents, and we *usually* have more or less abundant rains, but about one year in four or five our soil becomes so hot and dry it seems impossible for the rain to condense above it and fall upon it, any more than on Sahara, and the terrible drought lasts till September; and unless the June rains are very copious, even in years when they come, our old meadows cannot recover and give a heavy crop of hay. And so about one year in three there is great scarcity of hay and pasturage, and dairymen see hard times, and hundreds of cows are sold at ruinous prices to shrewder men from other counties or States. This has occurred again and again.

Is there any need of it? It seems to me not. Like causes produce like effects, and hence there is considerable uniformity in the matter from year to year, and we can plan accordingly. As for hay, there is no trouble if we will but plow and seed properly. But little plowing has been done here till recently. The farms have been divided between permanent pasture and permanent meadow. If rains are abundant and regular, week by week, feed, too, is abundant—if not, not. But, now, if we have good clover fields, the April rains push the clover so that it covers the ground and grows well till the June rains give it a sufficient rankness at time of blossoming. And if cut early on rich ground, the June and early July rains insure a heavy second crop. On rich ground, I say, for richness is in part a substitute for moisture.

Another means of securing abundant hay for winter is to sow Hungarian grass. But this requires skill and care in advance of sowing. The ground must be plowed early, say in April, while moist enough, and cultivated often enough to keep it well pulverized and mellow and moist. Then if even a light rain comes early in June, and the seed is promptly sown and brushed in with a smoothing harrow, and the ground "firmed" with the roller, the crop is almost sure on rich ground. It comes up in less than a week, and in two weeks more it shades the ground, if rich, and its roots get so good a hold on the turf or manure below, that there is sure to be a crop.

If the pastures become too short, the flow of milk in August can be kept up by "half-soiling;" that is, by stabling the cows at night and feeding Hungarian grass or fodder corn or second crop clover. The individual farmer can even make money out of our droughts, too, by the sale of hay wisely kept over from years of plenty, or by buying cows very low in fall and wintering to sell at a brisk advance in spring, or by wintering cows at so much per head for his less provident neighbors. He can, too, raise wheat and corn, the two crops least damaged by May and August droughts. Such are specimens of the means by which the shrewd individual farmer may prevent for himself the disastrous pecuniary consequences of drought, and even make it put money in his pocket.

But is it possible by concerted action so to change the physical conditions of the Western Reserve, for instance, as to make droughts actually less frequent and less severe. This must be answered in another number.

INDIAN CORN AS A STARCH CROP.

PROFESSOR F. H. STORER.

It is interesting to note from time to time how easily Indian corn retains its supremacy among American field crops and how widely and in what varied directions its influence is felt. The comparatively recent extended use of corn as a commercial source of starch, and of glucose, shows perhaps more clearly than anything else the merit of the crop, and serves to define with a considerable degree of precision the place and standing of corn as compared with the other products of American agriculture.

It is not many years since the potato was extolled as capable of producing, upon a given area of land, more nutritive matter than any other crop; but, as analysis shows, the merit of the potato is in great part due to the starch which is contained in it in large proportion. Yet the statistics of American commerce show that, considered as a sort of merchantable starch (and glucose), corn has become much more important than the potato. In a word, the potato, when put in competition with maize, has failed to justify itself at the very point where the natural superiority of the potato would have seemed to be the strongest. It may be said, in passing, that the old notion of the superiority of the potato among nutritive crops was disproved years ago, and in no way more clearly than by the "hog-crop" of America, which, as every one knows, could not possibly be produced by potatoes alone, though readily raised upon corn.

It is true enough that the potato has for many years suffered more or less from disease and has been greatly discredited on account of its liability to the attacks of the rot-fungus, to say nothing of the Colorado beetle, but these considerations make it appear only the more clearly that the failure of the potato to hold way with maize must be due to its real inferiority as a crop, under the conditions of soil, labor, and climate, which obtain in this country. The yearly production of millions of pounds of starch and of glucose, from Indian corn; and the constantly increasing consumption and export of these products point clearly to the conclusion that as a source of these materials the potato has been beaten in the race. It is true, of course, that a great deal of potato starch continues to be made in some parts of the country. Indeed, potato starch is even now quoted in the market reports as selling for a cent more per pound than corn starch, and there is little doubt that for some particular purposes it is better suited than the other kinds of starch. Potato starch still profits, withal, to a certain extent from its old reputation, and from the fact that it (and not corn starch) is specified to be used in many receipts employed in household economy and by manufacturers. But for the great general uses to which starch is put, and notably for making glucose and "corn sirup," the product obtained from corn stands pre-eminent.

All this, like the current export of cattle and grain to Europe, marks one particular phase of American agriculture. It is one more item, among many, going to prove the immediate advantage of our system of "extensive" farming. That is to say, the system of growing small crops at little cost.

It is not at all unlikely that, even with a climate like ours, the potato might hold its own against maize as a starch-producing crop, in countries where high farming is practiced; for as much starch can be got out of 250 bushels of potatoes as from 80 bushels of corn; and, taking one year with another, it would be easier on the whole to raise 250 bushels of potatoes to the acre than 80 bushels of corn, and easier still to increase this yield of potatoes than to increase this yield of corn. It is true, in fact, that in Germany large quantities of starch and of glucose are made every year from potatoes, although corn succeeds well enough in the southern parts of that country, and admirably in many parts of Austria and Italy. But here

In America, experience has shown that, under our system of farming, corn has a certain advantage over the potato. If it be admitted, for example, that it is as easy to get 40 bushels of corn to the acre from the generality of our American farms as to get 100 bushels of potatoes, then corn will take the precedence as a source of starch, for the average yield of starch per bushel from corn and from potatoes is rated at 25 pounds and eight pounds respectively. Even if it be supposed that it is as easy to grow 150 bushels of potatoes as 50 bushels of corn, the potatoes would give only 1,200 pounds of starch while the corn would give 1,250 pounds.

The superiority of corn over potatoes, as a starch producer, under the conditions which control American agriculture, was shown years ago in very much the same way, though not quite so clearly, when the distillation of spirit from corn came to prevail in this country instead of the German practice of distilling from potatoes. The spirit is derived from the starch in either case, and it may be said in general terms that the crop best fitted for producing starch cheaply will be best suited for distillation.

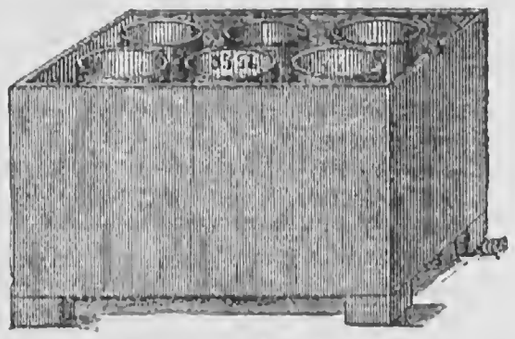
Dairy Husbandry.

DANISH BUTTER MAKING.

L. S. HARDIN.

It is one of the peculiarities of butter-making that the more modern the adoption of the occupation by a nation or class of people, the higher they carry the art. In this country for a long time the dairymen of the Eastern States carried the palm. The new West took up the occupation and carried the art to a degree of excellence that has won all the prizes and the highest market quotations. So it is in Europe. Ireland, Holland and the German States have in the past made all the fine butter consumed in Great Britain and the Continental capitals, but of late years Sweden and Denmark have come rapidly and prominently to the front. It was in these extreme northern latitudes that the art of butter-making may be said to have obtained a new lease of life. It was here that the effect of intense cold upon cream-raising was first discovered, a practice that now bids fair to supersede all other methods in use upon this continent. It was here also that was first practiced and has now become a national industry the manufacture and packing of butter for export to Brazil and other tropical countries. Of this latter practice I propose to give illustrations and a description with the assistance of the pamphlet of Chr. Hansen, of Copenhagen, Denmark.

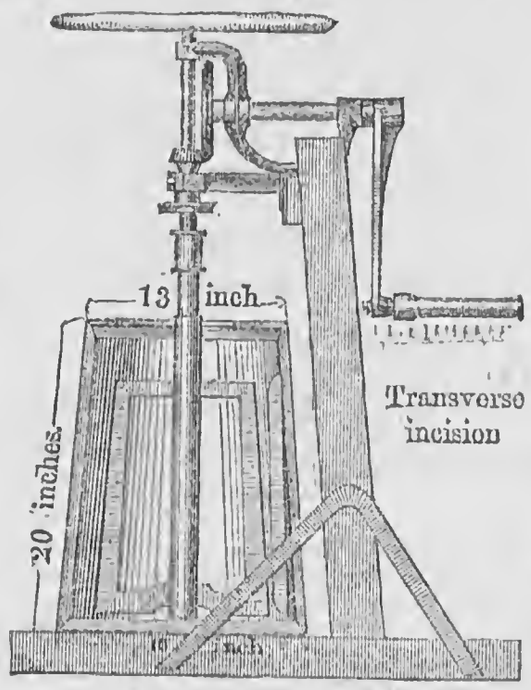
In order to perfect butter for the tropical market, great care is necessary in its manufacture. It goes under the name of canned butter, and is put up somewhat on the order of our imitation creamery butter that is so commonly quoted in our markets; that is, it is first made by private dairies, but under specific directions of the company that does the canning and shipping.



MILK COOLER.—FIG. 191.

For their own consumption and that of the English market the butter is usually made from sour cream; but when it is to be shipped to warm countries, it is invariably made from sweet cream. Owing to the long winters in this extremely northern latitude, the feed of the cows is mostly grain, straw and dried grasses, with some roots and oil-cake. In the matter of cleanliness the most scrupulous care is imposed upon the dairyman. The cows must be not only healthy, but at least eight days from calving. Care must be taken that no dirt gets in the milk pail at the stable, and as soon as the milking is finished, the milk is poured into cooling pails, 20 inches deep and seven inches in the diameter, and placed in a vat, (Fig. 191,) and water, filled with broken ice, put around the pails, so that the temperature of the milk is rapidly lowered to nearly the freezing point.

The milk is allowed to stand in this ice-water twelve hours, when the cream is skimmed off. The cream taken off at night is kept in ice-water over-night to be mixed with the cream that is taken off in the morning, when it is all immediately churned. The style of churn used, (Fig. 192,) is a stationary barrel with a revolving vertical shaft and attached wings. This turns at the rate of 150 to 200 revolutions a minute. The churning is commenced at 51 degrees and rises to 60 degrees by the time the butter comes. The liquid coloring matter is added in the churn—1 drachm of Hansen's mixture to 150 pounds of milk.



HAND CHURN.—FIG. 192.

The churning lasts from 30 to 40 minutes, and when the butter comes in granules the size of a pin head, the churn is stopped. The butter is taken out with a sieve that allows the buttermilk to drain off, and is then placed in a smooth, wooden trough, (Fig. 193.) No water or brine is allowed to come in contact with the butter. Sometimes a machine is used in working; but more frequently it is done by hand, (Fig. 194.) The butter is then weighed and salt, to the amount of half an ounce to the pound, is added. The butter is then rolled into lumps of four pounds, (Fig. 195), and placed in cold water to stand from three to seven hours for the salt to thoroughly dissolve. It is then worked by machine.

FIG. 193.

After this the butter is packed in wooden tubs or firkins, (Fig. 196,) holding from 80 to 100 pounds. The butter must be sent at least twice a week to the canning establishments, where it is classified in from three to five brands. The following were the ruling rates in November, 1879:

1st class,	35	cents.
2d "	32½	"
3d "	30	"
4th "	27½	"
5th "	25	"

At the same time the best sour-cream butter sent to England, was quoted at 30 cents. It would be well for our creameries that insist upon letting the cream sour, to think of this.

In testing the butter for canning it is placed in large, ventilated rooms, with an even temperature of 60°, kept thus by steam in winter and ice in summer. The butter remains in this room two days before it is tested, the theory being that a uniform temperature must affect all the butter tested before a uniform trial can be made. To those whose butter is classed in the lower grades, written information is given as to wherein lay the defects, so that in future these troubles may be avoided.

Only butter of the three highest grades is packed in tin. The butter for tinning is worked over again and salt added until it will contain about three per cent. of salt. This is done by steam butter-workers which are unknown in this country. The tin cans hold from half a pound to 28 pounds, the smallest holding the finest brand. The butter is pressed or stamped into the cans so closely that all air is excluded. The cover is quickly soldered to the can, and care must be taken that no part of the butter is melted in the operation. The cans are varnished, labeled and packed in wooden boxes with an intermediate layer of the husk of rice. (Fig. 197.)

PACKAGE READY FOR SHIPPING.—FIG. 197.

We are not told what the extent of this industry is, but it is strange that no effort is made in this country to take part in supplying the tropical market with fine butter. The question of how well butter will keep hermetically sealed in tin, is still an open one, though marvelous tales are told of its quality even after many months of travel in southern seas. To northern tastes, however, it will long be preferred even when slightly off-flavor to the substitutes of oil that are used in tropical climates.

THE TRUTH ABOUT IT.

[The object of articles under this heading is not so much to deal with "humbugs" as with the many unconscious errors that creep into the methods of daily country routine life.—EDS.]

"SAVE ME FROM MY FRIENDS"

The dairymen may well make use of the above exclamation when they consider the unwise efforts that are being made to restrict the manufacture and sale of oleomargarine. There is a large amount of buncombe and nonsense in the talk about this stuff, and an extraordinary large amount in the proposed law recited in Mr. Moulton's communication which was printed in the RURAL NEW-YORKER of May 22. There are six clauses in that proposed law, all of which might be combined in one, to the effect that no substance other than that made from cream from the milk of cows should be sold, offered for sale or exported under the name of butter.

FIG. 194.

But such a law would be manifestly one-sided and incomplete unless the making, selling, offering for sale or exporting of cheese made wholly or in part of any other substance or material than milk, either pure or skimmed, were incorporated with it. Why should butter makers be satisfied with the exclusion of oleomargarine from competition with their product when the creameries are permitted to skim their milk, make butter of the cream and add oleomargarine to the skim-milk and sell the cheese so made as full-milk cheese? In fact, private dairies suffer much more from the competition of creameries that, so to speak and in fact, procure their cream for the price of the oleomargarine, and getting full price for their cream can afford to sell butter so much cheaper than an honest dairyman. By all means bring in the cheese and don't leave the creamery men to laugh in their sleeves at the foolish fuss made by the butter makers.

The fact is that all this fuss is really made in the interest of the creameries that would prohibit the use of the stuff to others and would yet use it themselves. It was a merited rebuff which the oleomargarine bill received in the N. Y. State Legislature on May 18, when an amendment was tacked on to it providing

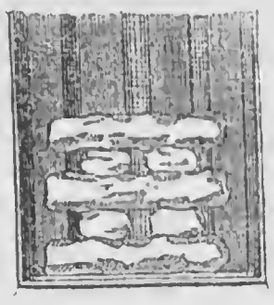


FIG. 195.

that rancid butter and indeed all butter should be branded and labelled, just as was proposed for the oleomargarine. Let us have exact justice; and the same sauce for the goose as for the gander. If a dairyman will use cream from filthy milk, in which mice have been drowned, for instance; or in which a cow has plunged her dungy foot; or in which the filth from foul hands and soiled udders has flowed, he surely cannot, without a grin of sarcastic maliciousness, put his name to a petition praying that the Board of Health shall "supervise the manufacture and sale of oleomargarine" or prohibiting the use of ingredients other than the caul fat of healthy animals in making that stuff, or the use of coloring matter to disguise it.

Let this thing be done squarely and fairly. Let a law be enacted that any person who sells or offers for sale any butter or cheese or other product of the dairy which is made wholly or in part of any oil or grease, whether it be called oleomargarine or by any other name, or that is not in reality precisely what it pretends to be, and is not conspicuously labeled or branded on the covers of the packages in conformity with its character, shall pay a penalty of $100; half to go to the informer. No dairyman can ask any more than that, and no honest maker of oleomargarine can do any less. Then let the makers of rancid butter look out for themselves, and if oleomargarine beats it out of the market, well and good, for it deserves that fate. H. S.

Feeding Sour Milk to Cows.

Some maintain that feeding sour milk to cows affects their butter injuriously; but we never made sweeter or nicer butter than we have been turning out this spring when feeding sour milk to the cows from whose milk it was made. Last spring we did not feed it; but gave each sixteen pounds of hay and three quarts of oats and corn—cob taken out—ground together, and then the average yield of milk per cow was from 13 to 14 pounds per day. This spring we have been feeding the same amount of hay, two quarts of oats and corn ground together—cob again taken out—two quarts of wheat bran and the sour milk from the herd, and the average yield of each per day, has been from 21 to 22 pounds of milk—an increase of over one-third. The cows are the same as last spring, with the addition of two others—one a cow we bought and which is thought no better

FIG. 196.

than the rest, and the other a two-year-old heifer which gives from 25 to 27 pounds of milk per day now. I don't expect the feeding of sour milk will make so much difference during the latter part of May, June and July, but, after that, I expect as great a difference as now. It is estimated that by using the sour milk in this way, one cow more can be kept for every ten in the herd; but on this point I cannot speak definitely. We take our milk to a creamery, so there is no guess-work with regard to the weight. G. E. NICHOLS.

Chenango Co., N. Y.

EWES FOR MILK AND CHEESE.—These have been so improved in milking capacity in the Department of Aveyron, France, that large flocks give sufficient per head per annum to make over 50 pounds of cheese of finest quality, selling for over 30 cents per pound, making the amount derived from each ewe, $15. In addition to this, she suckles her lamb for a couple of months or so, which is probably worth the cost or more of the keeping of the dam for a year. The best quality of ewe's-milk cheese, is the Roquefort. The process of making this is very peculiar, and requires so much labor and experience in doing it, that we think no people will attempt soon to rival the Department of Aveyron in its manufacture. But there are several other foreign varieties of cheese more simply and cheaply made, and which sell here for 20 cents per pound and more, that we can imitate if so disposed, and as there is likely to be an excess of ordinary-made in our country this season, dairymen would do well to give a part of their attention to the production of such.

BUTTER IN TEXAS.—It is a somewhat strange fact that although no State in the Union supports so large a number of cattle as Texas, butter and cheese are actually imported in large quantities, and among the consumers of these imported articles may be found farmers who themselves keeps small herd of cows. Cattle are there raised mainly for their beef and every effort is aimed at the production of large beef animals, while dairy products are considered to be of less importance. To this end the calves are allowed to run with the herd and suckle their dams at pleasure, and a cow once accustomed to give milk to her offspring will obstinately refuse to be milked.

THE BUTTER COLOR COMMITTEES.—At the late International Dairy Fair, the original committee on dairy butter coloring did not attend, and Mr. John Stewart, Mr. H. C. Sherman and Mr. E. D. Mason were appointed substitutes. After they had served, it was found that Mr. John Stewart was personally

interested in the manufacture 'of hutter color, and, therefore, not elegible. The other members sent in different reports, one being in favor of Wells, Richardson & Co's' well-known Perfected Butter Color, and the other of a Western preparation. This being an equal division of the Judges, the Executive Committee appointed a new committee of Judges, consisting of Mr. John Ellsworth, Mr. Howard Murphy and Dr. Marquis. This last committee, unlike the first, made careful comparative tests of each color exhibited, and were unanimous in awarding the prize to Wells, Richardson & Co.

This statement is made to show your readers the errors made in a statement printed in your columns a short time since, and signed by John Stewart, of Anamosa, Iowa. To those readers of the RURAL NEW-YORKER who know Messrs. Wells, Richardson & Co., or Mr. Van Patten (a member of the firm) who represented them at the Dairy Fair, the statement that they used, or attempted to use, any undue influence with the Judges will be known to be wholly without foundation, and can only reflect on the writer thereof.

ONE WHO KNOWS.

The Herdsman.

GREAT SALE OF JERSEY CATTLE.

ON May 26, the first of two sales of Jersey cattle under the management of Messrs. Peter C. Kellogg & Co., took place in this city, and was remarkable for the high prices obtained for some of the animals. The attendance was unusually large and the bidding extremely spirited. The chief purchaser was Mr. Lawson Valentine, of Houghton Farm, Orange Co., N. Y., who seemed determined to obtain a fine selection of these choice cattle for his Experimental Farm. One of the most notable incidents of the sale was his purchase, for $600, of the bull calf of Col. Hoe's famous cow Alphea, whose large yield of milk produced quite a sensation in 1871, and whose descendants have since well sustained her reputation. Later $1,000 was offered for the calf, but declined, nor would the owner name any figure at which he was willing to sell it. The cows Lass Edith and Myra II. were of very similar strain being full of the blood of Alphea and her full brother, Jupiter, and, moreover, both had been tested very high for milk yield during the current month, both which facts will account for the high prices they brought. The following is a full account of the prices got for each consignment and the average price brought by each lot.

A. B. Daring's lot.—Ramapo, 4,679, bull calf, 7 months old, out of Eurotas, Lawson Valentine, Mountainville, N. Y., $600.

Cornelius Wellington's lot.—Worombo, 4,619, bull calf, 6 weeks old, Jersey Belle of Scituate strain, Moulton Brothers, Vermont, $185; Roma, 9,908, heifer, 4 months old, same blood, same buyers, $240; Superb, 8,554, heifer 21 months, in calf to Black Defiance (double grandson of Jersey Belle of Scituate), P. Thorne, Dutchess Co., N. Y., $250; Miss Muffit, 9,907, heifer, 18 months, in calf to Black Defiance, John I. Holly, Plainfield, N. J., $400. Total for four head, $1,075. Average $268.75.

John T. Foote's lot.—Little Ethel, 5,864, cow, 3½ years, Thomas Barbour, Paterson, N. J., $175.

F. H. Falle's lot.—Butter Boy, 3,242, bull, 3 years out of Oak Leaf, Lawson Valentine, $150; Winglet 1,230, cow, 13 years, imported, Eli Barnett, Long Island, $85; Myrita, 2,819, cow, 7 years, by Mercury, W. Crozier, $175; Trudie II., 4,084, cow, 5 years, Moulton Brothers, $400; Myra, II., 6,259, cow, 4 years, L. Valentine, $1,400; Lass Edith, 6,290 cow, 4 years, L. Valentine, $1,425; Tasma, 7,200, heifer in milk, 2 years, James Stillman, New York, $485; Lass Edith II., 10,036, heifer, 14 months, Moulton Brothers, $325; Donnabel, 10,037, heifer, 14 months, J. Stillman, $810. Total for nine head, $6,055. Average, $672.78.

John D. Wing's lot.—Babylon, 4,723, bull, 22 months, dam Echo, II., J. N. Borland, New London, Conn., $110; Maple Blossom, 7,357, heifer, in milk, 27 months with heifer calf at foot two days old, Thomas Barbour, $580; Empressa, II., 7,362, 2 years, by Lord Lawrence, with heifer calf one day old, Thomas Barbour, $835; Godiva II., 10,094, heifer 18 months, by Niobe Duke, T. Barbour, $325; Timid, 10,095, 18 months, by Niobe Duke, T. Barbour, $200. Total for five head, $2,050. Average, $410.

B. F. Bowditch's lot.—Mattette, 5,881, cow 3½ years, Edwin Thorne, $180; Nix, 6,800 cow, 2½ years, L. M. Rutherford, Hackettstown, N. J. $125; Niopo, 7,494, heifer, 22 months, John Taylor, Bayside, L. I., $260; Nigella, 7,895, heifer, 22 months, J. Stillman, $155; Nitrate, 7,896, heifer, 22 months, L. M. Rutherford, $200; Hilla, 7,898, heifer, 20 months, E. Thorne, $205; Bibi, 7,899, heifer, 20 months, T. Barbour, $225; Nilette, 7,897, heifer, 21 months, E. Thorne, $200; Duxilla, 7,900, heifer, 19 months, W. M. Oliffe, Mott Haven, N. Y., $270. Total for nine heads, $1,820. Average, $202.22.

J. L. & G. S. Spofford's lot—Lottie Pearsall, 2,652, cow, 8 years, by Southey, Hoover & Co., Columbus, Ohio, $130; Lady Lurgan 3,531, cow, 6 years, same sire, E. Thorne, $190; Sunlight, 4,349, cow, 4½ years by Trusty, T. Barbour, $310; Lady Adelaide 4,350, cow, 4½ years, by Sooty Pioneer, T. Barbour, $250; Honeydrop, 10,032, heifer, 3 years, by Guy Warwick, in calf by Sly Boots, A B. Darling, $605. Total for 5 head, $1,395. Average, $275.

J. M. Mackie's lot.—Gray Hebe, 4,907, cow, coming 5 years old, J. Stillman, New York, $130; Pine Cliff Grand Duchess, 6,769, heifer in milk, 28 months, L. M. Rutherford, 135; Handsome Hebe, 6,763, cow, 3 years, 4 months, L. M. Rutherford, $180; Belle of Barrington, 5,830, cow, 3 years 9 months, D C. Waterhouse, New Haven, $205. Total for 4 head, $650. Average, $162 50.

Charles R. Charity's lot—Roselle of Ridgewood 7,192 cow, 3 years and 3 months, by Duke of Burlington (a son of Favorite of the Elms) W. S. Wickham, $100; Rosedale, 2,235, cow, 6½ years, T. H. Falle, $131. Total for two head, $231. Average, $115.50.

D. F. Appleton's lot.—Pearl of Ipswich, 5,582, cow, 4 years, by Agawam; T. Barbour, $200; Hannah of I., 3,923, cow, 5 years and 4 months, same sire, J. I. Holly, $330; Amy of I., 5,583, cow, 3 years and 10 months, by Briton, Hoover & Co., $190; Girl's Duchess, 5,589, cow, 3 years and 4 months' by Royal Duke of Ipswich (son of C. L. Sharpless, Duchess, 101) J. Stillman, $220; Bright Eyes of I., 9,214, heifer, 9 months, by Duke, Jr., T. Barbour, $100; Diamonds of I., 9,215, heifer, 8 months, same sire, J. D. Wing, $90. Total for six head, $1,130. Average, $188 33.

Cream Cottage Stock Farm lot (John Vasseur, Manager).—Imogene, 4,552, cow, 4½ years, J. C. Besson, Hoboken, N. J., $80; Blackie, 9,370, heifer, 12 months, J. D. Wing, $80. Total for two head, $160. Average, $80.

J. C. & D. Pennington's lot.—Ocean Queen, 1,405, cow, 9 years, imp., Hoover & Co., $100; Creole Louise, 9,271, heifer, 2 years and 3 months, T. Barbour, $175; Aspirante, 9,272, heifer, 2 years, Hoover & Co., $170; Consort, 9,273, heifer, 13 months, D. Collamore, $75; Bergere, 9,274, heifer, 12 months, T. Barbour, $120. Total for 5 head, $640. Average, $128.

H. C. R. Watson's lot.—Councillor, 4,468, bull, 26 months, sire imp. Tormentor, Moulton Brothers, $100.

William Watson's lot.—Ninette, 4,291, cow, 5 years, S. B. Smith, Roxbury, Conn., $180; Young Kitty, cow, 3 years, imp., T. Barbour, $105. Total for 2 head, $285. Average, $142 50.

Total for 56 head, $16,366. Average, $292 25.

THE JERSEY CATTLE CLUB.—The adjourned meeting of the American Jersey Cattle Club to receive the report of the committee to whom was referred the subject of a new constitution for the government of the club, at the last annual meeting, April 21, was held on Tuesday at the St. James Hotel in this city. The committee appointed to act in the matter consisted of Messrs. D. F. Appleton, John D. Wing, H. M. Howe, S. J. Sharpless and F. A. Potts. Besides these there were present our esteemed contributor, Mr. R. Goodman, Lenox, Mass., and Messrs. George E. Waring, Jr., Newport, R. I.; T. H. Malone, Nashville, Tenn.; Dr. Alsop, Mass.; W. T. Taylor, N. Y.; T. J. Band, Sing Sing, N. Y.; P. F. Billinger, Herkimer, N. Y.; Samuel Galle, White Plains, N. Y.; Benjamin Swan, Jr., Oyster Bay, L. I.; Benjamin Kittredge, Peekskill, N. Y. The committee presented its report and after a somewhat lengthy discussion of some of its features, it was adopted. The object of the association is to advance the breeding of Jersey cattle and to publish a Herd Book for the registration of pedigrees. The association has now over 15,000 animals registered in its Herd Book. The officers of the club are:—R. Goodman, Pres.; Thos. J. Hand, Treas.; George E. Waring, Jr., Sec.; Executive committee, T. H. Malone, H. M. Howe and W. S. Taylor.

CONTROLLING THE SEXES OF ANIMALS.—Mr. D. D. Fiquet, of Houston, Texas, in a letter to the Country Gentleman says, he has repeatedly done this, and is confident he can continue it indefinitely, by food alone. When he wishes to obtain a heifer calf, he feeds the cow light, cooling food for some days before putting her to bull, at the same time he feeds the bull with rich, heat-producing food. When he wishes to obtain a bull calf, he reverses the system. He experimented on 18 cows of his own and three of his neighbors, all of which bore calves of the sex he desired. He appends certificates of his neighbors as to the truth of his statements.

For years past we have heard of many systems of controlling the sexes of offspring, all of which were confidently believed in by their discoverers, but every one has failed when put to a general trial. If this of Mr. Fiquet should succeed, it will prove a great boon to stock breeders of all kinds of animals; for it is a matter of great importance to them to be able to control the sexes of their produce. Sometimes they are in want of females from certain of their animals, at other times of males only, and their success or failure in their business, often depends upon whether they do or do not succeed in this.

Sheep Husbandry.

SHEEP.

PERHAPS no branch of profitable stock growing has commanded so little systematic effort here as sheep raising. Almost every farmer has kept a few—say one to three or four dozen as a home necessity, while a very few make sheep a specialty. But the present favorable price of wool, and the growing demand for mutton, are creating a "boom" in the sheep business. While the motive, in the main, is profit from buying and selling, I think the result will be a forward movement toward a profitable business, to which this part of the country is surely adapted—systematic sheep husbandry. As evidence of such result, farmers talk of "going into sheep." Many have increased small flocks by purchase, and express an intention to breed up, by the use of blooded bucks. This, to my mind, is the *poor man's* best method of obtaining a paying flock of improved sheep. Let him buy what good young native ewes he can *pay and care for*, and then breed them to the best bucks obtainable.

That sheep will succeed in this Ozark mountain range, is suggested by the healthfulness of small native flocks without more care than stock cattle get—liberty to care for themselves. Pure atmosphere and dry range are favorable to the health of sheep. We have both here. Blue grass, perhaps the sheep's choice of all grasses, only wants opportunity here, and then as fast as this occurs by failure of coarser grasses, it grows spontaneously as though some Kentucklan had passed this way, broadcasting the public pastures—prairie and woodland—on every hand.

The price of stock sheep has wonderfully advanced in the last 18 months. Good young native ewes then cost $1.25; now, $4.

Springfield, Mo. M. O. T.

The Poultry Yard.

CHICKEN CHOLERA.

PASTEUR, the great French chemist, has made public, through the French Academy of Sciences, the result of his study of cholera in fowls. He declares that chicken cholera is caused by a microscopic parasite—"le microbe"—and so carefully has he studied it that he knows what it feeds upon and can produce and kill it at will. It finds its food in the body of the fowl, and when the microbes have eaten all of this, they die of hunger, and the broods are afterwards proof against the disease, but, unfortunately for them and their owners too, before they reach this happy condition they generally die. The experiment by which he proved the truth of his theory is the most interesting part of the discovery.

Of eighty healthy fowls, which had never had the disease, twenty died immediately after being inoculated with the cholera poison in a virulent form. The poison was then very much reduced in strength, and a second score of the fowls were inoculated with it. They all suffered from the disease in a slight degree, but they all recovered, and, when afterward inoculated with poison of full strength only eight of the twenty died. A third lot of twenty was then inoculated twice with the weaker poison, and only five died when they were afterward tested with the stronger "mixture." The final score of fowls were inoculated four times at regular intervals, and thereafter it was impossible to give any one of them such a dose of microbes as to cause its death. The conditions of the experiment are said to have been such as to leave no room for doubt as to the results obtained. Consequently, it appears that chicken cholera must be added to the number of diseases preventable by inoculation.

Pasteur thinks there is a relation between chicken cholera and the disease called "sleeping sickness," common among the negroes of Senegal, which is said to be caused by eating fowls afflicted by a certain throat disease. Some sanguine men see in the discovery of this relation between man and the brute an analogy to that made by Jenner, 80 years ago, of the relation between small-pox in the human subject and cow-pox in the brute; while others see afar off in it the possibility that cholera, and even yellow fever may be placed beside small-pox in the list of preventable diseases, by the use of the virus from some one of the lower orders of creation.

Field Crops.

HAY AND HAY-MAKING.

HENRY STEWART.

IF one were asked what is hay, he would be apt to reply "dried grass." But this is a very incomplete definition; he might as well say that bread is a mixture of flour, water, a little salt, and some yeast, quite ignoring the chemical changes which occur in the fermenting and the baking of the bread, and upon which much of its nutritive quality and the whole of its healthful digestibility depend. So with hay; it is grass, not only dried, but cured; and in the proper curing a considerable change occurs in its condition, which adds to its nutritive value and its digestibility. I do not know if accurate analyses have been made of well-cured hay as have been made of green and dry grass. I have met with none; but I know that a very nutritious drink may be made from hay, and that the value of the decoction depends altogether upon the manner in which the hay has been made. The tests to which I have been used, are cows, the milk pail, and the churn; and many others have made observations in the same laboratory, with the same result, viz.: that there are great differences in hay, all depending upon the time of cutting and the manner of curing.

While these tests are satisfactory in practice, it is desirable that some accurate analyses should be made of hay as found in the farmers' barns, made from grass and clover, or clover alone, cut when fully ripe, roasted in the full sun and carried, all brittle and parched, to the barn; and that made from grass or clover, or both together, cut just past the blossom or in full blossom, and cured in the cock, without exposure to the scorching sun, and with the usual fermentation which occurs under these circumstances. It would be of great interest to know precisely in what respects the feeding value of the hay is increased in the curing in such a manner as to affect not only the yield of milk, but the production, quality, and color of the butter. Professor Storer has given us some exceedingly interesting papers in the Bussey Institution Bulletins, and he would add to the obligations which the agricultural public owe to him, if he would investigate this subject of hay the coming season and explain these points.

The fact remains, however, that hay is as it is made, good or bad; and it is made or marred in the cutting and curing. Ripe grass will not make good hay, because in the ripening the soluble or digestible portions are converted, in part, into insoluble woody fiber; as, for instance, in red clover in which the difference makes a loss of nearly one-third of the albuminoids and carbohydrates, and an increase of more than a third in the crude indigestible woody fiber, as shown by the tables of Wolff and Knapp. Notwithstanding that this fact is well known, the idea is prevalent that hay should be made of well ripened grass, and more than half the crop is thus made, with a loss of one-third of its feeding value. Another loss is made in the usual system of curing. The grass is cut and lies in the swathe until it is dried; when it is at once raked up and drawn to the barn or stack. The two losses together cannot be less than 50 per cent. of its value; and, in fact, in feeding such hay after having fed that made as it should be, I have found the shrinkage of milk to be fully one-half, unless the deficiency has been partly made up by an extra allowance of meal. But it cannot wholly be restored even then. Let us follow a crop of hay from the field to the barn and recount the process as it should be.

When the clover is in full blossom, and here and there one may see a brown head, is the time to cut it? If timothy has been sown with the clover, that is hardly yet in blossom, and then, one has "Hobson's choice"—either to spoil the clover by delay or lose something by cutting the timothy too early. But the latter is preferable: the loss is one of the disadvantages of mixing this grass with clover. I prefer orchard grass to timothy, because that and the clover are in prime order for cutting together. The mower is started as soon as the dew is off, and if there is not help to turn the cut grass in three hours after it has been cut, the cutting should cease and all hands go to turning. If one has a hay tedder, so much time will be saved in the hay-making as will go a great way towards paying for the implement in one season. As soon as the grass which has been cut—and which will have been about one acre per hour with a fast-walking team and in good grass—has been turned (the time will depend somewhat on the weather), the horse rake should be put to work, and as the hay is gathered into windrows, it is put in cocks of about 200 pounds, which will be about four to five feet in diameter and five or six feet high. These should be put up carefully and the sides raked down to shed rain if a shower should come on. When clover alone is grown, the cocks should be made somewhat smaller, about four feet wide and high, and they should be opened after two days, turned and put up again; or left longer in the windrows. Clover being more succulent than grass, needs more careful drying, but it may be more easily spoiled by over-drying.

Hay caps are very convenient to have, and cost about 18 cents each. They are squares of brown cotton sheeting, 48 to 54 inches wide, with short twine loops at the corners and a hickory peg a foot long, tied to the loop with a piece of twine also a foot long. These will be completely water-proof if steeped in sugar of lead solution and dried. Ten of these will cover a ton of hay and make it safe against a week's rainy weather if need be. The caps are thrown over the top of the cocks and held down by thrusting the pegs through the loops into the hay. To be safe against a sudden thunder storm is to be happy, in haying time and one may rest easy when the thunder rolls at night, if the hay is cocked and capped.

As soon as the hay is raked, or sooner if there is a spare horse, the mower is started again, and cuts until night. This process is repeated until all the hay is made. The cocks will heat and sweat, and it is this fermentation which improves the hay, and by which the cellular fiber is, in part, changed to starch, or at least is made more digestible; the starch is changed in part to gum and possibly in the ripening process which goes on, some sugar may be formed. This *may* be, if it is so or not, no one knows, that I have been able to learn of, whatever may be thought or believed; and this is a point which should be investigated and set at rest by some competent person. The fact is that this curing and ripening in the cock is a very important part of hay-making; some farmers have it done in a fashion in the barn, by putting away the hay

somewhat damp, but there it cannot be controlled as it can be in the cock. It will be wise to watch the cocks and perceive, by pushing in the hand, if all is safe within them.

When the hay is all made, it should be put under cover at once. A roof of some kind over it is indispensable. A hay shed can be put up for a very small sum, and if there is not room in the barn or over the stables, it will be an economy to provide a long hay shed 20 feet wide, made of posts 16 feet long set eight feet apart along the sides, joined at the top by plates, and braced. A single roof of half-inch dry boards, set close together, will be sufficient to carry off the water, the little which may enter at the cracks will do no harm. Every two feet in length of such a shed will hold a ton of new hay. When the hay is drawn one man or boy should go about half an hour ahead of the wagons, and throw over the cocks and open them to give the hay a final airing and evaporate any excess of moisture. In feeding hay thus made, one secures every good quality of the grass without loss and adds to them somewhat in the process of curing.

Scientific and Useful.

THE TESTING OF VINEGARS.

M. BENJAMIN, PH. B.

In the January 24th issue of the RURAL NEW-YORKER, among the questions given in "The Querist" is one relating to vinegar testing. Inasmuch as the writer has been further questioned in regard to the methods employed, it may not be considered amiss to treat the subject more fully.

The strength of vinegar, or, more properly speaking, the amount of acetic acid it contains, may be estimated by means of a hydrometer, called an acetometer; just the same as whiskey and other liquids containing alcohol are tested by means of an alcoholometer. Two varieties of the acetometer are made and sold, one of which is graduated from 0° to 6o Beaumé; the other is divided into 100 parts and gives the percentage, in grains, of acetic acid contained in the sample. However, when we come to consider the fact that all vinegars containing less than three per cent. of acid, are said to be diluted with water, and that the strongest vinegar holds less than five per cent. and also that its specific gravity, on the scale of which water is the unit, varies but from 1.017 to 1.019 in malt vinegar, and from 1.014 to 1.022 in wine vinegar, it will be seen that the hydrometer yields results which cannot be relied upon. If such results were accepted, it would be a very simple matter to dilute the vinegar with water and then add some heavy, soluble salt which would increase the density until the desired specific gravity was secured.

The other methods employed in tested vinegars are mostly based on the determinations of its acidimetry.

A method given by Blyth consists in taking 110 cubic centimeters of the sample and distilling it until 100 cubic centimeters have been drawn over. The distillate will contain 80 per cent. of the acetic acid. Its specific gravity may then be taken, from which the percentage is readily calculated. It is necessary, however, to both test the distillate for hydrochloric acid and to determine the strength of the original sample in order to obtain correct results.

Another method and the one which is probably used the most, is the direct estimation of the acidity of the sample. This is effected by the use of a standard solution of sodic carbonate. This solution is made by dissolving 53.043 grammes of pure dry sodic carbonate in one litre of distilled water; one cubic centimeter of this solution is equal to one cubic centimeter of acid; 530 grains dissolved in 10,000 grains of water is also used to make the standard. One fluid ounce of the vinegar is poured out into a small beaker or flask and a few drops of litmus solution added; this will immediately turn red on account of the acid in the vinegar. The standard solution is then poured in from a burrette, drop by drop, until all effervescence ceases (owing to the liberation of carbonic anhydride) and the blue color appears. Towards the end of the operation it is best to boil the liquid so that the last traces of acid may be expelled.

Otto's acetometer is sometimes employed for this purpose. This instrument is a glass tube engraved with two scales on its surface, one at the bottom for measuring the vinegar and one at the top for measuring the test liquid. A quantity of litmus solution is poured into the tube and then either five or ten cubic centimeters of the sample added, that is, up to the mark where the upper graduated scale begins. A standard solution of 1.369 of ammonic hydrate is added until the acid is neutralized and the liquid becomes blue. The number of cubic centimeters used indicates the percentage of acid.

The objection to the use of these last three methods is that they are only reliable in case the vinegar contains no other acid than acetic. The adulteration of all sorts of food and of articles used in the household economy has become so common that even vinegar is rarely to be bought pure.

The most common adulterants are sulphuric acid, nitric acid, tartaric acid, hydrochloric acid and sometimes metallic salts. The first four must be eliminated in order to obtain the correct amount of acetic acid contained in any sample, and the latter adulterant would vitiate any results secured by means of a hydrometer.

Miscellaneous.

WHAT OTHERS SAY.

KINDNESS IN HANDLING DAIRY STOCK.—It is important that dairy stock, from the young calf to the old cow that is being fed for beef, should be handled and treated kindly. If a calf is handled roughly and becomes wild and vicious thereby, when it becomes a cow you may expect the same, but if handled carefully and treated with kindness, when grown up she will be mild and gentle. It may not always be so, but in general it is. There have been many cows spoiled by the person having the care of and milking them, by whipping or frightening them whenever they come in his way, or if when milking, a cow hoists her foot or kicks (which is generally caused by pain), such a fellow stops milking and commences whipping, or, worse, kicking the cow, and she becomes enraged, holds up her milk, kicks back, and is finally ruined. Never whip a cow for kicking, if she does knock the milk pail out of your hand and sometimes upset and knock you, but be kind and gentle with her, and milk her out with as little excitement as possible, and if she gets over her kicking propensity it will be by mild and not by harsh treatment. Never whip a cow because she kicks, for it will do no good, but will do a great deal of harm." So speaks Mr. Parcell in the Report of the N. J. A. S.

MILK AND BUTTER PRESERVATIVES.—A high German authority in dairy matters, Dr. De Kleuze, of Munich, says that the preserving compounds so widely advertised are nearly always composed of varying proportions of bicarbonate of soda, sometimes mixed with common salt, boracic acid, borax, mixtures of borax with common salt, salicylic acid, and of late a mixture containing half of boracic acid and half of sulphate of potassium. Bicarbonate of soda has been in use a long time, and is still largely used. It acts by neutralizing the lactic acid which is formed in the milk, but its action is not satisfactory, as it is liable to give the milk a soapy taste. Salicylic acid is also unsatisfactory as well as expensive. Boracic acid is a powerful antiseptic, and preferable to borax.

For dairy use Dr. De Kleuze finds the above-mentioned mixture of boracic and sulphate of potassium superior to all other preservatives, and perfectly harmless as well as cheap. It can be obtained at any druggist. Sixty grains to a gallon of milk or a pound of butter are sufficient to prevent souring or rancidity.—Scientific American.

THE RAGE FOR SENSATION.—"The Hour" remarks: "Nothing is more characteristic of American life than the extent to which it is influenced and colored by sensational elements. Every year, nay every month and every day, develop fresh evidences of this tendency. It is observable alike in literature, business, politics and society. Even religion, or at least the outward manifestation of it, is not free from this besetting evil. The preachers who attract the largest audiences are invariably of a sensational turn. Many churches are social and religious clubs, in which wealth and position in society are the sources of spiritual pride as well as of secular exclusiveness."

AGAIN: "The representative men in our halls of legislation owe their position not to solid, but to showy and superficial qualities. Instead of being well grounded in political history and philosophy, they are versed in the wisdom of caucuses and the arts of conventions. They compass their ends, not by argument, but by manipulation. Their speeches abound in pretentious generalities which mean nothing, and in asseverations of principles which they never dream of putting into practice. The secrecy with which they pull their wires makes their triumphs appear only more startling. They may say much or little, but alike in what is said, and in what is left unsaid, is the suggestion of a desire to create a sensation. But adroitness of political management is seldom found united with elevation of character or aim, and thus it is that our shrewdest politicians, in sacrificing so much to the sensational, lose the simplicity and strength of independent manhood."

By setting trees twelve feet apart, in a very few years they can be made use of for live fence posts; and by using them for this purpose the fence will not be tumbling down every two or three years. Maple, Chestnut, Butternut or some such trees should be used, as they will serve two purposes:—for fence posts, and then the Maple will give sugar, the others nuts.—New England Farmer.

IF churns are advertised to make butter in five minutes, one may be quite sure that they are bare-faced humbugs. I saw once a trial, says Dr. Kleuze in the London Agricultural Gazette, at which churns were produced which had been advertised to make butter in three minutes. Well, the minutes grew and swelled into quarters of hours, and, in fact, they were the longest minutes I ever passed.

FOR BEEF, MILK, CHEESE AND BUTTER.—In those sections of country where beef is an object, the Short-horns will answer the best purpose; for the production of milk and cheese, the Ayrshires, while for butter-making the Channel Island cattle hold the first rank, and of those my preference is for the "thoroughbred Jersey."

So?—Mr. Conover, in the New Jersey State Board of Agriculture's Report, says: "To produce a poor grade of butter will not pay, because oleomargarine or refined tallow can be produced so much cheaper (and in fact really a better article than rancid butter), that it will ultimately take the place of all the poor grades of butter."

TO MAKE SHEEP PAY.—To benefit to the full extent by raising and keeping a numerous flock of sheep, roots must be grown for winter use, and when this is found to be true, and roots are grown on a proper field system, so as to cost but from five to eight cents per bushel, sheep husbandry will go ahead.

MINERAL AND FARM MANURES.—Dr. Lawes says: "I may say that 42 pounds of nitrogen, applied in the form of nitrate of soda, with mineral manures, to one acre of barley, has, for 25 years in succession, produced as large a crop as an annual application of 14 tons of farm-yard dung per acre."

MENDING ROADS.

A FAVORITE method with too many of the overseers of roads, is to repair them by scraping out the soft, loose earth or mud from the ditches alongside, and then gathering all the weeds from the gardens or other places, and loose trash generally to fill up the holes. These soon rot, the loose earth is ground out, and there is left a mud hole bigger and more unsightly than the original one. Such holes should be invariably filled up with pure gravel, if to be had; if not, with the driest, hardest soil to be found near by. A subsoil is better for this than a surface soil, as it has less vegetable matter in it to decay and form mud. After roads are smoothed and all ruts and holes filled up, they should have a coat of gravel, if to be obtained even at a considerable cost, unless they are macadamized. Then they can be kept hard, smooth and dry for a long time, without additional expense.

UTILIZING SEWAGE.—The chemist says that 200 ounces of ammonia exist in the average annual discharges of people. This is now nearly all lost from want of proper earth or water-closets and applying their contents to the soil. Could this be done, millions of bushels of grain, and thousands of tons of grass would be added to the world's products; many diseases which now afflict humanity would be stamped out, and the water we drink would be purified from much that is deleterious. We little know now how often rain water, leaching through fecal matter, finds its way into springs and wells, and yet when drawn out, it looks so pure and tastes so well, that the poison within it is not suspected; it cannot always be detected even by the most perfect analysis.

TO MAKE PLUM TREES BEAR.—When the blossoms are coming out, dig a trench around close to the tree and fill it with boiling water. This will kill the curculios before they leave the ground, and you will be rewarded with trees loaded with luscious fruit. Try it. J. F. C.

Industrial Topics.

COLLAPSE OF THE IRON BOOM.

As a rule, "booms" are worked in the interests of certain classes, and when the reaction comes, as come it always does, some have to suffer, and it not unfrequently happens that those for whose special benefit the "boom" was started are among the crippled. During the past spring, farmers as well as others of the general public, have been mulcted pretty heavily by the unreasonable rise in the prices they have had to pay for all goods into the manufacture of which iron entered. This iron "boom" began last summer when the "iron men" saw that the return of prosperity would cause such an advance in the railroad and other industries which make large use of the commodity that the demand for iron would, for some time, greatly exceed the supply, and that before the furnaces that were out of blast could resume operations, or the rolling mills turn out the necessary supply, they could bring about a combination that could fix almost its own price on the product so much in demand.

Last summer, before the "boom" set in, pig iron was worth from $16 to $17.50 per ton; bar iron, $1.75 to $2.25 per cwt.; nails, $2.50 per keg, and other articles of iron in proportion. By the following December, however, prices had advanced from 60 to 100 per cent. and in February, '80, No. 1 pig was worth $50 per ton; bar iron, $4 per cwt., and nails $5.75 per keg. These were the ruling prices at the time when the manufacturers were compelled to buy. Plows and all other kinds of agricultural implements as well as machinery for the season must be manufactured at once, and the makers were compelled to pay the advanced rates for the crude material and, in their turn, to put up the price of the manufactured goods to the consumers. Some of the most wealthy and enterprising of them began to import iron from Europe, for they found that, after paying the expense of transatlantic handling, the ocean freight and the import duties, they could lay down the foreign product even as far West as Chicago at figures lower than they would have to pay for the iron made in this country. This introduction of foreign competition, together with the enormous amounts turned out from the new furnaces that were here and there started in the United States, and the long-disused old ones that were relighted in response to the heavy demand and exorbitant prices, soon overstocked the market and broke all the iron combinations, so that last April pig iron dropped $10 per ton; and at the present time it is selling for about $22, and nails at $3 per keg.

This fall, however, comes too late to be of any material benefit to the farming community as far as the prices of agricultural tools and machinery are concerned, for the iron in nearly all these at present on the market, was bought at the high figures that ruled last winter.

The only people who have reaped a benefit from this iron "boom," were the speculators, who bought heavily at low figures on a rising market, and sold out at high prices, and some of the furnace men and ore owners. Many of the speculators, however, were caught on the fall, with large high-priced stocks or contracts on hand, and have lost all or a great part of their winnings, while many of the furnace men have hardly been compensated for the heavy cost of starting their works, and others have on hand a hateful burthen in the shape of onorous contracts with the ore men. Of the latter too, many have the regret of having missed heavy profits by holding their stock in the hopes of higher prices.

The Millers' International Exhibition.

This Exhibition opened in May 31st, at Cincinnatti, Ohio, and will remain open until June 26. It is attracting all over the country even more attention than its originators anticipated, although the preparations made for it both here and abroad must make it the finest display of the sort that has ever been made in any country. The large hall of the Permanent Exhibition building is filled with all kinds of milling devices and machinery contributed by our own country and Europe, including ten complete flouring mills, showing in actual operation all the new processes of making flour, feed, etc., etc. There will also be a complete display of cereals of all sorts, as well as of flours, feeds, breads, cakes, etc. and a fine exhibit of the various methods of bread-making in use in all parts of the globe. Such an Exhibition will be of great use and interest not to the millers alone, but to the farmers of the country also, and the general public; for whatever cheapens or improves the processes of converting grain into flour is of importance, alike to the producers of the former and the consumers of the latter. Moreover, it will tend to enlarge our foreign markets for milling machinery, especially in Great Britain, for so much attention has of late years been bestowed on this branch of industry by the inventive genius of the country, that our machinery and processes are now ahead of those of any other country, and this Exhibition will serve to demonstrate this fact to others, and so secure their trade. Doubtless also, comparison of our own goods with those of other countries will suggest still further improvements in some of the former, and lead perhaps to the introduction of some of the latter among us.

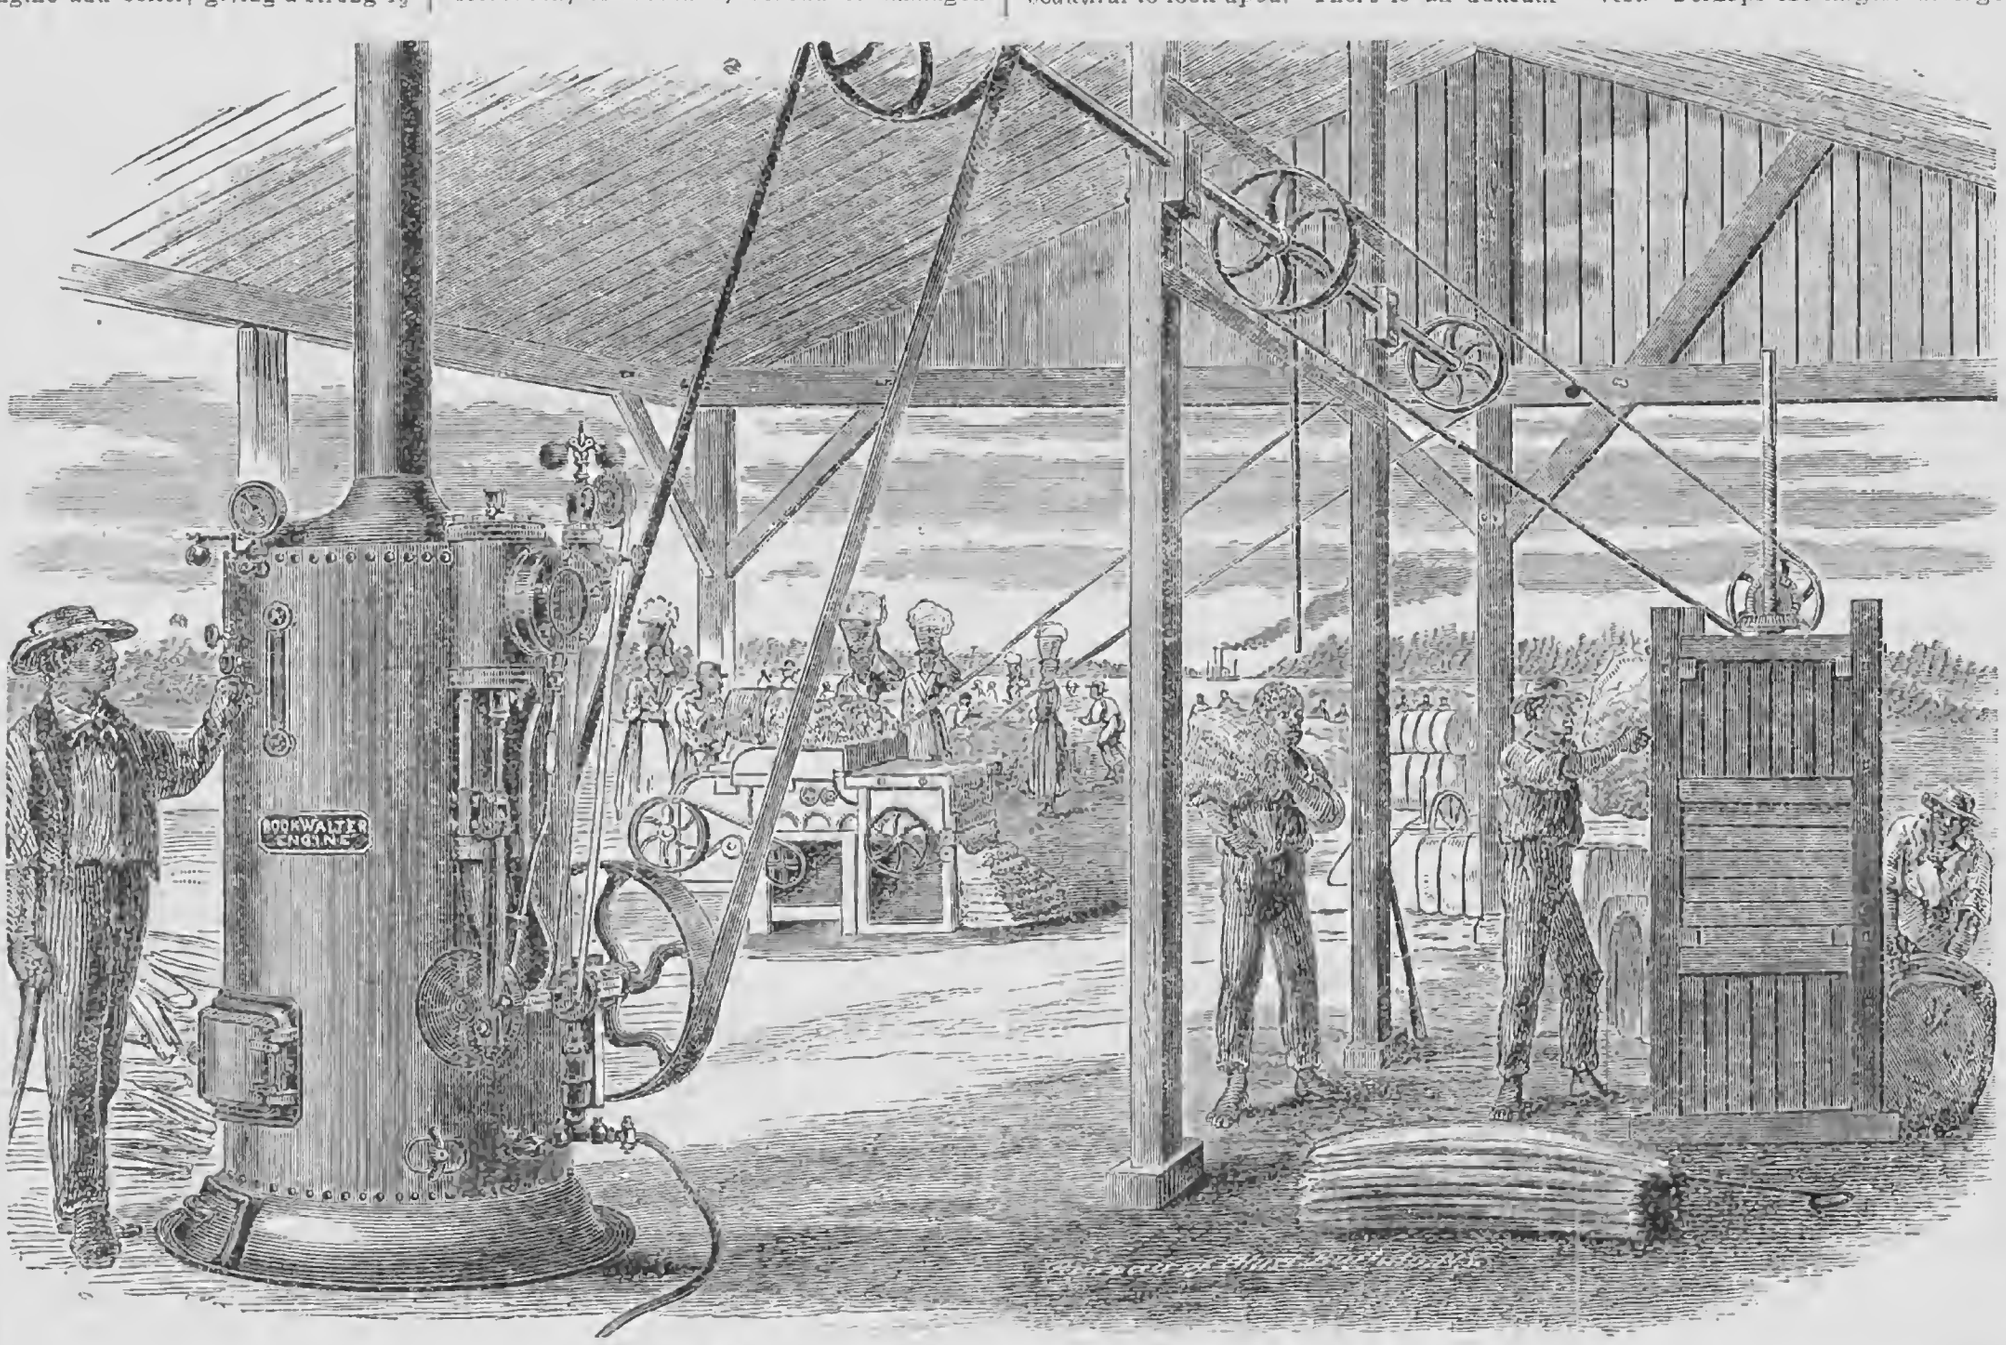
This is the first Exhibition of the kind—international in its scope—which has ever been held in the United States or any other country, and the prospect is that it will be crowned with the success, the labor, foresight and great enterprise of its originators richly deserve.

Industrial Implements.

THE BOOKWALTER ENGINE.

We have frequently dwelt in these columns upon the numerous economical advantages of steam power for many agricultural purposes. Among the most obvious of these are:—driving grain thrashers, feed mills, corn mills, wood saws, cotton gins, presses, etc. The great reduction in the price of engines and the many improvements lately made in their construction remove obstacles to their use, that formerly existed. At this day engines can be procured so simple yet complete in their construction that any ordinary farm hand can run and manage them. In the very front rank of this kind is the Bookwalter engine, which has won a highly favorable reputation throughout the United States and in many foreign countries. It is widely in use for driving all sorts of machinery, and those who have tested its many merits are loud in their praise of its cheapness safety, durability, power and thorough efficiency. We have recently received from its manufacturers, Messrs. James Leffel & Co., of Springfield, Ohio, a very neat pamphlet of 38 pages, giving prices and full description of this engine, and containing a number of letters from customers who have tested it, together with a good deal of other interesting information. These pamphlets are sent, free, on application to all intending purchasers of steam power.

The accompanying cut represents the Bookwalter engine driving a cotton gin and press, as many of our readers in the Cotton States have doubtless seen it, for the engine has had a wide sale in that section. It will be seen that the belt on the engine pulleys runs direct to a suitable pulley on the line shaft and that the gin and press are driven by belts attached to pulleys on this shaft. Of course, the same arrangements will answer for driving corn mills, wood saws and various other kinds of machinery. As important as steam power is to many of our Northern farmers, it is of much greater importance to the Southern cotton planter, and since the recent introduction of improved engines planters find that they cannot afford to wear out their horses and mules during the ginning season, when good, reliable, efficient and cheap steam power can be had for the purpose, which will do so much more and better work. Messrs. James Leffel & Co have fully demonstrated that a good, safe and reliable engine and boiler, giving a strong 4½ horse power can be made for the low price of $280, and one of 6½ horse power for $370. A good engine at such low prices will prove of special benefit to the agricultural interests of our country, and we trust many readers of the RURAL NEW-YORKER will deem it to their interest to avail themselves of the opportunity of making so desirable an investment.



THE BOOKWALTER ENGINE AT WORK.—Fig. 198.

REMOVAL.—Lewis Schilling, the originator of the celebrated Premium Bone fertilizers, has removed from Salem to Alliance, Ohio, accepting the presidency of the Excelsior Fertilizer Co. at that place. He now has two large factories at work and will soon be able to fill all orders for his celebrated brand of fertilizers.

Everywhere.

RURAL SPECIAL REPORTS.

ARK., Greenwood, Sebastain Co., May 22.—No rain since April 28, until a light shower today. Wheat crop not up to the average. Early-sown is now ready for the reaper and thrasher. Wages $1 per day. Oats not half a crop, and headed. Irish potatoes a light crop, but many farmers will plant for a second crop, in June. Considerable late corn will then be planted. The recent dry weather does not seem to injure cotton. The most of it looks well, but the leaves of corn in some fields begin to curl. Blackberries are half grown, and early peaches will soon ripen. R. R.

ILL., Baldwin, Randolph Co., May 22 —We are having splendid weather for all kinds of grain. We have had plenty of rain, but will need more to keep things growing. Wheat is nearly all headed out and to a person riding along the road it looks as though we were to have, if anything, a better crop than last year; but one who closely inspects the growing grain will find that the outlook is not nearly so favorable as at this time last year for as great a yield per acre as that of last harvest, though owing to the increased acreage about as heavy an aggregate yield may be obtained. Farmers who have held back their wheat for higher prices now are somewhat "in the dumps" at the fall of prices, and as there seems to be slim chances of a rise, they are selling a considerable quantity at figures much below those obtainable last winter. The prices now do not go over a dollar a bushel, while some time ago as much as $1.25 could be readily obtained. During the past winter wheat was damaged more than usual; when thrashed the weevil infested most of it, and afterwards it heated in the granaries, and that which was kept till now is mostly musty and brings only from 75 to 90 cents per bushels, its retention entailing a loss of from 35 to 50 cents per bushel on the owners. When to sell his produce is the puzzling question for the farmer. While the market is advancing he naturally waits to see how high it will go in order to sell at the topmost figure, and when a drop occurs he waits to see whether prices will not go up again, and all the time his stores may be robbed by vermin or damaged by other causes. For myself I think the best help towards forming a correct judgment in such matters is a careful perusal of a good agricultural paper, for by studying the markets in it and the frequent hints and information given here and there with regard to the state of the crops and markets in other States and countries, one is in a fair position to form a correct opinion as to the best time to sell his products—especially if he is not too greedy, and is willing to sell at a fair profit rather than run the risk of a loss. For, of course, in all such cases a man becomes a speculator by holding his crops back after a good price can be obtained for them, on the chance of getting a better, and as those whose business is speculation are better "posted," it is only natural the novice should often meet with reverses in competing with them in their own business. Corn is up in first-rate condition and is being promptly cultivated. Oats look well. There are assurances of an immense crop of fruit, and altogether our prospects are fine for an abundant harvest. N. J. S.

IND., Hall's Corners, Allen Co., May 24.—The Ennobled Oats are about 15 inches high and are growing fast; the Cow-peas are very nicely up and growing well; my Mangels are just coming up; the Cuthbert Raspberries are growing, and as for the balance of the seeds—which I gave to the care of my wife—they are generally doing well. A word in reference to Blount's corn:—Our district fair offers a premium for the best acre of corn, and the Indiana Farmer Co. offer $200. in seven premiums to boys under 18 years. I fenced off one acre for one of the boys for the trial with this corn. It is well up and he has a good, even stand, and I think he will be hard to beat, if the season is favorable. The little patch we planted last year was a good schooling for us in raising Blount's corn. Crop prospects in this part of the county are very favorable for wheat and oats; potatoes, too, are very promising, but the bugs are very plentiful. Corn is not all planted on account of heavy rains. Fruits, such as apples, will be very abundant Peaches are in very full bearing, though the trees are scarce, as they usually winter-kill in this place. Cherries, early very plentiful; late, scarce. Small fruits, such as currants, gooseberries and raspberries are abundant. The worms are working hard to destroy the leaves on currants and gooseberries. Strawberries are getting ripe and bearing full. The hog prospect is not good, as there is a good deal of cholera at this time. Cattle and sheep are doing well, as there is an abundant pasture. W. H H.

MINN., Township of Winnebago City, Faribault Co., May 20.—A dry cool April enabled us to complete one small grain sowing by about the 25th. A continuation of dry weather created fears among the farmers that the grain could not germinate; but a kind Providence removed the anxiety by sending copious showers, and to-day our prairie farms are beautiful to look upon. There is an unusual number of acres under wheat, all looking of a fine healthy color. Oats and barley also look well. Corn is just above ground on some fields, while the greater part is just ready to come up. Early potatoes are up. Garden seeds all started early and show plainly in the rows. The seeds received from the Rural Grounds are all growing finely. I expect to be able to show the premium mangel; but will cheerfully waive my claim to any one more successful. Everything pertaining to the agricultural interest appears in a thriving condition. No. 2 wheat here is fetching $1.05. I write this from near the Blue Earth River, a stretch known here as the Blue Earth Valley, a country unsurpassed in beauty and richness of soil. Every crop that is put in the ground soon starts to life and with astonishing rapidity. Our meadows, which one month since were brown and sear, to-day are covered with a verdant growth of the richest grasses over a foot in hight in many places. Dry seasons, the past two years, have occasioned many to feel discouraged—new-comers principally who were dependent on the grain they sowed for support—but those who began stock raising some years previous and had cattle and swine to fall back upon, feel no embarrassment on account of drought. We have railroads running at right angles through the county, so there is no lack of conveyance for marketable produce. The Sioux City Road will be completed this summer to Fort Dodge, Iowa, so there will be a continuous line of road from St. Paul to the former place. The Southern Minnesota Road is completed from La Crosse to Jackson, a distance of 225 miles west of the Mississippi. Farming lands here are worth from $10 to $15 per acre, on an average. Some located near towns, are higher. There are many places for sale, unimproved and improved, the latter belonging to owners who have gone on farther west and taken up homesteads, some being embarrassed and others of that migratory class who never remain long in a place. I moved in here last fall paying $2,600 for 175 acres of which 130 are broken, together with a good house and barn, two wells and a grove of trees. This is the average price of improved farms here. H. F. S.

MICH., Watson Co., May 23.—Corn planting is about half done in this vicinity, and wet weather prevails to such an extent that we cannot finish. Wheat looks well; grass, ditto, and there will be an abundance of fruit of all kinds. As the weather is warm, everything that has been planted or sown is growing finely. It is unusual for Roses to bloom in May; but we have now some white Scotch Roses in full bloom. Never since my remembrance was wheat so forward at this season of the year as now. H. D. E.

MO., Springfield, Green Co., May 23.—The farmer's Bible tells him every year if he sows he shall reap, and right liberally did the farmers of this country sow for this coming harvest. Perhaps the largest acreage is now in wheat ever sown here. Every farmer just now looks upon his field and asks, "What will the harvest be?" The answer comes from the waving field in a significant nod of countless heads, indicating a large, satisfactory yield. Wheat in this country never looked better. The present outlook for all crops is good—the farmer is hopeful and happy now! Fruit has suffered somewhat by cold since blooming; but frost has in most cases kindly done what few of us had nerve to do, thinned the over-crop, but as yet there is enough for an abundant yield. Grass is luxuriant, hence cattle, sheep etc., are happy—growing fat.

All stock appear to be very healthy and give promise of profit excepting hogs, which have suffered terribly here for two or three years with the "hog cholera," and in some parts of the county they are still dying. H.

MONTANA, Glendale, Montana Co., May 16.—The season in this part of the country is quite late; grass is just starting We still have snow. Stock-raising is the principal agricultural occupation engaged in here. J. A. M.

NEW JERSEY, Tom's River, Ocean Co., May 24.—After a severe drought of several weeks, we had copious showers from the evening of the 22nd to the morning of the 24th of May. These have considerably revived vegetation, but grass had been so scorched and stunted in its growth that the crop of hay will be very short, even if abundant rain falls through the rest of the month and June. A cool, wet May is necessary to make a good hay crop in this soil and latitude. The weather has been excessively hot, for the season, for several days past—thermometer rising at noon in the shade of the veranda, on the south side of my cottage, to 99°, and on the north side, to 93°. We must have more rain and cooler weather soon, or our strawberry crop will be of no account, and peas and early vegetables will suffer badly. A.

NEW JERSEY, Essex Co., Newark, May 25.—The five weeks' drought, I am afraid, will play havoc with our strawberries. I began watering yesterday, but it takes a big lot to wet ten acres. The grass crop in this State is "gone up the spout." P. T. Q.

PA., Paghtown, Chester Co., May 22.—The weather is very warm and dry—no rain since April 27. Wheat looks well, however, and is coming in head. Rye is in bloom. A great amount of potatoes has been planted about here; they are up, and plenty of bugs rejoice thereat. Corn is all planted and some is up. Grass is short from want of rain. Apples will be a pretty fair crop and pears a slim one. Peaches, cherries and plums will be only moderate crops. C. W. H.

PA., Franklin Co., May 19.—Ground very dry and roads dusty. Corn needs rain very much, but wheat never looked better. Rye is headed. The grass crop will not be large unless we get rain soon. Fruits will give only a medium yield owing to late frosts. But "hard times" are over. D. B. M.

SOUTH CAROLINA, Aiken, Aiken Co., May 24.—We have just had a good rain after a dry, hot time. It starts everything. When my late Peaches came into bloom, the leaves failed to come out until the fruit was as large as a hickory nut. Then the leaves came here and there—mostly on the ends of the twigs—and on close examination I found the leaf buds dead, and they had mostly dropped off. The snowfall following the hard freeze on November 21 last—an unheard of thing hereabouts before that—killed the leaf buds of the new growth and did great damage. Last summer was exceedingly dry from the commencement to late in July, or the first of August; then the midsummer rain started the second growth, which was unusually strong and vigorous, and in the fall this late growth was very tender and full of sap. Then came the freeze that did the mischief which it will take an entire season to repair. The bad effects were very plainly to be seen on the Peach trees in my garden, as well as on the Grape-vines, Rose bushes, etc. B. O.

VA., Palmeville, Amelia Co., May 22.—Since my last writing the farmers' prospects have changed in this county, and I think I may say in the whole State. We had a mild, dry winter up to the first of March; then wet, cool weather during the month, and since that time it has alternated between the extremes of heat and cold, ranging from frost to 80° in the shade, with no rain whatever, which, of course, has worked destruction to fruits, vegetables, tobacco plants and oats. Wheat, which was looking well two months ago, is now looking very bad in consequence of cold, dry weather and the fly. In the tobacco belt there will be a large crop of corn from the present outlook, many farmers having planted corn on their tobacco land. Of wheat and oats there will be half a crop with about ten per cent. of a crop of tobacco, the cold and fly having destroyed the plants almost entirely. J. W.

The Querist.

ANSWERS TO CORRESPONDENTS.

[Every query must be accompanied by the name and address of the writer to insure attention.]

Scale of Points of a Short-horn Cow.

W. L. H., Herkimer, N. Y., asks what are the points of a Short-horn cow.

ANS.—There are several scales of points by which judges guage the merits of Short-horn cattle, but they differ only in slight matters. The following is the scale adopted by the Agricultural Society of this State in judging of Short-horn cows, and with slight modifications it is adapted to bulls also, and, indeed, to all beef cattle—the Herefords, for instance—as well as to Short-horns.

Pedigree—Should show unbroken descent on both sides, from known animals derived from English herds, as found in the English or American Herd Books, and *without this an animal cannot compete in this class.*

Head—Small, lean, and bony, tapering to the muzzle	3
Face—Somewhat long, the fleshy portion of the nose of a light delicate color	2
Eye—Prominent, bright, clear; "prominent" from an accumulation of adipose substance in the socket, indicating a tendency to lay on fat; "bright," as an evidence of good disposition; "clear," a guarantee of good health	2
Horns and Ears—The horns should be light in substance, waxy in color, and symmetrically set on the head. The ears should be large, thin, and with considerable action	1
Neck—Rather short than long, tapering to the head; clean in the throat, and full at its base; thus covering and filling out the points of the shoulders	2
Chest—Broad from point to point of the shoulders, deep from the anterior dorsal vertebra to the floor of the sternum, and both round and full just back of the elbows, or, in other words, "thick through the heart."	14
Brisket—Deep and projecting, indicating a disposition to lay on fat	5
Shoulder—Where weight, as in the Short-horn, is an object, should be somewhat upright, and of a good width at the points, with the blade-bone just sufficiently curved to blend its upper portion smoothly with the crops	4
Crops—Must be full and level with the shoulders and back	8
Back, Loin and Hips—Should be broad and wide, forming a straight and even line from the neck to the setting of the tail; the hips or hocks round and well covered	8
Rumps—Laid up high, with plenty of flesh on their extremities	5
Pelvis—Should be large, indicated by the width of the hips (as already mentioned) and the breadth of the twist	2
The Twist—Should be so well filled out in its "seam" as to form an even and wide plain between the thighs	3
The Quarters—Long, straight and well developed downward	5
The Carcass—Round; the ribs nearly circular and extending well back	4
The Flanks—Deep, wide and full in proportion to condition	3
The Leg—Short, straight and standing square with the body	2
The Plates—Of the belly strong, and thus preserving nearly a straight underline	3
The Udder—Should be pliable and thin in its texture, reaching well forward, roomy behind, teats wide apart and of convenient size	3
The Tail—Flat and broad at its root, but fine in its cord, and placed *high up* on a level with the rump	2
The Coat—Should be thick, short, and mossy, with longer hair in winter; fine, soft, and glossy in summer	2
Carriage—Of an animal gives style and beauty; the walk should be square, the step quick, and the head up	2
Quality—On this the thriftiness, the feeding properties, and the value of the animal depend; and upon the touch of this quality rests in a good measure the grazier's and the butcher's judgment. If the "touch" be good, some deficiency of form may be excused; but, if it be hard and stiff, nothing can compensate for so unpromising a feature. In raising the skin from the body, between the thumb and finger, it should have a short, flexible and substantial feel; and, when beneath the outspread hand, it should move easily with and under it, as though resting on a soft, elastic cellular substance, which, however, becomes firmer as the animal ripens. A thin, papery skin is objectionable, more especially in a cold climate	15

Lightning Rods, etc.

N. S., Walnut, Kansas, says, there are agents traveling through that part of the country selling a tubular copper lightning rod, which they claim is much superior to all others, but it costs twice as much as ordinary rods. He has a new house which he wants rodded, but he is undecided as to the kind of rod and therefore asks our advice. 2. He sends the wings and head of a beetle which he thinks is eating the leaves and blossoms of his Blackberries, and asks its name; 3, also that of a plant, a specimen of which he forwards; it grows very tall and he has trouble to keep it down, and asks if it is of any value as a forage plant.

ANS.—1. We emphatically advise our friends not to buy these new-fangled lightning rods, and if the agents should prove troublesome, they should be sent off the premises without much ado. Being copper, which is a good conductor, the rod may be very efficient, but an iron rod that will serve the purpose just as well may be put up for one-sixth the cost. Copper is a better conductor than iron in the proportion of twelve to two-and-a-half, but by increasing the amount of iron in the same proportion, the iron rod will be as efficient. It is a disputed question whether the discharge of lightning is conducted away on the surface or through the body of the rod. Lightning-rod men generally favor the theory that the discharge passes on the surface entirely, and they are anxious to impress this idea upon the farmers, because they would then be justified in charging a high price for rods wrought into fantastic shapes for the purpose of giving a large expanse of surface. While the discharge may pass more readily on the surface, because it there meets with less resistance, it is also certain that it passes in part through the body of the rod. The cheapest and at the same time a very efficient rod may be put up of bar or round iron, which should not be less than three-quarters of an inch in diameter. Let it project four or five feet above the highest chimney, or other elevated point of the building, and cap it with a copper point which should be coated with nickel or gold leaf to prevent it from being tarnished. Put metal couplings over the joints and let the ends of the rods touch each other within these couplings to facilitate conduction. Let the lower end of the rod terminate at the bottom of a well, if possible, or, if no well is close by, bury it deep enough to reach the moist earth; and if the terminus is surrounded with pieces of charcoal or iron, or, if several bars are connected underground so that they spread out like the fingers of a hand, the better will be its conducting power. Use no insulators; they are of doubtful advantage; but fasten the rod directly on the building. Finally, paint the whole rod, except the point, with some good mineral paint that will prevent it from rusting. Such a rod can be made and put up by any blacksmith, and it will cost only a trifle compared with the prices of the fancy article sold by professional lightning-rod peddlers. 2. The beetle belongs to the family Scarabæidæ and the genus Melolontha; the specimen sent is too crushed to determine the species. This genus is very destructive to plants both in the larval and imago state. The larvæ eat the roots of grass and other plants, and the perfect insect feeds on the leaves. Though we have not heard of its attacking the Blackberry, yet it is not unlikely to be the case. Ascertain at what time they work, then shake them off on a cloth and kill them with hot water or otherwise. 3. The leaves sent were those of the sweet clover—Melilotus alba. It is a leguminous plant cultivated in some places for forage; but it is too coarse for this purpose, and spreads like a weed. It is an excellent honey plant, and hence is often sown by bee-keepers near their apiaries.

How many sheep?

W. F., Almonte, Ont., has 300 acres of land, half of which can be cultivated, while the rest, being rough, stoney and bushy, is unfit for tillage. Although a novice in the business, yet he is thinking of going into sheep husbandry exclusively, and asks how many sheep could he raise successfully on his land, and would the industry be likely to turn out profitable. Wool is now selling for 35 cents, and lambs will bring from $2.50 to $3 in the fall. The winters there are long, necessitating from six to seven months' feeding.

ANS.—The question cannot be answered precisely without knowing several points of which no information is given. The number of sheep to be kept depends upon the amount of pasture, the condition of grass and the amount of feed for winter use. If there is fair feed on the 150 acres of rough land, 300 sheep could be kept on that portion of the farm in the summer; the better way would be to divide the land into five fields, and pasture each in succession. The land might be improved without plowing by scattering grass and white clover seed on it, and the sheep will trample it in and manure it. In time, by gradually clearing off the brush, the 150 acres may keep three or four sheep to the acre. If the rest of the farm is in grain, hay and roots, winter feed for 300 sheep can be easily produced. Ten or 12 acres of mangels and the straw, with some hay, would feed a flock of this size. Whether it would be profitable or not would depend on the management. A flock of native Canadian ewes and Cotswold rams, well managed, could not fail to be profitable. The long winter's feeding is an advantage in respect of making a large quantity of manure; for this, gather leaves from the woods for bedding and keep all the straw for feeding with the roots.

Foot Rot in Sheep.

J. H. B., Topeka, Kan., asks for a remedy for foot rot in sheep, how to treat it and the cost.

ANS.—This disease is contagious and may spread through the whole flock, unless prompt preventive measures are taken. In it the whole hoof becomes inflamed, blisters form on the heels and between the toes, which break and in a few days form ulcers which excrete fetid matter. The fore feet are usually affected, and the sheep then goes about feeding painfully on its knees. The hoof is lost in course of time and a sore stump alone is left. It is usually the result of feeding on wet pastures. It should be treated on the first appearance of lameness, for afterwards the whole condition of the animal is demoralized. All raw, loose or diseased horn should be cut away, and if any pus, or matter, is found under the horn it should be removed. The feet should then be washed with carbolic soap and water twice a week, and after each washing a piece of soft tow or lint steeped in the following mixture should be bound on the foot and between the toes: oxide of copper, four ounces; arsenic, half an ounce; acetic acid, three ounces; honey, eight ounces. We have also heard of excellent effects from washing clean the affected part with Buchan's Carbolic Soap number 12, and then applying Buchan's Cresylic Ointment. No. 13 soap costs 50 cts. a cake which will wash 100 sheep. A four-ounce box of cresylic ointment costs 25 cents, and is enough for 12 or 15 sheep. The above soap, it is also claimed, is an excellent remedy for all kinds of skin sores in horses and cattle generally.

Early or Late Foals—Which?

R. H., Scranton, Pa., asks what is the best season at which foals can be dropped, and whether it is better that they should be dropped early or late.

ANS.—February or March is as good a time as any. If the dam is then well fed she will have plenty of good milk, and the foal will soon learn to eat with her, supplementing her milk, and when it goes to the pasture with her in April or May it will be in condition to crop the young, succulent grass. If foaled as late as May or June, and put on the pasture which is already becoming rank and dried up, it won't eat the grass while any of it is yet in good condition, and, supported on its mother's milk alone, it will not grow fast and large, and when old enough to graze, the grass that is left is of too woody a fiber for young foals—colts or fillies. Rather than have a foal dropped later than the commencement of June, it would generally be well to wait and breed for an October foal to be with the dam all winter, and be in fine condition for pasturing in spring.

Sowing Alfalfa.

J. A. P., Portsmouth, Va., asks, 1, whether Alfalfa would do well in that section; 2, whether it can be seeded to advantage in September; 3, does it require a rich soil, and, 4, what is the best fertilizer to use in seeding it.

ANS.—Alfalfa ought to do well in that section. 2, Alfalfa seed is generally sown in the spring at the same time and in the same manner as clover. We should not consider it safe to seed down a very large area in the fall. Try a small plot as an experiment and report the success to the RURAL. 3, It requires a very rich, deep, mellow soil. A sandy and thin soil is unsuited for it. 4, This question must be decided by the character and needs of the land, rather than by the seed. Any fertilizer rich in ammonia, will be of value to the crop. Should the land be deficient in other elements, as lime or potash, for example, these should be supplied.

Miscellaneous.

W. S. R., Newark N. J. finds his pretty rose bushes infested with the green fly and also with some green worms, and asks what they are and what will kill them.

ANS.—The green fly is so common that no description is necessary; but it would not be safe for us to attempt to name the worms without having seen them. It may possibly be the rose-slug—Selanderia rosæ—which is the larva of a saw-fly, though this pest seldom appears until later in the season. Syringing with a weak solution of carbolic acid, coal oil or whale oil soap will kill them.

J. D. S., Bowling Green, Ky., has a two-acre lot overgrown with burdock and he wants to know how to get rid of it.

ANS.—Thorough cultivation is the cure. The root of the common burdock, Lappa officinalis, is biennial, and the weed need, therefore, not be found on the land more than two years, if prevented from going to seed. There is no easier or surer way of extirpating it than by thorough culture.

A. O., New Tacoma, W. T., wants some books that will give him instruction in propagation and general horticulture.

ANS.—Barry's Fruit Garden is a good work on the propagation and care of fruit trees, price $2.50, and Henderson's Floriculture and Gardening for Profit, $1.50 each, will give instruction in the culture of flowers and vegetables respectively. Mr. Roe's new work on small fruits is also excellent.

S. F. B., Buckeye Center, Ill., wants a good work on photography.

ANS.—Abney's Treatise on Photography, price $1.50, is a good work, and so is Vogel's Handbook of Photography, $3 50; both can be had of D. Van Nostrand, 23 Murray St., N. Y. City.

THE
RURAL NEW-YORKER.
PUBLISHED EVERY SATURDAY.

CONDUCTED BY
ELBERT S. CARMAN.

Address THE RURAL NEW-YORKER,
No. 34 Park Row, New York.

SATURDAY, JUNE 5, 1880.

SUBSCRIBERS of the RURAL NEW-YORKER will greatly oblige us if they will promptly notify us of any irregularity in the receipt of their papers. The many changes rendered necessary by our removal and an unusually large number of complaints make us desirous of rectifying any further derangements at present unknown to us as speedily as possible.

GRADE SHORT-HORN BULLS.—We regret to learn that many of these are taken to the Far West by unprincipled breeders, and sold to the ignorant ranchers as full-bred, thus greatly injuring the reputation of the latter among them, because the stock of even the very best grade bulls cannot by any possibility be nearly equal to that of thoroughbred. In breeding from grades, the tendency of the progeny is to go back to the bad points of its common dam, rather than to the superior points of the sire. If the ranchmen would demand a herd-book pedigree of all from whom they purchase they could not then be cheated in the quality of the animals, or, if so, by referring to the herd-book, the cheat would be instantly detected, and the seller of the grade for a thoroughbred might be prosecuted and heavy damages got from him, as was recently done in a case of the kind in England.

AN OBJECTIONABLE PRACTICE.—To our view, the beauty of the surroundings of many country homes is seriously marred by the very common practice of cutting off the lower branches of the trees so as to expose a bare trunk from eight to fifteen feet in hight or more. This is especially detrimental to the appearance of evergreen trees whose beauty in a great measure depends upon a full growth of their lower foliage, even though it rests upon the ground. Deciduous trees, however, when thus cut up, have the look of being held up in the air, while the grounds are robbed of that shady, verdant fullness, which is so essential a part of landscape beauty. A forest viewed at a distance is grand. The tall, naked trunks are in keeping with its extent. But to those who seek the woods for pleasant walks, the smaller trees, the shrubs, the undergrowth, and not the tall trees, are the immediate objects of interest. To cut off the lower branches of trees is to remove the tree out of—above the lawn, while the rude stems are alone left for ornament.

"THE" AUTHORITY.—The street signs of New York are always interesting and especially so just after the May movings. A rural paper published in the City of New York celebrates its removal with a perfect eruption of signs. One of these reads "The American Horticultural Authority." "*The* Authority" is good, and it was well to put it on the sign, as it might not be discovered by reading the paper.

The above is truly sarcastic—isn't it? We frankly confess it hurt us. Argue as we would that it was the outcome of greed and ill-nature—yet we felt that we deserved the scathing reproach in a measure. Oh! that that sign had never been painted! The object of the sign was in truth to inform those who might not discover it from reading the paper, as well as those who do not read it at all, that the RURAL NEW-YORKER IS THE American Horticultural Authority. Has the American Agriculturist, in its self-laudations, never made equally astounding claims, the truth of which nobody might, could, would, or should otherwise ever have suspected! Why then should the A. A. hobble across the park during this "heated term" to read our signs and to cast its sarcasms at this bit of pretension? Why?

After thinking the matter over awhile full of shame and—remorse, we recalled a little circumstance that at once allayed a part of the sting. It was not many months ago that the A. A. earnestly solicited us to purchase a fifty-thousand dollar interest in its management. Aha! thought we—had we done so—would the A. A. then have objected had we assumed to be "THE American Horticultural Authority?" And would the assumption have been any the less pretentious?

THE CENSUS.—We would remind our friends that the taking of the Census begins to-morrow, June 1st. It is highly important, on several accounts, for the interests of agriculture that full and truthful answers should be returned to all questions relating to farming and farm products, and we trust our friends will not only be themselves careful in this matter, but urge the necessity of care upon their neighbors also. The enumerators are strictly instructed to observe courtesy towards all with whom their business brings them into relation, and any failure in this respect should be reported to the Superintendent. At the same time it must not be forgotten that the public should aid them in their duties by returning full and prompt answers to all legitimate questions. Any refusal in this matter subjects the offender to legal penalties. A word of caution may also not be out of order here. Many swindlers will doubtless make use of this opportunity to exercise their calling, and we warn all farmers and others to be on their guard against such rascals, and to sign absolutely nothing they have not read, and which they do not clearly understand. The law provides that the census enumerators must be taken from the districts in which they operate, and no difficulty should therefore exist in identifying them.

CARRIAGE AND HEAVY DRAFT HORSES.

BOTH kinds of these horses have been scarce and dear in our city markets this spring, and the country has been scoured in every direction with the hope of obtaining a supply equal to the demand, but with only partial success. For many years to come, we are persuaded that such horses, if rightly bred, will be the most profitable stock that can be grown in our country, for there is not only an active and increasing home demand, but they will also be wanted for foreign exportation.

A horse for the gentleman's carriage should be extra-well bred; that is to say, he must have a good share of race-horse blood in his veins, either immediately or remotely, otherwise he will be lacking in style, spirit, action and endurance, all of which are essential to be combined in fine carriage horses for a gentleman's driving, either single or paired.

For the buggy or light wagon, a hight of 15 to 15½ hands with a weight of 1,000 to 1,100 pounds, is the best size; but for pairs for the carriage and the coupé, they should be 16 to 17 hands high, and weigh from 1,200 to 1,300 pounds. This enables them to make a fine, lofty show, and gives them substance and power enough to take a heavy carriage full of people, not only easily over city pavements and through the park, but also over rough country roads, when gentlemen go to their summer residences.

Unlike the Europeans, we are sadly deficient in horses for heavy draft—such as are large and powerful enough to work the heavy clay soils of our farms, and for the use of city carts and truck wagons. These should be rather short in the leg, of block (pony) build, and with the best of feet and legs. They may be from 16 to 17½ hands high, and weigh not less than 1,400 or overgo 1,800 pounds. For the above purpose it is much more economical to use horses of these sizes than smaller ones, but they must not be made up of coarse bones and flabby flesh. Their bones should be fine for the size and the flesh firm—tough muscle, not butcher's meat—and the cords and sinews be like whalebone. The action must also be good, the walk fast, and the trot reasonably quick, with an indomitable will and a courage that never balks at a heavy pull.

Now is the time for farmers to decide upon the best and most suitable stallions to which to breed their mares. The value of the offspring greatly depends on this, and they should not mind an extra price for service, when the produce at full growth is likely to bring twice or thrice what it could be sold for if got by an inferior male.

AGRICULTURE AND THE TARIFF.

LAST Thursday, May 27, the United States Senate held some discussion anent one feature of the bill making appropriations for the Department of Agriculture. The bill authorizes the President to appoint nine Commissioners from civil life whose duty it shall be to investigate thoroughly all the various questions relating to the agricultural, commercial, manufacturing and mining interests of the country, so far as the same may be necessary to the establishment of a judicious tariff. In the prosecution of its inquiries, the Commission is empowered to visit such portions of the country as it may deem advisable. Should the bill pass with this feature incorporated in it, no legislation on the tariff must be looked for during the present session of Congress. Indeed, there is little doubt but that the main reason why the measure receives the hearty support of the Protectionists in that body, is to be found in the delay its adoption must necessitate in legislation lightening the duties on some foreign imports. So long, however, as its tendency is beneficial to agriculture, we do not care to scrutinize too closely the motives of its supporters, on the principle that it's churlish to "look a gift horse in the mouth."

We are strongly of opinion that the proposed investigation is essential to any alterations in the present tariff, that will prove at all satisfactory to the vast agricultural interests of the country. In legislating on this subject in the past the interests of agriculture have been, to a great extent, neglected or sacrificed in favor of those of other industries. This injustice, we are willing to admit, has been largely due to the ignorance of our legislators with regard to the effects of many of their enactments upon the agriculture of the country. All corporate interests have always been prompt in presenting to Congress generally a one-sided view of the bearing of legislation affecting their own welfare; the agricultural classes alone have never had recourse to the often doubtful methods by which other industries have secured legislative action favorable to their own prosperity. What success has attended agriculture in this country has been in spite of legislation; what reverses it has met with have more than once been precipitated or aggravated by it. With both branches of Congress composed mainly of lawyers, together with a pretty liberal sprinkling of those engaged in other professions and callings which have nothing to do with agriculture beyond drawing a large share of their support from its labors, there is urgent need of more light among our lawmakers upon agricultural topics than can come from the handful of Congressmen whose chief pursuit is farming—when politics and other avocations leave them any leisure for it.

Let us, therefore, have a thorough investigation of the bearing of legislation upon the rights and needs of agriculture, the prime interest of the country, not only with reference to the taxation of foreign goods imported into the country, but with regard to internal taxation also. But as past experience has taught us to be very moderate in our expectations of Congressional action for the benefit of agriculture, we shall be content, *for the present*, with the limited investigation proposed in the above bill.

BREVITIES.

THE London Garden of May 15 gives a colored plate of three magnificent Hybrid Tea Roses, viz: Duke of Connaught, Pearl and Beauty of Stapleford:

THE English papers are protesting—as well they may—against the stupid regulations which are being enacted by Belgium, France, Italy and other governments as precautions against the Phylloxera.

TRAIN a single tomato plant up the side of a barn, kitchen, shed or arbor, the same as one would train any other vine without tendrils. Most persons will be surprised at the quantity of fruit it will yield.

WE can now speak from experience with regard to London Purple. Three tablespoonfuls of the Purple to a peck of plaster are quite effectual in killing the beetles. It seems in every way preferable to Paris-green. It is perhaps needless to say that the flour and Purple must be thoroughly mixed. Perhaps a smaller proportion of the Purple would suffice.

WE take the credit to ourselves of having discovered that Defiance wheat is valuable as a winter variety for this climate. If at *this time* we were called upon to decide which of all our winter wheats in the most promising, we should have to say the Defiance. But the appearance of our experiment plots has changed very much since early spring, some of the most promising then being the least promising now. And there is still time for further changes.

THE strawberry meeting of the Michigan Pomological Society, will be held at Battle Creek, Mich, on the 16th, 17th and 18th of June. The meetings of this society are always of extraordinary interest and all lovers of horticulture will profit by attending. Arrangements will be made for the entertainment of delegates from abroad and representatives of local horticultural societies. A number of prominent horticulturists will address the meeting.

A WRITER in the Mark Lane Express, referring to our International Exhibition of sheep and wool at Philadelphia next September, says: "In order to induce foreigners to exhibit, the United States has passed a bill exempting exhibits from duties, provided they are imported solely for exhibition. This concession is rendered almost useless by the niggardly condition that if the commodities are afterwards sold in the States, they will be liable to the duties current at the time." The comment is made upon the above as follows:—"International exhibitions are quite out of character with prohibitory tariffs, as these are outrages upon the proper principle of international trade.'

FOR months past it has been a continual complaint of those visiting the horse marts of this city in search of powerful draft horses and fine large pairs of carriage horses, as well as of single coupé horses, that there were not nearly enough in the market to supply the demand, and both dealers and private buyers have sent out and scoured the neighboring country in vain for them. It will pay our farmers—and that well—to pay special attention to the raising of horses suitable to supply this rapidly growing demand, which is not confined exclusively to this section, but extends, with more or less urgency, all over the country.

EUROPEAN CROP PROSPECTS. Across the Atlantic, too, there has been a more or less severe drought, but it does not seem to have hitherto done much damage to crops. The London Times in its issue of May 27th, says: "Experts predict that there will be a great harvest here and in France where the appearance of the wheat is all that could be desired." Of the English crops the same high authority says;—"Some rain would do good, but a continuance of dry weather will do no harm." And again, "The aspect of the weather, which is now anxiously watched by those interested in pasturage and root crops, does not seem to concern operators in the wheat market." It is estimated that if the promises of the wheat harvest are realized, it will save England and France together fully twenty million pounds sterling, or about one hundred million dollars, nearly all of which would otherwise come to this country.

THE large sale of Jersey cattle in this city a few days ago, marks a new departure in judging of the points which are to determine the value of animals of this fine breed. Heretofore, whenever they have been brought under the auctioneer's hammer, importation, registration and fancy colors have mainly determined the prices which they brought; but under the impulse of the recent movement of several associations looking to the record of performances of cows at the pail, each cow at the late vendue was sold mainly upon her actual butter record, though, of course, the other points were not wholly neglected in the transaction. In the sale of bulls, too, the record of their ancestresses at the pail went a great way towards fixing their price. It was also remarkable in that the prices obtained for Myra II. and Lass Edith—$1,400 and $1,425 respectively—are said to have been the highest ever brought in this country by Jersey cattle at public sale.

THE Veterinary report of the British Privy Council for 1879, just issued shows that during last year 101,302, cattle, 193,263 sheep and 18,843 pigs—313,408 animals in all—left the United States and Canada for the United Kingdom. Of these 14,024 were thrown overboard at sea, 1,249 were landed dead, 455 were so much injured or exhausted that they had to be killed immediately after landing. Thus out of 313,408 animals 15,728 were either lost overboard, or as the Mark Lane Express puts it, "had to be killed to save their lives." This makes more than twenty per cent. We have long urged the necessity of reformation in the method of transporting live stock in the long voyage across the Atlantic, and been especially earnest against shipments during the stormy and inclement months of winter, during which most of the above casualties occurred. As the losses incurred by the shippers seem powerless to effect a reformation in this matter, the law should soon prohibit such reckless cruelty to animals.

THE SESSION OF THE NEW YORK LEGISLATURE has come to a close, leaving much disappointment at the non-fulfillment of most of its promises of reforming flagrant abuses. With regard to railroad legislation, through the machinations of a powerful lobby the Anti-Discrimination bill and the bill creating a Board of Railway Commissioners to overlook railroad affairs, were both lost. The $50,000 spent by the Hepburn Committee in investigating the abuses in railroad charges against which the former bill was directed, are not, however, to be regretted, as the odious injustice of these abuses has been so clearly demonstrated that the force of public opinion must soon overcome lobby influences, and insure legislation against them. Among the laws passed by both Houses and in which the farmers are especially interested are, the anti-tramp law; Senator Halbert's bill "To Prevent Deception in the Sale of Butter," providing that oleomargarine tubs shall be stamped legibly, and Mr. T. Skinner's bill appropriating $20,000 for an agricultural experiment station. As our readers are aware, the RURAL NEW-YORKER has earnestly advocated all these measures, and it will certainly do its utmost to insure proper legislation anent railroad freight changes during the next session of the legislature.

THE DROUGHT AND THE CROPS.—East of the Alleghanies the long drought has affected the agricultural interests very injuriously. For nearly six weeks little rain has fallen, and although on yesterday, May 30, there was a widespread rain over most of that section, still it came too late and was not heavy enough to more than cause a partial recovery of the damaged crops. The hay crop has suffered most, and farmers estimate it will not be more than half a crop. Grains have suffered less and in them 25 per cent. is about the present estimate of the loss. Garden truck of all kinds has been damaged considerably by the dry spell, except potatoes which seem to have suffered more from the Colorado beetles. Among fruits apples alone seem in fair condition. Young peaches have fallen and withered in many places, and cherries have been picked before ripe, to prevent an entire loss. The loss in strawberries is put down at 35 per cent. In the West the winter wheat in most of the States is in fine condition. In Texas and Kansas drought has injured the wheat crop seriously, but recent rains will produce half or three-quarters of an average yield per acre. In the Northwest wet weather caused a late planting of corn and spring wheat, but both are now doing finely. In the South a good stand of cotton is the rule; late rains have greatly benefited the crop, but have given a start to the worms in some sections. On the whole the harvest prospects are a good average.

For Women.

CONDUCTED BY MISS RAY CLARK.

THE ROAD TO SLUMBERLAND.

WHAT is the road to Slumberland?
And when does the baby go?
The road lies straight through mother's arms
When the sun is sinking low.
He goes by the drowsy "Land of Nod,"
To music of "lullaby."
When all wee lambs are safe in the fold,
Under the evening sky.

A soft little night-gown, clean and white,
A face washed sweet and fair;
A mother brushing the tangles out
From silken, golden hair;
Two little tired, satiny feet,
From the shoe and the stocking free;
Two little palms together clasped
At the mother's patient knee.

Some baby words that are drowsily lisped
In the tender Shepherd's ear,
And a kiss that only a mother can place
On the brow of her baby dear;
A little round head which nestles at last
Close to the mother's breast,
And then the lullaby, soft and low,
Singing the song of rest,

And close and closer the blue-veined lids
Are hiding the baby eyes,
As over the road to Slumberland
The dear little traveler hies.
For this is the way, through mother's arms,
All dear little babies go
To the beautiful City of Slumberland,
When the sun is sinking low.

DESCRIPTION OF CUTS.

FIG. 199, Ladies house and walking costume.
FIG. 200, Back of house dress.
FIG. 201, Back of walking dress.

There are many materials that may be used for the construction of these suits. A combination of plain and novelty goods would be suitable for either, but especially for the walking costume. The new lace bunting would be appropriate for the house dress: this material is an improvement on the old style of bunting, having a finer and cooler appearance.

FIG. 202—PINCUSHION.

The square cushion may either be covered with cambric or silk. The flounce, which is placed round the cushion, is of pink silk, edged with a small coquille of very narrow lace. The cover is of white muslin, ornamented with a border with silk in cross-stitch. It is edged with lace, and ornamented at each corner with a bow of ribbon.

HANGING BASKETS OF MOSS AND SHELLS.

HANGING baskets are among the prettiest of floral ornaments, and the variety of materials that may be used in their construction is almost countless. With good taste, skill, and neatness, many ordinary and homely articles may be converted into ornaments that will embellish the most refined dwelling.

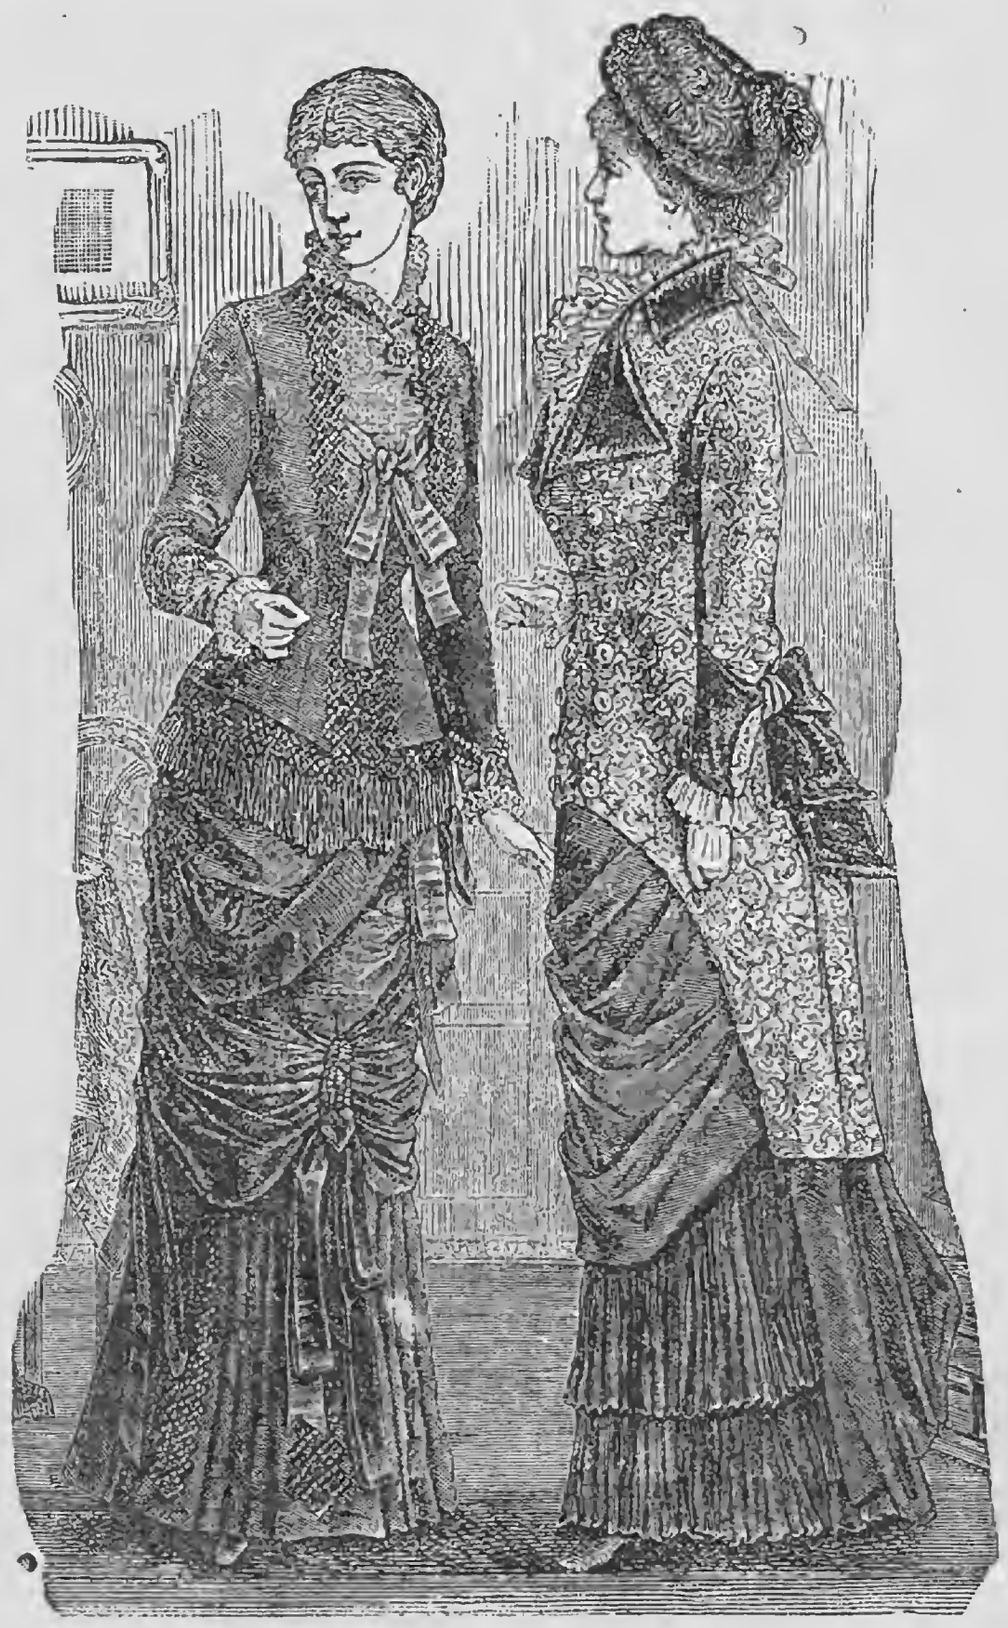
Two beautiful hanging baskets are made as follows:—The materials required for the first are sea shells, corals, sea weeds and mosses, or any other marine treasures, some asphalt, cement, and a common red flower pot. Make the pot quite warm, and at once apply the asphalt, giving two coats if necessary. Then around the upper rim cement a border of white scallop shells, and two double reversed rows round the center of the pot, using smaller shells. On the bottom fasten clusters of "branch coral" in such a way that the ong narr ow parts unite in the center below the

FIG. 201.

FIG. 200.

bottom of the pot. Between these cement clusters of sea weeds, if you have them at hand; if not, purchase carrageen (Irish moss) and Iceland moss from the druggist's, dip the ends into hot cement, and fasten the clusters closely over the whole bare surface. When entirely dry, touch the extreme ends with dammar varnish, and dust a very little fine frosting upon the surface, occasionally applying touches of green, blue, violet, and crimson distemper colors, which will relieve the dullness of the black and white Branches of coral are next fastened around the very edge of the pot, and on each side projecting pieces, to which the suspension cords may appear to be attached, though for safety they might better be passed through holes cut in the pot.

The companion to this beautiful basket has for the foundation a pot of the same kind, but the class of materials is different, consisting of lichens, hardened fungi, burrs, cones, bark, etc. In order to impart the necessary "bit of color" to the rich browns and wood-colors, holes are cut in the sides and bottom of the pot, and lycopodium or saxifrage (sarmentose) and feltonias introduced, which soon root, and mingling with the rugged covering, form a charming object. Around the rim of the pot fasten a border of the shell-like fungi, taking single sections and arranging them uniformly; fill the interstices between these with the exquisite lichens, in various shades of blue and



G 51

pale green. Around the centre make the double row of the smaller fungi, and fill the spaces with sealing-wax moss, or in lieu of this use the rock moss, and touch the tips with scarlet sealing-wax dissolved in hot alcohol. Between these light rows fasten burrs, cones, etc., neatly arranged between the holes filled with lycopodium. On the bottom cement light gnarled roots or branches, arranged in the same manner as the coral branches on the marine basket, and the same at the top. The various colors of greens, browns, and wood-tints form a lovely combination, and when these baskets are stocked with vines and plants they are very effective. Nothing is so appropriate for the rustic basket as a fine group of ferns, and creeping-fern, Lygodium palmatum, and Japanese climbing-fern, Lygodium scandens, to climb up the supports, then reach over and festoon the extended branches. —Weekly Globe.

HINTS.

VENTILATOR FOR SICK OR SLEEPING ROOMS.—A good ventilator for sick or sleeping rooms can be made in the following way:

From a plank of the thickness of the window sash cut a piece four inches wide and as long as the window is wide, so that by lowering the upper sash the plank can be put in at the top and the sash set up tight to it. In the center of this plank mortice a hole two inches high and seven inches long.

With some pieces of one-half inch by six inches stuff make a tube two by seven outside, of sufficient length to extend four or five inches inside of the window jamb, when one end is secured in the mortice in the plank. Make at the inner end of the tube a turn extending up to within a few inches of the ceiling and have this turned up portion of three or four times the capacity of the horizontal part, say four by six inches inside.

As the upper sash is lowered a space is left between the two sashes that must be closed and can be done by fitting a thin piece of wood back to the glass and tacking it to the top of the lower sash.

Simple and cheap as this contrivance appears, it is a perfect success in practice. In a room in which a fire is kept burning a rapid current of air constantly enters, and passing through the tube into one of four times the size, it only has one-fourth the velocity, and being driven directly up against the ceiling is so diffused that no evidence of draft is discernable in the room. Small as the opening is, it is large enough to provide perfect ventilation to any ordinary-sized room.

MRS. J. E S.

AMMONIA FOR HEADACHE.—There is nothing that will relieve the headache so efficaciously, as very warm water, with a few drops of spirits of ammonia mixed with it. Have the water as hot as the hand can bear, and bathe the head freely with the solution; it acts like a charm. The same remedy is good for bruises, or blows the head or any part of the body; it takes out the soreness and removes the black and blue spots quickly. I know of nothing that is so efficacious, and it is very simple, and quiet to apply. The bumps that are always happening to children, can be cured in a few minutes, by a thorough application of ammonia and hot water, and just as soon as the pain is gone, they are ready to run, and try it over again. S. H. R.

THE USE OF THE LEMON.—There are three ways of making lemonade: To squeeze the juice into cold water—this is the shortest way; or to cut it in slices and soak it in cold water, or to cut it in slices and then boil it. Lemonade is one of the best and safest drinks for a person, whether in health or not. It is suitable to all stomach diseases; is excellent in sickness. The pips, crushed may also be mixed with water, and used as a drink. We advise every one to rub the gums daily with lemon juice, to keep them in health. The hands and nails are also kept clean, white, soft and supple, by the use of lemon instead of soap. It also prevents chilblains. Lemon is used in intermittent fevers, mixed with strong, hot, black coffee, without sugar. Neuralgia may be cured by rubbing the part affected with a cut lemon. It is valuable, also, to cure warts, and to destroy dandruff on the head by rubbing the roots of the hair with it.

A MICHIGAN LETTER.

WE have lately attained to the possession of a small farm and old-fashioned farm-house about two miles from a small city. The place, although dilapidated, was lovely to our unaccustomed city eyes, with its glory of evergreen, maple, oak, and fruit trees surrounding the low built square farm house; but the house needed such an appalling amount of repairs that I confess I was dismayed. But my two daughters and I, attached the desolate rooms with such good results that when I go through them now I feel very complacent. It has occurred to me that I might give a few hints as to furnishing comfortably and economically.

During the winter we made for a low wooden mantel in the parlor, a lambrequin in this way. We covered a board the size of the mantel piece with seal-brown canton-flannel (two yards is enough) cut in scallops one-quarter yard deep, and pinked the edges. One-half yard of drab opera flannel was cut in points to fit the scallops and these were embroidered with scarlet and blue silk—or worsted in herring-bone and chain stitch. On the point of each scallop an ivy leaf of bright velvet or satin, was put on in button hole stitch, and points and scallops were finished with tassels of white opera flannel bound and tied with scarlet. A corner bracket covered with the same kind of flannel, was very unique. A description of it will be given at another time. MRS. O. W. D.
Mich.

ALICE AND PHŒBE CARY.

EXTRACT from a correspondent's article in the Inter-Ocean, of Denver, Colorado:—

My first recollection of "the girls," as they were called at home, dates back to the time of the accident to little Alice their niece. Phœbe accompanied by the child was making a tour of inspection over a closed house which a friend had placed in her charge; through some inadvertence the gas had escaped in one of the rooms to such an extent, that, on the lighting of a match there was an explosion. The child's clothing became ignited and before Phœbe could extinguish the flames, terrible burns were inflicted on the arms and neck of the little one. This occurred in their struggling times in New York, when they were establishing their literary reputation, and they endeared themselves to a large circle of friends by their devotion to their niece when time was indeed money to them.

Emerson says "There is some reason to believe that when a man does not write his poetry, it escapes by other vents through him, instead of the one vent of writing. Clings to his form and manners, while poets often have nothing poetical about them but their verses." This was in the main true of the Cary sisters. Although thoroughly refined and lady like in themselves and their surroundings their prosaic way of viewing things with their practicality placed the poet element so far in the background that it was never visible.

Alert, brisk, chatty, conformable in their manners, one would never surmise in conversing with them that such exquisite imagining as they were mistress of, was lying embryonic in their brain. Spiritualism had taken firm hold of the minds of both sisters. It did not take the form of Swedenborgianism, but they believed most firmly that after death the departed spirit could place itself *en rapport* with beings of this world. Alice died the death incidental to a long and lingering disease, but that Phœbe died simply because she wished to is our firm belief. Passing through New York about two months after the death of Alice, I called at their snug little home on 21st street.

She greeted me with her usual warmth and nothing in her manner evinced the terrible sorrow the death of her sister had caused her, but when I said "What are your plans for the future, Phœbe?" She answered. "I have no plans for the future, wherever Alice is I am sure she wants me." All are acquainted with the peculiar features of her death which occurred so shortly afterward. The absence of all characteristics which accompany real disease, and the quiet way she gave up life proved that she was simply "going to Alice, who wanted her."

KISSING ON A WAGER.

AT a party of young people in Paris, conversation happened to turn on the subject of kissing, and the question was propounded, who, of the young men present, could boast of having given, or being able to give, "his girl" the most kisses. Various were the replies this question called out. Finally a young man and the girl to whom he was betrothed bet 200 francs that they could kiss 10,000 times in ten hours, providing they would be allowed to take an occasional glass of wine "between." Two persons were appointed a committee to count the number of kisses, and the work began. During the first hour they counted 2,000 kisses. During the second hour the kisses were not nearly as numerous, for the committee only counted 1,000. After the third hour, during which they managed to score but 750, further operations were brought to a sudden standstill. The lips of the young man were seized with a cramp, and he

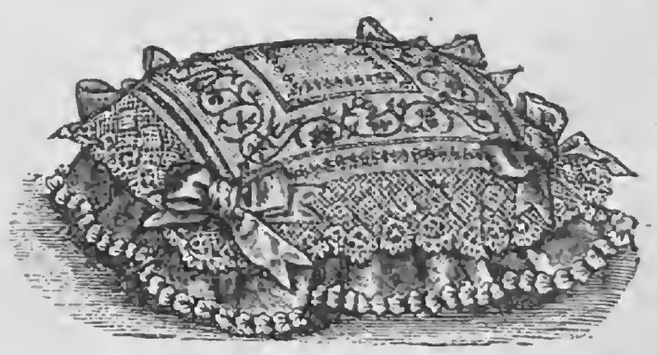


FIG. 202.

was carried off in a fainting condition. The girl a few days later was stricken with brain fever, which nearly carried her off to a land where kissing, under any form, is unknown. When the people who had won the bet demanded their money, the parents of the girl refused to pay her share of it. The matter was then taken to the courts, and there it was decided that the bet must be paid.

A LADY with more money than learning, called at a jewelry shop, recently, and asked to see their solitaire diamond rings. A tray of single stones was shown to her. She looked them over carefully, and at last selected one. "That is a very pretty stone," she said, "and if you will assure me that it is a solitaire, I will take it."

YELLOW and red are the colors particularly pleasing to the ladies this season.

Literary Miscellany.

THE SIMPLE CHURCH.

BY I. D. VALENTINE.

I've been to Quaker meeting, wife, and I shall go again;
It was so quiet and so neat, so simple and so plain:
The angels seemed to gather there, from off the other shore,
And fold their wings in quietness, as tho' they'd been before.

There was no high-priced organ there, no costly singing choir,
To help you raise your hearts to God, and holiness inspire;
But sitting still in silence, we seemed to feel and know
The still, small voice that entered in and told the way to go.

The walls were free from painting and costly work of art,
That in our modern churches seems to play so large a part;
For it seems that each, endeavor to please the eye of man,
And lose all thoughts of plainness in every church they plan.

The windows had no colored glass, to shed a gloom around,
But God's pale sunlight entered unrestrained and all unbound,
And centered in a little spot, so bright, it seemed to me
A glimpse of brightness, somewhat like our future home will be.

There was no learned minister, who read as from a book,
And showed that he had practiced his every word and look;
But a sermon full of wisdom was preached by an old Friend,
That took right hold of all our thoughts, and held them to the end.

He used no long, high-sounding words, and had a singsong way
In drawing out his sentences, in what he had to say;
But told the truth, and told it so that every one who heard,
Seemed to feel the prompting spirit, more than just the spoken word.

There was no pulpit decked with flowers of beauty rich and rare,
And made from foreign costly woods, almost beyond compare;
But plain and simple as the truths that we had that day heard,
The common painted gallery did much to help the word.

There was no bustle, noise, or stir, as each one took his seat,
But silence settled over all, so solemn, but so sweet,
As each one in his solemn way implored for strength to know
The right from wrong in everything, and asked the way to go.

It seemed when I was there, wife, so peaceful and so still,
That I was in God's presence, and there to do his will:
This simple, peaceful quiet did more to move my heart
Than any worship yet had done, with all its show and art.

I'm going there again, wife, and you will like it too:
I know what it has done for me—'twill do the same for you:
And you, when once you've entered through the plain but open door,
Will wonder why you've never tried the simple church before.

JOHN ASCOTT'S DAUGHTER.

BY CHARLES RICHARDS DODGE,
Author of "Louise and I."

(Conlinued from page 349)

CHAPTER XI.

A MILL-STONE.

"George, to-morrow is the anniversary of our wedding, do you know it?"

"That reminds me, May," he answered thrusting his hands into divers pockets," "I've a note somewhere about me from Charles and Sarah. Never mind, I can't find it now, but we are expected to dine there to-morrow, whether in honor of the occasion or not, I can't say. Of course we will go?"

"How pleasant," May answered "I think of nothing now to prevent."

"I had not forgotten the anniversary, Puss, and only wish I were able to give you a handsome souvenir—silver service or something."

"Oh, George, we must not think of such things."

"I'm going to try to pay off a part of the mortgage next year, and when we get out of debt—

"I am frightened every time I think of the two thousand you owe. I fear you have made a mistake in not paying up Mr. Stone first, and putting on the improvements later. Your interest money is no small amount, and it comes due, regularly, twice a year."

"Perhaps you are right" George replied, as he gazed out of the windows with a far away look in his eyes. "I think, though, the improvements will help me to pay the debt all the sooner, for Maplewood is even now, more than two thousand dollars better, as a piece of property, for what has been done."

"It was a hard winter for us, and we are a little behind you know."

"Don't worry, May, if we have any sort of a season, I am going to get a little ahead this year. My trout are about large enough to sell, and that is a farm crop we had not taken into consideration at all."

It certainly had been a hard winter, as May had suggested, a winter so full of experience for the young couple that they hoped never to see such another one. They had lived through it, however, and now that the spring had come again, bringing with it a promise of better things, they felt more hopeful for the future.

When the morrow dawned, it was but a repetition of the lovely day that smiled upon their marriage two long years before. "It is a good omen, May," her husband remarked as he assisted her into the carriage, as they were starting to spend the day with Charles and Sarah.

"I trust it will prove so," she answered earnestly.

"Now Susan, bring 'Jack Bunsby,'" said the young man, and he completed tucking the afghan around his wife.

"I wish you wouldn't call that child such awful names, George, really——"

"Well, John Ascott, then," he answered, giving the little fellow a toss in the air, and carefully depositing him in his mother's lap.

"Are you trying to kill him?"

"No, Puss, exercising him, that is all. Are we ready now? Look out for tramps, Susan."

They drove rapidly down the avenue of Maples, ruby tinted with swelling buds ready to burst into a million leaflets, and as the carriage emerged into Prospect road, a vision of enchanting loveliness burst upon them. The landscape, but lately marked by fields of sombre brown—save here and there with the richer umber of the ploughshare's painting—now touched by the magic wand of spring, and kissed by the sunbeams, appeared in undulating waves of tender green; and where the distant back-ground of forest and mountain lay cold and gray against the sky, catching the inspiration of awakening nature, now flushed into a hundred tints of purple. Happy birds sang in the trees and hedges; nimble squirrels stared timidly out from their hiding places to greet them as they passed, and the very air seemed filled with tiny forms of insect life, glad to greet again the warm sunshine. Before them the blue waters of the bay stretched away to meet the deeper blue of the ocean, flecked and dotted with innumerable sails—tiny atoms upon the world's great highway—ocean and ships losing themselves at last in the distant horizon.

"I wonder, May, if there is a ship sailing over the ocean to us?"

"I hope so," his wife answered, her eyes looking far beyond ships or clouds; "but we must not idly wait its coming or 'twill never anchor in our port."

"When our ship comes in—who knows——"

"Ah, George, how many are waiting, waiting, waiting for the ship that *never* comes."

"Here's our ship. Wake up Bunsby, and take a squint at your native heath. You're a regular little Clyde built clipper, with breadth of beam and depth of hold sufficient to entitle you to first-class register. How many tons burden, May? Give me the little scamp, I want to teach him to drive. I'll have him on the milk wagon before next spring——"

"You'll have him under the wheels in another minute."

Arriving at Charles' they were warmly welcomed by Sarah, and an hour was very agreeably spent in conversation. Thinking, however, that the two sisters-in-law might wish to have a cosy time by themselves, George, with the usual kind consideration of husbands under such circumstances, stepped around to his brother's place of business to hear the news.

"Have you taken up that mortgage, George?" his brother asked, at the very outset of the conversation.

"No—why?"

"Because Stone is dead."

"Joseph Stone, *dead!*" he exclaimed, in astonishment.

"That was the report at the bank this morning, How will it affect you?"

"Badly enough, under some circumstances."

"They say he was considerably involved."

"The deuce!" said George, reflectively; "then I had better be looking up two thousand dollars before the foreclosure, for I suppose his creditors will want to settle in a hurry."

"I believe the law gives six months," Charles remarked.

"But they may not give me six months in which to take up the mortgage. Hang the thing! I wish it had been paid off."

"Well, why haven't you paid it off, or a part of it at least. What have you been doing with your money?"

"Improving the farm," the younger brother replied.

"And what will your improvements amount to if they force a sale?"

"That's the mischief of it. Have you any money to loan Charles?"

"I'm sorry to say I haven't. That is, I have none to spare, but I think you will have no difficulty in raising it almost anywhere, its such a safe investment. I wish I had the money, George!"

"I wish you had," the young man answered with a deeply drawn sigh.

"Father could fix you up all right—if he would."

"Don't speak of father, for heaven's sake, unless you wish to irritate me. But I must raise it somewhere, for it would break May's heart to be obliged to leave Maplewood a second time. Don't mention this at the house, Charles. She'll know of it soon enough, I'll warrant."

The dinner would have been a most enjoyable affair, but the news of the morning had thrown a damper over George's enjoyment, and May, reading his face at a glance, felt that something unusual had happened, though she refrained from questioning until a more favorable opportunity. On the way home she learned of the unpleasant rumor and her mind was filled with dark forebodings in consequence. She openly regretted that the indebtedness had been allowed to run without effort to lessen it, fearing that it was even now too late to redeem themselves.

"I know I can raise the money, May," her husband assured her. "There isn't a safer investment in the town of S——. Charlie told me this morning that Maplewood was considered one of the best pieces of property in the township, since it came into my hands. Don't worry—it may give me a little present annoyance, but I entertain no doubts for the future. Keep courage, little one, and some day, rest assured, we shall own Maplewood out and out."

CHAPTER XII.

A PROSELYTE.

The season opened most auspiciously, and the young farmer was so busy with his spring-planting and other duties and employments of the farm that crowd so closely upon each other at this time, that the death of Mr. Stone hardly came into his mind. He had broached the matter of a loan at the bank, should it become necessary, and Mr. Bond, the Treasurer, had spoken favorably of Maplewood as security for even a larger amount than that asked, and resting upon this security George had given his whole time and thoughts to his farming operations.

He was impressed with but one idea now, and that to make the farm yield its utmost, and to put aside every dollar that could be made by combined thrift and economy, to the end of getting on his feet again. May, like a heroic little woman as she was, determined to do her share in paying off the mortgage. She set her wits to work to devise new modes of economy in the household department; doing her own millinery and dress making, and in addition to other duties took the entire management of the dairy upon herself. George protested against her doing so much, but she was as firm as a rock, having made up her mind to it—what woman is not—so nothing more was said. They were working for an object, and their labor was as sweet as the sleep that came to them when the toilsome hours were over.

Ye aimless ones in life's field of duty, what will the harvest be when your days are gathered into yellow sheaves? What golden grain will fall upon the threshing floor as one by one the garnered years shall come beneath the flail of time?

Old Silas Wilkins was quite a frequent visitor at the farm-house now. Since his talk in the winter upon stock feeding he had been slyly experimenting, and having satisfied himself that his cattle "didn't look any wuss" for the new feed when spring came, he resolved to give the fertilizer question a trial as well. So he talked with his younger neighbor, using shrewd arguments while doggedly sticking to his own opinions, making mental notes, however, as the young man dilated upon "the science of the thing," or explained its practical bearings. In fact, he sent the old gentleman home upon sundry occasions, with his head so full of "organic matter," "nitrogen," "phosphoric acid," "soluble salts," "ash constituents," etc., that his ideas were entirely "reverted," "reduced" or "precipitated" into a jumble of meaningless absurdities. Then the "book men" were at a discount" and "the old, sensible way" was declared the best after all. But George finally simplified things by practical illustration, and the force of example was so strong Uncle Silas could not help dabbling a little himself, and before the spring was over had actually spent a whole hundred dollars in fertilizers purchased and used under George's direction.

The two become great friends of course. The older man doing many a good turn for the younger farmer, but in so quiet a way, it would have been cruel to have acknowledged it. The fun of it was, Uncle Silas considered he had found an apt pupil in the *ancient* art of agriculture and he pointed with pride to George's fertile acres as an example of what had been accomplished by his own counsels and advice, aided by a little book larnin'" The young man humored the elder farmer in his vagary, by consulting him upon many questions of practice, often finding that his old friend could teach him many things most advantageous to know. Another thing that amused George was the manner in which the walls and fences around the Wilkins' farm grew better and better. Things were undoubtedly brightening, but humor gave way to astonishment, when one afternoon a couple of handsome Jerseys were observed quietly feeding in the meadow adjoining the Maplewood possessions.

"What's up! Uncle Silas, whose cattle are you pasturing there?"

"Well, I'll tell ye, George," the old fellow began in a confidential strain, taking a big bite from a plug of tobacco. "ye see I had a fust rate chance to get 'em cheap. I don't suppose they're any better cattle than those two old red cows down thar by the brook, but they were such powerful milkers, I thought mebby it was a special inducement to buy. But them red cows are fine milkers too, I'll warrant ye! No better cattle in the country! What do you get a pound for butter, George?"

One evening May and her husband were sitting together talking over future plans and prospects, when there came a series of quick, sharp raps upon the front door. It was so sudden both started to their feet and for a few seconds stood as if waiting a repetition. In a moment George came to his wits, and opening the door, a sombre apparition in the shape of a little dried up old man walked in.

"Mr. Ashton, I suppose?" said he. "Ah, good evening madame! A right cosy place this! H'm!"

"Will you be seated sir!"

"Thank you, Ahem! When my late client, Mr. Stone—Mr. *Joseph* Stone—owned this place, it hadn't as cosy a look as it seems to have now. You believe in home comforts I see. H'm!"

"Your business, sir!" George asked quietly.

"Oh yes—my late client Mr. Stone—Mr. *Joseph* Stone—held a mortgage on this place, I believe, for two thousand dollars, bearing interest at six per cent., payable semi-annually. H'm! and the little old man stared around the room most sharply.

"Yes, there is a mortgage which I suppose must be taken up prior to the settlement of the estate of your *client*—late client I should say, and it is doubtless upon this business that you have called to night?"

"Ye-as, exactly! *exactly!* H'm!" I supposo you are ready to take up the mortgage?" he said, looking George squarely in the eye for the first time.

"Well,—No-o,—I am not ready at the present moment, but I think it can be arranged in a few days. Of course his administrator will give me a reasonable time?"

"*Executor*, sir. The deceased appointed an executor in his will—but that is of slight moment. As to the time,—Ah! yes—a month will servo your purpose, sir; that will give you till the middle of June, and in case the mortgage is not taken up by that time, it will be my painful duty to foreclose."

"I shall be ready, sir, by that time, and thank you for your timely notice"

"You have improved the place, Mr. Ashton, very much since, ah—my late client, Mr. Joseph Stone was its possessor. Do improvements *pay*, Mr. Ashton? I suppose the madame enjoys her old home. It really grieved me when I sold out old John Ascott, fifteen years ago. H'm!"

"My wife has not forgotton it, sir; it is not neeessary to recall it."

"Ah! beg pardon, madame, no offense was intended, I assure you. We will give you one month, Mr. Ashton. Good evening, madame! Good evening, sir. Don't trouble yourself to come to the door. Really, a fine evening. H'm! *One month* from to-day, Mr. Ashton. Good night!"

"One month from to-day, my darling," said George, as he entered the sitting-room again, "and then——"

"Oh, husband, if——"

"No, no, May, it must not, it shall not be. Maplewood is yours now, and none there are who shall take it from you. I *can* raise the money."—*To be continued.*

THE EYE OPENER.

The frequency of inquiries from our subscribers, about the reliability of different parties who are doing newspaper advertising, convinces us that publishers can not be too careful in the selection of suitable advertisements for their columns. A number of our contemporaries are running advertisements for parties known to us to be unreliable and "tricky" concerns. The RURAL NEW-YORKER has rejected over $5,000 worth of advertising since January last, coming from parties whose reliability we could not fully endorse; and an examination of our pages will convince our readers, that they are free from all such class of business, and will also prove that in in point of legitimate and reliable advertisements the RURAL NEW-YORKER is second to no paper in this country. To keep these pages pure and reliable, requires the very closest scrutiny, and oftentimes it is attended with much expense; for in so far as it is possible, we admit no advertisement until one of our staff has personally examined the articles, and also ascertained the reliability of the advertiser.

Two instances happened during the past fortnight, one coming from Philadelphia and the other from Texas, the former signed "Toxicologist" and the other R. R. Land Commissioner, both of which were held for examination.

On a recent visit to Philadelphia one of our staff called on the Toxicologist, at 213 Lodge St., and found the place to be a second-class lager beer saloon. Upon inquiring, he found that the would-be advertiser had his mail sent to this place, called in the morning, got it and went away, no one knew where, or at least they pretended not to know, and we naturally conclude the party belongs to the class of "not-to-be-found" advertisers.

In the case of the Texas "R. R. Land Commissioner," above referred to, we learned from reliable parties, in answer to the tracers sent out from this office, that this man, Wilson, was in no way connected with any R. R. company, and that he was a tenant on a small farm which he had recently taken to work on shares, and we advise him to get located in a county where there is a railroad, before entitling himself R. R. Land Commissioner; as he may in that way get his advertisement in some paper from which he can realize some sales of his "valuable book" for "only $1." When newspaper publishers get into a position to care more for their readers than for the many dollars that come through this class of advertising, and insist on nothing less than reliable and trustworthy advertisements appearing in their columns, readers of papers will then have confidence in the entire paper and thus help all legitimate advertisers to receive much better returns. We will thank any of our readers who do not get satisfactory returns from any parties who advertise with us, to notify us of the fact, for in so far as it is possible we hold ourselves responsible for the trustworthiness of our advertisers.

COTTAGE HOSPITALS IN ENGLAND.

The case of the sick is dear to the hearts of the ladies of England, and ministering to them has always been justly considered one of the special missions of women. The problem of how to help the poor to help themselves, rather than to demoralize and to degrade them to the rank of ordinary paupers, by an elaborate system of indiscriminate alms-giving is one of the most difficult in political economy, and one which has been frequently discussed in connection with this subject. Especially must it claim attention in times of depression, trouble, and need. With a view to ameliorate the sufferings of the poor, the system of cottage hospitals has attracted great and increasing attention during the last twelve years. It has been computed that in that time there have been erected throughout the country more than one hundred hospitals which truly deserve the name

of cottage—that is to say, a refuge can be obtained for the sick or hurt, which is small, familiar, safe, friendly, near at hand, with skilled assistance, good nursing, and native fresh air, and to which they are privileged—nay, invited—to contribute something towards its support. By this system the disadvantages and evils incumbent on the sick person being removed to a large hospital some distance off, and being placed amongst strangers, are entirely obviated. On the other hand, the advantage of removing the sick poor from their own crowded, ill-ventilated, unsuitable, and wretched abodes to a clean, plain room of a cottage hospital in the neighborhood, with its regular medical attendance and good diet, is unquestionable. It must be an enormous boon to a locality if efficiently managed.

Domestic Economy.

LOG-CABIN SKETCHES; OR JESSIE SEABRIGHT'S DIARY. NO. 12.

MAY MAPLE.

March 20th, 18——

Our little Alicia is just six weeks old, and already she is queen of the household. Bertie wonders every day what we should do now without the baby. I wonder why so many homes are childless, when there are so many little ones reaching out tiny, helpless hands for loving care—fatherless and motherless little ones, who would with their innocent mirth brighten up so many sad and weary hearts, and in the bye-and-bye be a comfort in the declining years to the kind, yet judicious foster parents. Our baby's mother died when her little one was but two days old, and I brought the child home with me, that it might be properly cared for till other arrangements could be made by the bereaved husband and father. Night and morning he came with a cup of milk for the little Alicia, so named by her mother, almost with her latest breath.

As the days passed one after another, I began to wish I could keep her, for I was fast learning to love the baby as though it were my own; and yet it seemed impossible, for we had as yet, no cow, and when Mr. R. should go away, as he talked of doing, there would be no milk to be had within a reasonable distance. There seemed no way for us to keep the child, even for sweet Charity's sake.

But when the house of Mr. R. was once more put in order after the funeral services, and the neighbors had all returned to their homes, the death-like stillness about the house was too much like torture to him, and he concluded to shut up the house. Finding how much I desired to adopt the little one, he said we might have the child; and he would be very glad to get board with us for a certain length of time, and let us have the cow and such household stuff as we might wish to take in exchange. So I hug little Alicia to my heart, and give her a mother's love and care, and many times a day call her "Blessings," for I feel that we are favored above many.

Well, with the new baby came new experiences and observations in another direction. When Bertie was small, I was living near mother, and, of course, went to her on all occasions, if I even imagined my darling was not as well as usual. But he seldom received any medicine from her advice, unless he was afflicted with canker; then some golden-thread roots were steeped, and when the liquid was strained, it was sweetened with loaf sugar, and a small piece of borax, powdered and put into the sirup; and this was used as a wash for his mouth. She used to say that infants need a little water often, and if a teaspoonful was put into the mouth every hour or two, there would be less trouble with sore mouths.

But little Alicia has been very well thus far, and knows nothing of "doping." Still, as even the healthiest children are liable to sudden attacks of various diseases, I shall be a close observer of the ways of experienced mothers, and jot down such experiences in my journal as may be likely to benefit myself or others. At present physicians and drug-stores are not numerous here, and often it is that some dear, old grandmother, or elderly matron is called upon to advise what to do for the suffering, and frequently such prescriptions as she may be able to give from long experience, are far more efficacious than a learned "medicine man's" would have been.

PEN THOUGHTS FROM "EVERY-DAY HOUSE."

ANNIE L. JACK.

Rhubarb or "pie plant" being now very plentiful, we have secured some for the winter according to the following recipe:

Rhubarb Marmalade.

Peel six oranges; take out pith and pips; slice the pulp into a stew pan; add half the peel cut small, and a quart of rhubarb, with a pound of sugar for this quantity. Boil twenty minutes, and you have a very delicious preserve that tastes like none other, and is especially agreeable to those fond of marmalade.

As the time for jellies is near at hand, I would give as my experience in preserving from mold, that the surface of the jelly be covered when cold with a quarter of an inch of powdered loaf sugar. Thus protected, it will keep for years without sign of moldiness. It is almost discouraging to feel the weight of care that comes upon the busy housekeeper with the advent of spring and summer. Like the bees, we must prepare for winter, and gather the fruits in their season, and though there seems what Artemus Ward used to call "a muchness" of experience on the "can" and "jar" question, it is really useful to us all, and if in a multitude of counsels there is wisdom, what wise women we Rural readers shall be on this vexing subject! For I hold that nothing is more provoking in the annals of housekeeping than to bring up a jar of fruit from the cellar in anticipation of a treat, and find it frothy and soured. Yet we have all, no doubt, known this to happen at some time or other, and it is well to search and find out the cause for such a very disappointing effect.

Give Baby a Drink.

I have no doubt that much fretfulness in little ones is caused by their suffering from want of fresh, cold water. Give a little at a time, every hour or two, especially when teething. My own babe often at night awakes crying, after an hour or so of sleep. I have found that at such times a drink of water will do more to soothe and quiet him than anything else I can do.

E. M.

DOMESTIC RECIPES.

Graham Gems.

I have seen in the Rural, at different times, recipes for the above gems, but I have never thought them equal to those used at the Dansville Water-cure. It seems to me that so-called gems made with buttermilk and soda are not gems at all, but biscuits. Gems correctly made, need no soda to make them light and toothsome. The first requisite is nice fresh flour of white wheat. Take equal parts of sweet milk and cold water, say one pint of each. Sift in the flour from the hand, stirring constantly until a little thicker than for griddle cakes. First heat the oven very hot, then put in the gem pans and heat, grease slightly, and with a spoon drop in the batter (the pans being meanwhile in the oven) and bake about 20 minutes. If correctly made they will be very light. After the first panful the irons do not require greasing.

At this season of the year cooks have to rack their brains for something new to tempt the failing appetite, and as the winter supplies have run low and fresh fruit and vegetables are not at hand, a change or variety is hard to get. By way of varying our light bread we sometimes make

Cinnamon Rolls and Rusk.

For rusk, take a loaf of bread at the last kneading, work in a lump of butter and a little sugar. Let rise; make into little cakes; again let rise, then bake. For cinnamon rolls, roll the dough into a sheet half an inch thick, spread with butter, sugar and cinnamon. Commence at one side and roll up; then with a sharp knife cut into cakes half an inch thick, and let rise and bake.

Flour Gems.

These are made by taking a cup of sweet cream, one beaten egg, and stirring in fine flour until a little stiffer than griddle cakes. Bake the same as Graham gems.

Mrs. C. E. J.

Rice Cake.

Eight beaten eggs, a pound of white sugar, half a pound of butter, a pound of rice ground very fine, a little salt, three tablespoonsful of milk and any flavoring liked. Cream the butter and sugar, add the eggs, then the milk and salt, stirring in the rice last. Bake in small pans.

Pine-Apple Pudding.

Line the bottom and sides of a buttered dish with thick slices of stale sponge cake, pare and slice thin a large, ripe pine-apple, place in the dish a layer of fruit, then sprinkle with sugar, then more fruit and sugar until all is used. Cover with slices of cake, which have been dipped in cold water. Invert a buttered plate over all and bake in a moderate oven one hour and a half.

Mrs. Brady.

Pine-Apple Cracker Pudding.

Roll enough crackers to make two teacupsful of fine crumbs. Melt half a teacupful of butter, mix with the crumbs thoroughly. Slice thin two pine-apples. Butter a pudding dish and put in crackers and the sugared slices in layers. The crackers should make the last layer. Pour over half a teacupful of water, cover with a dish and bake slowly one hour and a half. Remove the cover just before it is done and brown the top.

Mary B.

Miscellaneous.

Trade **LONDON PURPLE.** Mark.

Valuable Insecticide for the extermination of the COLORADO BEETLE, COTTON WORM and CANKER WORM. For Prices, Circulars and opinions write.

HEMINGWAY'S LONDON PURPLE COMPANY, (Limited) 90 Water St., New York.

Professor C. V. Riley says: London Purple can be more effectually sprinkled or sprayed on to the plant than Paris-green, by virtue of its greater fineness.
Professor C. E. Bessey says: It promises to be a most excellent remedy. It quickly kills both the Larva and the Winged Insects.
Professor J. L. Budd says: A single application placed every one of the pests on their backs over the ground, either dead or in a dying condition, in less than six hours.

CARPETS.
SAVED BY PURCHASING DIRECT FROM

We have now open an immense stock of the most approved varieties of CARPETS and FLOOR COVERINGS
MANUFACTURED BY OURSELVES
Expressly for this season's Retail Trade, consisting of AXMINSTERS, WILTONS, VELVETS, BRUSSELS, INGRAINS, &c., &c., in
New Styles and Designs.
These goods will be found to combine in an unusual degree, Elegance of Appearance and Positive Wearing Qualities, and are well worthy of the inspection of intending purchasers.
We also offer a Full Line of TURKISH and EAST INDIAN RUGS and MATS, CHINA MATTINGS, OILCLOTHS, &c., &c., AT THE LOWEST POSSIBLE PRICES.
Special Inducements offered to Churches, Steamers and Hotels.
J. & J. DOBSON,
CARPET MANUFACTURERS AND RETAILERS,
40 & 42 WEST 14th ST., N. Y., Near 6th Av. Elevated R. R. Station
JOHN VAN GAASBEEK, Manager.

500 Male and Female Agents wanted immediately for an honorable, light, local business. An article of consumption needed in *every family*. Large profits. Thousands of patrons.
C. L. VAN ALLEN, Albany, N. Y.

$777 A year and expenses to agents. Outfit Free. Address P. O. VICKERY, Augusta, Maine

AGENTS WANTED EVERYWHERE to sell the best Family Knitting Machine ever invented. Will knit a pair of stockings, with HEEL and TOE complete, in 20 minutes. It will also knit a great variety of fancy work for which there is always a ready market. Send for circular and terms to The Twombly Knitting Machine Co., 409 Washington St., Boston, Mass.

XX COT (not painted, White Duck) $2.

Makes a perfect bed. No mattress or pillows required. Better than a hammock, as it fits the body as pleasantly, and lies *straight*. Folded or opened instantly. Self-fastening. It is just the thing for hotels, offices, cottages, camp-meetings, sportsmen, etc. Good for the lawn, piazza, or "coolest place in the house." Splendid for invalids or children. Sent on receipt of price, or C. O. D. For **50 cents extra**, with order, I will prepay expressage to any railroad station east of Mississippi River and north of Mason and Dixon's Line. For **75 cts.** in Minnesota, Missouri and Iowa.
HERMON W. LADD, 108 Fulton St., Boston; 207 Canal St., New York; 165 North Second St., Philadelphia; 94 Market St., Chicago, Ill. **Send for Circulars.**

Stock and Poultry.

IMPORTED CLYDESDALES
ALSO,
HAMBLETONIANS,
and other desirable strains of **Trotting Stock**, for sale, **cheap**, and on **easy terms**. All stock guaranteed as good as represented. Catalogues sent free. Correspondence solicited. Address
POWELL BROS.,

ARCHITECT.
Plans and Specifications for Country Dwellings and Barns furnished at the most reasonable rates by Rossiter & Wright, Architects, 160 Fulton St., New York

WANTED.
Young Men and Ladies to learn Telegraphy. Good situations guaranteed. Address with stamp
J. A. SHERIDAN, Supt., Oberlin, Ohio.

KIDNEY-WORT
PERMANENTLY CURES
KIDNEY DISEASES, LIVER COMPLAINTS, Constipation and Piles.
Dr. R. H. Clark, South Hero, Vt., says, "In cases of Kidney Troubles it has acted like a charm. It has cured many very bad cases of Piles, and has never failed to act efficiently."
Nelson Fairchild, of St. Albans, Vt., says, "It is of priceless value. After sixteen years of great suffering from Piles and Costiveness it completely cured me."
C. S. Hegabon, of Berkshire, says, "One package has done wonders for me in completely curing a severe Liver and Kidney Complaint."
IT HAS WONDERFUL POWER. WHY?
Because it Acts on the LIVER, the BOWELS and the KIDNEYS at the same time.
Because it cleanses the system of the poisonous humors that develope in Kidney and Urinary diseases, Biliousness, Jaundice, Constipation, Piles, or in Rheumatism, Neuralgia and nervous disorders.
KIDNEY-WORT is a dry vegetable compound and can be sent by mail prepaid.
One package will make six qts of medicine.
TRY IT NOW!
Buy it at the Druggists. Price, $1.00.

MAGAZINES FOR JUNE.

SCRIBNER'S MONTHLY is well illustrated in the June number, and appeals to a wide range of literary taste. For lovers of light reading there are papers on "Rocky Mountain Nights" (both poetical and practical); "Spring Hereabouts," *i. e.*, in New York and suburbs, with illustrations; "Thackeray as a Draughtsman," with over thirty reproductions of the novelist's sketches; "Life in Florence," a sprightly paper from an American point of view; "My Friend, Mrs. Angel," a humorous story of Washington life. The current political interest is appealed to by H. J. Raymond's journal of "The Philadelphia Convention of 1866," and Henry King's picturesque sketch of "A Year of the Exodus in Kansas," and indirectly by Principal Grant's third paper on "The Dominion of Canada." Other papers, more solid and of a curious interest, are Mr. Scudder's paper on "William Blake, Poet and Painter," with portrait illustrations, including "The Chariot of Fire," and others never before engraved; Rev. Isaac H. Hall's account of "The Cypriote Inscriptions," the specimens of which in the Metropolitan Museum were deciphered by him; and Richard A. Proctor's "Sunspots and Financial Panics," an intended refutation of Professor Stanley Jevon's elaborate theories, based on a former playful suggestion by Professor Proctor that these two phenomena are intimately connected. The re-appearance of the sun-spots, and the recent rumors of a financial panic, give interest to this paper. Schuyler's "Peter the Great" is interestingly illustrated, and deals with Peter's first marriage, the administration of Sophia, the eternal peace with Poland, old Russian sports, etc., etc. Mr. Cable's "Grandissimes" is rapidly justifying the high claims made for it by the publishers. This installment is said to be the most dramatic in the story, possibly excepting the episode of Bras-Coupe and the closing part. The departments contain many articles of special or timely interest, such as "The Political Machine," "The Shadow of the Negro," "Beaconsfield and Gladstone," "Letters to Young Mothers," a review of "The Art Season," "Steam Catamaran," "Seamless Paper Boxes," "Cheap Ventilation," "The Phonograph in the Moon two Centuries ago," Recent Books of Travel, Fiction, "Regenerative Gas-Lighting," "The Culture of the Rose," etc., etc.

DOMESTIC MONTHLY.—With the arrival of warm weather, and the probable approach of still warmer weather, the Domestic Monthly presents its attractive list of fashionable, useful and indispensable novelties appropriate to the season.

In the literary department a new serial entitled "Bertine: an Episode," by Ellis Conway, is begun. Among the other authors represented by contributions in prose or verse, are Mrs. Merighi, Mrs. Howell, Howard Glyndon, Florence B. Getchell and others.

News of the Week.

MISCELLANEOUS.

Monday, May 31.

THE two impending great conventions and their possible results are at present the themes on which all politicians are spending their eloquence. The Republican Convention will be held in Chicago June 2nd and the Democratic Convention at Cincinnati. Some of the knowing ones predict that if the conventions will adopt the unit rule the votes on the first ballot will fall about as follows: At Chicago, Grant 400, Blaine 217, Sherman 81, Washburne 14, Edmunds 34, Windom 10; at Cincinnati, Tilden 184, Bayard 37, Seymour 40, Hancock 84, Thurman 49, Randolph 18, and 22 more votes divided between four other candidates. This shows the most prominent candidates and their present popularity..... By a joint resolution the President has been authorized to call an International Sanitary Conference to meet at Washington, the object of which shall be to secure an international system of suppressing yellow fever and cholera in ports liable to be infected with these dreaded pests....A large number of miners in Leadville, Col., are on a strike. They want four dollars per day of eight hours' work....The heat in the vicinity of New York has been intolerable during the latter part of May, the thermometer rising higher than it has done for a quarter of a century past at this season. On the 27th 28 fatal cases of sunstroke took place in New York and Brooklyn....Denis Kearney, the San Francisco agitator, whose imprisonment we have heretofore noticed, is again out of jail on a writ of *habeas corpus*....Thirty-six Indian chiefs, including Red Cloud and Spotted Tail, are inspecting the Indian school at Carlisle, Pa. Red Cloud and Spotted Tail have children in the institution....

The five-mile single-skull race between Edward Hanlan of Toronto, Ont., and James Riley of Saratoga for $2,000, contributed by citizens of Washington, was rowed the 26th ult., over the Potomac river course at Washington. Hanlan took the lead at the start and increased it as he pleased winning by three-sixteenths of a mile in 36 minutes, 24 1-10 seconds. Riley's time was 37 minutes, 21⅝ seconds. Though the weather was intensely warm, 30,000 people witnessed the race.....The annual meetings of the Congregational societies were held at Boston the 26th ult. The publishing society reports having printed 3313 pages during the year, and asks for a permanent fund of from $10,000 to $100,000 to publish religious books in cheap forms. The net assets are $34,373 and the sales of the year are $80,089, against $75,962 for the previous year. Ezra Farnsworth was chosen president, vice J. R. Bradford, who declined a re-election. The American missionary society has taught during the year 7,027 pupils by 190 teachers, of whom 1,600 were in normal and collegiate departments. During the past 19 years it has spent $4,800,000 in the South, of which $3,000,000 was to educate negroes .....Clark Mill's Jackson's equestrian statue on the capitol grounds at Nashville, Tenn., was unveiled last week with impressive ceremonies before an assemblage of 20,000 people.....

The United States sold at auction last Tuesday a piece of property rich in historic associations and having the makings of great commercial value—the water-power at Harpers Ferry, W. Va., together with the old engine-house in which John Brown barricaded himself in 1858 and the ruins of the old musket works, arsenal and other buildings destroyed on the approach of the confederate forces at the beginning of the war....The Sibley cotton mills were organized at Augusta, Ga., Wednesday, with an authorized capital of $100,000, $600,000 being subscribed. One of the largest factories in the South will be erected immediately. The Augusta cotton mills have paid from 8 to 20 per cent. a year since the war....Assistant Treasurer Hillhouse reports that at the present rate of silver coinage the stowage capacity of the vaults will be exceeded; there are $28,000,000 of silver on hand, weighing over 500 tons.....Decoration Day was celebrated in New York as usual by a fine parade of the military and processions to the several cemeteries where the soldiers' graves were generously decked with flowers. The day was beautiful. A heavy rain the night before had cleaned the streets, and a cool breeze from the southwest had a pleasing exhilarating effect on everybody. ....The Sixth Commencement of Purdue University, Lafayette, Indiana, will take place on Thursday, June 10th. The preceding Monday, Tuesday and Wednesday will be occupied by examinations of classes.

Heavy fire losses are usually expected during dry times, but the six weeks after April 1 show losses, according to the New York Bulletin, of $13,000,000, or over $2,000,000 a week, a large average for this season of the year. Of this sum, however, $5,000,000 are from small fires less than $25,000 and forest fires, so that the losses from serious conflagrations are about $8,000,000....An excursion train from San Francisco to Santa Cruz., on a narrow-gauge road went through a trestle at Santa Cruz lately, killing 16 persons and injuring 40....Sitting Bull's Sioux are holding the buffalo country on both sides of the line between the Dominion and the United States, and the Crees, Blackfeet and other tribes friendly to the whites are literally starving. Sitting Bull's braves are also chasing buffaloes into the United States and raiding on American ranches in spite of the mounted police, and it is said that they are trying to join other tribes with them to carry on a plundering campaign upon the settlements on this side of the line....Nearly 80 persons have been killed by Indians in Seroco county and the Mogullon mountains in New Mexico last month. Some settlements will have to be given up till the Indians are subdued.

AGRICULTURAL NEWS.

CHINA is rapidly recovering from the terrible effects of the last famine, and the population is showing signs of once more being able to purchase foreign produce....The wheat crop of Australia harvested in January, 1880, was at first estimated at 500,000 tons, then at 400,000. The latest advices from that colony state that there were 1,480,000 acres of land under wheat, with an average yield of about 11 bushels per acre, which would give a gross outturn of 16,280,000 bushels, by far the largest quantity ever produced in a single season in the colony. Deducting from this the requirement for seed and home consumption, say for seeding 1,600,000 acres, and 6 bushels per capita for 257,000 population, will take 1,325,000 bushels for food, or for food and seed 2,915,000 bushels, leaving a surplus of 13,375,000 bushels for export.... This represents 361,500 tons shipping measurement, 2,240 pounds to the ton. About 3,912,400 bushels of the new crop had been shipped up to the 1st of April, 1880. It is expected that New Zealand will have 100,000 tons of surplus wheat available for export from the crop harvested during February, 1880....Exports from this city for week ending May 22 embraced 3,330 live cattle, 5,440 quarters beef, 1,980 live sheep, 1,740 carcasses mutton, 115 live hogs, 200 dressed hogs....In their New Orleans circular of May 32, Schawbacher and Hirsch say: "The Southern crops promise largely on the whole, and those of Louisiana—cotton, sugar and rice—are unusually promising, and without any serious injury in the future will be immense.....Apples in some portions of Middlesex and Worcester counties, Mass., are being ravaged by canker-worms.....The Toronto Globe of Tuesday says that the prospect for fruit this year throughout the entire western part of Ontario is the best for many years. Orchards are, as a rule, one mass of blossom; and should they escape frost for the next two weeks, the crop will undoubtedly be a large one. Small fruits show equally as well as the larger kinds.....Telegrams from northern Texas on May 28, say that that region had just been visited by heavy wind and rain storms doing considerable damage to crops.....A Leicestershire (England) farmer writes to the Mark Lane Express: "Hundreds of farmers have lost the whole of their flocks of sheep. It has been one of the most disastrous seasons (for sheep) ever experienced."....The condition of the mohair flocks all over Asia Minor some weeks ago caused the greatest concern. The intense cold (the snow in many places having been four to six feet deep, and rendering it impossible to reach the animals, was causing the death of hundreds of thousands. Angora and two other districts reported a loss of 30 per cent., and the mortality was continuing..... It is significant of depression in England that the marriage rate was lower in the last quarter of 1879 than in any since civil registration was established in 1837. The birth rate was lower than in 1850, and the death rate, too, below the average.....The money spent for tobacco in this country, according to The Retailer, exceeds in amount the expenditure for bread.....The Island of Elba, Napoleon's first exile home, has been devastated this spring by an army of locusts from Africa.....The stock of lard at Chicago has increased about 5,000 tierces during the past week, and the supply on hand is now estimated at 148,000 to 150,000 tierces. The stock of mess pork is about 220,000 barrels.—.....A company of speculators are urging the city fathers of Paris to allow them the exclusive privilege for 50 years of cultivating "market truck" on the entire extent of the fortifications and in the ditches at the foot of the ramparts. These market gardeners estimate that it will cost them about 300,000 francs and a year's hard labor to put the fortifications in a good state of cultivation. They offer to pay a rent of 100,000 francs per year for this privilege, provided the concession shall continue for 50 years. It appears that this piece of ground, having a total length of over 33 miles, could be made to produce alone more vegetables than all the market gardens of Paris.....Telegrams just received from Northern Texas tell of the entire destruction of the thriving town of Bonham by a tornado. Great damage has also been wrought throughout a large section of country by very severe storms of wind and rain. Fences, crops and stock have been much injured.....One day of May remains, and the immigrant arrivals at Castle Garden up to Saturday night had already reached the enormous total of 53,497 for the month. When April showed an aggregate arrival of 46,821 immigrants the result was deemed extraordinary, as indeed it was, since the number for April of last year had been but 11,601. Yet May has already far outdone the record of last month.....Mr. Henry G. Vennor comes forward again with his direful prophecies of storms, heat, cold, &c. His letter is dated at Montreal, May 18, and in it he says: "I believe that June will be an intensely hot month, and probably the '1st of June' will be fall-like, with frost again. July will be a terrible month for storms, with terms of intense heat, but another fall-like relapse, with frosts, will, in all likelihood, occur a few days before the 20th. I fear the storms of thunder and hail will be of unusual severity during July. I must claim the verification of my prediction relative to a cold wave, with frosts, over 'a large portion of the United States between the 10th and 15th of May.' The relapse toward the close of the present month (May) will be more severe than that just past."

Around the World.

A fame that is world-wide and acquired in the short space of a few years, must have true merit for its support. Dr. Pierce's Family Medicines have gained such fame and the foreign orders for his Golden Medical Discovery—the greatest blood-purifier of the age, for his Pleasant Purgative Pellets (little sugar-coated pills), and other remedies became so great, that a branch of the World's Dispensary has been established in London, England, for their manufacture. From this depot they are shipped to every part of Europe, and to the East Indies, China and Japan, and other countries. Their sale in both North and South America is perfectly enormous and increases yearly. World's Dispensary Medical Association, Proprietors, Buffalo, N. Y., and Great Russell Street Buildings, London, England.

ROYAL CENTER, Cass Co., Ind., Feb. 28th, 1879.

Dr. R. V. PIERCE:

Dear Sir—I take pleasure in writing my testimony with others in regard to your valuable medicine. For a long time I have suffered from disease of the lungs and until I used your Discovery found nothing that did me any good. Thanks to it, I am relieved and recommend it to all.

Yours truly, MARY KENNEL.

A Man takes to Himself the Credit of a Valuable Discovery Made by an Old Lady.

In the columns of this paper there appears an advertisement of a very valuable remedy said to be the first absolute cure for diseases of the kidneys and bladder, under the name of Day's Kidney Pad, which was discovered by a Mrs. Burton, and first used by her in curing Oliver C. Day of an affection of the kidneys, that had become so malignant that physicians pronounced him incurable. And now, while great credit is certainly due to Mr. Day for his efforts in bringing before the public this wonderful remedy, would it not have been more appropriate to have attached the name of the actual discoverer to this excellent remedy, and given to her, to whom he owes his life, the prominence and credit he now enjoys?

Women that have been bedridden for years have been entirely cured of female weakness by the use of LYDIA E. PINKHAM'S VEGETABLE COMPOUND. Send to Mrs. Lydia E. Pinkham, 233 Western Avenue, Lynn, Mass., for pamphlets.

Why Wear Plasters?

They may relieve, but they can't cure that lame back, for the kidneys are the trouble and you want a remedy to act directly on their secretions, to purify and restore their healthy condition. Kidney-Wort has that specific action.

Burnett's Flavoring Extracts are used and endorsed by the best Hotels, Confectioners, Grocers, and the first families in the country.

The Markets.

SPECIALS FROM ALL CENTERS.

Until Saturday, May 29.

Boston.—PRODUCE.—The market is well supplied and prices are moderate. The following prices are paid by receivers:—BUTTER—New York and Vermont—choice creamery, 20@22c ₩ lb; Franklin Co., Vt. dairy, 18@19c; New York and Vt. dairy choice, 17@18c; fair to good, 15@16c; Western—choice creameries at 21@22c; choice dairy packed, 17@18c; do. ladle packed, 16@17c; ladle packed, fair to good, 14@15c. CHEESE—quite firm—New choice full cream, 12½@13c ₩ lb, fair to good at 10@12c, and common 6@9c. EGGS—Eastern are selling at 11½@12c, Northern 11½@12c, Western 11@11½c ₩ doz. BEANS—Northern hand-picked Pea at $1.80@$1.85 ₩ bushel: do do. Western, at $1.70@$1.75: do. common $1.60@$1.65; medium choice $1.45@$1.50; common to good $1.30@$1.35: Yellow Eyes $2.10@$2.25; Red Kidneys at $1.40@$1.50. Canada Peas 80c@$1.05 ₩ bushel for common to choice. Green Peas $1.50@$1.85. POTATOES are more active; we quote Houlton and Maine Central Rose 45@55c ₩ bushel: Houlton Jackson Whites at 30@35, Maine Central Jacksons at 30@35, Vermont Rose at 40@45c, do. Jackson at 30@35, Peerless at 30@35, and Prolifics at 45@50c, ₩ bushel. ONIONS—Bermudas, $1.87½@$2 ₩ crate. APPLES at $2.50@$4 ₩ bbl. according to quality. DRIED APPLES are quoted as follows: East and North new sliced, at 6@7c ₩ lb: do. do quartered, at 5½@6½c; old quartered and sliced at 3@5c; evaporated, choice new, at 14@15c; do. good, at 12@13c.

Chicago.—BUTTER.—The demand during the week was quiet, with prices showing no quotable difference from those ruling at the same time last week. The demand for the better grades is merely local, though they move off briskly at figures quoted, but the poor sorts drag a little. Creamery 19@22c; good to choice dairy 16@19c; medium 13@14c; inferior to common 8 to 12. CHEESE.—Fair sales were made on export account but the demand from other sources was light. Full cream cheese was held with some show of firmness, but pure and full skim goods were hard to move except at shaded prices. Stocks are steadily augumenting, and the tendency of prices continues in a downward direction. We quote: full cream, new 10½@11½c; part skim, new; 8½@9½c; full skim, new 5@7; low grades 4@5.

Cincinnati.—BUTTER.—Since Saturday butter has ruled easier, with only a moderate trade, and all grades of Dairy Butter have declined 1@2c, but there is no surplus of creamery, and prices are well sustained. There is a little increase in the local demand for the medium grades, but the receipts are large and the bulk of the supply has to be sold to packers, who will not pay over 12c. for prime stock, and get some good lots at 9@10c. There is no grease butter of consequence here, and there is very little if any accumulation of stock of any kind in receivers' hands. Fancy creamery sells at 20@22c, choice Western Reserve and Dairy at 14@16c, prime Central Ohio 11@12c, medium do 9@11c and inferior 6@8c. per lb. CHEESE The receipts are liberal and the market rules easier at 9½@10c per lb for prime to choice factory, although there is a fair consumptive demand. EGGS.—There was a strong market for a day or two the past week but it has been slow and drooping since Saturday and closes dull at 10@10½c. per dozen for fresh. POULTRY.—The market has been heavy under usually large receipts and prices have steadily declined, closing dull at the lowest point. Spring chickens sell at $1.50@3.00 per doz. according to size; and common to prime old do. at $2.00@2.50 per doz. Geese are not wanted; Turkeys sell at 5@6c. ₩ lb. CATTLE have been in fair local demand and prices have made a slight recovery, ruling 10@15c higher than during the preceding week, and closing with a fair degree of firmness for butcher qualities, but dull for shipping lots. Fair to good shipping steers $4@4.60 per 100 lbs gross; good to choice butcher grades $3.75@4.50; fair to medium do. $2.75@3.50; common do, $2.00@2.50; good to extra fat cows and heifers $3.75@4.40; fair to good heavy oxen, $3@4.25; fair to good feeding grades $3.75@$4.40; common to good stockers; 2.50@3.50. SHEEP have ruled quiet at about steady prices during the week closing easy. Common to fair 2½@3½c, good to choice 3½@4½c per lb. Lambs have been in good supply but without much further reduction in prices, the market ruling quiet and easy to-day. Common to fair 3½@4½c. good to choice 5@6c ₩ lb.

Wool.

The Cincinnati Price Current of May 27th says:—Continued dullness in the Eastern markets and the inability of dealers here to realize on their recent purchases, or even cost on their early takings, is having a depressive effect on the market here, and prices have suffered a further decline of 2c per pound on fine, medium and delaine, fleece, washed and pulled Wool, and 1c on medium clothing, long combing and delaine unwashed. The offerings from producers have largely increased in Southern and Central Ohio, and in fact from nearly all sections tributary to this market. Dealers at present seem to be "all at sea" about the future course of the market. They did not expect to see prices go so low as they have done, and now there is nothing to prevent a further decline if manufacturers continue to hold off, as they seem disposed to do. Dealers seem to feel that they are working in the dark, but they are disposed to follow the market, trusting that the average cost will be low enough for a final outcome. They are carrying nearly all the stock which they have bought this season. Perhaps it is the best policy for manufacturers to pursue to let others carry the Wool until they want it, as the shrinkage is no inconsiderable item, but it is in marked contrast to the course they took last year. We give revised quotations.

Chicago.—The arrivals are rather light for the season and a quiet state of affairs exists both here and of other points. Asking rates from store for Eastern Iowa, Wisconsin, and Illinois wool ranges as follows: Tub-washed bright 50@55c ₩ lb; do. dingy and coarse 45@48c; fleece-washed medium 48@50c; do. fine 43@45c; do coarse 40@44c; unwashed medium 30@35c; do. coarse 26@30c; do. fine bright 25@28c; do. heavy 20@25c; buck's fleece 18@20c. Consignments from Western Iowa, Nebraska and Kansas sell at about 2c lb less than this range, and burry and poor conditioned lots at 3@5c less. Colorado wool (unassorted) is quoted at 28@32c ₩ lb for medium to fine; 25@27c for coarse to medium; at 25@26c for black, and at 22@24c for coarse carpet stock.

Fertilizers.

Bone at $23.50@$24.00 per short ton for Texas and South American mixed, and $25@27 do. for skin and shank. Sulphate of ammonia continues firm at 3¾@3¾c. per lb; some sales as high as 4c. have been made for the home market. Dried blood in good demand at $2.25@2.37½ per unit of ammonia for short ton. Tanking in request at $3@3.12½ per unit of ammonia, phosphates gratis, per short ton. Ammonite, azonitue, etc., in good demand at $2.62½@2.87½ per unit of ammonia respectively. Bone ash continues unchanged at $23@24 per short ton on the basis of 70 per cent phosphate of lime. No stock.

Nitrate of soda, 4¾c. Saltpetre, crude 6@6. The above are wholesale prices; at retail, goods are delivered at boat or cars at the following rates: pure ground bone 47 to 50 per cent. bone phosphate and 3 to 4 per cent. ammonia, $35@$40; dissolved bone black, 15 to 17 per cent. of soluble phosphoric acid $30@$35; dissolved bone 13 to 14 per cent. of available phosphoric acid $30; ammoniated superphosphate 10 to 11 per cent. of soluble phosphoric acid, 3 per cent. of potash, 3 per cent. of ammonia, $40@$45; German potash salts, 25 per cent. of sulphate of potash, $15@$18 per ton; muriate of potash, 80 percent. 2@2½c per lb. land plaster 7.50; dried blood, 10 per cent of ammonia, $35@45 per ton; fish guano dry and ground fine, 10 to 11 per cent of ammonia, 20 per cent of available bone phosphate, $40@45; fish guano, 8 per cent of ammonia, $45; unground fish guano, 6 per cent of ammonia, $25; castor pomace; $19@24: sulphate of soda, ground, and in barrels, $15@18 per ton; sulphate of ammonia 4½c. ₩ lb; bone black, 70 per

cent of bone phosphate, $30@32; ground South Carolina phosphate, 57 to 60 per cent of bone phosphate, $20 per ton; No.1 Peruvian guano, 10 per cent ammonia, standard, $55 per ton; Lobos $46 per ton; rectified $65 per ton; guaranteed $56 per ton; nitrate of soda, 5¼@5¾ ₩ lb.

FORRESTER'S potato manure, $47.50; cabbage, $50; oat, $17.50; lawn dressing, $47.50; turnip, $52; grass, $45; hop, $47.50; strawberry, $42.50; wheat, $45; rye, $47.50.

STOCKBRIDGE'S manures quoted: Potato, $50; cabbage, $50; strawberry, $40; corn $45; seeding down, $40; orange tree, $35; onion, $50—per ton each.

MAPES'S complete manures for clay soil, $25.50 per 1,000 lbs.; for light soils $25.50 per 1,000 lbs.; "A" brand for general use, $20 per 1,000 lbs.; fruit and vine, $18.50 per 1,000 lbs.; cabbage and cauliflower, $23.75 per 1,000 lbs.; corn, $24.50 per 1,000 lbs.; potato, $24 per 1,000 lbs.; asparagus, $25.50 per 1,000 lbs.; gypsum, Nova Scotia, ground, ₩ ton, $7.50.

BOWKER'S "Hill and Drill Phosphate" $45; Bowker's Phosphate $40 ₩ ton, each; Bowker's "Food for Flowers," 35c. ₩ package and $3 ₩ doz.; Bowker's "animal meal for fowls," $2 50 per cwt.; Ground oyster shells, $1 ₩ cwt.

BAUGH & SONS' prices for goods delivered at depot or boat, in bags and in 2,000 lb lots: Ammoniated dissolved bones, $35; pure bone meal, from raw bones, $36; Baugh's raw bone superphosphate $40; Baugh's $35 phosphate, $25; Baugh's A. A. nitrogen, 13½ per cent. of ammonia, $48.

PRODUCE AND PROVISIONS.

NEW YORK, Saturday, May 29, 1880.

BEANS AND PEAS.—Marrow beans continue to sell freely for export, and prices firm for all good shipping qualities. Mediums are quoted full, local wants very light. Pea and other fancy beans quiet. Green peas lower to sell. Southern B. E. peas as before. Marrow beans, prime, $1.62½@1.65; other, $1.50@1.60; medium, prime, $1.37½@1.40; other, $1.20@1.30; pea, $1.45@1.65; white kidney, $1.50@1.70; red kidney, $1.30@1.50 black, $2.

Receipts of beans for week, 1,360 bush.; exports, 2,825 pkgs.

BUTTER.—Receipts are immense and prices are weak from creamery to factory. Stock has shown badly owing to the severe weather. Ice is so high that it hardly pays to store much of the grade now arriving, and sellers let under or imperfect lots run out as they can. The demand is for fine, especially when 18@22c. is the general asking rate for prime table stock. Shippers have purchased liberally, and in fact make the ruling rates. We hear of a movement on the part of commission men to make a charge to their consignors for butter placed in cold storage. The price of ice has advanced so heavily this season that the cost of cooling and holding butter in cold storage is adjust to the commission merchant, and a division of expense would be proper.

Creamery, State, fancy, 22c.; State and Western, fine, 20@21c.; good to prime, 19@20c.; fair to good, 18@19c.; sweet cream, fine 21c.; fair to good, 18@19c.; State, firkins, choice yellow, 21@22c.; State, pails and hf. tubs, choice, 19@20c.; good to prime, 13@19c.; fair to good; 17@18c.; poor, 14@15c.; Welsh tubs, good to choice, 18@19c.; fair to good, 17@18c.; poor, 14@15c.; Western imitation creamery, 12@16c.; dairy, fresh, 16@17c.; good to prime 14@16c.; fair to good, 13@14c.; poor to fair, 12@13c.; Western factory, prime, 14c.; fair to good, 12@13c.; poor to fair, 10@12c.; Western, very poor, 8@9c.

CHEESE.—In the early portion of the week the market failed to respond to the higher country sales but later on demand becoming quite active prices gradually worked better and the market leaves off firm at 12½c. for the best factories. The shipments reach 54,300 boxes, which about absorb the receipts of the better grades.

Quotations are 12½c. for choice full cream; 11½@12c. for good and fine; 10½@11½c for fair Ohio factory flat at 12c. for full cream; 10½@11c. for fair and good lots.

Receipts for week, 40,000 boxes; exports, 50 000 do. Liverpool cable, new cheese, 71s. Steam, 35s. 6d.

BROOM CORN.—Trade is slack and prices unsettled. Latest prices are for brush and short broom, choice ₩ lb, 7@8c.; do., do., common to good 5@6½c.; hurl good to choice, 7@8c.; do. common to fair 5½@6½c.; red and crooked at 3@4c.

BEESWAX.—There is little doing with prices steady quoted at 24@25c. for Western and Southern.

Exports since June 1, '80 46,775 lbs.; same time last year 50,300.

COTTON.—The market is moderately active only and closed at for May, 11.33@11.36c.; June, 11.38@11 40c.; July, 11.56@11.57c.; August, 11 63@11.64c.; September, 11.23@11.24c.; October, 10.72@10 73c.; November, 10 52@10.54c.; December, 10 53@10.54c.

Quotations for spot cotton are based on American standard of classification, and on cotton in store running in quality not more than half a grade above or below the grade quoted.

DRIED FRUITS.—There is lis little life to the market, with prices generally unsettled and nominal.

Quotations are for N. C. apples, fair to good, at 7@8½c.; choice, at 8@9½c.; New York State quarters sliced at 7½@7¾c.; patent evaporated, in cases, choice at 14@15c.; good and prime 13½@14c.; evaporated, sliced at 12@13c. Evaporated peeled peaches, good to choice, at 16@18c.; North Carolina peeled choice, 16@17c.; Georgia prime at 15@16c.; fair to good at 13@14c.; common at 10@12c.; unpeeled halves at 7@8c.; do, quarters at 6@6½c. Pitted cherries at 17@18c. Blackberries nominal at 13@13½c. Raspberries at 28@30c. Plums at 17@17½c.

Exports for week, 4,515 bbls. dried apples.

EGGS.—Receipts for week, 14,525 bbls.; do. last week, 15,025 do. The market has been neglected, owing to the detrimental effect of the unseasonably hot weather upon stock. Buyers are making very close treaties, and when anything like a wholesale trade is made, full assurances for losses are required. The outlook is bad for stored Western.

Near Points, 12½@12½c.; State and Penn., 12c.; Western fresh, 10½@11c.; Canadian, 11@11½c; poor to 8, 10c.; goose, 18@20c.

FRESH FRUITS.—Apples are only nominally quoted A feature of the season is a display at this late date of Spys kept without ice and turning out splendidly. Strawberries have not shown up well, the weather has been so dry. Parcels for distant points have met softening, hot weather, and the market has ruled low most of the week.

N. J., choice, per qt., 16@20c.; poor to good, 10@15c.; Del., choice, 14@16c; poor to good, 10@15c.; Md., choice, 17@18c.; poor to good, 8@11c.; Norfolk, 2@8c. Apples—Russet, choice, per bbl., $3.50@3.75; poor to good, $2.50@3. Cherries, choice, per lb., 11@15c.; fair to good, 10@12c.; common, 6@8c. Gooseberries, Md., per qt., 7@8c. Peanuts quiet and weak; Va. handpicked, 5¼@5½c.; extra prime, 4¾@5c.; good to prime, 4¼@4½c.; shelled, 5¼@5¾c., hickory nuts, 90c.@$1. Hot-house grapes, 1b. Hamburg, $1 per lb.

Exports of apples since Jan. 1, 87,950 bbls.; same time last year, 50,100 do.

FLOUR.—There are free sellers and prices weak at the decline quoted.

Latest prices are at $3.35@4.50 for inferior to strictly choice superfine State and Western; $4@4.40 for very poor to good extra State, odd lots and lines; $4 40@5.00 for good to very fancy do.; $4.00@4.45 for inferior to good shipping extra Western, and $4.45@5.00 for good to fancy shipping extra do.; inferior to very good white wheat extras, $4.60@5.35; very good to fancy do. at $5.35@6.50; red and amber winter wheat, inferior to fancy trade and family, at $4.40@6.25; round hoop Ohio, $4.40@5 00; and trade and family brands of do. at $5.10@6.50; St. Louis at $4.50@5.35 for inferior to good extra; $5.50@6.65 for good to very choice; Minnesota clear, very inferior to choice, at $4 00@5.85; Minnesota "straight," poor to fancy, at $5 10@7.00, and patent inferior to fancy at $6.50@8.50; unsound stock at from $2.25@5 00; city mill extra at $5.60@5.85 for good to choice West Indies; do. for England, $4.35@5.00 for very poor to fancy; do. trade and family extras, $6.00@6.75; do. for South America, $5.90@6.35; No. 2 at $2.35@3.50 for poor to very fancy.

GRAIN.—In wheat there has been a good deal of excitement in No. 2 red, which has been cornered for this month's (May) delivery, and the extreme prices for the moment check export trade; other grades are fairly active: latest sales are of No. 1 white at $1.29@1.29½; do., May, at $1.29¾@1.29½; do., June, at $1.25¾@1.25½c.; ungraded white at $1.25@1.27½; No. 2 red at $1.40@1 42¾; do. May at $1.42@1.43; do. June at $1.26¾@1.27½; do. July at $1.16@1,16¾; do. August at $1.11½@1.12; ungraded red at $1.26@1.27; No. Northwest spring at $1.30@1 31; do., May, at $1.20. Rye at 95c, for Canada in bond. Corn has been active and fluctuating frequently; latest sales are of New York No. 2 at 54¾@55½c.; do., May, at 55c.; do., June, at 50¼c.; do., July, at 49½c.; New York steamer mixed at 54c.; ungraded mixed Western, 52½@55¼c.; No. 3 at 52½@53c.; yellow Western at 53@58c.; No. 2 white at 58c. Oats have been active and advancing, closing, however; weak; latest sales are of No. 1 white at 43½c.; No. 2 white at 45@45½c; No. 3 white at 43c; New York No. 1 at 46¼c.; New York No. 2 at 45@46½c.; do. June, at 40@40½c.; No. 3 at 41c.; ungraded white Western at 44@48c.; ungraded mixed Western at 42@45c.; white State at 46¾@48½c.; No. 2 Chicago quoted at 45c.; No. 2 July at 41c.

HAY AND STRAW.—The dry weather tends to give us very small supplies, as farmers are not willing to forward accumulations; prices are very strong.

Shipping hay quoted at 75@80c.; retail lots at 80@85c. for medium, and 95@$1.10 for better qualities; clover, 55@60. Straw at $1.05@1.15 for long rye; 65@70c. for short rye, and 50@60c. for oat.

Exports for week, 1,768 bales: since Jan. 1st, 41,500; same time last year, 25,350 do.

HOPS.—Brewers are buying more freely, and the market is strong at the prices current for several days. Quotations are for:

	Cents per lb.
New York, fancy	Nominal
New York, new crop, good and choice	33 @36
New York, new crop, medium	31 @33
New York, new crop, low to fair	27 @29
Eastern, new crop	27 @35
Wisconsin, new crop	27 @35
Yearlings	7 @18
Olds, all growths	4 @10
Pacific Coast, new	30 @35
Pacific Coast olds (nominal)	5 @10

OIL-CAKE.—Western is quoted at $32.25 per ton.

POULTRY AND GAME.—The call for dressed turkeys is light; steamers and hotels taking the principal parcels. A few fancy Vermont frozen have sold at 15c. Scalded fowls from distant points not wanted. City killers can now furnish good, showy stock, and it has the merit in warm weather of being fresh. With scarce ice the general market is weak.

Turkeys, choice small, on ice, 8@10c.; fair to good, frozen, 6@8c.; do., poor, 4@5c.; Phila., dry-picked, 8@10c.; capons, Phila. large, 20@22c.; small, 18@20c.; slips, 18@20c.; chickens, spring, Phila., large, ₩ lb., 33@35c.; roasting, small, 28@31c. Phila., dry-picked, 20@22c.; fowls, Phila., yearling, 13@14c.; Phila., dry-picked, 12@13c.; Jersey, good to prime, 11@12c.; State, good to prime, 10 @11c.; Western, good to prime, 10@11½c; poor to fair, 5@8c.; ducks, spring, large, ₩ lb., 30@35c.; Phila., dry-picked, —— squabs, white, ₩ doz., $1.75@2.00 dark, $1@1 25

Live poultry—Spring chickens plenty; generally sold by the pound at quotations. Fowls declined early in the week but are not very plenty to-day and rule steadier. Frozen turkeys being plenty, live might be kept at home for the present. Ducks dull; lower. Geese slow,

Chickens, spring, large, per lb., 24@25c; do., small, 22@23c.; fowls, Jersey, 11c.; Western, 10@10½c.; Southern, 9@10c.; roosters, old and young, 4@5c.; turkeys, mixed, 7@8c.; Southern, 6@7c.; ducks, Jersey, N. Y. & Pa., ₩ pair, 55@65c.; Western, 40@50c.; Southern, 40@45c.; geese, Jersey, $1.50@1.62; N. Y. & Pa., $1.25@1.37; Western, mixed, $1@1.12; Southern, 75c.@$1; pigeons, 25 45c.

Supplies of game are light, but the demand is unimportant. Bay snipe now included. Dowitch, $1.50 ₩ doz.; yellow-legged $1.75; sand, do., 50@60c.; Eng. snipe and plover, $2.25@2.50. Wild pigeons, 50@65c.; do., squab, 50@65c,

PROVISIONS.—Hog products have been unsettled and dull, closing at for pork, $10.30@10.95 for May; $10.85@10.95 for June; $10.95@11 for July; $11.05@11 10 for August; $11.05@11.15 for September, and $11.20@11.25 for October. Bacon at 6¾c. for long clear and 6¾c. for short clear. Beef—Extra India mess quoted at $17@19 for city and $17@19 for Philadelphia, and $10@10.50 for extra mess, and $9.50@10 for plain mess. Beef hams at $18@18.50. Lard—Western steam at $6.90 for spot June; $6.95 for July, and $6.97½@7 for August. Stearine at 8c. for city.

SEED.—Grass is quiet. Clover is quoted at 6¾@7c, and timothy at $2.65@2.75.

TOBACCO.—The market has been very quiet this week and shows no change in prices.

VEGETABLES.—Selections of old potatoes quoted at $1.75. Other lots have irregular rates down to $1 for useful. New in good demand.

Bermuda, ₩ bbl., $4 50@5.00; Chas. & Sav., Chill red, $3.50@4.00; early rose, $3.50@4.00; peerless, $3.00@3.50. Fla. $2 75@3.50; culls, $1@1.75. Garden truck has had a good demand when prime. Stale or wilted lots have no regular price. Tomatoes, Cha's. and Sav., ₩ cr., $1.50@2; Fla., $1@1.50; Bermuda, 50@60c.; cucumbers, Charleston and Savannah, $2@3; Fla., ₩ crate, 50c.@$1.50; string beans, Norf., ½ bbl. $3 75@4; N. C., bu. crate, $2 Sav. & Ch'n. per crate, $1.@1.50; green peas, Jersey, ₩ bbl., $3@3.50; Md. and Del., $1@3; asparagus, O. Bay, per doz. bch., $1.50@2; N. J., $1.25@1.50; turnips, Jersey, ₩ 100 bunches, $8; beets, Norf., $1@3; Jersey, $7@8; radishes, near-by, 75@87c.; round, 40@50c.; lettuce, per bbl., $1@1.50; cabbage, Norfolk $1.50@2.25; rhubarb, L. I. & Jersey, ₩ 100 bunches, $1@1.50; onions Bermuda, new, ₩ crate, $2@2.25.

WOOL.—Trade is dull and dragging; manufacturers being well supplied, and await the marketing of the new clips.

LIVE STOCK MARKETS

NEW YORK, Saturday, May 29, 1880.

BEEVES.—Receipts for week, 14,185 head; do. last week, 14,734 do. Butchers' wants have been moderate with weather that has forced consumers to the lightest description of diet, and the week has been a dull one. At the close there was rather more confidence displayed, nothing of importance remained in the yards. Light Texas stillers sold at 8¾c., to dress 56 lbs., and 50c. per head; Native stillers at 8¾@9c., to dress 56 lbs. Some of the cattle which were in last Tuesday night's wreck were sold as low as 8c., to dress 55lbs.; but from 8¼c. to 9¾c., to dress 56lbs. represents the general range for native corn-fed steers; Colorados sold at 8¼@9c., to dress 56 lbs., and a number of fat distillery-fed bulls at 3¾@4c., live weight.

COWS AND CALVES.—There is some increased demand for prime milkers, but not enough to invite heavy receipts, as special orders can be filled from near points. The range is $25@55,

VEAL CALVES—Dull and low, with unfavorable weather for retail small meats.

Live calves, Jersey and Bucks Co., choice, 5¼c.; prime, 5@5½c.; State, choice, 5@5¾c.; do. prime, 4¾@5c.; fair to good, 4@4¾c.; poor, 2¾@3½c.; Mt. Holly, fair to choice, 5@6c.; buttermilk, 2½@3c.

SHEEP AND LAMBS.—Receipts for week, 23,761 head; do. last week, 28,674 do. This market largely shared the dull tone of the live stock trade consequent upon the thermometer in the nineties. Sales were at 3¾@6c. for sheep; 4¼@5¾c. for some common yearlings; 6¾@7c. for Southern and Western lambs; 6¼@7¾c. for Pennsylvania do; and 7@8c for Jersey do. A carload of choice State wethers was delivered on contract at 6c.

SWINE.—Receipts for week, 25,628 head do. last week, 29,282 do. Packers have used up the entire offering and there is no recent quotation. Hogs, city dressed, State, light, 7@7½c.; 150 to 200 lbs., 6¾@7c.; city dressed, Western, 5¾@6c.

THE request often made by publishers that readers will mention their journals when answering advertisements, seems to us a very reasonable one. Such mention is a helpful and friendly act to the journal mentioned and enables the advertiser to determine which journals are the best advertising mediums. Reference to our advertising columns will show there is not one advertisement of an exceptional or ambiguous character admitted. In so far as this is possible we hold ourselves responsible for their high-standing and trustworthiness.

Good Agents wanted, both Male and Female, to whom Liberal Inducements are offered. Agents can make from $10 to $100 per week.

INDISPUTABLE EVIDENCE.

It is now nearly a year since we made the above offer to the public; up to this date we have not had a single application for the money. During this time we have shipped thousands of our Washers to all classes of men and women in every State and Territory in the Union, and the universal verdict is, "It does all you claim for it." "We would not be without it at any price." "The longer we use it the better we like it," &c., &c. We have advertised extensively in nearly all the large and influential newspapers, which upon investigation have never failed to indorse us as well as our WASHER. In fact, we are so well known to the press generally, that we take pleasure in referring to the following prominent journals, all of which have given us flattering editorial mention, viz.:

New-York American Agriculturist.
New-York Weekly Sun.
New-York Weekly Witness.
New-York Weekly World.
New-York Weekly Tribune.
New-York Weekly Times.
Moore's Rural New-Yorker.
New-York Christian Advocate.
New-York Illustrated Christian Weekly.
New-York Christian at Work.
New-York Methodist.
New-York Baptist Weekly.
New York Cricket on the Hearth.
Rochester Rural Home.
Boston Weekly Globe,
Boston Youth's Companion,
Boston American Cultivator.
Brattleboro Household.
St. Louis Globe-Democrat.
St. Louis Journal of Agriculture.
St. Louis Christian,
St. Louis Observer,
Philadelphia Saturday Evening Post.
Baltimore American.
Chicago Inter-Ocean,
Chicago Standard.
Chicago Farmers' Review.
Chicago Prairie Farmer.
Cincinnati Gazette,
Cincinnati Star.
Cincinnati Times.
Cincinnati Herald and Presbyter.
Cincinnati Christian Standard.

Springfield Farm and Fireside.
Pittsburg Methodist Recorder.
Pittsburg Presbyterian Banner.
Detroit Free Press.
Detroit Post and Tribune.
Detroit Christian Herald.
Detroit Christian Advocate.
Toledo Blade.
New Orleans South-western Christian Advocate.
And many others.

When the newspaper reader considers the thousand things that appear in the advertising columns of his paper, set forth in the most glowing style—which too often, we regret to say, result in great disappointment, not to say disgust, to those who answer them—we cannot but expect that there are thousands who would look upon us and our statements with considerable doubt and incredulity, were it not for the fact that the evidence we offer is unparalleled in the history of advertising. Would the papers we name lend their influence to deceive and injure their readers? Besides the testimony of the press, we have thousands of commendatory letters, many of which we have from time to time published in our advertisements.

If you want good paying employment, send for a sample Washer; try it first, and then go to work canvassing your neighbors. You can soon build up a good, profitable business. If you want to lessen the labors of your mother or wife, send for one, and, above all, if you want clean and snowy-white linen, send for one. A trial will more than satisfy you.

No. 1 works in boiler holding 10 to 15 gallons. No. 2 works in boiler holding 15 to 25 gallons. Price No. 1 $3.50; Price No. 2 $5.00.

WE SEND SINGLE OR SAMPLE No. 1 WASHERS, PREPAID, TO YOUR NEAREST RAILWAY EXPRESS OFFICE, in any part of the United States east of the Mississippi and Missouri Rivers, also in Kansas and Nebraska, for $3.50. West of that line as follows, viz.: In Dakota, at Bismarck or Yankton; in Wyoming, at Cheyenne; in Louisiana, at New Orleans; in Arkansas, at Little Rock and Texarkana; in Texas, at Denison or Sherman, for $3.50; in California, at San Francisco, Sacramento, Marysville and San Jose; in Colorado, at Denver and Pueblo, and in Utah, at Ogden, for $4; in Idaho, at Franklin City, and in Texas, at Corsicana, for $4.50; in New Mexico, at Santa Fe or Las Vegas, for $5. Our reason for so doing is to induce people to investigate this matter, feeling assured that a trial will secure an agent for us.

Send for sample and secure A BUSINESS THAT WILL PAY YOU WELL.

When you order or write, mention this paper. Address,

BISSELL MANUFACTURING CO.,
50 BARCLAY ST., NEW YORK.

FOR A DESCRIPTION OF THE WASHER AND BLEACHER SEE OUR ISSUE OF MAY 8TH.

Reading for the Young.

HINTS FOR THE MEMBERS OF THE HORTICULTURAL CLUB.

THE very warm weather, which has lately visited nearly all parts of the country, will naturally tend to curb the activity of young horticulturists, and garden work will perhaps be pursued with less ardor than in early spring. But, whatever your inclination may be, there are two conditions indispensible to successful gardening, which you must not lose sight of; namely, the plants should have, first, the necessary supply of water, and second, clean culture. I place the condition of water first, because upon it depends all plant growth. Sahara would not be a desert if it had a rich supply of water. Those of you who live in portions of the country liable to suffer from drought, know from experience how necessary water is to plant life, while others, who live in sections where the crops are seldom stunted for want of rain, may not be so familiar with this fact. But what I mean to say now is, that, if necessary, you must water your garden crops. Water diligently and thoroughly, if rain should fail you. But even the mere task of giving a plant water is something of an art that must be learned before one can do it nicely. It is hard work to carry water, and it should therefore be applied in such a way that it may do the most good. I have sometimes seen people pour a pail of water over a plant in a manner that caused more harm than good. The water would run away in long snakes in all directions, hardly wetting the ground, and, by the violence with which it was thrown on, several leaves or even branches would sometimes be broken. First loosen the ground about the plant as deeply as can be done without injuring the roots, and then, at a little distance from the stem, make a circular basin round the plant with the hand or with a trowel and pour the water gently into this.

Water thoroughly; fill up the basin about the same plant two or three times, as fast as the soil can absorb the water, till the roots are thoroughly soaked, and when finished, level the ground again as it was before you began. One such good soaking every three or four days in dry weather is much better than a superficial spattering every day, and less troublesome. Of course, on a large scale so much care cannot be exercised in the work, but in small gardens, like those of the members of the club, this is the best way to proceed.

Now as to clean culture. No cultivated plant can do well when surrounded by weeds, and no good cultivator will tolerate them. They not only interfere more or less with its growth by smothering it, but they live at the expense of the cultivated plant by absorbing the moisture and nourishment which belong to it. This is the season for weeds. Be watchful, therefore, that they do not get the start of you. Use the hoe and rake vigorously in your gardens. It will give you a healthful exercise, develop muscle, and each faithful worker will enjoy the exquisite satisfaction that a cleanly hoed garden, full of thriving, promising, petted plants, always gives to its possessor.

UNCLE MARK.

REMINISCENCES OF A LITTLE GIRL.

MRS. M. J. GALPIN.

CHAPTER VIII.

WE will now follow the fortunes of Uncle Tom and wife, after their departure from the Lakes, as they wandered here and there with the surveying expedition. Sometimes they went through lovely valleys that would remind one of the beauties described in "Rasselas Happy Valley," and anon over precipitous and frowning mountains, whose summits reminded one of the poetic lines, "Skylark never warbled o'er." Dashing cascades, rippling streams and laughing brooks interspersed themselves along the route, cheering or awing them by turns. But all things have an end, and so had this ordinance survey. After months of hardship and work they at last returned to their starting point, the city of Athlone, and here, one stormy night, when the wind howled in unabated fury and the elements seemed determined on settling all their differences, our little heroine put in an appearance in the home of Uncle Tom. She was a wonderful baby. A crop of silky, silver hair adorned her head, and her eyes looked like violets peeping from beneath the snow. She gave good evidence of being hearty by the exemplary manner in which she used her lungs, to the demoralization of Uncle Tom, who was afraid that there was something wrong with the precious child. She was a living curiosity to him, and even to the hour of his death he worshipped and idolized her. He was but twenty years old at her birth. The child was named Therese after one of his sisters, who had always been his favorite. Uncle Tom had now a good, lucrative profession, so that he no longer dreaded the wolf of hunger at his door, and so happy was he in watching the development of the little Therese, that he felt his heart full of love to all mankind. There's nothing in the household like a baby. It will serve to bind hearts together that otherwise might grow estranged.

Well, this wonderful baby grew and thrived like most other healthy babies. But when about two and a half years old she was taken with that dread disease, the small pox. For days the little life fluttered in the balance, but a pure, strong constitution carried her safely through the danger, and she recovered, although nearly every little one smitten in their street died of the fell disease. About this time Mrs. Silk sent for her oldest child, the little Katy we have previously spoken of. She became ardently attached to her baby sister, and all through their lives up to the present time, that love has stood the test of absence, sorrow and all else combined that fall to the lot of mortals on this mundane sphere. When Therese was about three years old her parents moved from Athlone to Maryborough, as a better position was here offered to Uncle Tom. Upon his arrival at that place he leased a pretty cottage which became their home. It is useless to think of buying a home in Ireland as we do in America. There all the land belongs to the "crown."

Our heroine was now in her element. The garden was full of flowers, and one white Moss-rose was her especial favorite. A noble Ash tree stood on one side of the garden gate, one of whose gigantic limbs supported a splendid swing, where Katy and the little Therese used to enjoy themselves by the hour, mornings and evenings, swinging to their hearts content. Uncle Tom had changed his given name to Peter, in order to elude pursuit and persecution. But when the Methodists, with whom he had united, found out that he was a turn-coat priest, they commenced orthodox persecution. Men who owed Uncle Tom for surveying failed to pay him, reverses followed so that his soul was once more enveloped in gloom. He was at this time, too, suffering from asthma and unfit to do anything. The rent was remiss, and the landlord, being a "good Christian," served a writ of ejectment on him. A *posse* of police was sent to throw the family out and leave them to starve or to die as they might. You see, in those benighted days people could be thrown into jail for debt if the creditors saw fit.

In this case the police shrank from the task; but some of the persecutors ran up the stairs like demons, and seizing Uncle Tom who was lying helpless in an easy chair, they proceeded to haul him off. At the sight of this the police grew indignant and threatened to arrest any man who did not leave him alone. Others proceeded to throw out the furniture, but Aunt Katy quietly took an old blunderbuss from the closet which so frightened them that they ran away. The joke of it was that the blunderbuss was unloaded, and had an old rusty lock that no amount of oil could make work.

Little Katy, meanwhile, watched her chance and as the minister was on the stairs haranguing the police (a minister was among the persecutors) she came with full force against him, tumbling him from the top to the bottom of the steps, where he lay in an ignominious heap, too thoroughly demoralized to make further trouble. The police, now completely aroused, cleared the rabble away, and in the name of the law placed a guard round the house, so that outsiders could not get in, nor Uncle Tom and family get out. They were virtually prisoners for debt, but the Lord of Hosts raised them up friends in the midst of their tribulations. The attending physician proved himself to be a noble man at heart, and came forward to the rescue of the unfortunates, paying their rent and giving medical attendance free of charge. When the demands of the law were satisfied, there was nothing farther left for enmity to do, except to worry them. Uncle Tom was sick for weeks, owing to the prostration brought on by the excitement. Not long after this persecution the chief leaders of it came to grief. The ungodly minister was detected in grave misdemeanors, and dismissed in disgrace from the church. Others of the leaders were similarly troubled. One of the chief miscreants was afflicted with a loathsome disease, and he died in the greatest agony. These facts involuntarily call to mind our Savior's words, "that vengeance is mine saith the Lord, and I will repay."

I have dwelt so long on these scenes, that I will now let our heroine take another chapter. During all these troubles that fell on her parents she clung to them with child-like love, not knowing or understanding their import. What a blessing it is that we all have a guileless childhood to look back to in after years. How I wish that the trustfulness and grace of childhood might forever remain, like a halo of light, to crown the closing years of our chequered and fading life. I would transpose Tom Moore and say:

"You may break, you may ruin the heart if you will,
But the charm of our childhood will cling round it still."

LETTERS FROM THE COUSINS.

DEAR UNCLE MARK:—I received some seeds some time ago from the Free Seed Distribution and I am very thankful that I am considered a "cousin." I received a Gladiolus bulb last year, but just as it was coming in bloom some one stepped on it, and broke it off completely, but I have saved the bulb and planted it this year. I received the radish seed and corn also and we enjoyed the radishes very much. I planted Pansy seed last year but they didn't bloom. I bought more seed this spring and have started it in boxes also the seed you sent me. Will Pansies remain in the ground through the winter? What plants are the best for a rockery? Wishing all the cousins success, I remain your loving niece.

Monmouth Co., N. J. NELLIE PREST.

[Pansies will remain in the open ground during the winter without much injury, but it is not the best possible way to keep them. A better way is to sow the seed in August in a seed bed, and when they are so large that they can be transplanted, set them two inches apart each way in an open frame. When cold weather sets in a sash should be put over them, but on sunny days it should be raised a few inches to prevent the air underneath from getting too hot, and on mild days toward spring it may be entirely removed. Thus you will have fine plants to set out on the flower beds early in the season. Only the young plants should be wintered this way, unless it is desired to have flowers very early in the spring; then some old plants may be taken up in the fall and kept in cold frames during the winter. On the flower bed Pansies should be planted close together in clumps. It is a plant that does not spread very much, and a few straggling specimens with the naked ground visible between is not a very inspiring sight, but when the plants stand so close together that they form one mass of rich bloom the effect is very pretty.

The following plants are suitable for a rockery The Checkerberry, Mitchella repens, the flowers are fragrant and the fruit of a bright red color; the Partridgeberry, Gaultheria procumbens; the Anemone, Hepatica triloba, and the Rue-leaved Anemone, Thalictrum anemonoides; the wild Strawberry, several species of the Bellflower, Campanula; several kinds of Stone-crop, Sedum; Mountain Pink, Dianthus montanus; Money Wort, Lysimachia nummularia; Lobelia speciosa, and many more. Many of the plants in common cultivation in the garden will do very well in a rockery.—U. M.]

UNCLE MARK AND RURAL COUSINS:—How do you all do? I am afraid that you are not very well to judge by the looks of our letter column. Our winter school has been out some time. I have a few house plants this winter. I have a Calla which is real thrifty; it has had two blossoms on it. I also have an Abutilon and a Fuchsia which have had flowers on, and my Rose Geranium has buds on it. I have a white Fuchsia which I have had about a year and which is three feet tall. I have not cut it back, because I expected it to blossom. I thank you for the seeds, and I will write presently and tell you of my success. With this I remain yours truly, CLARA A. MEAKER.

Broome Co., N. Y.

DEAR UNCLE MARK:—I live in Delaware County, Iowa, where the No. 1 butter was made that took the first premium at the world's fair held in Philadelphia. We take the RURAL and like it ever so much. I would like to join the Horticultural Club. I am 14 years old, have a brother 12, a sister nine and a little shaver of a brother four years old. We have a very good garden and a few flowers. My brother Frank likes to play with the calves, and yoke them up. Nellie has a few flowers in the yard and she hopes to get more. WM. S. CHILDS.

Delaware Co., Iowa.

DEAR UNCLE MARK:—My papa takes the RURAL, and the letters which have been written by the young folks are so interesting that I thought I would ask permission to join your club. I have a bed of Strawberries which my father gave me. I love flowers very much, and I love to work in the garden. I have peas planted and lettuce. I would be glad to have some of your seeds, if I am not too late. As this is my first, I will close with love to all the cousins. ALLIE PIERSON.

East Orange Junction, N. J.

DEAR UNCLE MARK:—I would like to join the Horticultural Club. I have got a little garden all to myself in which I grow Lady Slippers, Four O'clocks, China Asters, Zinnias, Nemophilas and other things, and I have also three kinds of foliage plants. My pet is a hen that will let me stroke her when I please, and will eat from my hand. I am ten years of age, but I have not been to school more than three months in two years because I have been sick. This is my first letter.

New Haven, Conn. EDDIE C. JONES.

BRIEFLETS.

MR. IDELL says that the Leconte finds no sale in the N. Y. market. It is a second-rate pear, and, although Mr. Parry quoted them at $4.50 per bushel, he found plenty that sold for half that amount....A writer in the N. Y. Tribune says that an inventive genius filled a small tarlton sack with a spoonful of cayenne pepper and tacked it over a rat-hole. When the rat bounced out his eyes were peppered by the siftings from the shaken sack. He squeeled like a pig and escaped. The whole tribe have since migrated....So soon as fairly tried, we wish our readers would tell us how they value London purple as compared with Paris-green. ....We are using the former for the potato beetle and prefer it to the latter....Barbed-wire fences. We should be glad to hear from our readers who have tried them, how well or ill they are pleased....Mr. Bishop says: "Probably one acre of tobacco costs as much as about eight acres of corn, as it depends upon contingencies to which corn is not so liable. At best it must be expensively raised, for cheap tobacco will not pay....Mr. Conover puts the dairy belt as lying between the 40th and 45th parallels....If the proprietor of a farm is too indolent to take an interest in his business and to properly guide his hired men, can it reasonably be expected that the hired men will give him their best services? Lazy farm-owners are the most fault-finding and dissatisfied of men....By the aid of the electric light, it is supposed that fruits and flowers of all sorts can be grown to order in from one minute to an hour. It will not be difficult to raise strawberries weighing a ton, watermelons a mile long, etc....Mr. Parry once upon a time imported over three hundred varieties of Pears from France and cared for them tenderly, but failed in the matter of profit, although the list included those sorts most esteemed for high flavor, rich and delicious qualities....He had heard prominent horticulturists—those to whom we commonly look for instruction—say that "high flavor" should be first and profit second in consideration. But he had learned from sad experience that fruit which cannot be grown at a profit will not be much grown for market. Wherefore, friends, let us plant Wilson Strawberries, Thwack Raspberries, Curculio-proof Plums, and blight-proof Pears! ....If there is one thing that Mr. Quinn despises more than all others it is dwarf Pears....

A NEW FIBER PLANT.—The American Consul at Vera Cruz calls attention to a new plant of this sort, a species of Cactus, commonly known as Pita. Some of the fibers are 16 feet long, strong and silky, and capable of minute sub-division. The plant grows wild and there are millions of acres of it. Strong and extremely beautiful handkerchiefs, more like silver tissue than linen, have been woven from specimens of the fiber sent to England. Maybe this will turn out a valuable addition to our fiber plants—but how about the exalted hopes entertained a dozen years ago of ramie?

CATALOGUES, ETC., RECEIVED.

REPORT OF THE BOARD OF COMMISSIONERS of the Seventh Cincinnati Industrial Exposition 1879—a volume of 408 pages.

LIST of Premiums offered by New York Horticultural Society for the Summer Exhibition, to be held in the new Metropolitan Concert Hall, on the corner of 41st Street and Broadway, on the 16th, 17th and 18th of June, 1880.

THE NATIONAL PRESS, a Monthly in the interests of the cider trade, published by Geo. B. Boomer, 15 Park Row, N. Y. This is a bright little periodical of eight pages, costing 50c. a year, and the standing of its owners as among the best experts in practical cider making, bespeaks for it a large circulation among those interested in this industry. We wish it all the success it is sure to deserve.

OHIO. POLAND CHINA RECORD.—This very handsomely gotten up work of 368 pages, strongly and neatly bound in cloth, is prefaced by a full history of the origin and spread of this fine breed of swine; after which comes an account of the chief herds of the breed, followed by the pedigrees of 293 boars and 738 sows. The work is published and for sale by Peter G. Thompson, Arcade Book Store, No. 179 Vine St. Cincinnati, O. Price $3.

REPORT UPON THE COTTON INSECTS. This exhaustive report was prepared under the direction of the Coms. of Agriculture, by J. Henry Comstock, Entomologist to the Dept. of Agriculture. The greater part of the materials for this compilation of 511 pages were collected under the direction of Prof. C. V. Riley, as Entomologist of the Agricultural Department, previous to the appointment of Prof. J. Henry Comstock to the position on May 1st 1879. The latter, however, has systematically arranged the mass of collected information, added materially to it, drawn conclusions from it, and, in short, very efficiently edited the work, which gives all the information at present known with regard to the cotton worm and its doings. We shall probably take occasion, later on, to refer more at large to the contents of this volume, and meanwhile advise our friends in the cotton belt to apply for a copy of this work on a topic of much importance to their interests.

PERSONAL ITEMS.

Senator Gordon of Georgia, has resigned his seat in the United States Senate, and Ex-Governor Brown, of war notoriety, has been appointed in his place.

Alexander Dumas's fortune is estimated at $500,000, outside of his art collection, worth nearly as much. Every penny of it he has derived from his literary labors.

It is intimated by a Ga. paper that General Longstreet, our new ambassador to Turkey, will take special pains, while at Constantinople, to induce the Sultan to buy a farm in Georgia and move over.

Mr. Gladstone at the Royal Academy dinner observed to Lord Derby, who sat next to him, in a tone which was perhaps intended to be, certainly was, overheard, that he did not propose to retain the Premiership longer than eighteen months.

An enterprising member of the St. Louis Dental Association has discovered that George Washington wore a set of false teeth that cost him $500, though a much better set can now be had for $50. The teeth were made of ivory blocks, set on a gold plate.

On April 3 Mr. Vennor wrote from Montreal to a New York contemporary: "May in New York will be cold and wet, and same up to the middle of June." There have been two slight showers in twenty-eight days, and the month averages the hottest May on record. So much for Vennorian vacticinations!

Lord Ripon, the new Viceroy of India, known here in connection with the Geneva Award arbitration, is one of the few Roman Catholic noblemen who did not swerve from the Whigs during the reign of Lord Beaconsfield. The Indian Vice-royalty is generally regarded as a poor peer's prize, and he is probably the wealthiest man in point of hereditary wealth who ever held the office. He has but one child, Earl de Grey, who, as well as Lady Ripon, is a Protestant. Lady Ripon is held deservedly in the highest estimation, and will be likely to have a good influence on social life in India, which by all accounts stands much in need of it.

"Growing Young Again."

A gentleman, the cashier of a Western bank, who had used Compound Oxygen for a little over a month, says in a letter: "I gained eight pounds while I was taking it, and almost began to think that I was growing young again. As I had no distinct ailment, *but only a general sense of good-for-nothingness accompanied by extreme nervousness and an inability to sleep long at a time*, my case is not so striking as many others which I have read of in your pamphlet; but there must be multitudes in my condition who would use your preparation gladly if they knew of it." Our Treatise on Compound Oxygen, which is sent free, contains a large amount of information in regard to this new treatment. Address Drs. STARKEY & PALEN, 1109 and 1111 Girard Street, Philadelphia.

New Publications.

For Sunday Schools! For Temperance!

THE BEST NEW BOOKS.

TEMPERANCE JEWELS, by J. H. TENNEY and Rev. E. A. HOFFMAN, has every qualification to be a standard Temperance Song Book. Choice hymns and songs, and music in excellent taste, are found throughout. There are nearly a hundred songs. Specimen copies mailed for 35 cts. $3.60 per dozen.

(The older and larger book, HULL'S TEMPERANCE GLEE BOOK, (40 cts.) retains its great popularity.

White Robes! The purest sweetest and best of Sunday School Song Books. Mailed for 30 cents. $3 00 per dozen. White Robes!

TEMPERANCE LIGHT. By G. C. HUGG, and M. E. SERVOSS. Is a perfect "electric" light for radiance and beauty. Has 32 of the very best songs by 27 of the very best authors, and sells for $10 per hundred. Mailed for 12 cts.

New High School Song Book, THE WELCOME CHORUS, is nearly through the press.

THE FERGUSON BUREAU CREAMERY.

Surpasses all others in quantity and quality of butter made. It secures matured and ripened cream, which makes butter of the best texture, flavor, and of unequaled keeping quality. It excludes flies, dust and odors; is constantly at the correct temperature (58° to 60°); has room for the cream and butter, and saves three-fourths the labor. It can be used with either ice or water, and both summer and winter.

THE FERGUSON CONCUSSION CHURN is the best. It combines scientific principles with the best labor saving devices. No floats or paddles. Brings the butter in granular form; and secures the largest yield. Before buying any other **Churn or Creamer;** or any pans, or cans, send for large illustrated circular to **THE FERGUSON MF'G CO., Burlington, Vt.** Reliable Agents Wanted.

Humorous.

"Good morning, Patrick; you have got a new coat at last, but it seems to fit you rather too much." "Och, there's nothing surprising in that; sure I wasn't there when I was measured for it."

Demand and supply average up pretty well after all. Although paper has doubled in price, the country publisher has the satisfaction of knowing that his old clothes would bring more at the rag-man's.

When, upon inquiry after a young lady's health, we learn from her own lips that she is "nicely," we know that she was born in New England, and that she would be "purty well" out West and "tolerable" in the South.

"What! twenty-five cents a pound for sausages. Why I can get 'em down at Schmidt's for twenty cents." "Vell, den, vy didn't yer?" "'Cause Schmidt is out of 'em." "Vell, den, uv I was owit of 'em I sell 'em for twenty cents, too."

Mistress—"Who were you talking to, Jane?" Cook—"Only my eldest brother, mum. He's—he's in the perliee." Mistress—"Indeed! What is his name?" Cook—"John Smith, mum." Mistress—"But your name is not Smith." Cook—"No, mum; but you see, he's—he's bin married!"

Professional pomposity is well taken off in the following anecdote:—Shields doctor (looking learned and speaking slowly): "Well, mariner, which tooth do you want extracted? Is it the molar, or incisor?" Jack (short and sharp: "It is in the upper tier, on the larboard side. Bear a hand, you swab, for it is nipping my jaw like a lobster!"

Street letter boxes are somewhat new in Georgia, and the police have a great deal of trouble in keeping them in their places. A countryman came into Macon the other day and wanted to feed his horse. Not seeing a box convenient, he tore off the top of one of the post-office boxes and fed his horse in it.

An uptown jeweller hung a watch in his window and labelled it "Look at this watch for $10," and the unsophisticated gentleman from Africa who stared at the article and then went in and wanted the $10, had to get down on the floor with the jeweller and roll over and under him a number of times before he could be made to understand that he couldn't have any $10.—*Boston Post.*

Check the First Approach

Of rheumatism, and further attacks may be escaped, if proper precautions against exposure are taken, and there be no hereditary predisposition. Unfortunately, people who ultimately become chronic sufferers, too often neglect the trifling twinges and premonitory stiffness which herald the advent of this agonizing malady. Among the diseases for which Hostetter's Bitters has been found efficacious this is one, and the medicine being perfectly safe, it is certainly to be preferred to drugs used for its cure, which are frequently useless, and nothing more nor less than poisonous. The substitution of this pleasant and pure blood depurent for medicines inimical to life in a slight overdose, is a measure which may fitly be urged upon persons who desire to obtain relief safely, or who have failed to obtain it from the numerous pseudo remedies for this disease in the market.

OTHELLO AS HE APPEARED AFTER DESDEMONA'S FIRST KISS.

THE WESTINGHOUSE

Threshing Machines, Engines & Horse Powers.

Grain Threshers unequaled in capacity for Separating and Cleaning. Combined Grain and Clover Threshers, fully equal to regular Grain Machines on grain, and a genuine Clover Huller in addition. Engines! Positively the most desirable for lightness, economy, power and safety. Boiler has horizontal tubes, and is therefore free from the objectional features of vertical boilers. Horse Powers: Both Lever and Endless Chain. All sizes. Mention this paper and address

G. WESTINGHOUSE & CO., Schenectady, N. Y.

JUNIOR & SENIOR BUCKEYE

LAWNMOWERS.

Easy to work. Noiseless in Operation. Beautiful in Appearance. Light, Strong and Durable. Stands ahead of all competitors. Strictly first-class in every respect. Fully Warranted. Send for Price List and Illustrated Circulars, to

MAST, FOOS & CO., Springfield Ohio.

RECTANGULAR & SQUARE BOX CHURNS.

Cheapest and best. No inside fixtures, and *always reliable.* Six sizes of each kind made. Three sizes of the Lever Butter Worker made. Best material used and every Churn and Butter Worker *warranted* exactly as represented. One Churn at wholesale where we have no Agent. *Send Postal for Circulars.*

CORNISH & CURTIS, Fort Atkinson, Wis.

THE NEW BLANCHARD CHURN

We have perfected a *radical* and *valuable* improvement in our celebrated Churn, which needs but to be seen to be appreciated. Now offered for the first time to the dairy public.

It received the HIGHEST PREMIUM at the International Dairy Fair in New York City, in competition with all the leading churns in the market.

Nine sizes made, churning from one to one hundred gallons. Warranted to be exactly as represented.

Send to any dealer in REALLY first-class Farm and Dairy Implements for a Descriptive Circular of "THE NEW BLANCHARD CHURN," or to the Sole Manufacturers, PORTER BLANCHARD'S SONS, Concord, N. H.

PAYNE'S FARM ENGINES

Established 1840.

Patent spark-arresting Farm and Dairy Engines of all sizes, from 2 to 12 horse-power, mounted or unmounted. Warranted to be the Best and Cheapest engines made. Prices from $150 upwards. Send for Illustrated Catalogue "A" which will give you full information and prices to

THE JOHNSTON HARVESTER CO., Brockport, N. Y.

Is the only successful String Binder yet produced. This Machine has been thoroughly and successfully tested for three years, and is

NOW ON THE MARKET.

The following from the Rural New-Yorker, of July 26th, 1879, is a brief description of its operation:

"The String Binder, made by the Johnston Harvester Co., of Brockport, N. Y., was recently submitted to a thorough test in the presence of our representative, at Brockport. The wheat, though well filled, was short—a condition making it unusually difficult to form a good bundle. Notwithstanding this fact,

THE BINDER WORKED TO PERFECTION

throwing off the bundles well bound and in good shape.

The size of the bundles is gauged by a foot lever, which is at all times under the control of the driver.

The machine is light, well constructed and easily handled and it would seem to be an event decided in advance that the sales will be large."

THE JOHNSTON HARVESTER CO.'S STRING BINDER.

Biographical.

PROFESSOR WILLIAM JAMES BEAL.

BY CHARLES W. GARFIELD, M. S.

The name of Professor W. J. Beal is familiarly associated with the horticultural literature of the past decade. Every week some contribution from his ready pen finds its way into papers devoted to rural interests. Having always been a keen observer of nature, he has a mind stored with facts that are of general interest, and as he writes them out in his modest style, the constant surprise of the reader is, that the things treated and the facts stated are not observed by everybody, because of their commonness and simplicity. Prof. Beal's life and education have been admirably suited to his preparation for the work he is now doing.

Wm. J. Beal is of Quaker parentage, and was born March 11, 1833, near Adrian, Lenawee County, Michigan. His father was a farmer, and William as a lad upon the farm early showed signs of the peculiar bent of mind which resulted in his choice of Natural History as a field for his special life-work. As a schoolboy he was a favorite, because of his knowledge of all the peculiarities of the neighborhood and his inventive genius which brought out contrivances for the amusement of his school-fellows and assistance in their games and plans. From the common school he went to the Raisin Valley Seminary. His earnest advocacy of the labor system in Agricultural Colleges, did not originate in any admiration for a similiar system practiced at this Seminary, for, it is said, he entertained as a student a wholesome dislike for it there. His knowledge of the trees, the plants, the stones, and the animals of the vicinity, made him a leader in this second stage of his education. From this Seminary he went to the Michigan University, taking the degree of Bachelor of Arts in 1859 His college education was "worked on." Having very little means to assist him in his course, he had recourse to a variety of alternatives to secure the necessary funds for his support. He worked on the farm, taught country school, and occasionally resorted to the vigorous driving of the buck-saw in the streets, to maintain himself.

For two and one-half years after graduating he taught in Friends' Academy, Union Springs, Cayuga Co., New York. Desiring to have a broader training in the natural sciences, the young teacher decided to make the best possible use of his funds accumulated as an instructor, and betook himself to Harvard University, where as a special student under Prof. Aggassiz and Dr. Gray, he laid a broad foundation for future usefulness, and conceived some of the methods of teaching which have in his hands proved so successful. Two years after entering Harvard he took the degree of B. S. and for nearly five years thereafter taught in Howland Institute at Union Springs, N. Y.

Early in 1869 he moved to Chicago and was successful in teaching and lecturing upon natural history in the seminaries and colleges about Chicago for nearly two years. In 1870 he was first called to the Michigan State Agricultural College to teach Botany, and was during that year elected by the Board of Agriculture, Professor of Botany. His method of teaching was original and popular from the first. He acted upon the principle that the best instructor was Nature, and told his students to go and learn of Her. He regarded his work as that of a rectifier rather than a producer. The erroneous conclusions of his students he seldom corrected, but the facts they were taught to hunt for in the fields, forest and stream.

In 1872 the Chair of Horticulture was added to Botany, and Professor Beal has had charge of the two departments up to the date of this article. During the years that Professor Beal has been connected with the Michigan Agricultural College, he has had very tempting offers to go elsewhere; particularly has the Chicago University striven to attach him to its Faculty, and in 1877, it gave him the honorary degree of Master of Science.

Prof. Beal is aggressive in his methods of work; he believes in keeping the institution with which he is connected in the minds of the people, and was influential in 1875, in starting the project of holding Farmers' Institutes about his State under the direction of the college, which have become so popular in subsequent years. He is often called out to lecture and, whenever possible, accepts the invitations. By this means he has made a large acquaintance and become deservedly popular. His addresses are not rhetorical, but simple statements of observations and experience. He cares more for facts than fine figures, and there is nothing he enjoys better than to answer questions that bring out his knowledge of facts. He has worked hard to give his department of the college a good position and was instrumental in securing a very attractive greenhouse as an accessory to his work, and recently projected a laboratory and museum which the Board has lately erected in accordance with his plans. He takes copious notes upon everything he observes, and does not confine his observations to his own department. By this means he has become very ready in conversation upon all rural topics, and his counsel is sought in the purchase of stock and implements, and the use of fertilizers, etc., as well as in the naming of plants. He was married to Miss Hannah Proud in 1863, and has one little girl ten years of age.

The published writings of Prof. Beal are found scattered through the leading educational and agricultural periodicals of the past decade. His best contributions to science may be found in the volumes of the "American Naturalist;" "Proceedings of the American Association for the Advancement of Sciences;" "American Journal of Science and Art," and the "Proceedings of the American Pomological Society;" his contributions to educational methods have mostly appeared in the "Illinois Teacher" and "Michigan Teacher," while his articles for practical horticulturists are scattered through the leading agricultural periodicals since 1872, and some of the very best of them may be found in the Agricultural and Pomological Reports of the State of Michigan. The readers of the Rural New-Yorker are especially indebted to him for valuable articles contributed to its pages during the past few years.

Prof. Beal is a prominent member of the Michigan State Pomological Society and is Master of a leading County Grange. Just now he is interested in a series of experiments suggested to him by Darwin's work on "Cross and Self-fertilization of Plants," and he believes that many facts of great practical utility to the farmer and fruit grower, may be worked out from ideas suggested in this book, if experiments are properly conducted. It is difficult in a short article to indicate the lines of work followed out by a busy investigator like Prof. Beal. At the age of 47, he is now in the midst of his usefulness, and if life and health are spared him, he will contribute largely to the horticultural progress of the next score of years.

PROFESSOR WILLIAM JAMES BEAL.—From a Photograph. Fig. 203.

Farm Topics.

NOTES FROM THE RURAL FARM.

We are sometimes asked questions like these, while explaining our experiments to friends:—"Why do you plant potato pieces six inches apart? Don't you *know* without experiment that that is too close? Why do you plant single eyes two feet apart? It is a waste of time and labor."

Here is a wheat plot that is burnt up. Here is another with heads scarcely over an inch long. Here is another plot with barley, oats, rye mixed in with the wheat which itself is mixed, showing several different varieties. The crops grown upon our experiment plots are, in fact, half of them failures from one cause or another—generally because they are not adapted to the place or because they are inferior to old varieties of the same species wherever grown. And thus it is that curious visitors who judge of things merely as they appear, while they overlook the necessities of the case, hold us or our poor judgment or poor farming, responsible for the failures which, as much as our successes, are the very objects of experiment grounds. If all *experiments* were as successful as the ordinary farm practice, while occasionally decided improvements were made, there can be no doubt that experiment farming would be the rule and not the exception. It is the *cost* in time, labor, patience and money that constrains the farmers, as a class, to hold on to that which is good or at least to that which is the best that they know of, and to leave experiments and their heavy proportion of failures to those who can afford to make them;—to those who can utilize them almost the same as if they were successes.

In one sense, it matters very little to us which kind of our twenty-five varieties of wheat turns out the best; which of our seventy-five kinds of potatoes yields the best or is the best in quality; which is the most profitable way to plant them, to single, double or triple eyes; six inches apart or two feet apart, in drills or hills, in ridges or flat, shallow or deep. We are interested in the results whether they be good, indifferent or bad. It may be as valuable to our readers to be informed that the much-praised Mold's winter wheats are failures in our climate, as that Defiance wheat proves to be more valuable as a winter than as a spring wheat. When new varieties of seeds are extensively advertised, with what seem to be trustworthy reports of enormous yields, tempted, as our readers may be to purchase them, they would probably be deterred from doing so, or at least be induced to await further tests, were we to report the failure of such seeds after careful trial at this farm. Indeed it is in this way that we have thought our tests have proven most serviceable to our readers.

We have just completed planting a field of three and a-half acres. It had been in pasture for six years and was plowed under late last fall. We have used concentrated fertilizers only—a light sowing broadcast and a dressing in the furrows before planting. A part of the field has been planted to Blount's corn, the seed saved only from the topmost ear of stalks which bore three ears or more; a part to Chester Co. Mammoth, a yellow Dent with 20 or more rows; a part to Queen of the Prairie (also a yellow Dent) which is said to mature if planted after the wheat crop is harvested; a part to several new sorts of sweet corn; a few hills to "Cuzco" corn which from tests made several years ago, we are assured will not ripen in this climate. [Cuts, it will be remembered, were given in the Rural New-Yorker of March 13 last, of the immense kernels which this corn bears. The several lots sent to us by friends have been distributed and planted in the South.—Eds.] We have also planted many kinds of bush-beans sent to us by seedsmen and friends; also eleven varieties of the Southern cow-pea (Dolichos); also new squashes, melons, etc. A considerable part of the field, however, is given to experiments with potatoes. To ascertain the distance at which it is most profitable to plant potatoes in drills, cut to single eyes, we have pursued the following plan, selecting the Beauty of Hebron as the variety in every drill:

66 pieces weighing	2 lbs.		in drills	33 feet long.	
49 "	"	1 10 oz.	"	"	"
40 "	"	1 6 "	"	"	"
33 "	"	1 6 "	"	"	"
30 "	"	1 2 "	"	"	"
28 "	"	0 14½ "	"	"	"
25 "	"	0 14 "	"	"	"
20 "	"	0 14 "	"	"	"
18 "	"	0 12 "	"	"	"

The following with two pieces (each single eye) placed close together:

66 pieces weighing 2 lbs. 2 oz. in drill 33 feet long.

That is to say two pieces are placed 12 inches apart.

60 pieces weighing 1 lb. 12 oz. in drill 33 feet long.
50 " " 1 " 8 " " "
40 " " 1 " 6 " " "

The following with three pieces placed close together (each and all single eyes):

90 pieces weighing 2 lbs. 10 oz. in drill 33 feet long.
75 " " 2 " 8 " " "
48 " " 1 " 6 " " "
64 " (four pieces put close together) weighing 2 lbs. 9 oz. in drill 33 feet long.
80 pieces (five pieces) weighing 3 lbs. 4 oz. in drill 33 feet long.

We have also planted 35 varieties of unnamed seedling potatoes, each of which is claimed by its originator to excel all others in some or all respects. As in the preceding tests, they were cut to single eyes, the weight of each kind carefully taken and noted.

A friend and a well known celebrity in agricultural practice and journalism made the statement a few days ago that *potato-skins*, cut to single eyes, would yield as well and as large tubers as if the flesh were added. "Have you never found" said he "the seed potato at harvest as sound as a dollar with just as many potatoes in the hill as where the seed piece or potato has rotted and disappeared?" For obvious reasons, as it appears to the writer, this is a mistaken theory. Nevertheless, we have planted a row of potato-skins cut to single eyes and shall give them the same care as the others, and report results to our readers in due time. We are fully aware that the eyes will grow, having seen vines from such eyes a hundred times growing out of rubbish heaps and the like. But we anticipate from those skins, cut to single eyes, "small potatoes and few in a hill."

Alas for the bright expectations of two weeks ago! Silver Chaff and Shumaker wheats, growing upon sandy loam and gravelly subsoil, are burning up, and others of our wheat plots are suffering. The grass is burnt to pieces and the clover droops its diminished heads.

Holidays for Hired Men.

"Boys, we have had two months of hard work, digging trees, packing and planting. I am about tired out, and am going to take a vacation. You may take one also—Saturday you may have to yourselves—go fishing or wherever you please." I did not grant the above expecting to make money by it, yet I verily believe I shall. It is economy for me to rest—I can accomplish more during the year by so doing. Why, then, is it not good economy to give the laborers a rest also? A day's recreation works wonders—who has not realized the fact? But, aside from this, the boys will feel that they have in a measure succeeded in satisfying me with their efforts. This thought relieves the long, weary working hours, I can assure you. Our laborers have procured musical instruments, and practice regularly at noon under the shady trees. I have heard more artistic strains, but none that gave me greater satisfaction. Don't cut short the noon rest of your laborers. The system needs rest after taking food. I am asked, "Would it not be better economy for you to let your men board themselves—they would live on cheaper food than you give them? "No, they would not provide food nutritions enough to enable them to do the work they now do." The labor question is important; let us consider the subject thoughtfully. Agricultural papers have a great deal to say about the welfare of all farm crops; but very little about the welfare of those by whose labor they are raised.

CHAS. A. GREEN.

Farm Economy.

THRASHING AND THRASHING MACHINES.

PROFESSOR I. P. ROBERTS.

In the days of our fathers the horse had largely superseded the flail of our grandfathers in thrashing grain. As soon as barns of sufficient size were erected, the change from human muscle to horse muscle appeared both wise and economical, for it obviated much hard labor and was far more expeditious. At the same time it furnished a fine opportunity to give the colts the first lesson of their education; coupled to an old horse and given the outside of the course, their steady tramp through straw knee-deep, soon curbed their youthful ardor. The next advance was the chaffer that thrashed the grain, but left the separation of grain and straw to hand labor—and dusty, hard work it was. Then came the shaker attachment which separated the straw. This was a great improvement over the single chaffer. Then came the full-fledged thrasher and cleaner, followed soon by the long straw carrier or "stacker" attachment, all driven by horses, and lastly the horses have been superseded by the portable engine.

In all this, how much have we gained? In rapidity we have gained much, and in case the grain is taken directly from the shock to the machine, we have gained something in economizing, handling, and storage-room, and in avoiding waste. But in this climate but few, comparatively, can avail themselves of the cheaper method of thrashing direct from the shock, and even by this cheaper method the expense, when the crop is small, is not so very much less than it would be to flail it, or tramp it out with horses.

The land within a radius of six miles from Ithaca is not first-class for wheat, and an average day's work for a steam thrasher does not exceed 400 bushels of merchantable grain. under favorable circumstances, the account would stand about as follows:—

Thrashing 400 bushels of wheat at .05	$20.00
Team and man to remove water-box, etc., to next job,	1.00
Coal,	1.50
Nine meals for thrashers, at 25c,	2.25
Seven workmen at $1.25 per day	8.75
Board for four horses (thrashers)	1.00
Total	$34.50

Or very nearly 8¾ cents per bushel. Under unfavorable circumstances, and when the wheat was not very good, it has frequently stood with me as follows:—

Thrashing 300 bushels of wheat at .05 cts.	$15.00
Team and man to draw water-box., etc.	1.00
Coal	1.50
Twelve meals, (thrashers came night before)	3.00
Board of four horses, (thrashers,)	1.40
Eight hands, (straw put in straw barn) at $1.25	10.00
Total	$31.90

This is over 10 cents per bushel, and several men last winter offered to board themselves, thrash with a flail and run once through the fan for 10 cents per bushel, and if I am correctly informed, several small crops were thrashed for that price. It appears to me we have gained much in rapidity, but little in economy. But, as a rule, there is no haste to get the wheat to market, for, according to the table given by Mr. E. M. Gilsam, the average price of wheat for May, during the last ten years, has been $1.49 2-5; for September $1.29¾. Some loss occurs in holding till May, but not nearly enough to balance the gain of 20 cents per bushels.

Having erected a new barn last summer and wanting a small engine and boiler to cut feed for the dairy, and being thoroughly disgusted with thrashers, a new departure was inaugurated. A two-horse thrasher and cleaner ($160) was placed in the grain mow on the third floor, and the grain stored immediately around three sides and over it. The machine was inclosed about one foot from the sides and two feet from the top, with a tight box, the sides of which were composed of movable doors, a small hole being left in the end for the straw and carrier. The top of this box over the machine is pierced with a tight, square wooden tube 10x12 inches, which extends with turns to the manure cellar, where is placed a small suction fan—cost $35. On the second floor, just beneath the thrasher, on a frame four feet high, stands a common fanning mill: and the wheat from the thrasher passes directly into it. The machine is capable of thrashing a bushel in three minutes, and averages a bushel in four minutes, at the same time that the suction fan and fanning mill are in operation. The hands necessary to run it are, a feeder, a grain-pitcher, a straw-pitcher and an engineer—four in all. The suction fan removes nearly all dust and deposits it in a box filled with water.

The fan cleans the grain ready for market. The cost to us (the workmen are hired by the year) is little more than the wear of machinery and value of coal, as everything is under shelter, and stormy days alone are used for thrashing, and we haven't half grain enough to occupy them. So far it works like a charm—no thrashers to pay; no dust; no hurry; no worry; no waste.

Cornell University, Ithaca, N. Y.

POISONED WELLS.

Some time ago we took occasion to refer particularly in these columns to a note from a correspondent in reference to the probable fouling of a well from a cesspool. We seized the opportunity to explain fully, with a diagram illustrative thereof, the theory of the operation of well poisoning in this way. The subject is of such surpassing importance that we return to it to notice an instance strikingly corroborative of our remarks and caution then made, and which comes to us in the interesting report of the Rutger's Scientific School, which is, in fact, the New Jersey State Agricultural College. The subject is taken up in a paper on "The well waters of New Brunswick" by C. W. Cutler, a student of the chemical course. Incidentally it may be remarked here that one of the excellent methods of this excellent school, of which but little is heard, although much is done in it, is to exercise the students in original analytical investigations, which they are expected to carry out without help from the professors, gradually passing from single to elaborate subjects. It was in this way that this young student undertook to examine the wells of New Brunswick with some remarkable results.

Twenty-four wells were examined. Of these eight only were good; two were passable, but fourteen—or more than one-half—were bad to very bad. When well water is found to contain more than 40 grains per gallon of solid matter it is to be suspected. When the solid matter in solution largely surpasses this quantity the pollution becomes dangerous. And here is a well in the city of New Brunswick which contains 202 grains, or nearly half an ounce of solid matter per gallon in solution, with a considerable proportion of albuminoid ammonia. Another of the contaminated wells contained four-tenths, or nearly half a pound of albuminoid ammonia in the million parts of water, although the solid matter was but 38¼ grains per gallon; this case shows clearly the foul origin of the contamination. A well was examined into which the matter from a cesspool 60 feet distant, had percolated through a bed of sandstone. Another source of mischief was found in the entrance of various kinds of vermin into the well, and their death and decay in the water. Some old wells are spoken of in the report which had many inches of sediment at the bottom, chiefly consisting of the remains of toads, snakes and other vermin.

Here is a monstrous evil existing under the shadow of many a fair homestead—a lurking danger, like the genius of evil, hovering in the dark over many a household, all unsuspecting of it. It is not only here and there; it is on every hand; the farm, from its want of drainage, being in more danger than the city house, and the better class of rural dwellings being worse placed than the farms, because of the modern improvements which gather the refuse of the household in a concentrated form under ground, but out of sight, and of the largely increased wastes from a more refined household. It may be that we suffer from our excessive refinement in thus hiding away our filth; that the only safe disposal of house wastes is in the shape of manure, and that to be safe the wastes of a house should be kept in sight and used as are those of the stable—to fertilize the soil. If we could but come to that in any practicable manner, we might add millions of dollars to our aggregate yearly income, and secure pure water, and with an undoubted freedom from much disease of mysterious (when unsuspected) origin.

PURIFYING WATER.

The great objection to most water filters is that, like the brick dividing wall in a cistern, they are made a solid fixture and cannot be easily removed and replaced without considerable trouble and expense when they become foul, which is invariably the case in a longer or shorter time. One of the best and cheapest we have yet heard of we find described by an English gentleman in the Metal Worker, which we copy below for the benefit of all who desire a pure, healthy beverage.

Take any suitable vessel with a perforated false bottom; cover it with a layer of animal charcoal; on the top of that spread a layer of iron filings and borings, the finer the better. These are to be mixed with charcoal dust; and on the top of them is placed a layer of fine, clean silicious sand. This will give you a perfect filter. The foul water, however, should be allowed to trickle very slowly through the filter, if one would produce a fine sample of drinking water. The iron filings, before being placed in the filter, require special treatment. They must be well washed in a hot solution of soda or potash, in order to remove the oil or other impurities. Then they must be thoroughly rinsed in clean water, in order to take out every trace of soda. The filings should be mixed with an equal measure of fine charcoal. The deeper the bed of iron, the quicker they will act. Of course, if the water is very foul, an unusual depth of filings and a very slow rate of filtration should be employed.

The above is a simple, cheap and very efficient filter, superior to any other that I know of, and has the advantage of being free to every one who chooses to make it.

The addition of permanganates will not destroy bacteria, or microscopic organisms, but the addition of hydrochloric acid will. If it is desired to purify water containing bacteria, hydrochloric acid must be added, until the water is slightly acid, to test paper. This will destroy the whole of the animalculæ; then sufficient lime water must be added to neutralize the acid. The lime is precipitated by means of the oxalate of ammonia. The final treatment is to filter through the iron filter which I have just described. The foulest ditch water, treated as above, is rendered quite pure and fit for drinking.

The above is exceedingly interesting to our readers, some of whom have asked where to obtain iron sponge for purposes of filtration. The filter described above does away with the use of the iron sponge entirely, while retaining all the advantages of that material. We believe at the present time there is no manufacturer of iron sponge in the United States, nor have we heard of any place where it can be obtained.

Iron filings and iron turnings, or borings, as they are called, can be obtained in almost any town in the country—certainly in any town where there is a foundry or machine shop. We wish to mention one precaution necessary in obtaining them. No brass, copper or zinc should be present in them, and they should be carefully looked over in order to make sure of their purity. Dust, dirt and oil may be easily removed, but zinc would be readily dissolved, to the great detriment of the filtered water.

The Curing of Gold Leaf Tobacco.

The old-fashioned method of curing tobacco on the stalk, is gradually yielding to the new and improved way of gathering the leaves as they ripen and curing them on a simple hanger made for the purpose. The fancy yellow tobacco of my section, is cured by artificial heat graduated by a thermometer, and in this, and in no other, way can the gold color be obtained. For instance, the tobacco is gathered from the field and put into a house made almost air-tight, with windows, so as to give air when necessary. In this is arranged a flue or heater so constructed that any degree of heat may be obtained from 90 to 200 deg. The house in which the tobacco is hung is heated to 90 deg. at the start. This is the yellowing process and is kept up for 24 to 30 hours. By this time the green tobacco will have assumed a golden-yellow color. When this occurs the heat is increased at the rate of five deg. per hour until it reaches 120 deg. At this it is kept until the tobacco shows indications of being dry, to reach which condition will generally take three to four hours. The heat is then increased at the rate of 10 deg. per hour to 180 deg., where it is kept until the tobacco—stem and stalk too, if men will still insist on curing a worthless article—is perfectly dry. The least sap will run back to the leaf the first rainy day, and turn it red, and thereby impair its value 50 per cent.

By this process of curing, you get a beautiful gold leaf and a mild and fine flavor, an article fit for a king to chew or smoke.

Ashville, N. C. S. C. SHELTON.

Field Crops.

SOILING CROPS.

To have enough and to spare is the secret of contentment. No farmer or dairyman can have enough for his stock if he depends on pasturing; if he should have, he certainly cannot have enough for his pocket, because his farm is not stocked heavily enough for profit, and never can be, with pasture only for summer feed. Pasturing may be very well where land is cheap and products bring but a small price, and where a subsistence is easily procured or the wants are few. But where land is worth more than $30 or $40 per acre pasturing is unprofitable, for the feeding of a cow costs too much. Pasturing is not consistent with high farming, which is only another name for good farming, because it is wasteful and uneconomical and does not develop the resources of the farm. If the farm is to be fully worked and every one of its resources fully developed, the pasturing of a field should be but a part of the process for getting it into the best condition for producing another course of crops, unless, indeed, it be a field which is fitted for no other purpose, and then it can be better utilized than by being constantly trampled, fouled and gnawed by cattle.

For profitable farming, pasturing should always be combined with soiling crops; but when, as is now occurring, pastures and hay meadows alike are dry and burned up under unseasonable and torrid suns, and yield no fodder, soiling crops are indispensable for the salvation of the stock. Soiling crops may be made an occasional help in this way, but they are the most valuable when used systematically and made a part of the routine of the farm. Sometimes a field needs summer-fallowing; it is clothed with weeds; it is worn out; it can no longer be profitably worked. Such a field may be used for soiling crops and may be brought out of its poverty-stricken and wretched condition, like the maniacs of Scripture who were brought out from among the tombs "clothed and in their right minds." It is in turning a piece of useless land to such a good purpose that one of the principal benefits of growing soiling crops consists; another is the producing from one acre of ground as much feed as could be procured from 10 acres of pasture; and another, which is specially pertinent just now, is the substitution of green fodder crops for grass and hay, which have partially or wholly failed in dry seasons.

The best soiling crops are those which grow rapidly; thrive in hot and even dry weather, being deep-rooted and naturally adapted to tropical or subtropical climates; and which yield a heavy burden of nutritious fodder. Corn is doubtless the most available of all the green fodder crops; but it is not early enough, nor does it possess all the desirable qualities, to make it the only sufficient one for our use in regular soiling. It is, however, the best single crop for partial soiling, and if but one can be grown; and it may easily be planted consecutively so as to give a succession of

enttings while green. For the present emergency the very useful early crops, as oats and peas, either together or alone, need not be considered. We are in a dilemma just now and must have something special that may extricate us from it. Corn is the best resource in this case; an early, rapid-growing kind for early use, and a large late-growing kind for fall and winter feeding. It is a great advantage that corn can be grown excellently by the use of fertilizers when manure is scarce. A piece of land, I care not how poor, may be plowed and prepared by good harrowing, and planted with corn of the following kinds:—Early Concord, Narragansett, Pratt's Early, Stowell's Evergreen and Mammoth Sweet, for summer and early fall cuttings; and Blount's Prolific, Chester County Mammoth, Southern Dent, King Phillip, or any other large-growing varieties for late fall and winter use. It does not matter that the variety is one that when grown in the usual manner, has very large and woody stalks; this can be changed by close planting, and the corn, confined laterally, seems to desire to free itself from bondage by escaping upwards and grows to a great hight, yielding stalks 12 or 14 feet long and but 1 or 1½ inch thick at the butts. The sweet varieties do not grow so tall, but I have grown the first three kinds with stalks 8 feet high, in rows 30 inches apart, yielding at the rate of over 400 pounds to the square rod, and having a considerable quantity of ears upon them. The larger kinds will make more than this when fully grown, *if the soil is richly fertilized.* Six hundred pounds per acre of concentrated special corn manure are sufficient to produce this yield.

The seed may be sown by hand in furrows made with a small plow, single grains being dropped about two inches apart, or three grains at every six inches. The fertilizer should be broadcasted and harrowed in before planting. The larger kinds may be planted in the same way, but in rows 36 inches apart. These distances are ample; if greater, the stalks may be too thick for the best use when cured for winter feeding. But let no one be misled into sowing fodder corn broadcast. The frequent cultivation of the crop, so long as a horse can pass in the rows, is necessary for the proper maturing of the nutritive qualities of the fodder. If this is not done the crop will be one-half lighter in weight and deficient in feeding value. The planting should be done in consecutive strips. One day's planting may consist of a quarter of an acre or more, according to the quantity of stock to be fed—a few rows of the Concord or Narragansett, followed by the others in consecutive order. The next week another plot may be planted in the same way; or sufficient for two weeks' feeding may be planted in each plot in one week, so that the whole planting may be made and finished in the week.

The next useful crop will be Hungarian grass, which may be sown on the first cleared corn ground. On good soil this will yield seven or ten tons of green fodder, or two and a-half to four tons of dry hay, to the acre. This grass may be sown as late as the 1st of August and make a good crop. Half a bushel of seed per acre is sown broadcast and harrowed in with a light harrow.

For winter use there is nothing so good as roots, and of all the roots, mangels are the best, and of all the mangels, the Yellow Globe stands first. This may be sown up to the 15th of June and yet make a good yield. Six pounds of seed per acre are sown in rows 30 inches apart, a liberal dressing of artificial manure, 200 to 300 pounds each of blood guano and superphosphate of lime per acre, for instance, being sown broadcast and harrowed in. Mangels, like all the beet tribe, are soda-loving plants, and 300 to 400 pounds of refuse salt per acre will tell a plain and satisfactory story at the harvesting. A quarter of an acre of Yellow Globe mangels will give one cow one bushel a day for six months, with a moderate crop; a good crop will double this yield.

Another fodder crop that is not often grown or used in this way is rye, sown on rye or oat stubble; or sown among corn at the last working. This makes a good growth by October, and will furnish either cut fodder or late pasture, and in some cases early pasture again, in the spring. This is a very valuable resource, and it deserves the good opinion of farmers and dairymen who keep their farms fully stocked, as indeed all should do. I have sown five bushels of seed per acre, as a thick growth is desirable; but three and a half or four bushels will give a close stand.

Of the newer fodder plants that have been highly recommended for soiling or feeding green, I can say very little that is satisfactory. The much praised so-called Pearl millet—the Southern "Cat-tail" millet—I have found by no means equal to sweet or other corn. I am now trying "Doura," a variety of sorghum vulgare, and have reason to hope much from this plant. I find it highly recommended in the report of the East Indian Government's experimental farm at Madras as a green fodder crop under the native name of "Cholum," and the common name of "Great millet." It has there yielded at the rate of 70,000 pounds per acre up to 90,000 in one cutting only, with high culture; while "Pearl millet" (known as "Cumboo" or Spiked millet) is said to be inferior to Doura both in yield and in feeding value. It would be very unsafe and unwise to attempt to grow a doubtful plant in an emergency, when a failure would be disastrous; but it would certainly be a good thing to try a small plot of Doura the present year, so as to learn some thing of its value for a soiling crop for future use. CORN FODDER.

THE excessive drought of May has been so disastrous to the growth of grass, that even if we should have abundant rain through this month, there will not be over one-third to one-half a crop of hay cut this season. The drought has also shortened the growth of the straw of rye, wheat, and oats; there will consequently be a much lessened bulk of this to fall back upon to use instead of hay, of which straw is a tolerable substitute, if meal and bran be added to feed with it. This great drought has likewise prevented a considerable quantity of the seed sown for roots from yet coming up, and the growth of beets and mangels will be much lessened. If we have suitable weather in July and August, good crops of ruta-bagas and flat turnips may be grown, but these are only a partial feed, and in the aggregate, will do little for the general support of stock during winter. Corn-stalks now must be our chief reliance for the loss of summer pasture and of hay for winter.

With due attention this sort of fodder can be fairly grown even in a dry time. Plant the corn three inches deep in a good loam and four inches in a very light soil; roll well or spat down hard over the kernels with the back of the hoe, and the seed will be pretty certain to vegetate, as so much of soil pressed firmly upon it will keep it moderately cool and moist. As soon as it comes up, keep the ground constantly stirred and the corn will grow. But after so long a spring drought, the probability is we shall get an abundance of summer rain, and if so, a good growth of corn stalks can be obtained, planted even as late as the middle of July.

We suggest planting in drills, and having the rows three feet apart, so that the horse cultivator can work freely among them, which is essential to stimulate a good growth. The stalks shoot up so much more freely with the rows at this distance, that about as large a crop can be obtained as if they stood closer, and by admitting plenty of sun and air, they are of a superior quality.

Of the kinds of corn to be grown for fodder, the sweet varieties are the best by all means, in consequence of the stalks being more nutritious, sweeter and tenderer than the common kind. There are various sorts of these—dwarf, intermediate and mammoth. The stalks of the first grow from 4½ to five feet high; the second 5½ to six feet; the third seven to eight feet in ordinary soil; but in quite a rich soil still higher.

For economy of feed, and we may also add for profit derived from the crop, we prefer the dwarf sorts; and certainly would not go beyond the intermediate, such as Stowell's Evergreen Sweet corn. But of the latter, we found that our cattle would not eat the butts of the stalks within two feet of the ends, while both horses and cattle eagerly devoured the whole of the dwarf stalks. Now, admitting the latter to cut only 4½ feet in length, and the former six feet, in consequence of the refusal of the animals to eat the difference of length of the butts, just as much fodder is got from the dwarf-grown as from the intermediate. People generally do not think of this, but we have carefully experimented on it for years past.

Aside from this, other things are to be considered in favor of the dwarf sorts. They do not exhaust the soil so much in their growth as the larger ones, and they are so much more easily handled after cutting that the labor of doing this is considerably lessened. They are also more quickly dried, and can be more safely stored away. There is, too, very little danger of their molding when put away. We have repeatedly put this sort of corn stalks into the mangers of our horses and cattle in the winter, alongside of the best of hay and they would invariably eat all the former up clean before touching the latter. Corn-stalks can be grown at a cost of $3 to $5 per ton. In many sections hay will probably be worth next winter from $20 to $40, according to locality.

FORAGE GRASSES.

PROFESSOR W. J. BEAL.

BERMUDA, WIRE OR SCUTCH GRASS—Cynodon dactylon. This comes from Europe and is a perennial, thriving from Pennsylvania southward. The stems are "low, diffusely-branched and extensively creeping with short flat leaves." In the Southern States it has long been known as a favorite grass for pasture.

The branching and creeping stems help to hold the loose sands in place. Gould says:—"We are assured that it is identical with the Durva or Doorba grass of Hindoostan, where it is the most common and valuable fodder grass of the region." The seeds rarely ripen. The grass may be easily distributed by chopped root-stalks or short cuttings sown and harrowed in. Prof. Killebrew says:—"It will throw its runners over a rock six feet across, and soon hide it from view, or it will run down the sides of the deepest gully and stop its washing." It will stand heat and dry weather remarkably well.

JAPAN CLOVER—Lespedeza striata. In the report of the United States Department of Agriculture is given a good figure with some explanation of this clover. Our cut is copied from that report. It is a low plant which lives on from year to year—a perennial. The flowers are very small and the fruit also. It has a clover-like look, as will be seen by the leaves, which are trifoliate. Professor Killebrew, of Tennesee, is quoted in the report named above. This clover was first noticed in 1849, in the vicinity of Charleston, South Carolina, the seeds having probably been brought from China or Japan in tea boxes. After this it spread rapidly and grew with great luxuriance on the poorest soils, retaining its vitality in the severest droughts. Sheep are very fond of it; cattle will eat it. It is spoken of highly by several writers in the Southern States for pasture and for plowing under, but it is said that it does not flourish north of the 36th degree of latitude.

Dairy Husbandry.

THE HOME MARKET FOR CHEESE.

A WESTERN FARMER.

ENGLAND imported last year four pounds of American cheese for every individual of the population. Estimating on the usual basis of five persons in a family, this would give an average consumption of 20 pounds of foreign cheese for each family. If we estimate the native production at four times the quantity imported (a very low estimate), this would give 100 pounds of cheese in the aggregate to each family per annum, or 20 pounds to each individual. If the consumption here were equal to that in England, we should use very nearly 1,000,000,000 pounds of cheese yearly, which, with the amount exported, would require a production of 1,150,000,000 pounds. Our present total product is less than 300,000,000 pounds.

The question then occurs, how can we induce our people to eat half a pound of cheese per week per head. This seems to be a very small requirement and a very moderate allowance which any person with a moderately good appetite could very easily and very profitably consume. It is certainly not the capacity that is wanting, but the desire. How then can this desire for cheese be stimulated up to the point required for the consumption of six or seven times as much cheese as is now eaten? There are some ways and methods that occur to a person of practical business acquirements, and of these the principal ones are: first, to make a really good and attractive article; and second, to acquaint the public with the fact that it can be procured at a reasonable price.

It was said of old that "the children of this world are wiser than the children of light." It is equally true in our days, and we, "the children of light," the honest, upright, industrious, skillful, but modest and retiring dairymen, may take a lesson from "the children of this world," the quacks, the humbugs, the confidence-men, and all those whose individual possession of "cheek" would supply the whole world of dairymen with a stock in trade and leave a large surplus to draw upon for emergencies; the Barnums, the Wall Street sharks and others "who draw all men unto them." They simply put their light, not under a bushel, but upon a hill, where it can be seen, and set forth their business so that every man, woman and child may know of it. Let us take a line and a precept from the lightning-rod man, the "strawberry tree" peddler, and others who canvass from house to house and find customers wherever they call. Why should not those who have a legitimate business, and whose mission is to do good and serve a useful purpose, use those means which, made to serve a good end, are honorable and effective? Let dairymen send out samples of their product to every village store and even canvass the towns and cities, making arrangements with grocers and others to retail their goods. If these are well made—of whatever quality they may be, and whether full cream, half cream, or skim—once they are introduced the work is done, the demand has been created, the desire has been evoked, the want has been made known.

The value of cheese as an article of food needs no elaborate demonstration; it speaks for itself, and if once the children even could be made acquainted with it they would "cry for more" and the parents would soon join in the demand. But it will not do to send out to our foreign customers the best cheese, and supply home consumers with the skims, the off-flavored, the huffy and the tainted refuse. To find a really good cheese at a grocery store is very difficult, and the wonder is that the mean stuff there retailed finds any sale at all. The fact, indeed, that it sells, argues that good cheese would go off with great rapidity and that the required increase of 600 per cent. on our present home consumption would soon be reached.

This business is in the hands of the dairymen themselves, and if they will first reform their practice and offer no poor cheese to the consumer (except a pig), and, in fact, make no poor cheese, be thoroughly honest to themselves and do themselves perfect justice, not belying their own skill and business capacity, and use the ordinary business methods of attracting customers and of keeping them when they have been secured, the result will surpass their most sanguine expectations and prove to them that the ancient adage to the effect that "a man is not without honor save in his own country and among his own people" is in no wise applicable to them.

The Herdsman.

DEER'S HORNS EATEN BY CATTLE.

PROFESSOR F. H. STORER.

THE observations on this subject communicated by Mr. Wilson, in the RURAL of May 29th, corroborate fully those made in Scotland some years since, as set forth by Dr. Lankester (in his "Lectures on the Uses of Animals") in the following terms:—"The question has been asked, what becomes of stags' horns after they are cast, and there is a very prevalent notion that the deer eat them. This has arisen from the few which are found compared with the numbers which are known to be thrown off. That both stags and hinds occasionally gnaw the horns is beyond doubt, and the yearning for a supply of phosphate of lime is probably the inducement to partake of this kind of food. Not only do the deer eat horns, but all the bones they meet with in the forest. It may also be added that where deer are, there are generally other animals, to whose welfare phosphate of lime is necessary, and who would assist in the same way in the destruction of the fallen antlers."

Since some slight misapprehension seems to have arisen in respect to the notes on bone-chewing which were published in the RURAL of May 15th, I would remark that the opinion that grass-eating animals gnaw bones for the sake of the phosphates contained in them, has long been held and is familiar to most students of agricultural literature. It is referred to in several well-known elementary treatises on agriculture. I had never had any doubt that the common opinion that bones are eaten by cattle for the sake of the phosphates is correct as regards many localities, where lime-compounds are naturally so abundant in the soil that there is rarely, if ever, any lack of this substance in the plants upon which the cattle feed. I urged only that when phosphates are lacking in fodder, the administering of doses of bone-meal is hardly the best way of supplying the want.

On the other hand, it is perfectly well-known that the food of cattle is often deficient in lime rather than in phosphates, as, for example, when the animals get comparatively little hay or grass, but large quantities of grain, potatoes, roots, distillery slop, the residue from beet-sugar making, or the like, together with some straw; and in such cases chalk can be used to better advantage than bone-meal to supply the deficiency.

This second conception, that lime is needed in certain cases, is unquestionably of equal importance with the old familiar notion of giving phosphates as food, which is, in its turn, doubtless true in some special instances. As was just now intimated, it may often happen that the better the cattle are fed, in the ordinary sense of the word, the greater will be the risk of their not getting lime enough in their food; but at the same time the less sense will there be in giving them bone-meal when they need chalk.

The instances of bone-chewing cited in the RURAL of May 15th were specially interesting in that the persons reporting them were inclined to believe that the animals craved lime in those special cases. The observations tended to show that even in some poor pastures, as well as in the special cases of rich feeding just now alluded to, it may be well to place lumps of chalk where the cattle can lick them. A still stronger statement of this view of the matter will be found in the following abstract, taken from Volume 13 of the Journal of the Royal Agricultural Society of England. "The cattle in some mountain vales in the county Cumberland are liable to an affection of the stomach, provincially called "Crobbek" or "Crovek," exhibited in a fondness for chewing bones, leather and clothes. If this disease is suffered to go on unchecked, the bones of the legs make a rattling noise in walking, the joints swell, the animal loses its appetite, and spends its time in hunting round the field for bones, etc., instead of depasturing and ruminating, and eventually dies. A change to rich keeping for a few weeks in the earlier stages, is the ordinary and effectual cure. It is remarkable that limed land is not liable to this disease."

Sheep Husbandry.

WHAT ARE THE MOST PROFITABLE SHEEP?

HENRY STEWART.

WITH wool at 50 to 60 cents for fine and combing, sheep are in the ascendant; "those want them now who never did before, and those who always had them want the more." The question is asked, "Which is the most profitable sheep to keep?" Those who ask this question are acting very judiciously, because, not knowing much about sheep, they are very apt to go astray at the start and lose their time and their money, unless they start aright. It is a popular opinion that there is most profit in the largest and most attractive-looking breeds and in growing long wool, which is greatly in demand and of which a heavy fleece is produced. Unfortunately this opinion leads many into trouble; for they procure sheep at a high price and which need costly keeping, that are unsuitable and run down very fast, and finally fail entirely.

COTSWOLD-MERINO EWE.—FROM A PHOTOGRAPH.—FIG. 206.

At the outset it may be stated concisely that there is no one sheep that is the best under all circumstances; that sheep must be chosen with regard to the circumstances under which they are to be kept, and that, as a rule, there is the most profit in the kind which costs least. I will show this by figures. Let a person begin with a flock of 50 ewes and one ram. The cost and income of the flock will be about as follows:

	Good natives.	Pure-bred sheep.
Paid for 50 ewes	$200	$1,250
One pure-bred ram	25	100
Feeding and care for one year	150	300
	$380	$1,650
Value of lambs at $3	$150	$210
200 pounds of wool at 40c	80	....
400 pounds at 55c	....	220
50 ewes sold fat	250	....
Value of sheep on hand (4-5 of cost)	....	1,080
	$480	$1,510

The natives will have paid back their cost with $100 profit and $100 more in manure, while the pure-bred sheep will have lost about 10 per cent. of their cost under the most favorable circumstances. For no one who keeps a flock of costly pure-bred sheep can expect to sell the lambs for more than their actual market value, and the profit from the extra price paid for the flock must come from the wool, in greatest part. The experience of nine out of ten persons who have been misled into keeping thoroughbred long-wool or even fine-wool sheep has been even worse than the example here given.

Let us follow the fate of the native flock. The owner who picks out a lot of good, sound grade Merino ewes and selects a pure-bred Cotswold ram, one or two years old, of compact build, broad-loined, with deep brisket, short legs, fine head, broad forehead and a close fleece of long, silky wool, and crosses him on his ewes, will soon have a flock which in every respect will be as good as the pure-bred flock which would have cost six times as much, and in five years it will probably greatly surpass the pure-bred flock in quality and appearance, under equally good management. The difference in profit is very readily seen.

Pure-bred sheep are for the breeders. Farmers must have pure-bred rams to use with their common sheep to improve the produce; but the keeping up of a flock of high-bred sheep is a work that requires special skill in management, and knack as well as knowledge in breeding; and there is no profit in it to one who is not already an adept in the management of a flock. Perhaps the best sheep under any circumstances for a farmer to raise, is the cross of the native grade Merinos with pure Cotswold rams. The second cross have all the hardiness of the dams and some of the excellencies of the sires. The wool is in demand and always will be. The lambs are the best market lambs, will reach a weight of 60 or 70 pounds at six months, and when two years old will make the best of mutton and a carcass weighing 100 pounds, dressed. The fleece will weigh double that of the dams, and the third or fourth cross cannot be distinguished from pure-breds. These facts have been proved by experience. The cross of Cotswold-Merino is a favorite one in Germany, Austria and Hungary, and fine specimens of this cross were shown at the last Paris exhibition. In our own country Mr. Harris, of Rochester, N. Y., and the Gerrish Bros., of Webster, New Hampshire, have been breeding in this way for several years. The portrait of an ewe given here with is one of the Messrs. Gerrish's flock. She is 12 years old, and is a cross of Cotswold on Merino; she has all the appearance of the Cotswold, and her age speaks for her constitution.

As a matter of course, the cross-bred sheep so nearly approaching the character of the pure-bred race, require better feeding than the original smaller ewes. One cannot have a fleece and a carcass doubled in weight without providing the requisite feed. But we have the hardiness and the vigor of constitution of the cross-bred races, which confer a greater adaptability to the ordinary circumstances of the farm and our exacting climate, and these are the attributes of a sheep which is really the farmers' sheep—the one for profit under the widest range of circumstances.

But some may have a fancy for other breeds. South-Downs, for instance, whose mutton is the choicest in the market, and whose lambs are the fattest and most desirable; or the Shropshire, differing only from the South-Down in its longer wool, larger body and heavier fleece; or the Hampshire or Oxford-Downs, all dark-faced sheep, but cross-breds having Cotswold blood in them. If so, there is no objection. It is a matter of liking only, excepting this: that the Cotswold is a pure breed as is also the South-Down, and that the others are cross-bred sheep, of thirty years' standing, it is true; but still cross-bred; and I would choose an old-fashioned pure breed for the crossing on our natives rather than one of the newer cross-bred races. These cross breeds are very popular and profitable in England, but it does not follow that they would be so here. In this country, with our different climate and methods of agriculture, we should produce our own cross-bred races which should have all the hardiness of natives, as indeed they will be, and no longer depend upon importations. We have an excellent basis in our native grade or mixed Merino sheep, and those who can or will, may very soon have a thrifty and profitable flock with the expenditure of very little money; and an investment which pays three dividends in the year, in the shape of wool, lambs and a valuable manure heap; and which is always available in the shape of mutton.

Arboricultural.

THE RECENT DROUGHT.

PEOPLE talk of the late drought as if, simply as a drought, it was a very remarkable occurrence. We have not heard it qualified as the most severe within the memory of the oldest inhabitant, although it would not surprise us if we met such an expression, because it would be nothing more than we have heard remarked of a drought several times during the last twenty years. Nevertheless, if as a drought it is not altogether unprecedented, there certainly are features pertaining to it which are well worthy of consideration. For instance, it has occurred at a season when droughts are little noticed. About this time, bright, clear, spring weather is looked on as a godsend. Work goes on merrily. Walking is good. Early plowing is done promptly and the outlook is cheerful for a long season of prosperous work. It is true there is the fear of late frosts, that always goes with an early spring, but we have had nothing of the kind that has done us harm this year. Spring has come on slowly and steadily, so slowly and steadily that sometimes we were tempted to call it, for any earliness it showed, an ordinary spring after all. Yet such is the insidious and almost imperceptible influence of a long succession of warm days, interspersed though they may be, among many cold ones, that the spring has proved, after all, an unusually early one. The first of June, instead of displaying only the early spiraeas, lilacs, etc., offered the mere remnant of rhododendrons and azaleas, and scarcely as much as the remnant of most flowering shrubs. Roses were in bloom at least two weeks earlier than usual, doubtless also, unnaturally forced by extreme heat and dry weather.

Lack of water has produced lack of richness and durability of texture among the petals of all classes of flowers. Indeed, the peculiarities

of the season have been such that scarcely any foresight and punctuality in planting at the proper season could prevent unhealthy and imperfect growth. We say foresight and punctuality in planting at the proper season, but in thus speaking, we desire to restrict the statement definitely to the current year. Careful observers may readily discover, if they choose, special qualities peculiar to any piece of land where crops are now doing well. They will always find that such land has been thoroughly and permanently enriched by the well-managed culture of years. It must be strong, healthy land just as we must have strong, healthy frames to endure all sorts of severe and unexpected strains. Green crops—clover, etc.—have been doubtless, turned under from time to time. We may always safely infer, if we do not know, that any land bearing at the present time vegetation uninjured by drought, must have had long and persistent good culture, especially by the proper rotation of crops. On such land we could have ventured, even in these difficult times, to transplant evergreens possessing fibrous roots, well mudded and mulched, with a fair prospect of success. The unfortunate result of planting evergreens during the past spring without these favorable conditions, many will learn with chagrin. Everywhere the need of intelligent and persistent culture and fertilizing must be evident, whatever the crop may be, if we expect to meet with success the strain of seasons like the one just passing away. It may be hard for some to believe, but it is a fact, nevertheless, that much land thus managed will pass through a series of these strains as well as though irrigated.

Pruning.

Pruning in America is either a lost art or an art never learned. When we make such broad assertions, we wish to be understood in a broad sense altogether. It may, doubtless, be asserted, on the other hand, with entire truth, that various vineyards, pear and apple orchards and small fruit patches, are pruned sufficiently well to yield fine crops of fruit, but we believe never the finest. What we miss is a comprehensive practice of pruning, based invariably on the same general principles, but applied to each specimen in a manner suited to the individual peculiarities of that particular plant. We would wish that a process of pruning, pinching and thinning out buds, could be devised in strict accordance with the nature of the plant, just as the doctor studies the constitution of his individual patient. Original methods created by the needs of the case in hand—that is what we want. It is not systems we want, for with them we are well supplied between the Dubricul, or spur system, the renewal system and now, finally, the extension system. They have their merits in the treatment of certain cases, but everywhere we come unexpectedly on peculiarities of constitution and environment to which they do not apply without modification. In other words, Nature does not intend us to have a book of recipes for obtaining her most satisfactory developments by a sort of rule of thumb. It is for this reason that we are now and then much astonished by the perfect results obtained by an original amateur of long experience who does not claim to have any system whatever. All this is apropos of the little-understood need for pruning at this season of the year throughout all classes of ornamental and fruit-bearing trees and shrubs. It behooves us to look carefully after this need of ornamental trees especially. Perhaps we may find we are neglecting golden opportunities for obtaining the best results.

The Naturalist.

A PLEA FOR THE MOLE.

In a late number of the RURAL, a correspondent from South Carolina inquires how to get rid of the mole in his pea-nut patch; and the RURAL confesses its inability to give an effectual remedy, saying substantially, "It's hard to kick against the pricks." It is hard to keep moles away from the garden or from any piece of land in which mole food abounds. To keep them away from such a place is to *kill* them first.

When a boy in the land of "pea-nuts," near the home of the above correspondent, I was taught to make war upon the mole, which I kept up for 40 years, not knowing at the last how much good or *harm* I had done; but I am satisfied that the last half of the 18th verse of the 9th Chapter of Ecclesiastes, is quite true of me in the mole war. More than 50 years' acquaintance with the little animal has brought me to the conclusion that "wisdom is better than implements of war" in this case. It has been a long while since I killed one, except by accident, as sometimes one friend kills another. Our business relations for some years have been such as to make us friends. I have been growing nursery stock—small fruits, flowers, etc.—in which he has operated with me as "hired help." I have had hands who were such good workers that a little awkwardness, by which a few plants were sometimes killed, was excused, and they were retained. So I treat the mole, and for the same reason.

It is true he does sometimes destroy a plant while catching my enemies in a flower bed; but it is by accident. He is very useful in the strawberry grounds catching the worst enemy to strawberry growers. In hunting the white grub, however, he passes under a hill of plants, and so admits the air that the plant dies. On examination, the root is found to be eaten away and the evil is charged to the mole, when, in fact, he only ate the grub that killed the plant. A little observation has shown that, grounds manured with chip manure or sawdust are more frequented by him than others, and simply because he is most needed there; for after such manure or mulch comes a crop of this strawberry foe. But it may be said that the mole eats "pea-nuts" in S. C.; yes, and he nibbles a yam sometimes in Missouri He eats roots and grains when unable to find plenty of bugs and worms; and when all the bugs and worms are dead, it will be early enough to kill the mole to save the pea-nuts and potatoes.

Shall we muzzle the ox that treadeth the corn, or kill the bird that catches daily a thousand hurtful insects, because he eats a dozen berries? The best pickers I ever had I allowed each to eat a quart of berries per day while at rest, but not one berry at any other time. It worked well as a rule, and I am willing to allow the birds, and the moles too, to test the quality of the fruits they protect so well. "The laborer is worthy of his hire;" and if even the moles serve us, we should pay them for it. As a matter of friendship, we may spare them. When moles, toads, birds or *snakes* do us more good than evil, they are profitable, and our friends, and should be treated as such. Those were dark days of barbarism when horticulturists killed alike their friends and foes, without investigation. These are better days for the birds than those—most of them with thoughtful men are safe because useful, and so should everything useful be esteemed.

Even the homeliest faces on many of our fellow-men are tolerable to all, and even admired by many, because sometimes worn by persons of worth and real goodness. So of the huge old, homely toad—I confess to a real friendship for him. I would gladly have one sit under every Dahlia or other plant and sing. Sing? Yes, his voice is musical to me. And now the *mole*—why is he killed while we spare and esteem the toad? Because we *see* the toad catch flies and bugs in great numbers, he does it quickly and fast so that the fair ladies, (sensible ones) spare him for their beautiful flowers' sake. But the humble mole, like a real Christian, does not sound a trumpet or perform any part of his service to be seen and praised of men. He is persecuted by those he befriends, because they do not understand and appreciate him. He goes about doing good, and is killed without law for the harm others do. It has been a question, and may be yet with some, whether the mole is friend or foe. Some kill him because others do; some, not sure of his guilt or innocence, kill him "at a venture;" those who have decided against him kill him by rule. Now if that South Carolina inquirer has tried and condemned him in his "pea-nut" court, I, as the silent mole's friend, respectfully appeal to the supremacy of the grub-worm district of the strawberry court of the United States, where I ask a thorough investigation and a just decision. The merits of the case having been thoroughly canvassed before such an intelligent and impartial tribunal, I have no fear but a decision will be rendered in favor of my friend, the mole.

Springfield, Mo. JOT.

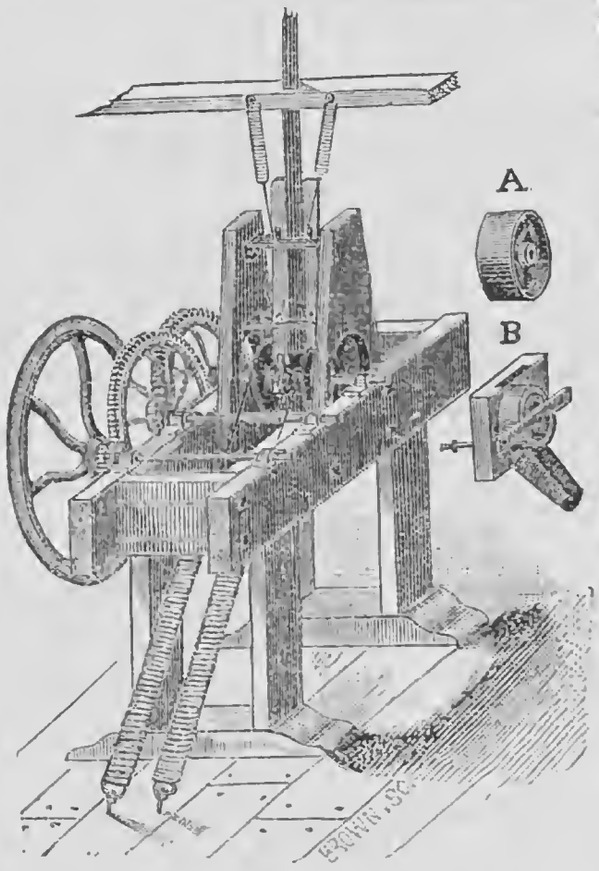
Industrial Implements.

THE MINNESOTA CHIEF THRASHER.

It is doubtful whether any thrasher made in this country has won a wide popularity so rapidly as the Minnesota Chief, manufactured by Seymour, Sabin & Co., of Stillwater, Minn. Since January 1878 upwards of 3,000 machines have been sold by this firm, and last season they received orders for 700 thrashers more than they could possibly turn out, although they were making six, and sometimes seven, every working day. Since then, however, their works have been so enlarged that even with the increased demand for their goods, they are confident of being able this year to fill all orders. Their aim has always been to make the best possible machine. In this, simplicity and stability of construction as well as capacity are, in their opinion, essential. They saw that the machine must be so constructed that unskilled labor could operate it; that it must be made of the best material so that it could travel over rough country roads, and be crowded to its full capacity without overstraining the working parts; that it must have capacity to thrash large quantities of grain, in view of the enormous increase in crops; that it must be suitable to thrash not wheat alone, but oats, clover, timothy and flax, also. These requirements they have embodied so successfully in their machines, that the sale of these has not been confined to the "home market" only, but has extended from the slopes of the Alleghanies to Oregon, and from Lake Winnipeg to Mexico. Of this machine Finlay Dunn, the special correspondent sent by the London Times to investigate the agriculture of this country, lately wrote: "Over several fields we drive to see the work of the Minnesota Chief thrasher with attached winnower and elevator, made at the convict establishment at Stillwater, capable of thrashing out readily 1,000 bushels a day, driven by a 10-horse portable Minnesota Giant farm engine, fed with flax straw, the extra capacity of furnace required for the bulky fuel being extemporized by introducing within the furnace-door a six-foot tube, into which the straw is packed, dried and is pushed into the furnace. The produce of 36 to 40 acres is thrashed daily: 16 men, a pair of horses and two teams of oxen do the work, including drawing water and taking the wheat to the granary, at a cost frequently within 60 cents an acre." One of our staff lately inspected all the works of the corporation and found them running to their full capacity, the firm being determined to turn out from 1,500 to 2,000 first-class thrashers this season.

THE RYTHER ROTARY MOTION AND ROTARY AND GRINDER.

This handy attachment can be used for grinding grain or feed, shelling corn, cutting fodder, turning a fan-mill or a grindstone, churning, etc., etc., much more cheaply, it is claimed, than these operations can be performed by a geared mill. The rotary is so constructed that the work is all done by the lift or upward stroke of the wind-mill to which it is attached. It can either be connected with the pitman rod and worked directly under the mill, or be operated off by the side of the latter, so that the mill can stand over a well and pump water while the rotary can perform its various offices in the granary or barn. The principle on which it works compensates for the irregular



motion of the crank operated by a pitman rod, as well as for the irregularity in the motion of the wind-wheel. The wheel for running it needs no more rigging than is required for ordinary pumping. This device is valuable alike to stock raiser and farmer, as well as to the manufacturers and dealers in all kinds of windmills. It is made by Clark & Co., Somonauk, Ill., who will furnish machines and full information to all applicants.

AN EXCELLENT POTATO-PLANT DUSTER

The Troy Stamping Works (Troy N. Y.) have sent to us for trial one of their contrivances for dusting potato or any other plants with London-purple or Paris-green mixed with plaster or flour. We commend it to our readers as the simplest and most effectual contrivance of the sort we have ever used, and we have used half-a-dozen or more that have at various times been sent to us. It saves so much labor—performs its work so effectually—that we take pleasure in writing this note entirely in the interests of our readers, and without the knowledge or solicitation of those who have the duster for sale. It is well to remark that the long wooden handle is not to be shaken, as one naturally supposes at first. This remark will be understood by those who attempt its use. With this machine it is nearly as easy to dust a potato patch thoroughly as it is to walk over it leisurely.

The Apiarian.

SEASONABLE HINTS.

The present season is well-nigh the busiest time of the year for the apiarist. The white clover, which, in the majority of localities, is the main honey plant, is now in full bloom; the queens are breeding rapidly, and swarming is the order of the day. This is the season that is especially trying to beginners in the business. When one has no experience to assist him, he is apt to be undecided as to what is the proper thing to do and how to do it, and consequently there will be an embarrassing lack of system in the work.

The first and great care of the apiarist should be to see that each colony is provided with a laying, prolific queen. An old queen, or one that, for any reason, has become less vital and has deteriorated in her laying propensity, should never be tolerated. In the honey season, when the workers live but a few weeks before they wear out, it is of importance that the colonies should be re-enforced with a constant and copious supply of young bees. Where such re-enforcement is lacking there will be a corresponding deficiency in the store of surplus honey, as well as in swarms. It is well to keep a few queens on hand in nuclei, so that if any accident should happen to a laying queen, a new one can be substituted without delay. Should a queen be killed by accident and a new one not be introduced, the workers will go to work and rear a queen from a worker egg, or young larva; but this process takes sixteen days, and five or six days more elapse before the young queen is fertilized and begins laying; hence, three weeks, in all, are lost. A prolific queen is estimated to lay over two thousand eggs a day when at her best. The total loss of bees to the colony would, therefore, be nearly 50,000 by a three weeks' absence of a queen. Those who take no warning from these figures do not deserve to succeed in apiculture.

Having prolific queens in the colonies, it next becomes important to see that there is room for them to lay. When honey is plentiful the bees will store rapidly; use the extractor freely, therefore, and let no more honey be stored in the brood nest than necessary. This extracted honey can be stored in barrels, if the quantity is large, and shipped to commission-men; but it is much preferable to endeavor to develop a home market for the article, and there sell it at retail. To this end, put it up in as attractive a form as possible. Glass jars, properly labeled with the name of the producer and the kind of honey, and containing from two to five pounds each, are perhaps the best sort of packages.

Keep, also, a watchful eye on the sections for storing surplus honey. The queen should never be allowed to lay eggs in these; but if there is sufficient room for her in the brood-nest, there is but little danger that she will enter the upper story for the purpose of laying. The size of the sections in which to store surplus honey will, of course, vary somewhat with the form of hive. We have found sections measuring 5½ by 5½ inches very desirable. These will hold, when filled, nearly two pounds of honey each.

The increase of colonies is also a subject of first importance. All successful apiarists do not agree as to the way to increase; some still prefer to have their colonies swarm naturally, while others—and these are in the majority—are in favor of artificial swarming. The method of forming nuclei and gradually increasing these to full-sized colonies, by adding bees and frames from other hives, is undoubtedly the best. The nucleus should, for this purpose, be started in an ordinary hive, with about a quart of bees, two or three frames of brood and honey, and a queen cell; or, if no queen cell can be had, there should be eggs or young larvæ less than three days old, from which to rear a queen. The bees will usually accept the situation quite cheerfully, and straightway begin to rear a ruler. Towards the fall should there be several nuclei too weak for wintering, these can be united into one or more strong colonies.

Do not let the number of drones be increased indiscriminately. This useless class of bee society corresponds to the loafers and tramps of the genus homo. They do not contribute to the prosperity of the hive, and they do not even make their own living. Nor can it be urged in their favor that they, as male members of the family, sustain the relation of protectors to the weaker sex, for they are utterly defenceless when attacked. Unlike the neuters, they are devoid of that small appendage in the abdomen, which is held in such high respect by small boys, and whose effect when used is like that of alcohol—stimulating but not nourishing. Catch and kill off these useless inmates of the hive wherever they may be found, and cut out all drone comb that is built in the brood-nest. Some, of course, are needed to fertilize young queens, but enough for this purpose will escape attention.

Miscellaneous.

WHAT OTHERS SAY.

COLORADO POTATO BUG DESTROYER.—We find the following in Cornell and Wood's Farmer's Guide:—Take Mandrake roots (easily gathered) dried for a week or more in the shade; put one-quarter bushel in a barrel (one head being removed), fill with water and let stand for two days, stirring now and then; strain the liquid through a cloth into a garden sprinkler; sprinkle toward sunset only those plants on which the young brood hatch and before they scatter to adjacent plants. This is an entirely safe remedy and just as effective as Paris-green and is less difficult to apply.

TEMPLES OF ROSES—MANY WEEPING TREES, ETC.—We have seen at flower shows ill-directed attempts to build temples of roses, and sometimes they have been made into the shapes of human beings, eagles, flags, etc. The mind at once revolts at the sight of solid and massive structures attempted with so fragile and delicate materials as flowers. Nearly as unfit is the attempt to build solid gateway arches of delicate foliage. There is another practice, much less objectionable, but still carried too far—the abundant planting of weeping trees. These are mostly unnatural to some extent, and if employed at all, the most graceful should be selected, and sparingly introdneed. They sometimes assist in the variety of a sky outline. Many of them came in the first place from an unnatural twist of a branch, propagated and continued by grafting. The above is from the Country Gentleman. We would make one suggestion:—No matter what the size of the grounds—unless a graveyard is included—one Weeping Willow, at most, is enough.

COMMON SENSE is defined by Prof. Huxley to be science exactly in so far as it fulfills the ideal of common sense—that is, sees facts as they are, or, at any rate, without the distortion of prejudice, and reasons from them in accordance with the dictates of sound judgment. And science is simply common sense at its best; that is, rigidly accurate in observation, and merciless to fallacy in logic....The course of nature as it is, as it has been, and as it will be, is the object of scientific inquiry; whatever lies beyond, above, or below this, is outside science.

THE Mass. Ploughman thinks that when the consumers are really in earnest to get good milk and are willing to pay for it, no doubt a way will be found to supply it. Already a plan has been adopted by at least one party that prevents milk from being tampered with while in transit; namely, that of locked cans, the key being in the keeping of the lady in whose family the milk is to be used.

"I HONESTLY believe," says the New England Farmer, "that the farmer who will work his brains until noon, and his hands the balance of the day, will outstrip him who rises at five and toils until nine at night."

THE Grocer thinks that if the dairy interest continues to increase as it has been doing heretofore, in a few years hence no other country need make butter and cheese, as this country will be able to supply the requirements of the world at a lower rate and of a better quality than they can make it themselves.

MAJOR FREAS thinks that of late years it is generally noticed that both apples and pears are more perfect than formerly, being less injured by insects; and he has not a doubt but this is owing to the incessant labors of the imported house-sparrow. Those who become especially observant of their industry for a single season must be convinced of the fact.

AGAIN the Editor of the Germantown Telegraph says they are always present in his own garden, among the fruit at all stages, yet with the most careful observing he has never seen or known them to touch any kind of fruit whatever. They eat insects only, and they are the most industrious and efficient insect-destroyers we have—better than any native bird. It is true, he says, that before the appearance of insects they will subsist upon vegetable matter, and this food may be the blades of grass, any winter garden crop, the tender foliage upon trees, etc., but this is the extent of their offending. The charge that they sometimes eat the young fruit-buds is not sustained. [We would remark that we have seen the sparrow eat the grains of sorghum, nearly destroying the panicles; have seen them pull open the ends of the husks of corn and eat the kernels as far down as they could reach, and we have seen them eat strawberries.—EDS.]

BE CHEERFUL.—An ill-tempered, gruff, glum man, cannot keep friends, and without friends it is impossible to succeed in business. We do not wish to be understood, says the Grocer, as advocating an easy good nature, which lets everything take its own way, without caring particularly. Such cheerfulness as that is the direct outgrowth of laziness, and will be sure to result in ruin. Be cheerful with your employes; it brightens them up, and they will work all the better for it. Be cheerful with your customers, and they will like you the better, and you can hold their trade. A man who is cheerful is generally a man who is good, and he inspires confidence. Don't stay up until the "wee sma' hours," for if you do you will find it impossible to be cheerful. A man can't smile when he has a bad headache, and a headache is a necessary concomitant of late hours. "Don't cry over spilt milk," is a good maxim. If anything has gone wrong, don't make it worse by getting mad, swearing and kicking up a row generally, but go to work to remedy the evil. All the swearing and fussing in the world won't help you when a barrel of flour has broken, or any other accident happens in your store, and the time you spend in getting mad might be much more profitably spent in doing something else. Misfortunes always come easier to a man with a cheerful spirit.

THE WHEAT CROP OF THE WORLD.—The wheat crop of the whole world for 1879 shows a deficiency of over 375,000,000 bushels, nearly 200,000,000 bushels of the deficiency falling to Europe. The following table, compiled from the *Bulletin des Halles et Marches*, by the Scientific American, shows the yield for each large wheat raising country compared with the average yield:—

	Average yield. Bushels.	Yield for 1879. Bushels.
United States	337,500,000	337,500,000
France	230,172,000	173,125,000
Russia	180,000,000	157,500,000
Germany	99,000,000	90,000,000
Spain	94,500,000	78,750,000
Italy	87,550,000	67,500,000
Austria Hungary	76,500,000	63,000,000
Great Britian	83,500,000	47,500,000
Turkey	34,500,000	29,500,000
Roumania	27,000,000	22,500,000
Belgium	19,150,000	14,650,000
Portugal	6,750,000	5,675,000
Algeria	20,500,000	16,875,000
Canada	13,500,000	13,500,000
Australia	13,500,000	14,650,000
Egypt	13,500,000	11,500,000
Netherlands	4,615,000	3,375,000
Greece	3,500,000	3,375,000
Servia	3 375,000	2,812,500
Denmark	2,250,000	2,250,000

A PROPOSED AGRICULTURAL COLLEGE NEAR NEW YORK CITY.—At a meeting of the Farmers' Club on the 1st inst., at their rooms in Cooper Union, this city, it was proposed to establish an agricultural college somewhere near New York city—perhaps on Long Island—in which to teach the science and practice of farming and gardening to young men, free of charge. As an initiatory step a large committee on organization was appointed. The following are some of the gentlemen on this committee, nearly all of whom are from New York or its immediate neighborhood: A. S. Heath, M. D.; Nathan C. Ely, Robert J. Dodge, Richard Kelly, Hon. John Jay, Edward Schell, Hon. James W. Covert, Erskine S. Bates, M. D.; Lawson Valentine, Wm. H. Gedney, Thomas Kinsella, James D. Hopkins, D. V. S.; Henry E. Pellew, Dr. Albert R. Ledoux, Col. F. D. Curtis, Thomas G. Knight, James Wood, Col. F. G. Wentworth, Wm. S. Schermerhorn, Col. Wm. Crozier, L. S. Hardin. In a speech on the subject, Dr. A. R. Ledoux, formerly of the North Carolina Experiment Station, said: "Let us select 1,000 acres of good land within an hour's ride of the city and stock it with model houses and tools. Let there be a practical dairy, conducted on the most approved plan, a model barn, greenhouse, museum, etc., etc. Let there be *free* instruction in farm and garden; in the care of stock and in dairy work. Let there be furnished rooms which students of agriculture may occupy and pay for by work. Let there be established in conjunction with this field work, but in the city, free evening lectures by the most eminent Professors on the Chemistry, Botany, Zoology, Entomology and Physiology of the farm work and farm life. Let these also be supplemented by lectures on agriculture, etc., and to these lectures let all be invited.

What will be the results? An establishment entirely divorced from literary institutions; where the home-spun of the farmers' boy need not feel ashamed beside the broadcloth of the collegian; the opening of a door to the honest mechanic and laborer of this crowded city, through which he can enter an honest, healthful calling and in time secure a home and a livelihood; a place where our farmers' sons can see the most approved machinery, methods and systems; a place where we all can go and learn something new and useful. Through the chemical analyses of the "Station," we can be protected in our purchase of fertilizers, and can learn the quality of our soils, marls, peats, waters, feeding-stuffs, etc., etc.

Establishing, one by one as we are, Experiment Stations in our States, we shall soon, I trust, be on a par with Germany with her 75 Stations and numerous agricultural schools, and nothing in this or any other land has been attempted more pregnant with great and priceless possibilities for good to the farmer and the laborer than this College and Station of which we have been told this afternoon."

CONNECTICUT AGRICULTURAL EXPERIMENT STATION.

BULLETIN 43.—MAY 29, 1880.

FERTILIZER ANALYSES.

Canada Ashes.

400. ASHES from stock of W. W. Cooper, Suffield. Sent by R. E. Pinney, Suffield. Cost 35 cents per bushel of 42 pounds.

401. Canada Leached Ashes from stock of James A. Bill. Sent by Otis Snow, Rockville. Cost 21 cents per bushel.

	400	401
Potash	4.66	1.26
Soda	1.20	.54
Lime	34.02	24.37
Magnesia	2.41	2.43
Iron oxide and alumina	1.41	2.13
Phosphoric acid	1.19	1.26
Sulphuric acid	95	10
Carbonic acid	19.25	14.99
Silica and sand	11.11	15.71
Charcoal	6.86	3.11
Water at 100 degrees	13.42	32.02
Combined water and loss	3.52	2.08
	100.00	100.00

Sample 400 is apparently unleached ashes and the analysis closely resembles in most particulars one made at this station last year on hickory ashes. The sample has evidently been exposed to wet and may have lost a portion of alkali. Reckoning in it the potash at 7 1-2 cents, lime at 1-4 cent (cost at kiln in New Haven), magnesia at two cents, phosphoric acid at seven cents and sulphuric acid at one-half cent per pound, the estimated value of 100 pounds is $0.57 1-2, while the cost is $0.83. Allowing lime to be worth at Suffield one-half cent per pound, to cover transportation, would raise the valuation to $0.66. On the other hand, considering the potash worth no more than in muriate (4 1-2 cents) would reduce the value 14 cents per 100 pounds. The ashes are really worth about 50 to 65 cents per 100 pounds, the former price for ordinary crops, the latter for tobacco where muriate of potash is objectionable. The valuation of fertilizers like this sample is less exact than in case of superphosphates, etc., because the ingredients, like lime which make up a large part of its weight, have variable commercial values, according to locality and state of market.

401 has essentially the composition usually found in leached wood ashes. It contains, indeed, more sand and silica than the average, but also more potash, while lime and phosphoric acid are up to the average.

Superphosphates, Etc.

404. Lombard & Matthewson's superphosphate.

410. Quinnipiac Fertilizer Co.'s superphosphate.

411. Fish and Potash, manufactured by the Quinnipiac Fertilizer Co., New London.

412. Pine Island Guano, manufactured by the Quinnipiac Fertilizer Co.

415. Bradley's Superphosphate.

404. Sent by John D. Gaylord, Ashford. The others by S. R. Gridley, Pres. Farmers' Club, Bristol.

410, 411, 412, from stock of S. A. Weldon & Son; 415 from stock of Wilcox & Judd.

	404	410	411	412	415
Nitrogen (organic)	3.61	3.22	4.52	4.79	3.06

RURAL SPECIAL REPORTS.

ALA., South Lowell, Walker Co., May 25.—Wheat is badly rusted and is only about half a crop. Cutting has begun. B. A.

CONN., Columbia, Tolland Co., May 31.—The season has been unusually dry thus far. In many cases corn has failed to germinate, and in others has dried up after the germinal shoot had started. Trees that have been set are likely to dry up, unless special care is taken, and careful mulching practised. The potato beetles appear in force and promise to need lively work in their destruction, or else the destruction of the potato crop is inevitable. In some instances garden vegetables have died in consequence of the severity of the drought. Sorghum is being planted more extensively than ever before, and it is probable that large quantities of sirup will be manufactured. The same is true of onions; but they are being injured by cut-worms. Butter is growing dull, and is in little demand, except what is required in local markets to supply customers. W. H. Y.

KANSAS, Council Grove, Morris Co., May 29.—Heavy rains fell all over this section on May 25. While the dry weather had done considerable damage to wheat, corn and other crops have not materially suffered. The rain will cause the wheat to turn out much better than was expected, and other crops are in excellent condition. The prospect for crops in this part of the Neosho Valley is at present very flattering. In fact, the condition of crops will compare favorably with the best seasons during the past ten years. L. H.

KAN., Republic Co., May 29.—The usual rains are a month behind, but they have come at last, and the drought is considered over. Crops will do a long time without more rain. Fall wheat will be short and thin on the ground, but the heads are of good length and well filled. Other small grains are late, but may do well. Corn generally looks well. F. E. H.

MICH., Watson, Allegan Co., May 22.—Corn planting is about half done in this vicinity, and wet weather prevails to such an extent that we cannot finish. Wheat looks well: grass, ditto, and there will be an abundance of fruit of all kinds. As the weather is warm, everything that has been planted or sown is growing finely. It is unusual for roses to bloom here in May; but we have now some white Scotch roses in full bloom. Never since my remembrance was wheat so forward at this season of the year as now. H. D. E.

MICH., Lansing, Ingham Co., May 27.—It has been a very wet spring here. W. J. B.

NORTH CAROLINA, "In the Valley of the Tryon," Polk Co., May 25.—Yesterday and the day before we had most refreshing showers. Everything seems to be growing with great rapidity. The oat crop that was sown in August last is now fast turning in color and will soon be ready for the harvest. Wheat is generally cut and in the shock by June 10th. The prospect now is quite encouraging for a good crop of wheat.

All kinds of fruit seem to be progressing well, and we are likely to have a most abundant crop. The summer travel to these mountains is now just beginning. It comes from Florida and all the coast regions of Georgia and South Carolina, and some from Alabama and Louisiana. Visitors come to avoid the "malaria" of their Southern homes, and to invigorate enfeebled constitutions by breathing pure air and drinking pure water among the mountains—the highest in N. C. in the great Appalachian chain.

Prices of all kinds of produce rule high here, and one wonders why it is so. Corn is worth to-day 80 cents per bush.; wheat, $1.25; flour, $4 per cwt.; hay, $20 per ton at the railroad station; butter, 15 cents per pound; eggs, 10 cents per dozen; bacon, Western, $8 per cwt. The reason why all kinds of grain rule so high is to be found in the fact that from the southern slope of the mountains to the ocean the great bulk of the people grow cotton almost exclusively; not that corn and wheat do not thrive well here, but cotton is, if not a paying crop, a crop that commands the cash whenever it is offered. There is always a market and a price for cotton.

[We take the liberty of stating that the above communication is from Dr. McAboy, a clergyman and a physician, who, though of Northern birth and education, was induced to settle in the delightful Tryon Valley some ten years ago for the benefit of certain members of his family who were not in the enjoyment of vigorous health. The writer spent several weeks at his hospitable home. The doctor is full of enthusiasm respecting the grandeur of the scenery, the salubrity of the climate, the fertility of the bottom lands and the adaptation of the "Thermal Belt" to fruit growing in general, and, it is but fair to say, that visitors soon find that his enthusiasm is highly contagious. The doc-

tor's address is Lynn P. O., Polk Co., N. C., and we are assured that he will take pleasure in answering any questions relative to the Tryon Valley, and this, too, without, so far as we can judge, any selfish motive. The writer of this and many acquaintances afflicted with throat and pulmonary weaknesses of various kinds, were much improved by the climate, and we are glad of the opportunity of recommending it to those of our readers who may be suffering from the same causes.—EDS.]

NEW JERSEY, Montclair, Essex Co., May 29. Our hot term is virtually at an end, at which all rejoice. Commencing on the 23rd, with a temperature of 90 deg. it rose daily to 94 deg. 96 deg. 99 deg. culminating at 102 on the 27th. With more air stirring, the latter temperature was more endurable than that of the preceding days. On the evening of the 27th. there were slight indications of showers in the distance, resulting in a cool breeze from the north, which sent the temperature down to 60 deg, on the morning of the 28th. During the day shower indications came nearer, but passed to the south and east, reaching Newark, New York city and probably the RURAL FARM. We bide our turn hopefully and the indications this evening are that a rainfall is near at hand. The "oldest inhabitant" does not recall so hot and dry a May. Vegetation wilts at midday as it is wont to do in August. The hay crop in old meadow is lost beyond redemption and the most promising crop of strawberries is irretrievably injured. Much corn and potato planting has been deferred for want of sufficient moisture to cause the crop to vegetate. Plowing sod ground has been almost impossible. Newly set trees and plants have died to a greater exteut than ever before, being literally burned up. Life in many a plant has been retained only by irrigation.

Roses, rhododendrons, weigelas etc., have had a hard struggle to open their flowers which have been of very brief duratiou, with less color and character than usual, some being actually scorched by the intensity of the sun's rays before unfolding their petals; but the redeeming feature of this drought and heat is the readiness with which the most persistent weeds die, and great has been our satisfaction in their destruction. A twenty-four-hour rain, steady and gentle, is greatly needed. E. W.

NEW YORK, Sharon Center, Schoharie Co., May 29.—May has been a remarkable month in some respects—very cold in some parts, very hot in others, and unusually dry all the time. In the early days of the month we had ice, and in the closing days the thermometer staid steadily up about 90° in the shade. On the evening of the 20th a thunder storm accompanied with hail passed over the town doing considerable damage—a church was struck by the lightning and several trees up-rooted, a number of persons knocked senseless, and several hop-yards cut clean to the ground. Since that time we have had a very rapid growth of crops, corn planted ten days ago is all up; one can see the rows across the fields; mangolds and beets started the same or next day are all up. Cucumbers and melons planted five days ago were up last night. Grass is very poor. Last year's seeding is of no account; old meadows and pastures are short and thin. Wheat may be half a crop; several pieces have been plowed up. Stock of all kinds, however, are in very good condition. Cows can be had for $30—rather a low figure when butter and cheese bring 20 and 12 cents a pound repectively. The article upon home consumption of cheese in the last RURAL reminds me of a little incident which proves the truthfulness of all said therein. A grocer at Canajoharie ordered three cheeses from our factory at Sharon Center. When they were delivered, one of them was cut. There happened to be a number of heads of families in the store at the time, and, of course, each one had to have a taste; the result was when the last man had gone to dinner, the last pound of that cheese had gone also, and the grocer had to order cheese very often to keep a supply. Had the cheese been poor, everybody knows what would have been the result. L. S.

OREGON, Portland, Multnomah Co., May 26.—A gentleman who has traveled somewhat extensively through the Willamette Valley during the past two weeks reports that, in a residence of nearly thirty years in Oregon, he has never seen a more encouraging outlook for the wheat crop. In almost every locality visited the young plant appeared to be growing finely, being of excellent color and healthy. With a moderately favorable season for the next two months, a harvest of unusual abundance of the "staff of life" is assured. Similar reports reach us here from the wheat-growing sections east of the Cascade Mountains, and there seems to be good ground for the estimate of a surplus of at least 250,000 tons of wheat to find its way to the markets of the world. Fruits and vegetables are also said to promise well, and Oregon will still retain the appellation of the land of plenty. H. L. S.

PA., Rockland, Venango Co., May 23.—The weather here is very dry. Vegetation is suffering for rains. Frost two weeks ago injured to some extent the fruit crops, except apples; but did not entirely kill the rest. The present prospect is good for an immense crop of apples. If the drought continues much longer the hay will be very slim. Wheat is looking very bad—the outlook is not as good as in March. The freezing and thawing of that month must have injured it somewhat; then the dry weather is not helping it at all.

G. L. J.

TEXAS, Dayton, Liberty Co., May 23.—The season has been all that the greatest grumbler could desire. Corn and cotton are now rioting in our glorious sunshine. The former is in silk and tassel. My "Blount's Prolific" is not the same as I got from the RURAL. It is only knee-high and in tassel, while last year it was 10 to 12 feet high. This was purchased from Mr. Carson in New York City, so I think *he* has been swindled by some one. Mold's Ennobled Oats are 30 inches high, but look sickly, I am sorry to say—they are yellow. I have sprinkled them with ashes, salt and lime, but this treatment apparently does no good. I suppose the seed was sowed too late—February. In this latitude—30°—it ought to have been sown in October. My cow-peas went down in a frost, as described by your Waco correspondent. I thought they were *peas*, but it seems they are *beans*. I could have saved them easily, as I did my melons, cucumbers and Limas, but I got fooled that time. However, your Alabama advertiser supplied me with a quart that are now growing nicely—so nobody is hurt. The mangels are undergoing a crucial test from some insect, and I am doctoring them with ashes. My Cuthbert raspberries died, owing, I think, to too much petting. In the same row I have a dozen Kittatinny blackberries, from your advertisers, E. & J. C. Williams; they are doing nicely, but I have let them alone. A large area of cotton has been planted this year in our neighborhood—about double that of last year. From 7 to 11 cents a pound makes all the difference from penury to plenty, and if no cotton worm appears, Texas will march up to the front rank of cotton-growing States. Yet the cotton worm ought not to be a set-back with any prudent man. Years ago when "Daily Rural Life" enlivened your columns, I sent him a vial of cotton worms, stating that I had no faith in Paris-green, but he insisted that I should persevere, and ever since it has been a perfect success. While my colored brother's field, just over the fence, was a forest of withered stalks, mine was green and blooming until Christmas. I have never been able to get a negro to use it. They are afraid of it seemingly, or think it is "conjuring." The great mistake made is in not having the poison on hand, so as to give it at the right moment. I buy mine before the cotton is planted and thus make certain work of it. One year I had a pet acre of the Dickson seed, and, though I had plenty of Paris-green, I concluded to stifle them with finger and thumb. I succeeded effectually, but it was a tedious, nasty business, and I never could get any of my boys to do it, and I really don't think I would do it again unless from necessity. This may aid some of the new-comers, who know nothing of the cotton worm, for this is the *truth*. G. G.

The Querist.

ANSWERS TO CORRESPONDENTS.

[Every query must be accompanied by the name and address of the writer to insure attention.]

Fence Law in New Jersey.

G. G., Bergen Co., N. J., says that a large tract of land adjoining his place has lain in common for years. The division fences will hardly sustain their own weight, no one being willing to repair his share. Stray cattle collect on the common and are constantly raiding the adjoining fields, and our friend asks who is responsible for the damage; would it be just to impound such cattle, in view of the worthlessness of the fence, and demand damages from the owner.

ANS.—If the division fence has been apportioned in accordance with the provisions of the New Jersey Fence Act, your neighbor will be liable for the damage caused by his neglect to repair his portion of the fence. If the neighbor refuses to repair his portion of the fence, you may repair it, and upon an appraisal of the expense of such repairs by any two of the township committee residing nearest the land, and the non-payment of the amount appraised, you may sue him and recover the amount appraised together with the commissioner's legal fees. If the division fence has not been apportioned and each one's share remains unascertained, neither can claim for himself or impose upon the other the provisions of the fence act. If you cannot mutually agree upon the portion of fence to be maintained by each, you must then call in two of the township committee, who will determine the portion of such fence that each must maintain. Their decision is binding upon the parties and upon succeeding owners. Cattle owned by, or in charge of, your neighbor, coming upon your premises through his defective fence, may be impounded, or the neighbor may be sued for the trespass. If the cattle stray from the highway, or are turned without your neighbor's consent upon his land and then trespass upon your land, you may impound the cattle or sue the owners for trespass. One may turn his land into common, but may not remove division fences without first giving twelve months' notice in writing to the adjoining owner, of his intention. Should he remove the fence before the expiration of twelve months, he becomes liable for all damage caused by the removal, and after the removal of the fence he must see to it that the land is not used in such a manner as to work injury to the adjoining owner.

Improving a Muck Swamp, etc.

L. D. Belmont Station, N. Y., has a black muck swamp in which the muck is from three to thirty inches in depth, and he asks, 1, whether in improving it, it should be underdrained before plowing; 2, what kind of manure should be used; 3, and what kind of grass seed should be sown on it; 4, is Prickley Comfrey a humbug; 5, what is the best method of clearing up laurel and blueberry land and the best plow for the first plowing.

ANS.—1, The swamp should be drained: not necessarily with tile, but perhaps open drains may serve the purpose, especially if the land is to be used for grass. The ditches may be made two feet deep and four or five feet wide with gentle slopes, and seeded on the sides. 2, If the swamp is dressed with 100 bushels of lime per acre, no other manure will be required for some years. 3, The best grasses for such land are red-top; fowl meadow grass, (one bushel of each) and five pounds of timothy. This will make hay or pasture. 4, Prickley Comfrey is not exactly a humbug. It will produce a good deal of fodder on good soil, but will not thrive on poor soil, as has been claimed for it; some cows will eat it eagerly and some cannot be coaxed or starved to eat it. We don't think it will ever be so valuable as corn, but as it is a perennial and grows very early in the season it may serve a good purpose in some cases. 5, Laurel and brush land is best plowed with a pair of oxen, or a steady team of horses or mules and a sharp-edged steel or chilled plow with a sharp, steel coulter. A Syracuse chilled plow may answer the purpose. It might be well to write to some plow makers whose addresses may be found in our advertising columns, and procure a plow that is suitable for such work, or get one made expressly for it.

Warbles in Cattle.

W. A., Shell Rock, Ia., has a valuable young Short-horn bull on whose back a little lump appeared about two months ago. Since then it has grown very fast and looks now like a big, ugly-looking seed wart, and a lot of small ones have appeared around it, and our friend asks the cause and a remedy.

ANS.—These tumors are caused by the larvæ of the common gad-fly—œstrus bovis. The larvæ are commonly called wormals, wormils, wournils or warbles. The fly attacks the animal, pierces the skin and deposits its egg in the orifice. In a short time a swelling appears which grows larger by the deposition of lymph and the growth of the larva. Before long the latter is discharged, drops usually to the ground and, when fully developed, assumes wings and soon begins to deposit its eggs as its mother had done. When the fly is about, cattle may be seen galloping about the pasture with tail uplifted, and evidently in a state of great excitement. The tumors sometimes reach the size of a walnut, and animals plagued with a number are feverish and suffer considerably. Usually they do not need treatment, but in bad cases the grubs can be squeezed out by the pressure of the fingers. Sometimes the knife is required to make the opening large enough for the expulsion of the "bot." Bathe the wound with a solution of carbolic acid and water—1 to 40.

Putting up Pickles for Sale—Making French Wash for Fences—Walnut Stain for Wood-work.

D. M. H., Richmond, Va., asks, 1, how pickles are put up "commercially;" 2, how to make French gray wash for fences; 3, how to stain wood-work on the inside of houses a walnut color, at the least cost.

ANS.—Pickles are put up for sale in the following manner:—The small cucumbers when gathered are laid upon broad trays on tables and sprinkled with salt, and left to drain for a day. They are then sorted into sizes, and put into large casks with brine, where they are kept until wanted for sale. They are then drained from the brine and washed in fresh water, drained and put with some spices into glass bottles, jars or kegs, which are filled up with vinegar, the best being pure cider vinegar of moderate strength. Such pickles are not green but of a brownish tinge, and are chosen by those who prefer quality to looks. The green pickles are "coppered" and packed in diluted acetic acid, but these are not at all wholesome or desirable. 2. A French gray wash for fences is made of lime wash to which glue water and a little lamp-black and Prussian blue are added. The lamp-black makes a steel gray; the blue added gives the tinge known as French gray. 3. Walnut stain is made by brushing the finished wood with asphalt varnish thinned with turpentine. This varnish consists of asphalt dissolved in turpentine, and if it cannot be procured ready-made, it is easily prepared. One coat is sufficient. A sample piece should be tried first.

Relative Value of Pine and Oak Ashes as Fertilizers.

W. W. W. Griffin, Ga., asks, 1, is there any value in pine ashes for fertilizing purposes, and, if so, what is their value as compared with that of oak ashes; 2. will salt marsh muck make a good fertilizer for asparagus and other vegetables, and, if so, how should it be prepared.

ANS.—1. Pine ashes contain about as much of the fertilizing elements as oak wood, but pine wood yields but half as much ash as oak. The following will give the exact proportions:

	Pine.	Oak.
Total ash per cent.	2.4	5.1
Potash per cent.	0.4	0.5
Soda per cent.	0.2	0.2
Magnesia	0.1	0 2
Lime	1.2	3.7
Phosphoric acid	0.2	0.3
Sulphuric acid	0.1	0.1
Silica	0.2	0.1

It is seen that pine ashes are richer in potash and phosphoric acid than oak ashes, weight for weight, although the pine yields less ash than the oak. 2. Salt marsh mud makes an excellent basis for a compost, and when mixed with manure in cow pens or in stables it will make a good fertilizer for asparagus or any other crop for which stable manure is used. Alone it is of no use for such crops, but used as a top-dressing for grass it has been found very useful.

Miscellaneous.

G. E. N., Afton, N. Y., has a sugar bush of about 500 trees on 20 acres, and he asks, 1, whether he can "underbrush" it and sow grass seed, so as to make a good pasture, or will the trees give too thick a shade; would it be advisable to burn it—it is small and last fall about half of it was cut—or let it lie a year or so and rot. He also asks what grass seed he should sow and how treat the land to make a good pasture; 2, where can drain tile be had near him.

ANS.—If the trees shade the whole of the ground, grass will not grow much, and should not for the good of the trees. If quite scattering, sow orchard grass, red top and blue grass mixed. If the land lacks potash (as sandy soils usually do, and as clay soils more commonly do not), burn the brush, but be careful not to scorch the maple limbs. The grass seed will probably catch without harrowing, if sown in September or March. 2. W. Bender, Albany, N. Y., is the nearest dealer in tile drains that we know of. Prices, etc., will be furnished by him on application.

H. W., Rochester, N. Y., makes several inquiries as to lawn mowers, and desires to know whether those with "iron rollers" are the best. His lawn is small, smooth and the turf velvety and he desires so to keep it.

ANS.—The Buckeye lawn-mower (Mast, Foost & Co., Springfield, O.,) is, as claimed, easy to work, handsome in appearance, simple in construction and durable, so far as we can judge from one season's use. The Excelsior and Philadelphia are both excellent machines. The former may be purchased with or without an iron roller. For your use, we should think the small wooden roller would suffice.

E. D. L., Speedville, N. Y., 1, asks where the Clipper mower is manufactured; 2, where and by whom is the spring-toothed harrow made.

ANS.—1, The Clipper Mower Co., Keene N. H. It is sold by R. H. Allen, & Co. of this city. 2, Wheeler, Melick & Co, Albany, N. Y.; Olin & Co., Perry, N. Y., and Harrison M'f'g Co, Janesville, Wis.

J. G. A., Baltimore, Md., asks how far apart should raspberries be set in the rows and how far apart should the rows be.

ANS.—It will depend upon the vigor of the varieties. Strong-growing sorts should be planted about five feet apart in the rows, and the rows five and a half to six feet apart; weaker varieties may be set a foot to a foot and a half closer each way.

G. G., Dayton, Texas, has a seedling orange tree, thirteen years old, that has never borne fruit. It has five stems as thick as his wrist, and he asks whether we would advise him to cut off all but one.

ANS.—We should cut it back, and root-prune it.

THE
RURAL NEW-YORKER.
PUBLISHED EVERY SATURDAY.

CONDUCTED BY
ELBERT S. CARMAN.

Address THE RURAL NEW-YORKER,
No. 34 Park Row, New York.

SATURDAY, JUNE 12, 1880.

A REQUEST.—We would thank our farmer readers if during the approaching harvest they would send us by mail any heads of wheat of new or little-known varieties which they may deem of special value. According to recent postal laws, the name of the variety and the name and address of the sender may be written upon the envelope or box containing the article sent—a matter of importance to us, since we could not otherwise place them together, if many of our friends would comply with our request. Of course, we do not want old varieties, like Fultz, Clawson, Mediterranean, etc., etc., of which we have already presented engravings, while little that is not already well known can be said regarding them. We should also be pleased to receive any heads that are remarkable for their size and weight.

KEEPING UP WITH ONE'S WORK.—We have never tried harder than during the present season to keep ahead of our work upon the farm, and we have never been less successful. The mild winter was favorable for putting all things in order, and for the accomplishment of much work that in severer winters is necessarily left until early spring; and we did not neglect the opportunities thus offered. Nevertheless, the drought through which we have passed has thrown us so behind that the corn and potato fields—now that rain has come—are crying out for cultivation. We are constantly advising system, fore-handedness, promptness on the farm—and the advice is, no doubt, good—but really rain in excess, drought, frosts, insects, crippled horses, inability to procure extra labor when most needed, and other causes often make us feel like laughing to scorn our own advice. Still there is this consolation that farmers who do all they can to keep up with or ahead of their work, are in vastly better circumstances to bear with such drawbacks than those who are always behind.

SHEEP HUSBANDRY INVESTIGATION.

AMONG farm animals, in every country, the sheep has a prominent position. Meeting the vital human wants—food and clothing—"golden hoof" is also quite generally deemed essential to good husbandry to sustain the fertility of the soil. The present era is one of unusual interest in this branch of rural effort, from the recent revival of manufacturing, the variety of wool demanded, and the increasing home use and foreign demand for fine mutton. The business is in a transition state in which place, soil, feed, skill, science and various circumstances aid in determining whether wool-growing, lamb-raising, mutton-producing, or a combination of these specialties be pursued.

General Walker, in his census work, has recognized this fact, and proposes a thorough investigation of the subject, which has been committed to Mr. J. R. Dodge, a recognized expert in this line. The inquiry, in addition to the regular enumeration of sheep and fleeces, involves the distribution of breeds, the tendencies of breeding, the time and material of feeding and grazing seasons, the cost of keeping, the economics of lamb raising and mutton production, casualties and their causes, diseases and their prevention. It is far more exhaustive than any statistical inquiry upon the subject heretofore undertaken and demands the willing and earnest co-operation of the most intelligent flock-masters in all parts of the country. Public spirit and personal interest unite in equal inducements to painstaking endeavor on the part of individuals making these returns. The result should be of incalculable advantage to the future of wool growing and meat making. It is beginning to be recognized that the entire business of stock growing is to be based, in the future, on the strictest business methods and soundest scientific principles.

HOW TO BEAUTIFY COUNTRY SCHOOL GROUNDS.

OUR school houses, taking them together, are a disgrace to farmers and, in fact, to our civilization. The ornamentation of country school grounds is a subject which is being agitated by several of our horticultural societies. But the trouble seems to lie in the apathy of the farmers themselves, the very ones who are to be benefited through the refining influences that such ornamentation and the work attending it, secure to their sons and daughters. Is there no simple way of waking up the farmer to an appreciation of this? The first steps in this direction need not involve any considerable outlay of money, which, we take it, is the great stumbling-block in the way of a beginning. When once fairly begun, we have a strong faith that the utility of the work would so commend itself even to those who, as Pres. Lyon expresses it, "begrudge a few feet of ground for an evergreen tree, because the same space might be profitably occupied by a potato hill," that it would be vigorously continued until the grounds about country schools were made, not only beautiful, but a means of imparting to the scholars lessons scarcely less valuable than those of arithmetic, writing, geography and grammar, to which country school instructions are in the main confined.

It has long been a matter of surprise to us that the study and cultivation of plants are not made a first consideration in country schools, since the pupils (or a majority of them) have to look to plant-growing as the basis of their future occupation through life. Nor is it necessary that such studies should be more than elementary. Gray's first book in botany ("How Plants Grow") is a book that any pupil who is capable of learning elementary arithmetic, could easily understand; and this studied in connection with a plot of ground for the cultivation of plants from the seed, could hardly fail of giving that first insight into plant life, which in many cases—if not in all—would incite the apt scholar to diligent study in after years.

Suppose that each school were to start with a bed ten feet square, and that each seasonable day an hour were devoted first to its preparation, then to planting the seeds, then to the care of the plants—then to the transplantation for the purpose of beautifying the school grounds.

We are presuming now that only seeds of hardy perennial shrubs and trees or herbaceous plants were sown. For this purpose, is anything more needed than that the teacher should be instructed that that is a part of his duties? The seeds themselves would cost little—nothing. The RURAL NEW-YORKER would be glad to distribute them without charge. In this way in three or four years the grounds of our naked-looking school-houses might be beautified with such handsome hardy plants as Weigelas, Deutzias, Berberries, Callicarpas, Calycanthuses, Bush honeysuckles, Viburnums; vines of various kinds, Yuccas, Phloxes, Irises, Cardinal flowers, Poppies; magnolias, maples, catalpas and many others which are known to grow freely from seeds. The seeds of fruit trees might also be planted, which would soon give the stocks upon which any superior fruit of the neighborhood could be grafted, while the useful art of grafting or budding might thus be taught.

Is there anything very complex or visionary about the above suggestions? If so, tell us what they are, friends, and suggest some more practical plan by which we may some day hope to enlighten our "town Superintendents and district Boards," to the end that our farmers' school-houses may be elevated at least to the æsthetic level of their barns.

THE ARMY WORM.

Its Appearance on Long Island (N. Y.) in vast Numbers.

Wheat, Rye and Corn Fields Destroyed.

The Entire Crops of the Island Threatened.

THE following dispatch, under date of the 5th inst., 12 M. has been received from the RURAL FARM:

Five days ago we first noticed the Army-worm in our wheat. It has increased in numbers with marvelous rapidity. On the east side of the farm, one plot of wheat is half destroyed, nothing but the stalks remaining. An adjoining piece of fodder corn is also attacked. They seem to show very little choice of food. In some parts of this farm the grass and clover, and even all sorts of weeds, are alive with them. We have trodden upon a dozen at one step. In several respects they act like what is known as the cut-worm, burying beneath the surface soil, though only when the heat of the sun becomes intense, and cutting off and devouring all herbage before they take to the leaves of taller plants. They cannot endure heat. If, while feeding, the leaf and worm be carefully placed upon a post or other hot surface, it ceases eating and at once endeavors to escape. It drops to the ground if touched or disturbed. Hot weather would, therefore, be welcomed as offering some, and, indeed, so far as we can see, an only hope of arresting their havoc. We have instituted inquiries in many parts of the Island. One report from Christian Hook says: "Forty acres of rye devoured in 60 hours." From the Oyster Bay region we learn that wheat, rye and corn are being destroyed rapidly. The farmers of the Island are in consternation and the outlook is sad indeed.

LATEST.

Monday, June 7th., 10 A. M.

Yesterday was favorable to the depredations of the Army-worm, being still and overcast in the morning and cool in the afternoon. Their destructive work of the day is very apparent. We have found hundreds under old, half-decayed rails. The largest are fully two inches in length. Some farmers are plowing trenches about the infested fields. It may be worthy of note that the west half of the farm is free of them. Finding that the Army-worm is relished by poultry, we have confined our flock in an acre field of young corn and wheat, depriving them of their usual food. The sparrows are feasting upon the worms. They seem to be traveling North. They have also made their appearance in portions of Monmouth Co., N. J., in vast numbers. They eat the leaves and beards of the wheat and then go in quest of other fields to conquer. Clover has there suffered comparatively little. After about a week's destructive work they seem to disappear as mysteriously as they came.

[NOTE.—Below we present our readers with life-size engravings of this destructive pest. At, a, is seen a very good illustration of the worm or larva, though when well-fed it is considerably larger; b, is the moth or fully-grown insect which lays the eggs from which the larva is hatched, and, c, is the same insect in the pupa state. This insect is known to entomologists under the name of Leucania unipuncta, and the larva is commonly called the Army-worm. This pest appears especially after hot, dry springs, as has

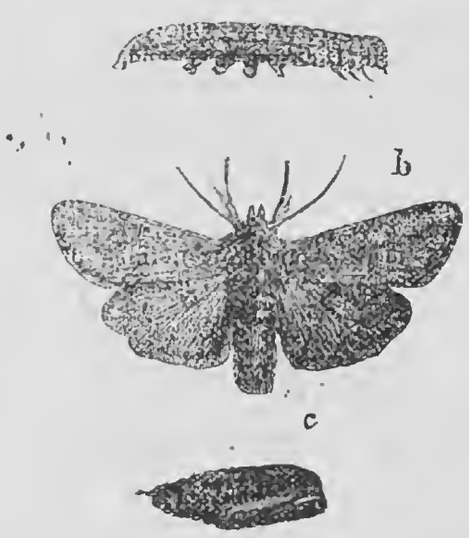

FIG. 207.

been the case the present season. The worms then spring into existence suddenly, as if by magic, and advance to their work of destruction in countless multitudes. The moth is of a yellowish-drab color, with a small white dot near the center of each of its forewings, and a dusky oblique stripe at their tips. On the under-side the wings are paler and more glossy than above. It is a night-flyer, and deposits its eggs at night on blades of grass, in April and early May. The eggs soon hatch and the worms begin their havoc. The larva, as stated above, sometimes grows to a length of two inches, though it is generally smaller. It is of a dull gray color, with three yellow lines on each side, the lowest one being the broadest and brightest. When full-grown they enter the earth and assume the pupa state, in which condition they are supposed to pass the winter.]

BREVITIES.

BREEDING draft horses pays large profits to Western farmers and they are at present the most profitable stock of any kind that can be raised.

OUR South Carolina friend, Mr. S. Ott, writes us under date of May 24, "The RURAL Doura is doing finely and getting its fifth and sixth leaves.

SIFT coal ashes through a flour sieve. There is nothing better with which to mix London Purple, Paris-green, hellebore, etc., for the destruction of potato beetles and other insects.

THE CRYSTAL CITY STRAWBERRY, produced the first ripe fruit of the season, on June 1, at Clifton, Monroe Co., N. Y. as we learn from Mr. C. A. Green. The soil is clayey and several days later than the surrounding sands.

IT should be borne in mind that the next annual meeting of the American Association of Nurserymen and florists will be held in Chicago, commencing June 16th and continuing three days. For particulars address T. S. Hubbard, Fredonia, N. Y. or D. W. Scott, Secretary, Galena, Ill.

THE American Drier Co. (Chambersburg, Pa.) write us under date June 1st. "Our advertisement with you is paying us *well—very well indeed*, and among the best people. We ship three machines to-day, that we trace to our advertisement with you." The italics are those of the writer.

"MRS. STRANG" is the name of the first Golden Tricolor Pelargonium (Geranium) that bears double flowers. Mr. B. S. Williams, of London, informs us that they are of a scarlet color, very double, while the leaves are richly colored. We did not suppose that it was among the possibilities to combine the two.

MR. E. WILLIAMS, who is always ready to find out the truth of things by his own tests, writes us as follows: "Of 300 bug-eaten peas, 30 germinated and appeared above ground. *Seventeen* are now visible with little vitality. How different the case would have been had the season been less dry, deponent saith not.

OUR esteemed contributor, Mr. W. I. Chamberlain, has been elected Secretary to the Ohio State Board of Agriculture. The appointment is all the more honorable in that the office came to him unsolicited, and we have no doubt but his manner of performing its duties will justify the choice of the Board.

WE shall shortly begin a series of articles, about one column in length, each week, on "The Dairy Cow," how to breed, feed and take care of her, by that experienced dairyman Dr. Henry Stewart. We have no doubt that they will include a good deal of matter useful to our readers, especially to those who keep but one cow. The articles will be illustrated.

WE are sorry to learn that the herd of cattle of our distinguished correspondent, Dr. J. B. Lawes of Rothamsted, England, has suffered both from pleuro pneumonia and anthrax. "The chief pathological interest in this outbreak," says Prof. J. Wortley Axe, "is the existence of anthrax and pleuro-pneumonia in the same herd, and even in the same animal at one and the same time."

DR. LYON PLAYFAIR, the eminent British chemist, indorses Mr. James Caird, the eminent British agricultural authority, in his opinion that British farmers, in view of American competition, must to a great extent abandon the production of wheat and cheese in favor of more perishable products—just what the RURAL NEW-YORKER said months ago, when it declared that the British farmer must, ere long, become a milkman, poultryman, or "truck" gardener.

IN open winters and in spring and autumn, in freezing and thawing weather, roads in the clay soils of the West often become next to impassible, and for weeks and sometimes for months, farmers cannot draw their produce to market, and thus often suffer heavy loss by keeping it on hand. The cheapest roads in the end are the macadamized. It has been remarked by wise men: "Let the country make good roads and the roads will make the country"—and there is much of truth in the adage.

ONE of the most grievous charges in the mouths of many against the Commissioner of Agriculture has been the smallness of his salary. It is said that no man of transcendent ability would work for $3,000 per annum; Gen. Le Duc did work for $8,000 per annum, therefore—etc. We are glad to see that the Senate last week, in making appropriations for the Agricultural Department, lightened the load of opprobrium under which the Commissioner has been suffering on account of the meagreness of his stipend, by adding $1,000 to it.

LAST Thursday, June 3, the United States Senate passed by a large majority, the clause in the Agricultural Appropriation Bill, appointing a Commission of nine to investigate all questions relating to agriculture, etc., so far as they relate to the enactment of a judicious tariff. In the discussion concerning the matter, Senator Eaton, of Connecticut, as one of the sticklers for the manufacturing interests, said that were it not for the present tariff on wool, Connecticut could make woolen goods more cheaply than they are made in England. Thereupon Senator Coke, of Texas, replied that if Mr. Eaton would join him in striking off the import duties on iron and steel, he, as one of the representatives of the Lone Star State and her wool, would vote to strike off the duties on foreign wool. That assertion exemplifies the principle which the farmers of the country must maintain in this matter. They are heavy losers by the extra prices they have to pay for nearly all home-made goods, on account of the shutting out of foreign competition in our markets by a protective and often a prohibitory tariff. Among the few products of their own, the production of which is fostered by the tariff, wool holds probably the most prominent place. If this stimulus to the production of wool among us is weakened by the lowering of the import duties on foreign rivals, then must the agricultural classes insist that, as a part of the benefit they derive from the tariff has been taken from them, a part of the disadvantages they suffer from it shall also be removed. If the protectionists of our manufactures are anxious to make thousands of agricultural voters converts to Free Trade, let them go ahead in their efforts to injure the sheep husbandry of the country by cutting down the taxes on foreign wools in the interests of their pet manufacturers. Hitherto the growers and manufacturers of wool have acted generally in unison, and it will not be to the ultimate benefit of the latter to aid in injuring the former, by supporting any modification of the present tariff on wool.

Literary Miscellany.

DECORATION DAY.

It came with peace and brightness,
The ushering of the morn;
The day of fond remembrance
To the soldiers who have gone.

All nature seemed respondent
To the honored brave,
For God had sent the sunshine
To illuminate each grave.

Hushed, the din of battle;
Stanched, the flow of blood;
Instead, the thoughts of thousands
Went out to the flowery flood.

These gifts of rarest beauty,
Were tributes to the forms,
Now buried 'neath the dust,
Away from the beating storms.

'Tis well to thus remember
And honor duly pay,
By deed, as well as word,
The fallen in the fray.

But spare the costly deed,
If the widow and the child,
Be left in need of food
Or shelter in the wild.

Their souls were called away;
God gives them *their* reward;
The living claim *our* care,
Stretch forth the hand well stored.

—*Anon.*

JOHN ASCOTT'S DAUGHTER.

BY CHARLES RICHARDS DODGE,
Author of "Louise and I."

(Continued from page 366)

CHAPTER XIII.

"TO BE, OR NOT TO BE."

"A MONTH from to-day" is a long step into the future, so long a step in this instance that our young farmer friend felt in no haste, particularly as it was a very busy season of the year, and there was no pressing need of hurry. The money could be obtained from the bank a week before the time specified, in fact it was as good as promised already. The transaction would only require one day at the longest—days were valuable things now—and that was the end of it for the time being. It certainly was a busy month at Maplewood. George was ambitious and anxious to make the most of the season—and some money too—so, gave little thought to the mortgage till within a few days of the date for taking it up, and then he went about it in earnest.

Arriving in town he drove directly to the bank and inquired for Mr. Bond, the Treasurer. To his chagrin he found that important functionary out for an hour or two on business, and was requested to call later. He felt that two hours was a long while to wait, but there was no help for it, so he went around to his brother's to attend to some minor matters of business, and fortunately found Charlie in.

"I've three days left me to pay off that confounded indebtedness," he announced upon entering.

"Well, have you the money?"

"That's why I am in town to-day. I think Mr. Bond is going to make it all right for me. I mentioned the matter some time ago, and there was no objection."

"Have you seen him to-day?"

"No, I have not. He was out when I called at the bank, but is expected to return in an hour or so."

"I think you had better see him as early as possible."

"Why Charles?"

"Because two other persons are negotiating heavy loans, and you may not be accommodated. French told me so this morning at the bank."

"You don't say so! Then I'm off at once. I'll see you later," and the young man started out abruptly in search of Mr. Bond.

"Come around to dinner, George," said his brother as he quitted the store.

"All right, when—if I get the business fixed."

Returning to the bank it was ascertained that Mr. Bond had been in for a brief moment, and had gone out again. Would doubtless be found at Judge Coke's office, though he might be elsewhere; impossible to name any particular time for return. With this most unsatisfactory information the young man drove rapidly down Main street in search of the missing Treasurer. Stopping at Judge Coke's he learned the additional information that the object of his search had been gone nearly a quarter of an hour, and had left the office in company with Mr. Ashton, Senior. Here was a pretty pass. Supposing he should meet Mr. Bond in the street; he could not broach the subject of the loan in his father's presence. No, no, not for worlds would he do that. So he drove around to the bank again, resolving to wait and see the gentlemen in the privacy of the back office.

With what anxiety did he watch the clock and count the minutes as the long finger jerked from space to space around the circumference of the quaint, old-fashioned dial. He was nervous and could not help it, and the thought of Charles' suggestion, did not make him any the less so. Then his mind turned to May—he could not help thinking how anxiously she would watch for his return, and as he fidgeted in his chair it seemed as though the old clock was saying, with every swing of its great brass pendulum, "*fore-close, fore-close.*" He jumped up, strode upon the sidewalk, and approaching Dolly, standing quietly and patiently where he had left her, stroked her nose a moment and then walked into the bank again. It was fully half an hour after when Mr. Bond made his appearance. George stated his business in a few words, and with palpitating heart awaited the Treasurer's answer.

"I am very sorry, my boy, that you did not come two or three days ago; *all* the available funds of the bank have been loaned since that time. I presented your case to the trustees some weeks ago; there was no objection to letting you have the amount asked, and I would have reserved it had I known positively that it was wanted. I am truly sorry George, but there is no help for it now."

"The young man dropped his head, but only for a moment; then he arose to go.

"Have you any idea, Mr. Bond, where I *can* get it. I think Maplewood is safe property to loan money on."

"None better. You have made a splendid place of it, even in the two years. How much time is there left you."

"Three days——"

"Oh, dear me! I was hoping it was longer. A week later I *might* be able to help you get it in another quarter. Who represents the Stone estate."

"Old Skinner, I think."

"Then you will have to work lively, for he will not give you two days of grace, if he can help it. Let me see—ah!—you might try Harkness, though he will want seven or eight per cent."

"I could afford to pay that for a short time."

"You can't *afford* to pay it, George, though it may be necessary under the circumstances."

"I mean that the season promises well, now, and I hope to make a good margin this year."

"You may tell Harkness, from me, that he ought to let you have the money at six—seven at most—if he has got it; and if he hasn't, I don't know where you will get it. Money is in demand just now."

Old Mr. Harkness was as kindly disposed as Mr. Bond had been, but he had nothing to loan at any interest at the present time; nor could he offer the least suggestion as to where such an amount could be raised on such short notice. Disappointed and sick at heart, the young farmer now made his way to his brother's store, meeting him almost upon the threshold on his way to dinner.

"Well, what luck?"

"No luck, and no money."

The deuce! I feared it would be so. Why don't you swallow your pride and go and see father, have a talk with him, and borrow the money in a business-like way, as you would from a stranger?"

"I could'nt do that, Charles."

"Well, it seems to me you had better do that, and keep a shelter over your wife's head than to turn her into the highway."

"Oh my God, don't lisp such a thing—No, no, no, I will try elsewhere. With such a farm as mine to offer as security it is a loan anybody ought to jump at."

"None have jumped to any alarming extent this morning."

"Can William help me?"

How a drowning man catches at a straw! George asked the question almost knowing it to be a hopeless one, and Charles answered it precisely as it was thought he would. William had some money, it was true, but whether he would choose to assist his unfortunate brother was another matter even if it was to be spared. The reminder that "he always was a queer devil, his father's own boy" did not help the doubt in the least. Nevertheless George decided to make the effort and a little after two o'clock called at his brother's place of business. He was to be seen and appeared quite sociable and much more talkative than upon any previous occasion since May had "become an Ashton." The subject of the loan was introduced, followed by about the same measure of success that had attended the two former efforts.

"What kind of a mood did you find him in?" asked Charles as his younger brother again appeared before him.

"Amiable and unaccommodating."

"Humph, I feared it would be a still hunt."

"Oh curse it all!" George exclaimed vehemently "Is my father trying to ruin me?"

"Why what do you mean?" Charles asked anxiously.

"William has been advised by father not to loan me a cent should I ask it, on the ground that there was too much risk in taking the farm for security. What do you think of that?"

"I think *that* knocks a big hole in your kite, as far as getting any assistance from the family is concerned. I know he swore all sorts of things when you bought the place and married May in spite of him, but I supposed he had in a measure, gotten over it. Well, don't worry, brother, perhaps it can be fixed up in a day or two, though bless me if I see a glimmer of light now. Trust me if I can be of any assistance to you, I shall be on hand."

"Father is deucedly down on George," Charles remarked to his wife, that evening." I vow I think the thing has gone about far enough; its getting unchristian now. But one thing is certain, if something is'nt done within three days Maplewood goes under the hammer."

CHAPTER XIV.

"A FRIEND IN NEED IS A FRIEND INDEED."

It was an anxious day for May, but she tried to busy herself with her duties as usual, watching the clock, hour by hour, and going to the window a hundred times, it seemed, to see if her husband was returning. As the day wore on, her anxiety grew to positive nervousness, and the sound of every passing carriage made her heart flutter in her bosom, beyond control. It was between four and five o'clock in the afternoon when George returned, as she saw him drive around to the barn, without stopping a moment at the door, she knew intuitively that his mission had been hopeless.

"It was just as I feared it would be," said she, "though I hoped you would get it at the bank. When you did not come to dinner I knew you had been disappointed."

"Yes, the first day's disappointment, my dear girl, but it should not discourage us—there are two more you know."

"Two thousand dollars is *so much* money, and friends are *so few*."

"Yes, May, it is the way of the world; *friends* are few when their help is needed. It is only when we stand upon the top round of the ladder of prosperity that friendship is warmest. We must be our own friends in the future, if we ever get out of this scrape; and then we may value friendship for what it is worth, asking no favors and bestowing them only where love prompts."

"If talking would only help present needs, you might talk all night long—what will you do now?"

"Sleep over it to-night, and try it again to-morrow, and to-morrow——"

"And, *then*, if you—fail?"

"*I must not!*"

If human will were only law, what great deeds would be accomplished, deeds that would electrify the world! To wish to perform—to will to perform—and to *do* are such widely different things that when we come to the sticking point, we are very apt to show ourselves mere creatures of circumstance. How many title pages have been written to volumes existing only in ambitious desire, castles-in-Spain, methinks, thought-reared—never to be attained. I think Shakespeare expresses the sentiment more strongly where he says, "If to do were as easy as to know what were well to do, chapels had been churches, and poor men's cottages princes' palaces."

George had plenty of will, and plenty of energy too, especially where there was so much at stake, but he was not able to overcome insurmountable obstacles, and as he felt the time lessened to so small a compass, he almost lost faith in himself. He had spent another weary day, unsuccessfully, and could not understand why the money was not forthcoming from some source. The season was a most favorable one for his farming operations, the crops thrifty, and promising a golden harvest. His stock were in splendid trim, everything in thorough repair, and the farm generally in a prosperous condition, yet no one would advance him the amount he desired even with such security.

At one time he could have raised half the amount, but with a single thousand he was no better off than before. Time had been winging, and but one day remained in which to save the farm. Could he do more than had already been done to avert the calamity that was inevitable?

After breakfast the young man ordered Dolly harnessed and was preparing to go to town to make one last effort, when his old neighbor made his appearance in the stable yard.

'Good morning, Mr. Wilkins."

"Good mornin" George. What's this I hear about the farm bein' sold? It's sumthin' new to me. I didn't know there was a mortgage on it."

"Well, I know it, Uncle Silas, to my sorrow."

"Mortgages are unhandy sort o' things to have a' top of a house, that's sartin. Can't ye raise the thing?"

"No, a man's friends always desert him when there is any money wanted."

"That depends on the kind of friends, my boy. But never mind that now; I've come over to see if I can be of sarvice to ye in any way?"

"I truly thank you for your good intentions, but ——"

"I'm a plain sort of man, and I ain't used to fine speeches, but I've got five hundred dollars in my breeches pocket that the old lady and I saved to bury us with, and you are welcome to it if you want it. Give me your note for a year, and we won't take any account of the interest, that's all."

"I—I feel grateful to you, Mr. Wilkin's," the young man answered, a sudden moisture gathering in his eyes. "Your kindness touches me—but—that amount alone would not do."

"It's none of my business, but may I ask how much of a mortgage they hold agin ye?"

"Two thousand dollars."

"Two thousand dollars? why, you tarnel little foo——. Excuse me, George, but it's my opinion some of the improvement money orter have gone in another direction."

"I know it now."

"I'm sorry for you, and I shall hate to lose a good neighbor, if it comes to that, but if I can be of any sarvice to ye, just rely on old Silas Wilkins every time. If your father wasn't such a cross-grained old nummy, he'd have pulled you out of the rut himself, in spite of your doing the best thing you ever did in your life agin his wishes. You've got grit, and you deserve a better fate."

"I feel sure of *your* friendship, Uncle Silas, and I am deeply grateful for your kind words."

"Wal, guess I'll trudge back across lots. If you want the five hundred you know where it is. Good day!"

As Mr. Bond had suggested, Old Skinner gave no grace at all, and the sale was announced at once. It was a memorable day to the little household, and one they might remember always. The red flag floated defiantly at the entrance of the Maple drive-way, from an early hour in the morning. The yard was filled long before noon with idle men, sitting around in groups talking and laughing while awaiting the commencement of proceedings, and there was no privacy anywhere. The appurtenences of the farm were examined, the barn and out-buildings inspected, and even the sanctity of the house was invaded by prospective buyers, or others drawn thither by idle curiosity. It was for the young farmer's interest to have everything appear to as good an advantage as possible, and he lost no opportunity to explain the value of the improvements and to call attention to the splendid condition of everything about the farm. It was certainly a fine piece of property and an unusually large number of bidders had been attracted by the sale.

George had indulged himself in the hope that at the last moment, if not before, some one would come forward and help him over his present embarrassment. He had indeed worked hard to save the property in the limited time that circumstance had left to him, and he could not become reconciled to the thought that Maplewood would soon slip from his possession. When Mr. Skinner appeared with the auctioneer, hope had not wholly died within his bosom, but with the reading of the schedule of farm property, came the unwelcome conviction, that all indeed was lost.

The bidding was spirited from the outset and considerable rivalry was manifest as the sale went on. After "five thousand five hundred" had been reached there were only two or three bidders in the field, and the figures crept slowly upward by hundreds and fifties until "six thousand" was taken.

"Twenty-five"—"fifty" "seventy-five——"

"Will it stick there?" George queried mentally. "Aunt Jane's little fortune is barely covered."

"Six thousand one hundred—going—going—Shall I have the twenty-five? Six—thousand—one—hundred,—all done, once, twice—thr——"

There was a stir at the outer edge of the crowd, a middle-aged gentleman, a stranger, stepped from his carriage and made his way hastily to the spot where the auctioneer was standing. There was a look of purpose in his face, and a lofty bearing in his manner that commanded attention and respect. As he approached there was a momentary pause in the proceedings.

"I hope I am not too late," said he, rapidly glancing over the group of men gathered around the auctioneer—"Will you please repeat the last bid?"

"Six thousand, one hundred dollars, sir," spoken in an undertone——

"Thank you."

"All done—once, twice——"

"Six thousand *five hundred*," called the newcomer.

A murmur of approval swept over the company, and all eyes were turned toward the bidder, while the previous "taker" showed evident dissatisfaction at the new turn of events. Of course the property was knocked down at the figure called, and the gentleman stepped to the side of the auctioneer.

No one knew him or could tell from whence he had come. He had secured the property, and that was all that was known concerning him. Everybody was astonished and the auctioneer grew quite deferential, while the little lawyer became so obsequiously polite as to make himself ridiculous.

The sale affected, the company dispersed as it had come together, the stranger rode away with the lawyer, without as much as looking at the farm he had purchased, and the unhappy Ashtons were left to their reflections.—[To be continued.

THE OLD BARN.

Was ever perfume sweeter than that all-pervading fragrance of the sweet-scented hay? was ever an interior so truly picturesque, so full of quiet harmony?

The lofty haymows piled nearly to the roof, the jagged ax-notched beams overhung with cobwebs flecked with dust of hay-seed, with perhaps a downy feather here and there. The rude, quaint hen-boxes, with the lone nest-egg, in little nooks and corners. How vividly, how lovingly, I recall each one!

In those snow-bound days, when the white flakes shut in the earth down deep beneath, and the drifts obstructed the highways, and we heard the noisy teamsters, with snap of whip and exciting shouts, urge their straining oxen through the solid barricades; when all the fences and stone walls were almost lost to sight in the universal avalanche; and, best of all, when the little district school-house upon the hill stood in an impassable sea of snow—then we assembled in the old barn to play, sought out every hidden corner in our game of hide-and-seek, or frolicked in the hay, now stopping quietly to listen to the tiny squeak of some rustling mouse near by, or it may be creeping cautiously to the little hole up near the eaves in search of the big-eyed owl we once caught napping there. In a hundred different ways we passed the fleeting hours.

The general features of New England barns are all alike. The barn that we remember is a garner full of treasure sweet as new-mown hay. You remember the great, broad, double doors, which made their sweeping circuit in the snow; the ruddy pumpkins, piled up in the corner near the bins, and the wistful whinny of the old farm-horse as, with pricked-up ears and eager pull of chain he urged your prompt attention to your chores; the cows, too, in the manger stalls—how sweet their perfumed breath! Outside the corn-crib stands, its golden stores gleaming through the open laths, and the oxen, reaching with lapping, upturned tongues, yearn for the tempting feast, "so near and yet so far." The parti-colored hens group themselves in rich contrast against the sunny boards of the weather-beaten shed, and the ducks and geese, with rattling croak and husky hiss and quick vibrating tails (that strange contagion), waddle across the slushy snow, and sail out upon the barn-yard pond. Here is the pile of husks from whose bleached and rustling sheaths you picked the little ravelings of brown for your corn-silk cigarettes. Did ever "pure Havana" taste as sweet?—*Harper's Magazine.*

MAGAZINES FOR JUNE.

ST. NICHOLAS, has an out-door, summer-y character sustained throughout, in the poems, the prose, and the seventy-two pictures.

Among its striking features is an account, by Olive Shorne Miller, of the Children's Aid Society's delightful charity, The Summer Home for poor city children, at Bath, L. I., with seven pictures made by Jessie Curtis from sketches taken on the

spot. Another article is written by Daniel C. Beard, explaining to young people How to Camp Out cheaply, easily, and comfortably.

There are long installments of the two serials—Jack and Jill by Louise M. Alcott and the Fairport Nine, by Noah Brooks.

The number contains five complete short stories all illustrated: Little Miss Stone, by Mary Wager Fisher. Bessie Ainsley Doctors the Doddses. The West Wind's Last Cruise by Frank H. Converse; Lost and Found, a tale of English life; and Marion's Story.

Mrs. R. Swain Gifford contributes a fine picture and a few paragraphs about some interesting ducks called Old Squaws, whose musical cry, He got no Gun! is said to be irritating to sportsmen.

Among the funny things are the verses Ah Lo, with two comical pictures by Hopkins, and the curious Chronicles of the Molbos—a thick-witted people living in Jutland—with three humorous illustrations by Frank Beard. Short poems and bright pictures are scattered through the number, and there is a full-page illustration of curious modern head-dresses of European men.

Two Famous Old Stones, from Rosetta, near the mouth of the Nile, and from the ancient country of Moab, are described and pictured, and their history and importance are explained.

PHRENOLOGICAL JOURNAL.—Contents: Robert Collyer. Portrait; Gifts of Healing; Comparative Phrenology.—The Frontal Bone in the Carnivora, Rodent and Bird, illustrated; The Physiologists and Localized Brain Function; Popular Mistakes; The Pantheon at Rome, illustrated; Henry Fawcett, M. P. Portrait; Unity of the Human Species. III.; Rev. Joseph Cook as a Phrenologist; M. Godin, Founder of the Familistere; The Young Folks of Cherry Avenue. VI.; Milk as Food—No. 2; False Exercise; Human Obligation; Poetry—Echoing Bells; Notes in Science and Agriculture; Editorial Items; Answers to Correspondents; Personal—Library—Index—Publishers' Department. Extract from article on Robert Collyer:

While Mr. Collyer was settled in Chicago an interesting incident occurred:

One of his parishioners happened to visit Ilkley, the birth-place of his pastor. That little village had grown to be a considerable town Low, thatched houses had made way before fine mansions, and the smithy in which the boy scholar had worked and studied, still existed, but the day of its disappearance was very near. The visitor inspected with some interest an old anvil standing n the shop.

"How long has that anvil been here?" he asked of the proprietor.

"Why," said the blacksmith, "it must have been here nigh thirty or forty year."

"Well," said the gentleman, "I will give you twice as much for it as will buy you a new one."

"Certainly," replied the puzzled smith; "but I would like to know what you want with this anvil."

"I will tell you. There was formerly an apprentice in this shop who used to work on it. That boy has now become a prominent man. Thousands love and honor him as a friend and a teacher, and I wish to carry this anvil with me to America, as a memorial of the humble beginning of his life."

The bargain was completed, and the anvil is now carefully preserved by the society of Unity Church.

LIPPINCOTT'S Magazine for June presents an unusually rich and varied table of contents. Dr. Weir Mitchell's paper, the first of two, on the Yellowstone Park; "The Career of a Prairie Farmer," by Mary Hartwell Catherwood; Dr. Felix Oswald concludes his series of "Summerland Sketches:" The eminent French sculptor Carpeaux, a child of the people, in whose career success and misfortune were strangely blended, is the subject of an interesting paper by Olive Logan. Helen Campbell continues her series of "Studies in the Slums." De Lancey Nicoll has a timely paper on Lawn Tennis, giving a full description of the game. "Our Young Kindergartner, by a writer who is evidently versed in the science and practice of the Frœbellan system, will have a deep interest for parents and for all to whom the best method of educating young children is a subject of anxious thought. "Social Aspects of the Forties" is a well-written paper, and "German Boys and Men," by Marriott Pyne, gives a good notice of the social foundations of the greatest military empire of modern times.

The poetry of the number deserves especial mention. "Old St. David's at Radnor," by Longfellow, is in his happiest manner, pensive in tone, limpid in flow, and striking in imagery. Paul Hayne has a fine sonnet entitled "Spiritual Illumination," and Mrs. Caroline A. Mason one almost equally good, called "An Open Secret." "Adam and Eve" grows in interest, and there are several good short stories, while the "Gossip" contains some anecdotes about Carlyle, and other readable matter.

APPLETONS' JOURNAL.—This number contains a paper by Appleton Morgan, resuming the discussion he began last year on the authorship of the Shakespeare plays. Mr. Morgan in this article reviews all the various theories of their authorship, and gives a most graphic and striking picture of the Shakespearean period. Whether one agrees with Mr. Morgan or not, it is impossible not to enjoy his pungent and suggestive comments. There is the first half of a novelette by Victor Cherbuliez, entitled "Herr Drommel's Inconsistencies," in which the brilliant characteristics of that writer appear at their best. The story is full of wit, point, fresh characterization, and the main situation is certainly a novel one. Herr Drommel is a German savant, who is made the butt of the author's brilliant satire. There is another selection from "Senior's Conversations," giving utterances from Lamartine, Renan, and others. It is eminently readable. There is a very entertaining paper on Burton's "Anatomy of Melancholy;" a paper on Siberia, which gives quite a new idea of that much-talked-of-country, by which it appears that a banishment to Siberia is not the terrible thing it has been supposed to be. There is a second paper on "Health at Home," from Dr. Richardson; an article on Gottfried Keller, the Swiss novelist; one on "Dreams," which is full of strange matter; a paper on "Infernal Machines," and the "Spanish Theatre." The editor's departments complete the number, which is full of valuable and very readable material.

THE MUSICAL HERALD: Published at Music Hall, Boston, Mass. It is worthy of much commendation. Besides the music it contains literary matter pertaining to the subject, which is pleasing and instructive.

THE DELINEATOR: Published by E. Butterick & Co. This periodical continues to illustrate and describe the prevailing fashions in a way to meet the requirements of the many with varied tastes.

THE YOUNG FOLKS' MUSICAL: This monthly is presented in its usual interesting style, suitable for the young people.

BRIC-A-BRAC.

IF you would show your new-bought clothes,
Built in the latest style,
The safest way to do the thing
Is, when the choir stands up to sing
Glide down the middle aisle.—Puck.

SHAKESPEARE was married when he was 18 Dante at 23, and Brigham Young when he was 18, 19, 20, 21, 22, 23, 24 and so on.

CLUBS—DOMESTIC AND OTHER.

Knock, knock, knock,
Knock till you're black and blue;
I'm not going down to-night
To open the door for you.

You would go drink at the club
Till your boots were full of snakes,
And now you can roost on the mat
Till the light of the morning breaks.

HERE is a small triumph for Mr. Darwin: "Why, my dear," said a lady to her friend, "where did you get that beautiful monkey?" "Oh!" was the reply, "my husband travels a great deal, you know, and he gave me the monkey that I might not forget him in his absence."

COURTING AT MIDNIGHT,

The married man of the Modern Argo says:—

When the courting at midnight is ended,
And he stands with his hat in his fist,
While she lovingly lingers beside him
To bid him "ta-ta!" and be kissed,
How busy the thoughts of the future—
You bet you his thoughts he don't speak—
He is wondering how they can manage
To live on six dollars a week.

A SERVANT girl applied for work at the State Normal School, Salem, Mass., bearing the following testimonial from Gail Hamilton:—"I have found her invariably good tempered, *immunda* (dirty), cheerful, obliging, *exitiosa* (destructive) respectful, and incorrigible. With neatness and carefulness and economy she would make an excellent servant. I heartily recommend her to all Christian philanthropists, and her employers to divine mercy."

A LOVER'S TWO WATCHES.

When the maid I mean to marry
I of evenings go to see
I invariably carry
Watches twain along with me.
One is hours and hours too fast,
T'other hours and hours too slow:
By the first we meet, the last
I consult when I go.—Gallant French Poet.

OF the late Bishop Ames the following anecdote is related: While presiding over a certain Conference in the West, a member began a tirade against universities, education etc., thanking God that he had never been corrupted by contact with a college. After proceeding thus for a few minutes, the Bishop interrupted him with the question. "Do I understand that the brother thanks God for his ignorance?" "Well, yes," was the answer; you can put it that way, if you want to." "Well, all I have to say," said the Bishop, in his sweet, musical tones, "is that the brother has a great deal to thank God for."

THE farmer turns the furrow
With a careless unconcern;
And—
The farmess works the handle
Of the big, old-fashioned churn.
Their son sorts out the 'taters
For plantin,' in the cellar:
While—
Their daughter on the back porch
Is talkin to her feller.

As a lazy tramp came down the street
With free and easy gait,
This welcome sign his eyes did greet:
"Free chops to those who wait."
"Now here," he said, "I'll get some food,
Without the slightest tax;"
They led him to a pile of wood,
And handed him an axe.—Boston Times.

LAWYER C. (entering the office of his friend Dr. M., and speaking in a hoarse whisper): "Fred. I've got such a cold this morning that I can't speak the truth." Dr. M.: "Well I'm glad it's nothing that will interfere with your business."

WASHINGTON never told a lie, but if the Gem Puzzle had existed in his day we fear that he might have—have said; "Oh, I've done it, done it lots of times; but I can't tell just how."—[Boston Transcript.

For Women.

CONDUCTED BY MISS RAY CLARK.

PERPLEXITY.

OH, what shall I do for a bonnet?
I've nothing to wear,
And the styles are so queer—
It's not want of variety
That causes anxiety;
'Tis distracting to choose
'Mong the shapes and the hues
Of braids, straws and chips,
Red, brown, and sage dips,
Bleached, unbleached, and black—
Of styles there's no lack.
The question's so vexed
I declare I'm perplexed
With fruitless thinking upon it.

Oh, what shall I do for a bonnet?
The spring's almost gone,
And June's coming on,
And a friend writes to me
My new bonnet to see.
What can a blonde do
If she may not wear blue?
Only yellow and red
Are now worn on the head;
But my cheeks would look sallow
If set off by yellow,
And my hair would look ashen
If dressed in such fashion.
It would not be right
To become such a fright.
My old broad-brimmed hat
Would be better than that,
And I've half made my mind up to don it.

Oh, what shall I do for a bonnet?
I've searched several hours
For suitable flowers.
Would hollyhocks do?
They are certainly new.
There are exquisite copies
Of sunflowers and poppies.
How would dandelions suit?
Or suppose I have fruit—
Ripe cherries and hops
Are shown in the shops;
I might wear a few bunches upon it.

Oh, what shall I do for a bonnet?
Shall tinsel chains dangle,
Or beaded fringe tangle?
Shall gold-dust besprinkle,
Or black bugles tinkle,
With gilt balls on top,
Like a pawnbroker's shop?
Or perhaps I should take
A gilt spade and rake,
To show that my taste
Is simple and chaste,
As a poet's should be who writes sonnets.

Oh, what shall I do for a bonnet?
Shall green lizard's crawl—
Or blue flies—over all?
Shall butterflies hover
To mark Nature's lover?
Shall dragons surprise
With fiery glass eyes?
Shall brown beetles creep,
Or grasshoppers leap?
Oh, what shall adorn my new bonnet?

—Harper's Bazar.

TO THE LADIES.

IT is to be hoped that the ladies will not wait for a personal invitation to contribute their mite to the columns devoted to their interests. Questions, hints or other communications are always acceptable and are solicited. R. C.

WHAT SHOULD WOMEN LEARN?

E. L. T.

WITHIN the past few years much has been written about female emancipation, and equal education for boys and girls. The inefficient systems of female education have been recognized from the days of Deane Swift down, but much of the present higher educational idea, is surely at fault.

Women are to learn all their mothers learned, and all their brothers learn too; they are to stoop over desks more, do more sums, and pass more examinations.

Instead of learning more household science, and everyday hygiene, they are to amuse themselves with Euclid, or delve, like fair ghouls, in the graves of dead languages. There certainly is no objection to their studying Greek, especially if they would read the story of Nausicaa, and following her example, learn to play at ball, even if they do not, like her, wash the household clothes.

But for the average country girl, who, when she marries, must expect to be housekeeper, head nurse, and half a dozen other things besides, the dead languages and higher mathematics are not as useful as an accurate, if not very deep knowledge of natural sciences and philosophy. And here let me quote from Canon Kingsley to define an educated person: "An educated person is one, who, though wholly innocent of book-learning, has all the faculties of mind, body, and heart, fully, proportionately, harmoniously brought out, developed so as to form at once a reverent yet self-assured, a graceful yet valiant, an able and yet an eloquent personage."

Above all, let science enter into the course of training. That name—science—is a bugbear to many girls, but let them remember Huxley's definition—that science is really clear, logical common-sense, capable of forming correct judgments and exact deductions.

I may write again concerning that almost infant science, which every woman may and should study above all others, namely, bio-geology.

SHOPPING.

PEOPLE who go shopping ought to be fair and above-board, never giving more trouble than they are obliged, and not expecting unreasonable sacrifices. If they consider that they have been trifled with, annoyed, or cheated in any shop, they ought never to enter it again. Still, the customer must not be unreasonable, any more than the shopman must be rude and independent. The enjoyableness of shopping rests entirely on the sense of fair dealing and security, which the best shops are remarkable for; and that shopping is enjoyable few women will deny. It brings many new ideas and "wrinkles"—a large experience in judging of value and comparing in kind—the colors and materials are often very beautiful, and arranged with real taste—one sees much of human nature—in fact, in shopping one learns a good deal in more ways than one. The politeness, equability of manner, and real wish to help and accommodate people's tastes; the intelligence of the attendants, and the tact with which all confusion and delay are avoided, which are found in the first-rate establishments, and which are no doubt attained by the perfect system and organization which ability and capital command, render shopping in the present day more than pleasant—sometimes delightful—and "delight," of course, means "grist to the mill." A good salesman never lets a customer slip, because he always contrives to please, but a bad salesman is indolent, dilatory, and surly. Custom gravitates to courtesy and to establishments careful of their own good name.

But in these matters ladies must be their own protectors; and even out of consideration for those establishments where civility is the rule, they ought to note the mischievous practice at other shops of trifling with a customer's time and temper, and the mistaken policy of dunning people to buy what they don't want, instead of providing them with what they require, or politely refusing their application. M. E. H.

OUR MOTHERS.

IN the formation of character, we owe to our mothers more than to any other human agency, for it is their hands that first twine the tendrils of our hearts, guide our foot-steps aright, lead us in the path of virtue, and in the dark, dreary night of pain, their watchful vigils keep beside the couch of their dear ones. Whose but the all-seeing eye of Jehovah can fathom the depths of anxiety they feel, and who can tell of the ceaseless prayers which they offer for their sin-stricken children?

Their influence ever shines with an unsullied light which softens and purifies the wayward impulses of the youthful mind, and guides it onward in its course toward heaven. How, then, can we pay just tribute to our mothers—with what measures of gratitude and affection shall we requite them for their maternal care?

To those who have lost their mothers in early life, there is the hallowed spot, sacred to memory, where they retrospect the past—recall days and nights when their mothers kept watch over their sinless years, and where they may look forward, with faith and hope, to the blessed re-unions of the everlasting future.

Friends may be torn from our hearts, hopes may be blasted, and our love for others may grow cold, yet every principle of gratitude and every feeling of virtuous sensibility requires that we should cling to our mothers and love them still.—Freemason.

HOW TO BE BEAUTIFUL.

CURLS and cosmetics are all in requisition to enhance the beauty of "the human face divine," but what is the result? Youth's roses only flee the faster—old age will creep on apace; rouge cannot hide its wrinkles, nor can it make any face beautiful. We are decided believers in the old adage, "Handsome is that handsome does." No face has true beauty in it that does not mirror the deeds of a noble soul. There is not a thought, word, or deed that does not leave its autograph written on the human countenance; and we care not whether kind Nature has given her child an ugly face or a handsome one, if the heart that beats underneath all is warm and loving. And if the soul that looks out from the eyes be true and pure, that face will be beautiful always, for it has found the true fountain of youth; and though time may fold the hair in silver, and furrow the brow, yet there will ever be a beauty lighting it up that years cannot dim, for the heart and soul never grow old.

FASHION NOTES.

AMBER color is coming into fashion.

Fancy costumes have parasols and fans to match.

Spotted materials will be worn by leaders of fashion.

There are many new materials in cashmere coloring.

Japanese sunshades will be used this summer.

The fashionable bonnet is the small capote.

Ecru embroidered muslins are among stylish novelties.

Some of the new laces appear to have been dipped in coffee.

Hoods will be revived and used to excess on all kinds of wraps.

Spanish lace will be the fashionable net for summer polonaises.

Some touches of color brighten every black toilet that is not mourning.

Worth is exercising his genius just now in creating Spanish costumes.

A young girl always looks well in a simple toilet with a small tunic formed by a scarf.

New black Chantilly lace mitts are very fine have very long tops, and are sold at very high prices.

New chimeses fastened by buttons hidden in the pleats of the embroidery and lace on the shoulders.

The shoe is gradually replacing the boot for outdoor as well as indoor wear, especially in Europe.

Coat sleeves of dresses are made very high on the shoulders and stand upward like men's coat sleeves.

Large hats and bonnets, though not general, are worn more and more as the season advances.

The basque, jacket, and coat-bodice are favorites for summer dresses. In washing materials, as well as in wool or silk fabrics, combinations of figured with plain tissues are extremely fashionable. Thus, take some floriated chintz and some plain buff percale—you can make the short round skirt of the percale, trimmed with a series of very narrow-gathered or fluted flounces; the second skirt, to be open and slightly draped on the left side, will be of chintz, as well as the jacket-bodice, trimmed with collar, revers, and cuffs of buff percale to match the dress, simply stitched round.

A more elaborate toilet can be made thus: front of skirt of shirred pale blue cambric; the sides and back of foulard d'Alsace of some pretty Japanese pattern, multi-colored, over a pale blue ground, draped up over an underskirt of the cambric, only a small portion of which shows, and is covered with narrow flutings. The upper skirt forms the side-panier and the tournure. The bodice is of foulard d'Alsace (which is a nice sort of percale) with a plastron of shirred cambric to match the underskirt. It may be trimmed with Breton or fine torchon lace, but no trimming is postively required. The skirt, well draped, need not have any; and the bodice may be merely outlined by a narrow fluting all round. The sleeves should be extremely tight and not very long, and finished round the wrists, as well as the bodice round the neck, with a fluting of fine muslin of Bretonne lace.

Delicate bows of Byzantine lace, a very beautiful close-meshed linen point, are the newest things to wear with collars.

Bow and arrow combs and ornaments for the hat and hair show the tendency of popular fancy for archery.

Brocaded ribbons, both in floriated patterns and in the very fashionable spotted style, form a nice variety in the new models of the season. These are either in self-colors (the whole effect of the pattern depending upon the contrast between the bright and dull texture of the material), or else they are in multi-colored miniature patterns, in vivid tints, over a dark or neutral ground.

The great rage of the season is for dotted fabrics. Large dots, little dots, polka dots, Japanese dots, Chinese dots, French dots, printed dots, brocaded dots, light dots, dark dots; dotted dresses, dotted mantles, plain fabrics trimmed with dotted ditto, and dotted fabrics trimmed with plain ones; dots of every size and of every style; dots for ever—such is Fashion's decree for this season. The rage for dots equals that for stripes which reigned a short time ago.

Large roses in various shades, clusters of unnatural-looking poppies, immense pansies in every shade of violet and yellow, and big red carnations are among the favorite flowers, and are made of the richest materials—silk, satin, velvet and plush, combined with the finest muslin and cambric, and are mounted with soft India-rubber stems and foliage. Heliotropes, lilacs and daisies are also made up in close garlands for the trimming of both the inside and outside of bonnets.

FRIENDLY WORDS.

From the many encouraging words received we select the following:

"We are very much delighted with John Ascott's Daughter and think it appropriate for the paper. A. T. G.

Alleghany Co., N. Y.

"Don't let the Rural stop; can't keep house without it. J. E. P.

Miss.

A lady who had received a severe bite on her arm from a dog went to Dr. Abernethy; but hearing of his aversion to hear the statement of particulars she merely uncovered the injured part and held it before him in silence. After examining it he said, in an audible tone, "Scratch?" "Bite," said the lady. "Cat?" "Dog," replied the lady. So delighted was the Doctor with the brevity and promptness of the lady's answers, that he exclaimed: "Zounds, madam, you are the most sensible woman I have met with in all my life!"

Love of power, and of fortune as a means to it—and some one has resolved the love of money into a love of power—is not an affection: it is a passion: one of the passions that swallow up the affections: the gentler affections are overborne by the violence of the passions, or discarded as standing in their way—the way of their gratification—but, in taking their departure, the affections also take away with them the happiness.

The game of from 25 to 40 will puzzle the census taker more than the little game of 13-14-15. He will be awfully puzzled when a maiden lady with corkscrew curls and false teeth tells him that she was "born in 1860 and he can count it up himself." He'll be ready to swear that she has jumped "15" from the lower left hand corner.

A typical Boston girl is credited with saying lately: "I can go without my spring bonnet, and wear my thick boots up into June; I can even, if must be, do without a new summer dress; but I can't no, I won't let these seraphic concerts go by for they are treasures in heaven, and I grow an inch in spirit every time I go to one."

The Census.—As the census-takers have now commenced business it will be necessary to come to a decision upon the question of age. Bear in mind that the same form was carried out 10 years ago, and the "Paul Prys" may set themselves to investigating, so be careful what discount is taken off of the original amount.

A familiar instance of color-blindness is that of a man taking a brown silk umbrella and leaving a green gingham in its place.

Domestic Economy.

CONDUCTED BY EMILY MAPLE.

THE MEETING OF THE KITCHEN CLUB.

ANNIE L. JACK.

Cooking Conveniences.

The Hon. Horatio Hupperton lives at some little distance from our village, and his wife, though gracious and kind, has never been on "club" terms with *all* the members, though a few of us have enjoyed the pleasure of her friendship. But the other day to my surprise she suddenly remarked, "My dear" (a way she has of being patronizing at times), you have never had the "club" in my kitchen. Now the day of your next meeting, cook is to be away to a pic-nic, and Martha, the housemaid, can stay in the nursery with Jane. So try to let the members know that you will put off meeting at your house till next month, for by that time I may be away to the sea-side."

I made the suggestion to the members, and we agreed to meet at Every-day House and walk over to Hupperton House all together. It was a bright, pleasant afternoon, and the air was rich with perfume of apple and pear blossom. The fading lilacs were everywhere to be seen; and here and there we passed a clump of hawthorn, snowy white and sweet to faintness. The kitchen into which we were introduced by our hostess was furnished with every possible convenience. At one side was a shining range, with numerous griddle holes and plates of the latest approved style. The fire was carefully shut down and guarded to suit the afternoon heat, yet was in such a state that by opening a damper or two it could soon be tempered to cook the six-o'clock dinner. We were all absorbed in the study of the range as soon as we entered the kitchen, it being part of our subject of "Cooking Conveniences."

Miss McGregor could do nothing but admire the array of porcelain saucepans, that were of every size upon the shelves; while the attention of Miss Whitand was taken up with the beauty of the wood-work, which was of ash without paint, polished and varnished to brightness. The walls were tinted to what may be described as a pale smoke color, and the floor was of polished oak. "No scrubbing or painting needed," said the pale, little minister's wife, with a sigh of gentle envy. The pretty pie-crimpers and perforated spoons were ornamental as well as useful, while the pudding boiler excited the admiration of such of the members as had not seen this useful adjunct to pudding cooking. The four largest porcelain kettles had steamers to fit, and the dish-pan was in three compartments, the last being full of small holes with a tray underneath as a drainer. There was a dish-cloth of woven steel rings for scraping pans, and pots and mops of every size and fineness for the different articles to be washed. Water, of course, hot and cold, was close at hand, while the combined flour-scoop and sifter took Miss McGregor's attention almost as much as the neat, little gray strainer. "Well! well!" she kept repeating, "how easy folks can have things if they only have the "siller to buy." There was a marble board for paste rolling, and cake and biscuit cutters of every shape and size. We paused over a curious contrivance for taking pies out of the oven—thereby saving stooping and finger burning, and turned over the numerous egg beaters with some curiosity in view of the workings of the same.

We had no cake for tea, but the lightest of flaky biscuits, regarding which our hostess, when questioned as to the recipe, explained that they were made like common biscuits, only in the milk was placed a bit of ice, and it had been kept in the refrigerator till icy-cold. "I made them *myself*," she added proudly, and knowing how seldom she engaged in culinary art, we appreciated and praised the puffy morsels as they deserved. This matter of mixing biscuits with ice-cold milk or cream is of great importance, as any one may ascertain who has ever tried *snow* in winter mixed with the milk, which is used to wet the flour. Besides the apple jelly on the table, there was a pretty dish of frosted oranges, of which I obtained the recipe:—"Pare and remove the white skin and divide into lobes. For a dozen oranges, take a cup of sugar and mix with a few drops of coloring as used for jellies and ices. Dry this and then crush again into powder. Whip two whites of eggs, and add a tablespoonful of water. Dip your oranges in a little white powdered sugar, then into the egg and water and afterwards put half of them into the red sugar. Lay on white paper to dry while you melt one ounce of gum-arabic in two table-spoonsful of hot water, and add a cup of sugar, stir till thick and clear. Peel two more oranges and dip in it. You can place them to suit your fancy in a glass dish, and garnish with orange leaves if you happen to have some, as had our hostess; otherwise select some pretty vine to trim the dish. The effect on a tea-table is very pretty, and some of the younger members seemed to consider it the "bonne bouche" of the whole entertainment.

TIN CANS, CORN AND TOMATOES.

Being a young housekeeper, and wishing to know the best way of keeping fruit, I have been much interested in the canning question, and am surprised that almost all the ladies that have written prefer glass for tomatoes. My experience is that tin is better than either glass or stone. Two years ago I put my tomatoes in both stone and glass. I was very careful to cook them well, to seal them well while hot, kept them in a cool, dark place, and almost every one spoiled. Last year I prepared them the same way, except that I put them in tin cans, and when opened they were perfect. In canning tomatoes I always put sweet corn with part of them. Cut the corn from the cob, and when the tomatoes have boiled a few minutes, put in one-third as much corn as you have tomatoes; boil all about a quarter of an hour, then seal. They are very nice. I am glad that the ladies write about canning fruit now before it is ripe, for so often I have read recipes that I should like to have tried had it not been too late in the season. I think we ought to write about canning and preserving fruit just before that kind of fruit is matured, or at least before the season is over. This is the first year we have taken the "Rural," and I think it is different from many papers, in the respect that it becomes more interesting each week.

Mrs. G. McFarland.

DOMESTIC RECIPES.

Delmonico Pudding.

One quart of sweet milk; the yelks of five eggs; three tablespoonsful of corn starch, mixed smooth in half a teacupful of milk; a teacupful of sugar and any flavoring liked. Bring the milk to the boiling point, stir in the corn starch, then the sugar, and lastly eggs. Draw to the back of the range and let thicken for two or three minutes. Be very careful not to burn. Turn into a pudding dish and bake about half an hour. Beat whites to a stiff froth; stir in four tablespoonsful of powdered sugar; flavor; spread over the pudding and return to the oven to brown.

Puff Strawberry Pudding.

Sift two teaspoonsful of baking powder with a pint of flour; beat well an egg; add a little salt; mix with sweet milk till of the consistency of thick batter. Place well-greased cups in a steamer; put into each a spoonful of batter, then a spoonful of strawberries and cover with another spoonful of batter and steam 20 minutes. Eat with cream and sugar, or a liquid hot sauce with a cupful of strawberry juice added. E. M.

Strawberry Sauce.

Cream and half a cup of butter with a cup and a half of granulated sugar; add a pint of crushed strawberries and the beaten white of an egg. Nice for batter puddings.

Mrs. L. A.

Spiced Gooseberries.

Remove stems and blossoms from ripe gooseberries, wash and boil down in a sirup made of three pints of sugar to a pint of vinegar. When very thick add ground cloves and cinnamon. Careful not to burn.

Sweet-Pickled Cucumbers.

Wash, pare and quarter ripe cucumbers, take out seeds, wash and place in strong brine for two days. Take out, place in cold, clear water for an hour, then throw into alum water—a lump the size of a small hickory-nut to a gallon of water—for another hour. Make a sirup of a pint of good vinegar, a pound of white sugar and a tablespoonful each of broken cinnamon and cloves. Make enough of this sirup to cover the pieces, and boil until tender.

Pickled Walnuts or Butternuts.

Gather when well grown but tender enough to run a needle through them. Put into strong brine for three days, changing once. Take out; wash; place in sun, turning frequently until black. Bring good vinegar to the boiling point, add whatever spice liked, put the nuts into a jar and pour over the hot vinegar. They will be ready to eat in a week.

Mrs. Brady.

Gooseberry Jam.

Look over, wash and stew in a little water. Press through a coarse wire sieve and return to the kettle. To each pound of the pulped gooseberry add three-fourths of a pound of granulated sugar. Boil three-quarters of an hour, stirring constantly. Put into bottles or wide-mouthed jars and secure like jelly.

Currant Jam.

Pick from the stems, wash, put into a preserving kettle and boil gently 20 minutes, skimming as needed. Add sugar in the proportion of a pound of sugar to a pint of the boiled fruit. Boil half an hour longer, stirring almost constantly. Mrs. L. Brown.

Strawberry Jelly.

Remove hulls, wash, drain, then put into a kettle over a slow fire. Crush, and when quite hot take from the fire and when cool enough to handle strain through a coarse flannel bag. Boil juice 15 minutes, skim, add a pound of sugar for each pint of juice, and boil 15 minutes longer. If the jelly be not very firm let it stand in the sun for a few days covered with pieces of window glass. I. A.

Wind Mills.

Halladay Standard.
VICTORIOUS AT
Phila., 1876—Paris, 1878
25 Years in Use.
GUARANTEED SUPERIOR
To any other Windmill Made.
17 SIZES—1 MAN TO 45 HORSE POWER
Adopted by the leading R. R. Co.'s and by the U. S. Govt. at Forts and Garrisons.
$3,500,000 worth now in Use.
Send for Catalogue "B" and Price List.
U. S. WIND ENG. & P MP CO., Batavia, Ill.

CHALLENGE WIND MILLS
Victorious at all fairs. Over 7,000 in actual use in every State and Territory of the U. S. It is a section wheel—has been made by the present Co. for ten years; in all that time not one has blown down without tower breaking—a record no other mill can show. We leave it to the public to determine their merit. Mills sent on 30 days' trial. Best Feed Mills, Corn Shellers, &c., &c. Catalogue free.
CHALLENGE MILL CO., Batavia, Ill.

IMPROVED CALIFORNIA WIND MILL.

Simple, Strong, Durable, Rosette Wheel and perfectly Self-regulating, avoiding 100 wearing joints. Also, Steven's Pony Feed Grinder and a perfect Rotary Motion attachment, without gearing, the power being communicated by the lift or up stroke of Pump Rod. Can be used for cutting feed, churning, &c. The best, cheapest and most useful power in the market. Full particulars, circulars, &c., sent free. Address the Manufacturers. CLARK & CO., Somanauk, Ill.

THE
WATERTOWN Wind Mill.

Send for Descriptive Circulars to
H. H. Babcock & Sons,

MISCELLANEOUS.

Monday, June 7.

Violent tornadoes in Connecticut and Northern Texas have done an immense amount of damage. .....The American Union telegraph company opens for business with, as it claims, 50,000 miles of wire, extending from Portland to Omaha and Kansas City, south to Nashville, and northward throughout Canada.....The Pacific Mail steamship company passed under the control of Jay Gould at the annual election of officers on Wednesday, when a list of directors headed by Gould was chosen, 127,300 out of 200,000 shares being cast in its favor. J. B. Houston was elected president, and the line will be run hereafter to suit the Pacific roads.....The public debt was reduced by the immense sum of $15,928,033 in May, making the whole reduction since June 30, 1879, $74,820,536. The secretary has been buying $3,000,000 a week of the 5's and 6's, and the former are now down to $483,848,700 and the latter to $22,001,900. The reduction is of course attributable to the great income from duties and the internal revenue consequent upon the revival of business. Another month as favorable as May would carry the gain on our indebtedness up to $90,000,000 for the fiscal year..... During the last five months 135,000 immigrants have arrived—the largest number for the same months in the last 25 years.....Takata Agee, Secretary of the Japanese Legation at Washington, committed suicide by shooting himself through the head at about seven o'clock on the morning of the 6th inst. The Japanese minister refuses to give any information as to the probable cause of the rash act, and he has instructed the Legation to give it no publicity..... The last days of Congress will be occupied with the most important of the work still remaining. It has been agreed that no bills of a political character should be considered. The greater part of the time for the remainder of the session will be occupied by the House in discussion of the resolution for counting the electoral votes, the bill to change the law relating to the appointments of special deputy marshals, and the bill defining the term of office and duties of chief supervisors of elections. The greater part of the week will be occupied in the Senate in discussing the Sundry Civil and General Deficiency Appropriation bills. The Senate will be unable to finish the appropriation bills by next Thursday, the 10th inst., which has been fixed by the House for adjournment, and the House resolution will probably be amended by the Senate to fix the date of adjournment on the 15th inst. Already many members have left the city for their homes, anticipating the final break up this week....The large tannery belonging to Danziger & Co., Chicago was burned on last Sundday afternoon. Total loss $150,000, which was covered by insurance....During a recent revival in the Brooklyn Tabernacle, (Dr. Talmage's church), four hundred and sixteen converts joined the church, and 120 or these were baptized on the 6th inst.....As we go to press no news of importance have yet arrived from the Chicago convention, which has been in session during the past week. Ballot followed ballot in rapid succession this morning. The 12th vote just telegraphed 3.30 P. M. as follows: Grant 305, Blaine, 283, Sherman 93, Edmunds 31, Washburne 33, Windom 10, Garfield 1, Harrison 1, Hayes 1.

AGRICULTURAL NEWS.

Statistics show that the exports of the country are steadily increasing. Last April that of breadstuffs was 33 per cent. greater than in the corresponding month last year, the total shipments including grain, during that month this year, aggregating in value the large sum of $21,670,000.. ....The average yield of cotton on the famous Sea Islands, near Charleston, S. C., under the slave system, was from eighty to one hundred pounds an acre. With free labor it has been increased to two hundred and fifty pounds, and some planters last year made a net profit of $100 an acre.... ... The King of the Belgians offers a prize of 25,000 francs, or $6,250 for the best work on "Means for Improvements on Low and Sandy Coasts," such as those of Belgium. The competition is open to writers of all nationalities. Foreign writers must send in their essays to the Ministry of the Interior, at Brussels, on or before January 1, 1881. The award will be made by a jury of seven persons, consisting of three Belgians and four foreigners of different nationalities, who will be appointed by the King. The successful work will be published by the Belgian Government in 1882.....The Chautauqua County Farmers' Board of Trade, the project or which was mentioned here some weeks ago, was opened at Jamestown, N. Y., on June 1. The Exchange was formally tendered to the Farmer's Organization with appropriate remarks from the President of Jamestown, a speech by ex-Gov. Fenton, and responses by the President of the Board of Trade. The Exchange was declared open for business transactions. The offerings were 861 packages of cheese and 267 packages of butter, from 18 factories and way dairies. The buyers were numerous. The prices were 10 cents to 12¾ cents for cheese, 19 cents to 21¾ cents for creamery butter, and 18 cents to 19 cents for dairy butter .....A correspondent from Fargo, Dakota Territory, under date of May 24, says:—Interviews with nearly 100 farmers from various sections of the valley show that the universal conclusions among them is that the crop prospects were never better. Wheat is 20 per cent. better this year than last year at the same date. The yield of wheat tributary to the Northern Pacific railroad last year was 6,000,000 bushels. The acreage and prospects for 1880 indcate 10,000,000 bushels. The wheat seeded just before the last storm three weeks ago is stronger, brighter and better than later seeding.... Millions of locusts have appeared in Suffolk county, Long Island, N. Y. They are said to be attacking the trees and bushes, and stripping them bare. In many places they are so thick as to bend the bushes to the ground, and the highways are lined with the old wings and body-cases cast off by them. The woods appear to be full of them, and the peculiar roaring sound made by their wings can be heard for a great distance. They are said to be the 17-year variety; but then, as the genuine 17-year locust is said to have appeared some two or three years ago, this is a question. But, at all events, the farmers are much alarmed for the safety of their crops. The army-worm has appeared near the Great South Bay, L. I., and is doing some damage there. The potato bugs are also troublesome to the farmers, although they are said to disappear before the locusts and the army worm .....The strawberry and pea pickers in south New Jersey are busy. The crop is not so much injured as was at first feared, the rain coming just in time to save it from total loss, and the growers entertain hopes of a fair return for their labor.....The drought was welcomed by New Jersey sportsmen. The eggs of woodcock have been permitted to hatch, and the young escaped the floods. The birds will be very plentiful. As the birds lay their eggs in marshes, thousands of them are annually destroyed by being submerged in water.....Bowie's Liverpool circular of June 1, estimates the loss of sheep in the United Kingdom from rot at 2,900,000, and this will be followed by a deficiency of about 2,400,000 lambs as most of the sheep which have perished were breeding ewes. .....The movement of flour and grain to the East through Buffalo, N. Y., this year is very large; in fact, it has been heavier thus far than in any preceding season. The receipts of flour for May were 64,490 barrels in excess of those for the corresponding month in 1879, and 82,790 barrels for the season, or double the arrivals for last year. The grain movement is equally as gratifying, the excess for the month standing at 3,172,687 bushels. For the season up to May 29, the receipts compare as follows: In 1880, 22,071,641 bushels, to 8,881,929 in 1879. The exports by canal were also unusually large. The totals for all kinds of grain compare as follows: 1880, 11,532,529 bushels; 1879, 6,506,000 bushels, and 1878, 13,000,400 bushels.....To fill up the gaps in the Paris parks caused by the destructive effects of the winter, as described some weeks ago in our "Everywhere," 54,000 evergreen trees and 30,000 deciduous trees are required. In the Champs Elysees 3,200 trees were killed and 6,000 had to be cut down to the roots. Yet amid this great destruction it is pleasant to know that the great cedar of Lebanon in the Jardin des Plantes remains unharmed, notwithstanding the report that it had perished....By official record, the rainfall in Paterson, N. J., in May was the lightest in that month for nearly half a century, excepting in May, 1836, when it was only 0.63 inch. The rainfall for May, 1880, was 0.85 of an inch; in May, 1843, one inch, and in May, 1875, 1.33 inches. The present year the month began with a temperature that made ice half an inch thick. On the 4th the temperature amounted to a mean of 83 deg., with a maximum of 79 deg., showing an upward range of 49 deg., in four days. The extreme range for May, 1879, was 36 deg., or 20 deg. less than the present month....A leading Liverpool grain circular telegraphed hither on June 5, says: "The grain trade during the past week was unchanged, and the demand at various markets inactive. Previous prices were, however, well maintained for choice wheats, but barely for secondary. There was a fair inquiry for cargoes off coast for both the United Kingdom and the Continent, but they are held somewhat above buyers' ideas. There is hardly any disposition to operate in wheat on passage and for shipment. On the spot, since Tuesday, the transactions in wheat have been moderate. Corn was dull, tending downward. To-day's market was thinly attended. The demand was slow, and in the limited sales of wheat, except for choicest qualities, millers have the advantage of 1d. The market is about cleared of California off coast, chiefly for the Continent, at extreme rates. Flour was very dull and nominally rather cheaper. Corn was in fair request,".... A Paris dispatch says: "The ravages of the phylloxera are becoming more serious daily. In July last it was computed that one-third of the total surface devoted to wine-growing had been irretrievably devasted, and as the plague has been steadily increasing all this year, it is estimated that 40,000 acres have been added to the total amount of land lost. A society of wine-growers has been formed for the purpose of utilizing and applying scientific means for destroying the insect. ....The first car-load of new wheat arrived at St. Louis on May 29, from Texas, and sold at auction at $1.62, a bushel. A premium of $125.00 in addition was made up for the shippers by several of of the grain dealers in recognition of the event. .. Exports from New York in the week ending with Saturday May 29, included 3,400 head of live cattle, 9,550 quarters beef, 3,516 live sheep, 3,100 carcasses mutton, and 300 dressed hogs. 414,000 bushels of wheat and 455,000 bushels of corn....The area in wheat along the line of the Northern Pacific railroad this year is estimated at 10,000,000 acres against 6,000,000 last year. A yield of 20 bushels per acre would make 200,000,000 bushels as the crop of that region. ...The Mark Lane Express of May 31, in its review of the British grain trade for the past week, says: "The showers and warm winds of the past week have promoted vegetation wonderfully. If the weather from now to harvest should even be unusually dry, it will probably be beneficial to the wheat crop." The supplies of English wheat continued small, but trade was not very animated either in Mark-Lane or in the provinces. Prices were fairly steady, and only receded for inferior produce, of which, however, a large proportion of the offerings in London consisted..... The tons of Paris-green that have been used by New Jersey and Long Island farmers in the destruction of potato bugs it was supposed would rid them of the pest for this season. But the bugs appear in greater numbers than ever before, and to make it more serious have adopted a new place of attack. They cluster around the vine before it has shown above the drill, and feed upon it until the seed rots. In uncovering drills where the crop has been too long sprouting, hundreds of young bugs are found clustered around the tender stalks....The arrivals of immigrants during the past week aggregate 12,511....An International Exhibition of sheep, wool and wool products will be held at the Exhibition Building in Philadelphia next September. Congress has passed an act admitting free of duty all importations intended for show only at this exhibition, and directing the Commissioner of Agriculture to "attend and make a full and complete report of the same." There will be an excellent opportunity for our raisers of fancy stock to enter their stock and see how they compare with those of other countries. Considering that the importations of the raw material to the United States amounted to 70,247,972 pounds of wool for 1879 as against 35,798,515 for 1878, it is very evident that too little attention is paid to the raising of this much-needed article....On May 27 the Senate spent the day in the routine consideration of the Agricutural Appropriation bill, and passed it. The salary of Commissioner Le Duc was increased to $4,000 Mr. Windom advocated the amendments proposed by the Senate Appropriation Committee, the principal of which is to add an appropriation of $15,000 for the purchase of machinery and apparatus for experiments in manufacturing sugar from sorghum and corn-stalks and other sugar-producing plants. The Committee proposed an amendment appropriating $7,000 instead of $5,000 for, experiments in connection with the culture and manufacture of tea 3,000 instead of 5,000 for experiments for the improvement of the varieties and culture of cotton... Mr. Hammond moved that the first amendment should read $8,000 and the second $2,000. Experiments in South Carolina and other Southern States had shown that tea could be cultivated in this country. We were importing $20,000,000 or $25,000,000 worth of tea annually, and should encourage everything tending to domesticate this plant and make its importation unnecessary. He explained the second part of his amendment by stating it was too late in the season to make such experiments in cotton this year. There was no occasion to import cotton-seed, because the finest grades of cotton in the world are American, and $2,000 was an ample amount for this appropriation. Mr. Hampton's amendment was agreed to. Mr. Allison moved to amend the Committee amendment so that experiments in manufacturing sugar from sorghum and corn-stalks, etc., shall be carried on, and machinery erected, in one of the chief corn-growing States. In opposition it was urged that Washington was the place to erect machinery, where experiments could be carried on under the direct supervision of experts. Mr. Allison's amendment was rejected—yeas, 16; nays, 35—and the Committee's amendment was agreed to. Other Committee amendments and some other unimportant amendments were agreed to, and the bill passed. It adds about $28,000 to the bill as it came from the House.....The exports of cattle from Boston port for the first four months of the year were 18,194, of sheep 5713, of hogs 1373. The total up to the present time is about 27,000 cattle, 12,000 sheep and 25,000 hogs.

HIGGIN'S SALT.

Higgin's Salt *must* be the best, for it has, in most sections, within four years almost run the Ashton brand out of the market as a first-class dairy and table salt. For a time the agent of the Ashton brand tried to stem the tide by talking of its old-time reputation, just as the importers of raw sugar talked about the superior sweetness of their half-manufactured product when the clean and pure refined sugars first came into use. Now, however, as a last resort, the versatile agent of the Ashton brand is endeavoring to distract attention from the inferiority of his salt by loudly crying that the New York agents for Higgin's also sell oleomargarine, the inference being that Mr. Higgin and the hundreds of salt dealers who handle the Eureka for their best salt also deal in oleomargarine and that dairymen should use only Ashton's salt. Apropos to this the American Dairyman suggests that "he hates not Oleo less, but Higgin more;" at any rate, his effort to grind his little salt axe by appealing to the prejudices of dairymen is amusing. Dairymen are, doubtless, smart enough to see through this, and consult their own interest by using the best salt, no matter who sells it. Higgin's improved process has been granted a patent by the English Government; the Eureka Salt is used in the Queen's dairy and by the most successful and progressive dairymen everywhere. Notwithstanding it has only been known in this country for four years, it is for sale by nearly all the salt dealers from Maine to Texas and from the Atlantic to the Pacific. In 1876 there were 5,950 sacks imported; in 1877, 32,800 sacks; in 1878, 69,045 sacks; and in 1879, 93,000 sacks.—*American Grower.*

The Wabash, St. Louis and Pacific Railway, with their usual enterprise, are now running two express trains daily through to Denver, Pueblo, Colorado Springs, and all points west, with Pullman Palace and Horton reclining chair cars on each train. This line has a fine passenger equipment and makes excellent time. Round trip excursion tickets are now for sale by their enterprising General Eastern Ticket Agent, Mr. E. I. Burritt, at 271 Broadway, New York. He will see that tourists and travelers receive all the attention and information that can be given. The Wabash, St. Louis and Pacific now control over 2,500 miles of railroad, and their trains are celebrated for quick time, and comfortable cars. Their system of through cars is acknowledged to be the most complete in the world.

The collapse of the iron boom has already caused the failure of several large operators in iron both here and across the Atlantic. Week before last an English iron firm failed for upwards of $3,000,000, and last week Campbell & Co., of this city, followed suit to the tune of about $2,500,000. The downfall of these heavy dealers is sure to cause the bankruptcy of many smaller operators in iron. —another proof of the evils inseparable from "booms" in any industry.

Catarrh Sometimes

commences with a cold, but its cure *always* commences with the use of Sage's Catarrh Remedy. This old, reliable, and well-known remedy has stood the test of years, and was never more popular than now.

Thousands of ladies to-day cherish grateful remembrances of the help derived from the use of Lydia E. Pinkham's Vegetable Compound. It positively cures all female complaints. Send to Mrs. Lydia E. Pinkham, 233 Western Avenue, Lynn, Mass., for pamphlets.

One Box or Six Bottles.

If you are suffering from a combination of liver or kidney diseases, and constipation, do not fail to try the celebrated Kidney Wort. It is a dry compound, as easily prepared as a cup of coffee.

Burnett's Cocoaine is the best and cheapest Hair Dressing in the world. It kills dandruff, allays irritation, and promotes a vigorous growth of the Hair.

The Markets.

SPECIALS FROM ALL CENTERS.

Until Saturday, June 5.

Butter and Cheese.

Boston—Buyers have not taken hold with any snap, and a good many of them object to paying over 18c. for the best lots of Vermont, and there are more sales at that price that at 19c. The best lots of York State will not bring over 18c. Northern—Choice New York dairy, ₱ lb, 17@18; Choice Vermont, ₱ lb, 18@19; Fair to good, ₱ lb, 15@16; Common, ₱ lb, 13@14. Western—Choice creameries, ₱ lb, 20@22; Fair to good, ₱ lb, 18@19; Choice dairy-packed, ₱ lb, 17; Choice ladle-packed, ₱ lb, 14; Common, ₱ lb, 12@13c. There is no accumulation of receipts in cheese, but the market is hardly so stiff, as this article is relatively much dearer than butter, and there must very soon be a large supply. About 12½c. is an outside price for anything, unless it is a fancy lot. New whole milk, ₱ lb, 12½@13; New half skims, ₱ lb, 10@11; New skims, ₱ lb. 6@8.

Chicago.—Butter—The market remains quiet and weak. Good to choice grades are becoming more plentiful, and they are the weakest. A light business was doing at the following prices: creamery, 18@21c.; good to choice dairy, 15@18c.; medium, 12@14c.; inferior to common, 8@11c. Cheese remains dull and heavy. The following prices were only indifferently sustained: full cream, new, 10@11c.; part skim, new, 8½@9½c.; full skim, new, 5@7c.; low grades, 4@5c.

Cincinnati.—The arrivals of butter have not been excessively large during the week, but the local consumptive demand has been so largely supplied by suburban farmers' wagons that the regular receivers have had a light trade, and prices have declined 1@2c per lb on the medium and better grades. The lower qualities are scarce, and the quotations for them are merely nominal. Packers are taking the bulk of the current receipts and as they will not pay over 10@11c the sales are mainly at these figures. Fine Dairy is sold to retailers at 15c, but this is extreme, and round lots sell mainly at 13c. Creamery is plenty and sells at 20c. as a rule, but 1c more is obtained for selections of special brands, in a small way. Fancy creamery sells at 20c and fair at 18@19c, choice Western Reserve and Dairy at 13@15c; prime Central Ohio 11@12c, medium, do 9@10c and inferior 6@8c. ₱ lb. Cheese—is in only moderate supply and with a fair demand the market has ruled steady and closes firm at 9½@10c per lb for prime to choice factory.

Philadelphia.—Butter.—Supplies during the week were light, particularly of choice goods, but the demand was limited to small selections for table use, and the market for lines of all kinds was dull and weak. Now and then a jobbing selection brought 1c or 2c more than quoted rates, but our figures are full high for general wholesale trade. We quote creamery extras at 20@21c; do. good to choice, 17@19c; limitation creamery, 12@13c, as to quality; Erauford tubs, extras, 19c; York State tubs, extras, 18@19c; fair to choice, 15@17c; Western dairy extras at 14@15c; do. fair to good at 11@13c; factory packed, 11@15c, as to quality; common grades, 8@9c. Rolls—Fancy, 14@15c; none here; do., fair to prime, 9@12c. Prints—Fancy at 22@25c; do. firsts at 17@20c; do. seconds at 10@15c. Cheese continued in small supply, and prices were well maintained under a steady good demand. We quote New York factory, full cream, at 13c; selections, 13½c; do. fair to good, 11½@12½c; do. half-skims, 10@10½c; Ohio new, full cream, 11½c; do. half-skims, 10@10½c; soft full skims, 8@9c; hard do. 4@6c.

PRODUCE AND PROVISIONS.

New York, Saturday, June 5, 1880.

Beans and Peas.—Marrow and prime white kidney beans are steady and firm supported by a good export demand. Peas scarce. Medium and red kidney quiet, but the former are not unseasonable. Southern green peas quiet and weak at $1.65@1.70 ₱ bush. for Wis. bbl.; Southern B. E. nominal $1.30@2 ₱ 2 bush. bag. Marrow beans, prime, $1.62½@1.65; other, $1 60@1.60; medium, prime, $1.35@1.37½; other, $1.20@1.30; pea, $1.45@1.65; white kidney, $1.50@1.70; red kidney, prime $1.45@1.50; other $1.30@1.40; black, or turtle sup., $2.20

Receipts of beans for week, 1,416 bush.; exports, 3,995 pkgs.

Beeswax.—Trade is quiet, with 24@25c. quoted for Western and Southern.

Broom Corn.—Transactions are small, with prices generally unchanged.

Latest prices are for brush and short broom, choice ₱ lb, 7@8c.; do., do., common to good 5@6½c.; hurl good to choice, 7@8c.; do. common to fair 5½@6½c.; red and crooked at 3@4c.

Butter.—Buyers have the "low price" fever and with the enormous receipts sellers are forced to humor their views. General good grades of stock, however, has enlarged consumption and that fact is encouraging when such unwieldy supplies have to be handled. Exporters, too, have made a noticeable pull upon the surplus but most of the transactions have been at their dictation of rates. The best export price named this week is 18c. Mixed and straggling parcels have sold down to 12@14c. The common grades have gone to Germany. Quotations are Creamery, fine, 19@20c.; good to prime, 18@19c.; fair to good, 17@18c.; sweet cream, 17@19c.; yellow firkin choice 19@20c.; other 17@18c.; State, pails and hf. tubs, choice, 18c.; fair to prime, 15@17c.; poor 12@13c.; Welsh fair to choice 15@17½c.; poor 12@13c.; Western imitation creamery, 12@17c.; dairy, fresh, 16@17c.; good to prime, 14@15c.; fair to good, 12@13c.; factory fine 14½@15c.; fair to prime, 12@14c.; poor 10@12c.; very poor 8@9c.

Mr. E. Phillips, a prominent broker, gives us the following distribution of dairy products abroad for the past year: Butter to Great Britain, 876,390 pkgs. to the continent 124,143; cheese to Great Britain 2,001,102 boxes; to the continent 2,934 do.

Comparative receipts and exports for the past four years:

	Rects., bxs.	Exp'ts, firkins.
June 1, 1879, to June 1, 1880..	1,490,750	310,805
June 1, 1878, to June 1, 1879..	1,600,000	303,140
June 1, 1877, to June 1, 1878..	1,233,100	186 208
June 1, 1876, to June 1, 1877..	1,377,200	55,550

CHEESE.—The receipts have been large, an though the exports have reached fully 74 000 b the market has ruled lower and closed easy considerable of an accumulation carried over.

Latest sales are 12½c. for choice full cream; 11¾@12¼c. for good and fine; 11¼@11⅝c. for fair Ohio factory flat at —c. for full cream; 10@11c. for twin and good lots; 8@10c. for half skimmed.

Comparative receipts and exports past four years.

	Rec'ts. pkgs.	Exp'ts. lbs.

DRIED FRUITS.—The market generally is very slow and is without decided change.

Quotations are for N. C. apples, fair to good, at 7@5½c.; choice, at 8@8¾c.; New York State quarters sliced at 7¾@7¾c.; patent evaporated, in cases, choice at 14@15c.; good and prime 13¾@14c.; evaporated, sliced at 12½13c. Evaporated peeled peaches, good to choice, at 20@22c.; North Carolina peeled choice, 16@17c.; Georgia prime at 15@16c.; fair to good at 13@14c.; common at 10@12c.; unpeeled halves at 7@8c.; do. quarters at 5@6¾c. Pitted cherries at 17@18c. Blackberries nominal at 13@13½c. Raspberries at 28@30c. Plums at 17@17½c.

EGGS.—Receipts for week, 13,530 bbls.; do. last week, 14,625 do. With smaller receipts the market has shown more buoyancy during the past few days and extra fresh lots close firm. A good many old Western remain to be worked out, and 11½c. is yet the top.

Near Points, 13½@14c.; State and Penn., 12½@13c.; Western choice, 11@11½c.; Canadian, do. 11¼@11¾c.; off grade Western 10½@11c.

FLOUR.—There is a stronger demand with prices in favor of buyers through liberal supplies.

Latest prices are at $3.85@4.50 for inferior to strictly fancy superfine State and Western; $3.90@4.35 for very poor to good extra State, odd lots and lines; $4.35@4.85 for good to strictly choice do.; $3.90@4.35 for inferior to good shipping extra Western, and $4.35@4.85 for good to strictly choice shipping extra do.; inferior to very good white wheat extras, $4.60@5.35; very good to fancy do. at $5.35@6.50; red and amber winter wheat, inferior to fancy grade and family, at $4.40@5 25; round hoop Ohio, $4.40@5.00; and trade and family brands of do. at $5.10@6.35; St. Louis at $4.50@5.50 for inferior to good extra; $5.50@6.50 for good to very choice; Minnesota clear, very inferior to choice, at $4 00@5.75; Minnesota "straight," very poor to fancy, at $5.10@7.00, and patent inferior to fancy at $5.50@8.50; unsound stock at from $2.25@5.00; city mill extra at $5.60@5.90 for good to choice West Indies; do. for England, $4.15@4.75 for very poor to very choice; do. trade and family extras, $6.00@6.15; do. for South America, $5.90@6.35; No. 2 at $2.35@3.50 for poor to fancy.

Receipts for week: flour, 100,300 bbls; corn meal, 3,144 bbls.; wheat, 1,581,300 bush.; corn, 817,200 bush.; oats, 544,450 bush.; rye, 17,250; malt, 75,710; rice, 591 pkgs.

Exports: flour, 75,300 bbls.; cornmeal, 3 812 bbls.; wheat, 1,258,500 bush.; corn, 1,6 5,500; oats, 4,000 bush; peas, 2,250 bush.; rice, 1 200 pkgs.

CORN MEAL.—Sales at $3 15 for Brandywine, and $2.50@2 75 for yellow Western.

FRESH FRUITS.—There is a little call remaining for fine russets. The limited supply ranges at $3@4.75 ₱ bbl. Strawberries have had a varied week. Early pickings were ruin beaten and sandy and very low prices ruled on several days. A better style of fruit is now arriving and fancy bring good prices. "Great American" "Boyden's No. 30," "Jucunda" and "Trumpet" are making a good moderate display.

Up-river good to prime ₱ qt. 16@20c.; good to prime ₱ 3 to qt. cups 5@7c.; Staten Island, Wilson, ₱ pint 6@8c.; Jersey, Mon. Co. prime ₱ qt. 12@14c.; prime to fair ₱ qt 8@10c.; pints 4@7c.; So. Jersey ₱ qt. 5@9c.; M'd and Del. ₱ qt. 5@8c. Cherries, sweet, fancy ₱ lb. 14@15c.; fair to good, 10@12c.; common, 5@7c; Southern, sweet, good to prime, 10@12c.; common 5@7c.; sour 5@6c. Gooseberries, Md., ₱ bush. $2@2.25. Hot-house grapes, Black Hamburgs ₱ qt. $1. There has been a better demand for peanuts and holders have established an advance of ½c. ₱ lb; prices firm as quoted. Peanuts, Va. hand-picked, 5¾@6c.; extra prime, 5½c.; prime 5c.; shelled, 5¾@6c., hickory shellbark, ₱ bush 90c.@$1.

GRAIN.—Wheat has showed a full export demand with prices lower; latest sales are of No. 1 white at $1.26½@1.27; do., do., June, at $1.24¾@1.25¾c.; No. 2 white at $1.25; ungraded white at $1.24@1.26¾; No. 2 red at $1.28¾@1.29¼; do., June, at $1.26½@1.27; do., July, at $1.16@1.16¼; ungraded red at $1.18@1.20¼; mixed winter at $1.25; No. 2 amber at $1.27@1.27½; ungraded amber at $1.28@1.28½; choice hard spring at $1.20; No. 2 spring at $1.08@1.10; ungraded spring at $1 18. Rye at 95@97c. Corn has been active and closed firm; latest sales are of New York No. 2 at 54@54¼c.; do., June, at 51@51¾c.; do., July, at 50@50¾c.; New York steamer mixed at 53½c.; ungraded mixed Western at 53@53¾c.; No. 3 at 52½@53c.; New York yellow at 56c.; low mixed at 55½c.; No. 2 white at 57c. Oats are active and showing sharp changes in prices; latest sales are of No. 1 white at 43c.; No. 2 white at 43½@44c.; No. 3 white at 41¾@43c.; New York No. 1 at 42c.; New York No. 2 at 42c.; do, June, at 41c. No. 3 at 41½c.; ungraded white Western at 43@46¾c.; ungraded mixed Western at 40@43c.; white State at 46@47c.; mixed State at 42½@43c.; No. 2 Chicago quoted at 42c.

HAY AND STRAW.—There is is a liberal demand and prices are firm; latest prices are for:

Shipping hay quoted at 75@80c. for medium, and 90@$1,10 for better qualities; clover, 65@70. Straw at $1.05@1.15 for long rye; 65@70c. for short rye, and 55@60c. for oat.

Exports for week, 41,000 bales.

HOPS.—The market has been very steady for several days, and demand moderately active. Quotations are for:

	Cents per lb.
New York, fancy	Nominal
New York, new crop, good and choice	35 @36
New York, new crop, medium	31 @33
New York, new crop, low to fair	27 @29
Eastern, new crop	27 @35
Wisconsin, new crop	27 @35
Yearlings	7 @18
Olds, all growths	4 @10
Pacific Coast, new	30 @35
Pacific Coast olds (nominal)	5 @10

MAPLE SUGAR.—A few tardy parcels quoted at 9@12c. for cakes. Syrup steady at 75c.@$1 ₱ gal. in tins.

POULTRY AND GAME.—There is a fair demand for moderate receipts of carefully iced, good order stock; turkeys selling slowest of any sort. It is hardly safe to send scalded poultry after the season settles warm.

Turkeys, choice small, on ice, 10@11c.; fair to good, frozen, 6@8c.; do., poor, frozen, 4@5c.; Phila., d.-p., 10 12c.; chickens, spring, Phila., large, ₱ lb., 34@35c.; small, 25@32c.; roasting, Phila., dry-picked, 20@22c.; fowls, Phila., yearling, 14@15c.; Phila., dry-picked, 12@12½c.; Jersey, good to prime, 11@12c.; State, good to prime, 9@11c.; Western, good to prime, 8@10c.; poor to fair, 5@8c.; ducks, spring, large, ₱ lb., 25@30c.; small, 23@25c.; Phila., dry-picked, 12@13c.; squabs, white, ₱ doz., $2.00; dark, $1@1.50.

Live fowls dull, turkeys extremely so. Spring chickens have a steady sale when of good weight.

Chickens, spring, large, per lb., 24@25c; do., small, 22@24c.; fowls, Jersey, 10c.; Western, 9c.; Southern, 8½@9c.; roosters, old and young, 4c.; turkeys, mixed, 7@8c.; Southern, 6@7c.; ducks, Jersey, N. Y. & Pa., ₱ pair, 55@56c.; Western, 40@50c.; Southern, 40@45c.; geese, Jersey, $1.50@1.62; N. Y. & Pa., $1.25@1.37; Western, mixed, $1@1.12; southern, 75c.@$1; pigeons, ₱ pair, 35@40c.

The supply of game is small, but there is no urgent call. Eng. snipe, ₱ doz., $2.50; sand, 25@30c.; wild pigeons and squab, 75c.@$1 per doz.

PROVISIONS.—Hog products have been moderately active and prices generally steady. Mess pork, $11.10@11.15 for June; $11.30@11.30 for July; $11.50 for August, and $11.35@11.40 for September. Bacon at 6¾c. for long clear and 7c. for short clear. Tallow at 6¼c. for prime. Stearine at 8¼@8¾c. Beef hams at $18.50 for fresh and cured. Lard—Western steam at $7 for spot lots; $6 97½ for June; $7@7.02½ for July, and $7.07½ for August deliveries.

Receipts for week: pork, bbls., 5,465; beef, pkgs., 500; cut-meats do. 21 00; lard do. 18,500.

Exports, pork, bbls., 5,450; beef, pkgs., 2,725, cut-meats, lbs. 8,622,225; lard lbs. 3,919,200.

SEED.—Grass are quiet. Clover is quoted at 6¾@7c for medium Western and 7@8c. for State. Timothy at $2.65@2.75.

TOBACCO.—Export demand is moderately active and prices generally steady. Quotations are for

KENTUCKY LEAF.

VEGETABLES.—Exports of potatoes for week, 2,200 bbls. Common useful to best old potatoes range at $1@1.75 ₱ bbl., rose and snowflake selling quickest. Prime new in good demand; poor lots neglected.

Bermuda, $4@4 50; Norfolk, $2.50@3.50 Ga. & Sav., $3.50@4.00; Fla. $2.75@3.75; culls, $1.50@1.75. Southern truck has not turned out attractively this week. Near by items in good sale. Tomatoes, Cha's. and Sav., ₱ cr., $1@1.75; Fla., ₱ cr., $1@1.50; Bermuda, ₱ box, 30@40c.; cucumbers, Charleston and Savannah, ₱ cr., $2.25@2.75; wax beans, Norf., ₱ ½ bbl. crate, $3.00; string beans, Norf., round, ₱ ½ bbl., $3@3.25; flat, ₱ ½ bbl., $2.75@3; N. C., bu. crate, $1.50@1.75; Sav. & Ch'n, per crate, 75c.@$1.25; green peas, L. I., per bag, $2@2.25; Jersey, ₱ bbl., $3@3.50; Md. and Del., per $3@3.50; asparagus, O. Bay, per doz. bch., $1.50@2; N. J., $1.75@1.75; turnips, Jersey, ₱ 100 bunches, $6; beets, Jersey, per 100 bunches, $5@6; radishes, per 100 bunches, 50@75c.; lettuce, per bbl., $1@1.50; cabbage, Norfolk, $2.50@3 25; rhubarb, L. I. & Jersey, ₱ 100 bunches, $1@1.50; onions Bermuda, new, ₱ crate, $2@2.12; Maryland, yellow, ₱ bbl., $5@5.10.

WOOL.—The market rules weak and dull, buyers generally awaiting the reports from the new Western clips. Ohio, Penn. and West Virginia washed fleeces quoted at 50@52c. for XXX and picklock; 46@48c. for X and XX do.; 50@55c. for No. 1, and 46@48c. for No. 2; 44@47c. for X and above N. J., State, Mich., Wisconsin and Indiana; 50@55c. for No. 1; 44@47c. for No. 2, and 40@42c. for common.

LIVE STOCK MARKETS.

NEW YORK, Saturday, June 5, 1880.

BEEVES.—Receipts for week, 15,687 head; do. last week, 14,135 do. Buying has been exceptionally free during the past week as light receipts are anticipated for next week. Light and medium steers ruled the demand, heavy weight seemingly not wanted unless put down on the rate for market styles. The week has not been profitable for owners; range at the close, 8¾c. for latter, to dress 55 lbs., and 9¾c., to dress 56 lbs.

COWS AND CALVES.—With small arrivals the market is weak; $35@50 is a full range, and this would be broken with free receipts.

VEAL CALVES.—Supplies have run light and the market has favored sellers.

Live calves, Jersey and Bucks Co., choice, 6c.; prime, 5¾@5¾c.; State, choice, 5¾@5¾c.; do. prime, 5@5¼c.; fair to good, 4@5c.; poor, 3@3¾c.; Mt. Holly, fair to choice, 5¾@6¾c.; buttermilk, 2¾@3¼c.

SHEEP AND LAMBS.—Receipts for week, 32,652 head; do last week, 23,761 do. There was a fair trade in sheep at steady prices. Lambs were more abundant and the singular excitement which was the leading feature in yesterday's market was scarcely perceptible to-day. In fact sellers were compelled to yield about ¼c. before it was possible to clear the pens. Sheep sold at 4@5.35; Southern and Western lambs at 7@8¾c.; and Jersey do. at 8¾@9¾c.

SWINE.—Receipts for week, 22,648 head; do. last week, 25,848 do. The feeling is firm owing to an advance in dressed on change. Live quoted nominally at the close at 4¾@4¾c.; city dressed, heavy to light 6¾@6¾c., pigs 6¾c.

REMINISCENCES OF A LITTLE GIRL.

MRS. M. J. GALPIN.

CHAPTER IX.

After the recovery of Uncle Tom from his severe attack of asthma, he, by the advice of friends, concluded once more to change his habitation as he could not bear the locality wherein he had suffered so much. When, therefore, all his worldly affairs were adjusted, he determined to turn his back forever on the scene of his misery. There was in the neighborhood, a favorite romantic spot, called "Mullen's Mill," where Katie had often taken the little Therese, and when Therese heard that papa was going away, and she might never more see her favorite haunt, she decided in her childish heart to go and see the old mill once more, and feed the swans once again, as they glided to her side over the glossy surface of the silver lake, whose waters turned the mighty wheels of the giant old mill. Watching for an opportunity, she slipped away unknown to all the household and proceeded along the well-known road to the favorite place; but every one seemed to know she was doing something wrong. At least her conscience whispered so. The rude beggar boys yelled at her and threw stones, the dogs barked in their kennels, and it seemed as if everything reproached her for running away. Still she had no thought of turning back, but pressed on with flying footsteps till she reached the goal of her desires. Taking bread from her pocket she called to the swans, and they glided swiftly, with their proudly arched necks, to the side of their little friend and received her gift. After playing till she was tired she at last concluded to go home. But to do this, she had to pass the gates of the mill yard, which were open, and she was afraid of the ganders and turkey-cocks that were within. This was a trying situation, and she began to cry and wish she had staid at home. But she must get by, or home would never be reached. Swiftly and stealthily she tried to pass the open gates of the barnyard, but alas! one of the old "boss" ganders espied her, and sounded the battle cry, which was echoed by the gobble of the turkey-cocks. Both parties combined their forces, and made an attack on the unfortunate Therese. She flew down the road as fast as she could run with a flock of geese and turkeys chasing her in the rear. To make her case worse, she had on a bright scarlet dress, trimmed with braid which seemed to irritate the turkeys. Her silver curls, which at this time floated to her waist, were flying on the breeze like the pennons from some flagship. No grass grew under her feet, nor did she stop to look back and see what was the force of her enemies.

Wild with terror and affright she took the wrong turn on the home road, and now was lost among strange streets. Wandering into the beggars locality commonly called, "tea lane," or "beggars row," she espied a boy who, because he was such a nuisance and mischief in general, had received an odious nickname. Upon seeing him she was more frightened than ever, and tried to run, but the boy planted himself in the road, and squaring off, he asked her, "where are you going now you young runaway, shure it's a fine colleen bawn you are, running away from your father's like a wandering gypsy. Come here, an' I'll take ye home to yer mother." Taking her unwilling hand he led the crying Therese safely back to her own home, and then left without waiting for the thanks that would have been showered upon him by the grateful parents. Now, children, do not judge a wild, bad boy too harshly; because in his inmost heart there is always a germ of a better nature which may be influenced for good. Always speak gently of the erring ones, for no one knows what were the powers which lead them astray.

During the absence of the little Therese consternation and dismay reigned in Uncle Tom's household, every imaginable place was searched for the fugitive, but to no avail. They were about to organize a band to go in search of her, when the disheveled little truant appeared to allay their fears. Coming in while they were debating as to her whereabouts, she exclaimed, "why, papa, I'm here." Upon being reproved and talked to for her misdemeanor, she replied, that she only just wanted to see the swans once more, and bid them good-bye, as she should never, never see them again. By this time the floodgates of grief were opened and she sobbed herself to sleep in her father's arms. I don't think we grown folks realize sufficiently what sorrow little ones experience at the loss of what they highly value.

Uncle Tom and family were ready for their departure in a few weeks after the escape of Therese from the enraged ganders and goblers. When all was ready they told little Therese to bid good-bye to her friends, and going into the garden, she kissed her white rose good-bye and plucked one to keep. She then took one more swing from the limbs of the giant ash tree that stood beside the garden gate, and between tears and sobs she was finally lifted by her father into the jaunting car that awaited them at the door. The city of Bandon was the point at which they agreed to settle; so away they went with hopeful hearts of better days yet in store.

Nothing of note occurred during their trip. Like all children, Therese soon forgot her troubles in the new scenes that surrounded her, and she looked forward with eagerness and delight to her new home. After journeying some days, they arrived at their destination, and, renting a good house surrounded by a garden, they were again, in a few days, comfortably settled. About a year after their arrival in Bandon, Uncle Tom's old enemy, the asthma, took hold of him again, and all doctors agreed that he was obliged to change climate or he could never recover. Uncle Tom had a rother who a few years previous had gone to merica. He determined to write to him and see what he thought about his exiling himself from his native land, and also what would be the chances for his profession on that far off shore. The Irish famine had just commenced and everything was looking rather dreary.

Our little heroine knew naught of trouble; she now, in addition to a beautiful garden, had a pair of pet Bantam chickens, which were her heart's delight; she also had a pet goat that furnished milk and butter for the family. While waiting to hear from his brother James in America, Uncle Tom had an offer from young Lord Cornwall to take a young son of his, of whom he was ashamed, to America with him, and that if he would do so they would give him $2,500 at the start, and afterwards $50 a year till his majority. Money was a tempting bait just at that time, and as Uncle Tom had no son of his own, he concluded, upon consultation with his wife, to take the boy if he should determine to emigrate to America.

In due time an answer arrived from his brother which decided him in his intention of emigrating. Once more the family prepared to "pull up stakes" and try in a foreign land, where both peace and plenty reigned, to make a home and fireside. Little Willie Cornwall went with them. His aristocratic father little dreams to-day, if alive, that his grandson, is now in the South a fine young man. His own son Willie has gone to the spirit land; he died at the early age of twenty-four years. But we will reserve their "farewell to Erin" for another chapter. The voyage across the Atlantic was full of hair-breath escapes. In former days the crossing of the sea was deemed a grave matter, and those who once parted hardly ever hoped to meet again. If they could only have glanced into the future a few years, how wonderful the change would have appeared to them. We who have seen each step of progress, cease to wonder.

LETTERS FROM THE COUSINS.

Dear Uncle Mark:—We have had a very dry spring; no rain to speak of has fallen. Everything has been drying up and the weather was as hot as in July till a few days ago. Since the middle or March the dust has been blowing every day with very few exceptions. Sometimes it was so thick we could not see a quarter of a mile. I planted some of the white tailed radishes, March 20th, but the dust buried them so deep they could not grow. I have planted some more and they are doing fairly. My bulbs did not flower, they were full of buds but all withered before they opened. I would have had a beautiful show if it had not been so dry. All the watering I could do was of no use.

I received the seeds you sent me in the spring and have many of them growing now. I have Phlox, Pinks, Cockscombs, and Mignonette up and doing well. I have also some of the melons and okras up. My grape seed laid dormant all winter. May 1 two came up; one plant was very small and died soon after; the large one is growing nicely. I suppose more will come up yet.

I planted the sweet corn in two lots; 1st, the corn I got from you; 2nd, that which the calves picked off when just right for eating, and I ripened it in the house. The last came up better than the first. I did not think corn picked so green would grow. The rains have now set in, and I hope for a better season. The wet weather came none too soon, as some of my plants were withering and in some places on the bluffs the prairie grass was dying. Yours truly,

Dodge Co., Neb. Wm. J. Mason.

[Here is a young gardener and experimenter who is doing excellent work. He works understandingly and therefore learns something. He now knows for a certainty that corn which has been imperfectly ripened on the stalk, will, nevertheless, grow and do well when planted; and he will doubtless follow up the experiment, and see if the same is true of all kinds of farm and garden seeds. You are doing well, William, go ahead.—U. M.]

Dear Uncle Mark:—I see no letters from the cousins in this county, and I wish to join your Horticultural Club, and thus become one of your nephews. I attend school, and am getting along with my studies very well. I live in one of the finest valleys in Central New York, and enjoy reading the cousins' letters very much. The trees are all in bloom, and our flowers are looking splendid. My father was a member of the 148th Reg't. N. Y. State, and all the ex-soldiers here are going to have a march on Decoration Day, and if the weather continues warm, they will have plenty of flowers by that time, to decorate the graves of their dead comrades. I should like to come to New York very much and see the largest city on this continent. I study geography and have "big ideas" of the cities I find located on my maps. But as this is my first attempt, I must close for fear you will consign this to your waste basket. If I see this in print, I may venture to try again. Orren Salisbury.

Yates Co., N. Y.

Dear Uncle Mark:—I am always interested in the cousins' letters and have often thought I would write, too. I would like to join the Horticultural Club if Uncle Mark will accept me. My father has taken the Rural for several years and thinks it is the best paper published. We raised 22 pounds of Beauty of Hebron potatoes from one small potato which had 13 eyes, planting one eye in a hill. We raised 12 ears of Blount's Prolific corn from one kernel of corn planted. I am very fond of flowers and raise several varieties every year. We planted seeds from the Free Seed Distribution last year, but only the Hollyhocks germinated. I must close or my letter may find its way to the waste basket.

Yours truly, S. H. C.

Ovid, N. Y.

Dear Uncle Mark:—I thank you very much for those seeds. We planted some hardy flower seeds to-day. We have started many varieties in the house—Mimulus, Carnations, Vinca, Cannas and many others. I will tell the cousins of our dog, Tiger, for I think he is very intelligent. He will speak, (bark), shake hands, (or rather, *paws*), sit up, or roll over, whenever he is told to do so. He will also hold a piece of bread upon his nose, while we say—"ready—take aim—fire!" when he will instantly throw it up and catch it in his mouth. Rena Violet.

Linn Co., Mo.

Dear Uncle Mark:—I am a new cousin. My papa commenced to take the Rural this year, but I would like to join your club; I am very fond of flowers, Mamma tells me I will be a botanist. We have a piece of land to raise our flowers and garden produce on. We have received all the seeds that was given by the Rural to its subscribers. And now Uncle Mark if you will let me join the club and send the club seeds to me I will do the best I can. Being a boy of only ten, don't expect as much as from a man. Respectfully yours,

Charles M. Crittendon.

Winnebaha Co., Dak., Ter.

Various.

BRIEFLETS.

The members of a young ladies' debating society in Troy have decided in favor of long courtships. Level-headed girls! Observation has taught them that there is a wonderful falling off of confections, balls, carriage-rides and opera when courtship ends and the stern realities of married life begin.—Norristown Herald. . . . . G. H. & J. H. Hale say that of the newer sorts of strawberries, Miner's Great Prolific is the best for general cultivation. . . . . They praise Pres. Lincoln as the largest and best in quality of newer sorts, having grown berries *eleven* inches around from plants set September 1st. Sharpless, they say is very vigorous and irregular in shape. But is not Pres. Lincoln more irregular in shape than Sharpless? Great American (as usual) fails with them. . . . . "It is said that the male wasp does not sting." But as a male and female wasp wear the same kind of polonaise, and look as much alike as twins, the only way to distinguish their sex is to catch one and examine its arsenal. If it stings you it is a female; if not, it is a gentleman wasp.—Norristown Herald. . . . . Referring to the support of various political journals to various candidates, the Nation says:—"We know of no question more interesting just now than the morality of passing five months in lauding and declaring worthy of the highest place in popular confidence a man whom during the previous five months you have been describing as a tricky rascal. Is there room," the Nation asks, "in the Christian system for this sacrifice of editors to the exigencies of practical politics?" What has put it into the Nation's head that political editors belong to that system! . . . . . Oleomargarine does not lack for synonyms. Butterine, Ambrosia, Oilymargarine, Woodcosaw-dusterine, Grease-butter, Sham-butter, Fat-butter, Stuff, etc., are among them. . . . . The Rural reports, as to the value of the newer sorts of strawberries as tested at the Rural Grounds, are well supported by careful horticulturists. Prof. Husmann, of Coleman's Rural World, has the following to say of the Crescent Seedling: "The Crescent Seedling we believe to be a good deal like the Ben Davis apple. There is money in it, as it is early, immensely productive, of good size and color and moderately firm; but the less said about its quality, the better. . . . . The Hour says that the man would be a great benefactor to his race who would invent a method for closing doors noiselessly. . . . . Mr. Bailey claims that he can, by his system of preserving green fodder (ensilage), produce milk at one cent per quart, beef for four cents per pound, butter for ten cents per pound, etc. We are sorry that he claims so much. . . . . It is reported, says Puck, that Mr. Edison has discovered that oilymargarine makes capital axle-grease, and that it can also be utilized as pomade. . . . . Providence is impartial. For example: It raineth upon the Just and Jerseyman "equally the same." . . . . The Philadelphia North American tells of a man given up by the doctors. When a man is given up by Philadelphia doctors, it is strong evidence that his money is all gone.—Boston Post. . . . . How to enjoy four springs in one season: Go to Florida in March; to Aiken (S. C.) in April; to the "Thermal Belt" of N. C., in early May, and North in late May. . . . . "Major" of the Rural New-Yorker has received many inquirers as to the healthfulness and other characteristics of the "Thermal Belt" of North Carolina since his visit to that Paradise. Friends may write to Dr. McAboy (Lynn, Polk Co., N. C.) with the assurance that they will receive prompt, courteous replies. . . . . Ellwanger & Barry (Rochester, N. Y.) will send their plant catalogue free to applicants. . . . . Green plants of the great Cuthbert are now offered in our advertising columns. These, if planted now and well attended to, will grow bearing canes for another year. Better late than never. . . . . We might tell our readers of many other interesting things offered in our advertising columns. But they must look for themselves. . . . . The father of Mr. A. B. Allen, our valued contributor, was one of the earliest breeders of Merino sheep. He had a flock in 1813. Mr. Allen well remembers, when a schoolboy in New York in 1811, seeing a flock of Merino sheep that had been imported from Spain, landed near the Battery. They were driven up the city to Chatham St., and so into the country, for it was all country then, with a few scattered houses above Chatham Square. They followed the Spanish shepherds and their dogs that came out with them, and no one could turn them back from these or to the right hand or the left. Two years after, Mr. Allen's father put his family on a New England farm and the son was sent out to watch the sheep with his dogs. It will appear, therefore, that he has had an early apprenticeship in sheep husbandry. . . . . Mr. Dunham, of Wayne, Ills., is the largest importer of the celebrated Percheron-Norman horses which are probably the best and finest of all large farm horses as well as for the city dray, truck wagon and heavy express. We learn that Mr. D. has sold about two hundred thousand dollars worth within the past ten years of his own importation and produce bred from the same. He keeps nearly 100 head in his stud, has immense barns and stables for them and numerous large paddocks on his farm a mile square. It is a great and growing business in the West. . . . . The respected name to whom Mr. Roe has dedicated his really fine work "Success with Small Fruits" is a happy selection.

"I dedicate this Book to
Mr. Charles Downing,
A Neighbor,
Friend and Horticulturist,
From whom I shall esteem it a privilege
To learn in coming years as
I have in the past."

CATALOGUES, ETC., RECEIVED.

Outlines of Phrenology.—This little work of 105 pages, 12 mo., by F. E. Aspinwall, M. D., is intended mainly as a chart for the use of practical phrenologists, but is also useful for students and others who may desire to acquire an elementary knowledge of phrenology with a little outlay of time and labor. Published by D. M. Bennett, 141 Eighth St., N. Y. Price 50 cents, paper-bound.

Beet Sugar and Cultivation of the Beet, by E. B. Grant, Lee and Shepard, Boston, and Chas. T. Dillingham, N. Y. This work of 154 pages, 12 mo. is a new edition of a work very useful in the present condition of our sugar industry. The high prices of sugar during the late war induced the author to visit Europe and investigate the beet sugar industry there, and this volume contains the result of his researches. The work is handsomely bound in cloth and is full of practical and statistical information.

Success with Small Fruits by Edward P. Roe. Published by Dodd, Mead & Co., New York.

We have not had time to read—as it deserves to be read—this elegant work of 313 pages with their superb illustrations. Unless the price is too high (it is not stated), the work will no doubt find its way into the hands of all small-fruit growers. Mr. Roe quotes liberally from the teachings and writings of experienced horticulturists, and very liberal, not to say indiscriminate, credit and praise are given to them and to Mr. Roe's friends in general. The book is written in an enthusiastic, free, sprightly style that impresses upon the mind its instructive portions with scarcely an effort of the memory. We are free to express the opinion that it is far in advance of any other treatise on small fruits heretofore published.

Report of the Conn. Board of Agriculture and Experiment Station for 1879. This work of 402 pages, 8 vo. contains the Sec's. report, and essays on Agricultural knowledge, by R. S. Hinman; Preservation of Food, by the Sec. T. S. Gold; Home Supplies of Food, by J. B. Olcott; Food of Man, by Dr. E. L. Sturtevant; Butter as Food, by our contributor Richard Goodman; Sugar-producing Plants, by Prof. Collier, Chemist to the Department of Agriculture; Compensations of Agriculture by J. M. Hubbard; Fruits and Fruit Gardens for Farmers, by Alfred H. Augur; Fermentation, by Prof. W. H. Brewer; Bread, by Leander Wetherell; and Diseased Meat, by Noah Cressy, M. D. V. S., besides reports on Pomology and on Farm Experiments with Fertilizers, the latter a lengthy report of 58 pages by Prof. W. O. Atwater. As an addition to the above matter, is the Annual Report of Conn. Agr. Experiment Station, embracing 159 pages of highly useful information much of which has been already given to our readers in the Fertilizer Analyses, by the Director, Prof. S. W. Johnson, which from time to time have appeared on these pages. T. S. Gold, Sec., West Cornwall, Conn.

PERSONAL ITEMS.

A. G. Burgess of East New York has produced a new seedling which he calls Wistaria Gigantea. It bears much bigger flowers than the old sort.

The young women of Onoko, Texas, have taken to a fashion of cutting their hair as short as scissors will do it. They wear little slouched hats on the sides of their smooth heads, and look as rakish as pirates.

Dr. Peck of Indianapolis has amputed the legs of a young girl on account of decay in the bones, produced by excessive rope jumping. He advises parents and teachers to prohibit this play under all circumstances.

The average speaker uses 120 words a minute. John Sherman once delivered a speech at the average of 170 words a minute, and Ben Pitman reported it so plainly in phonography that his wife (who was recently cremated) copied the signs into ong hand without having heard of it.

The toadies to be most recently fooled by a bogus English lord are those of Columbus, Ohio. He called himself Lord Arundel, and he was welcomed at once to fashionable homes, though he was plainly an uneducated cockney. He was invited to the floor of the Legislature, and the women doted on him. After borrowing all the money possible, he absconded.

The late Lord Derby and Mr. Gladstone's favorite author was Homer. The present Lord Derby said recently of his father that "the only thing he knew perfectly was Homer, and even at that Mr. Gladstone beat him." Mr. Bright's favorite author is Milton, a copy of which he always carries in his pocket. Mr. Lowe, in his great speedhes on the reform debates of 1868, laid Virgil and Ovid heavily under contribution.

New Publications.

For Sunday Schools! For Temperance!

THE BEST NEW BOOKS.

TEMPERANCE JEWELS, by J. H. TENNEY and Rev. E. A. HOFFMAN, has every qualification to be a standard Temperance Song Book. Choice hymns and songs, and music in excellent taste, are found throughout. There are nearly a hundred songs. Specimen copies mailed for 35 cts. $3.60 per dozen.

(The older and larger book, HULL'S TEMPERANCE GLEE BOOK, (40 cts.) retains its great popularity.

White Robes! The purest sweetest and best of Sunday School Song Books. Mailed for 30 cents. $3.00 per dozen. White Robes!

TEMPERANCE LIGHT. By G. C. HUGO, and M. E. SERVOSS. Is a perfect "electric" light for radiance and beauty. Has 32 of the very best songs by 27 of the very best authors, and sells for $10 per hundred. Mailed for 12 cts.

New High School Song Book. THE WELCOME CHORUS, is nearly through the press.

OLIVER DITSON & CO., Boston.
C. H. Ditson & Co., 843 Broadway, New York. J. E. Ditson & Co. 1228 Chestnut St., Phila.

WELLS, RICHARDSON & CO., Proprietors, Burlington, Vt.
USE ONLY THIS THE FIRST AND THE BEST

Humorous.

NO SWEETS TO THE SWEET.—A New Jersey colored man, whose wife had left, said: "She would come back if I frowed her some sugar, but I ain't frowing no sugar, do you heah?"

"A PLACE for everything, and everything in its place." A man at Yale nails his slippers on the wall four feet up, and then all he has to do of an evening is to wheel up his easy chair in front of them and pull out his meerschaum.

THE editor of a newspaper that has adopted phonetic spelling, in a measure, received a postal card from an old subscriber in the country, which read as follows: "I hev tuk your paper for leven years, but if you kant spel enny better than you hev been doing for the las to munths you may jes stoppit."

THE teacher of a Sunday-school class in one of the East Bridgeport churches gave the little ones a description of the flood, and when she had finished inquired if any one could tell who went into the ark with the animals. A perfect chorus of hands flew up in response. Turning to a little fellow, the teacher said, "Tell me who went into the ark with the animals?" "P. T. Barnum," promptly replied the youngster. The lesson closed.

Avoidance of Malaria.

Health may be preserved as well as recovered in malarial stricken districts, if a measure which experience suggests, and the value of which the most positive evidence confirms, be adopted. This is to add stamina to the physique and vigor to the constitution with Hostetter's Bitters. This leading and time-honored medicine, which has met with emphatic approval in professional quarters, has for over one-quarter of a century been the regnant anti-febrile specific of the United States. Nor is it scarcely less esteemed in the tropics, where the torrid heat exhales from dank, decaying vegetation the air-poison which produces the worst forms of fever and ague and bilious remittent. Not only is it a specific for these maladies, but a standard remedy for dyspepsia, constipation, biliousness, rheumatism and debilitating maladies. Emigrants to the far west find it their surest medicinal safeguard.

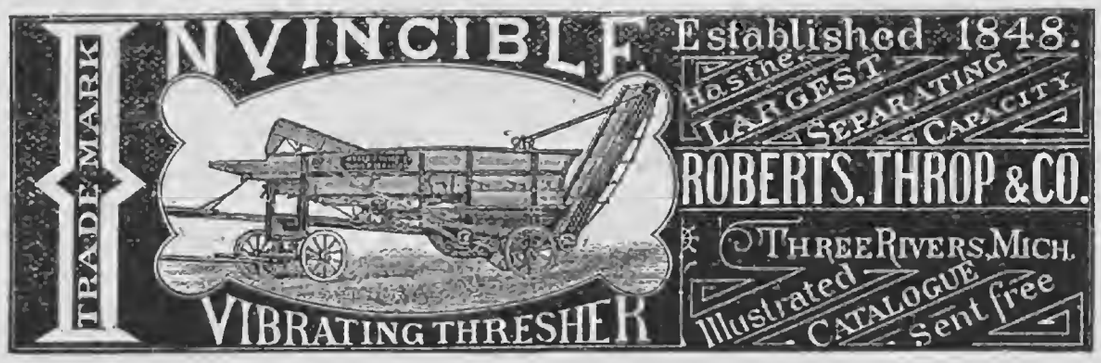
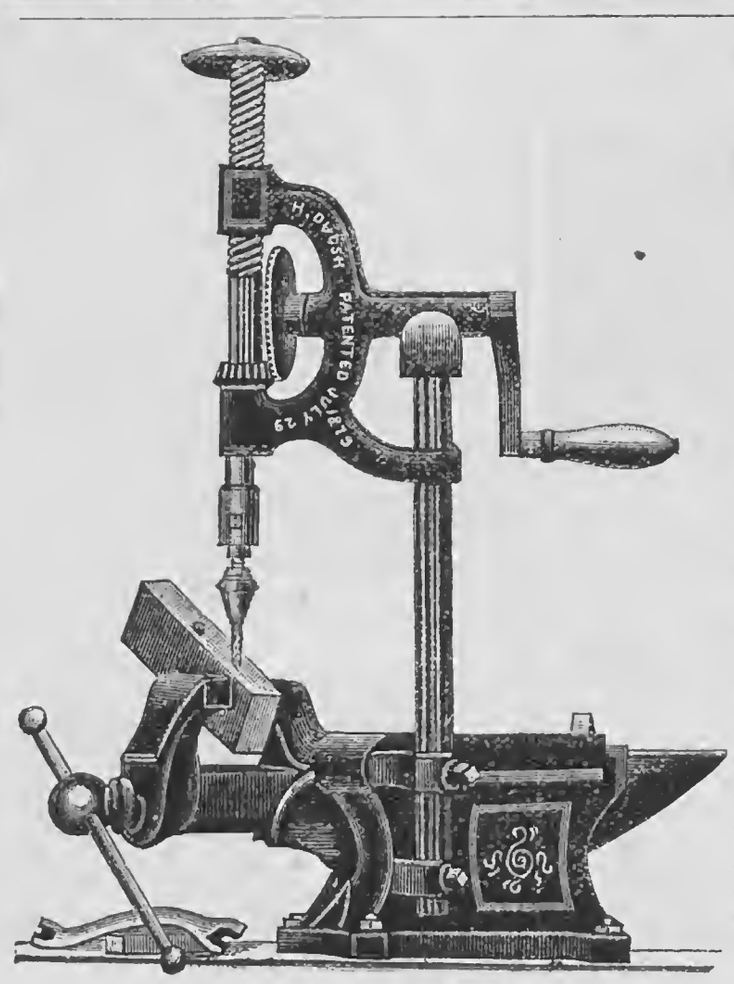
M. WILLIAMS,
St. Johnsville, Montgomery Co., N. Y.





Anvil, Vise & Drill.

This machine was first made by a practical mechanic for his own use, and to meet a want which nothing in the market would fill. It was so highly regarded by all who saw it that he was minded to get it patented and manufactured for the market. When it was brought to our attention we saw at once its great utility, and bought the exclusive right for the whole United States. We believe it will come into general use as fast as its merits become known. The anvil face is 4x8 in. and height 6 in. Width of vise jaw 3½ in.; steel drill press, with adjustable chuck to hold ½ in. drills, and all smaller sizes. The article to be drilled can be held firmly in the vise, so as to be drilled *at any angle*, or if it is too large for the vise, it can be drilled on the anvil. The drill may be removed when not in use. Price for the whole $18. Weight 80 pounds. The vise and anvil are complete without the drill, and are sold for $10; weight 60 pounds. For all jobbing shops it is worth much more than it costs. Farmers can do with it many jobs which otherwise would have to be sent to the shops. All hardware dealers who do not keep them in stock will furnish them on demand, or we will furnish them on receipt of price.

MINNESOTA CHIEF!

The Best Thresher on Wheels!

It is not a vibrator, neither is it an apron machine, but the best points of both are combined, with new and original features of its own. It is wonderfully simple in its arrangement. It is admirably perfect in its threshing and separating qualities. It saves all the grain, and cleans it ready for market. It runs easily, is constructed durably, is finished beautifully, is the most economical, least expensive, and altogether the most satisfactory machine in the market.

It will handle wet grain as well as dry. In threshing Flax and Timothy it has no equal, threshing and cleaning both as well, and nearly as rapidly, as wheat, and requires no change except the sieves. It has more square feet of separating and cleaning surface than any other machine made, and cannot be overloaded. It is both over and under blast at the same time.

Our clover hulling attachment is a new and very desirable feature. It does the business more rapidly and better than an exclusively clover hulling machine.

Separators of the various sizes fitted for Steam or Horse-Power, as desired.

An Improved Pitts Power, an Improved Woodbury Power, and the Elward Equalizing Power, all mounted on four wheels, are manufactured by us, and are not surpassed by any in the market.

For Price-Lists and Circulars, address the manu'frs.

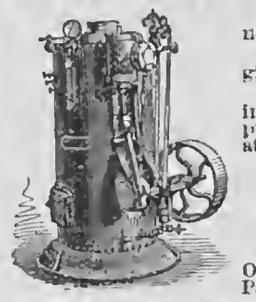
'THOMAS' PORTABLE ENGINE.

This is the lightest, most durable and economical Farm Engine made. It is from 1000 to 1500 lbs. lighter than other engines of the same power. It is warranted in every respect, and on account of improved method of utilizing steam is more economical in fuel and water. It is made especially to meet the wants long felt by Threshermen Farmers, &c., for an engine that would combine lightness with absolute strength and durability. Made in three sizes. Circulars giving full description sent on application to J. H. THOMAS & SONS, Manufacturers Springfield, O.

Be sure and mention this paper.

BOOKWALTER ENGINE



Compact, substantial, economical and easily managed.

Guaranteed to work well and give full power claimed.

Engine and boiler complete, including governor, feed-pump, drive-pulley, etc., etc. at the low price of

Field Crops.

THE ELDORADO WHEAT.

LAST winter a subscriber to the RURAL, Mr. H. N. Likely, of Fremont Co., Colorado, sent us a head of wheat for name, which on account of its peculiar shape, and the reports of the marvelous productiveness of the variety, we have here reproduced for the benefit of RURAL readers. The sender describes it as a spring variety which in that locality is known as Seven-headed wheat, and states that it requires no extra cultivation to raise from fifty to seventy-five bushels per acre, and he has never known it to be troubled with insects, rust or smut. The story there goes that a farmer in that neighborhood found a single plant growing on his land some few years ago, from which he saved the seed and from the product supplied his neighbors.

Professor A. E. Blount, of the State Agricultural College of Colorado, writes us concerning it as follows:—

The name is Eldorado—some call it "Seven-headed wheat" and Egyptian wheat." The Egyptian has seven heads and is the same as Seven-headed. The Eldorado has as many as 15 heads from and on one rachis, and the peduncle is much stiffer and stronger. The largest yield I know of is 90 bushel per acre in this valley. Last year I sowed on a plot, 14½ feet. wide by 275 long, 14 ozs. of very inferior, cracked grain. Only about a third of it came up. I cut it on July 24 with a sickle and thrashed out 127½ pounds, or 2.1-8 bushels—at the rate of a little over 90 bushels per acre. I am not able to speak concerning the flour it would make. The grain is very white, but the white is not uniform. The gluten and starch "set" somehow in the dough state of its ripening, which leaves the face of the grain white while other parts of it are transparent. The Egyptian wheat has the finer and more handsome grain; but it is not nearly as prolific as the Eldorado.

SORGHUM HALEPENSE—AGAIN.

M. B. BATEHAM.

FROM what the writer of this note has seen of the much-praised Sorghum halepense in the South, we caution our readers against introducing it upon their farms in any part of the country where the roots are hardy enough to endure the climate.

The above appeared among the editorial Brevities in the RURAL of May 8. I wish the editor had stated what new objections, if any, he had discovered in the South. [The chief objections made against this fodder plant are mentioned in RURAL for May 29.—EDS.] The difficulty of eradicating it from the soil where it once has possession, would have no serious weight with our Southwestern farmers where land is cheap, and they would prefer to have no trouble in re-planting. The next objection is the coarseness of the stems and their woody nature if not cut early and often during the season, but this should, of course, be avoided by frequent and timely hoeing. I have no sort of interest in the dissemination of this grass, but having recommended it to the stock farmers of the Southwest, especially dairy farmers, as a possible means of lessening the disastrous effects of the summer droughts, I should like to know if there are good reasons for recalling that advice.

I have received letters the past year from several farmers of the South, who have used this grass for quite a number of years, and give it the very highest commendations; and as far as my reading has gone, the weight of testimony is decidedly in its favor. One year ago I sent a small handful of the roots to the noted dairy farmer and cheese and butter manufacturer, W. B. Straight of Hudson, Ohio, for him to test, with myself, the ability of the plant to endure the winters of Ohio. He was so well pleased with its appearance during the drought of last summer and its perfect resistance of the winter—though this was too mild to afford a proper test—that he has determined to plant several acres of it the coming season.

It may be remarked here that Mr. Straight is the most active partner of the firm of S. Straight and Son who are the owners of a dozen or more cheese factories and creamery establishments in Summit Co., Ohio, the products of which are all brought daily for curing, packing, etc., to their great central depot at Hudson. Mr. S. is also the owner and manager of a farm of 150 acres with a dairy of twenty choice cows on which he has for several years been experimenting with the soiling system of feeding, in the hope that he may be able to teach the dairy farmers of the county better systems of feeding than they have hitherto practiced; so that it will be inferred that his name carries much weight among the more intelligent class of such farmers. The following is an extract from a recent letter to me on the subject of grasses for withstanding drought.

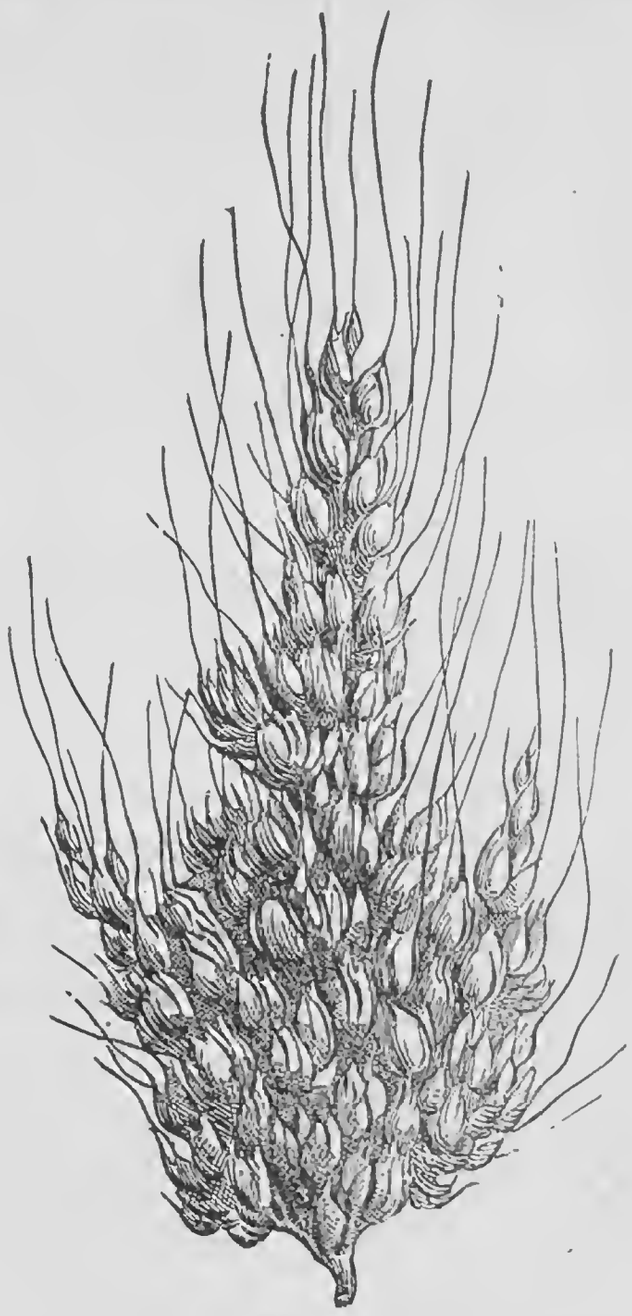
"I left the roots of that Green Valley or Johnson grass you sent me last spring (which I put in my garden) in the ground all winter without any protection, and I see that it is growing again from the roots and has spread considerably. Last winter was mild and the roots might not survive such treatment through a cold winter. I should, however, if raising it, mulch the ground with coarse straw manure in the fall, and perhaps ridge the land with the plow, which would not only protect from frost but contribute richness. I am under the impression that it will prove to be a great addition to feed for this section in years of drought, if the farmers would be willing to perform the labor and have the patience to wait for it. We must, if possible, secure and cultivate forage plants and grasses that will withstand dry weather such as we are now having. Even clover is now (May 19) commencing to head, and orchard grass, except in very rich ground, is not doing well. We need forage plants and grasses that *root deep*, sending their roots down after moisture instead of those, like timothy and such grasses, whose roots lie near the surface to perish in time of drought.

I am of the opinion that as our forests are cleared off, the evaporation will be greater, and it will be more necessary to provide deep-rooting plants instead of shallow-rooting ones.

FORAGE GRASSES.

PROFESSOR W. J. BEAL.

WE often hear of the nutritious native grasses which abound on the Western prairies of the United States. In many places the climate is very dry. The grasses grow during the coolest or the wettest portions of the year, and remain partially cured just where they stand, retaining their nutritive qualities. There is no rain to wash out the virtue of the leaves and stems.



ELDORADO WHEAT.—From Life.—Fig. 207.

INDIAN-GRASS—Andropogon furcatus. — In many portions of the dry prairies, the prevailing grass is Andropogon furcatus. Of this there are several local names one of which is broom-grass, but there is no one good common name by which the grass is known. It is common in dry, sterile soils in the Northern and Southern States, especially in open places, along banks, on the dry borders of marshes and in oak-openings. It grows from four to six or more feet in hight. There are usually three to five spikes together, which are well represented in the illustration. The flowers appear late in the season—in September in the Northern States. The stems are stout, hard, and woody; the leaves tough. It is well adapted to a dry climate. It is one of the principal native grasses for hay in Kansas, Nebraska, and the neighboring States. According to one author, who has studied the subject, 28 per cent. of the bulk of the prairie grasses are composed of this species.

BROOM GRASS, BROOM SEDGE.—Andropogon scoparius—is another grass of the same species common in the same places as the last. The stems are finer and branching; the leaves are finer. The grass grows from one to three feet high. Both of these Andropogons grow in bunches or tufts. The leaves and stems of both are often purplish. The latter is the finer of the two as a pasture grass, but produces less feed. About 15 per cent. of the bulk of prairie grass, according to the report above mentioned, are composed of this species. While young and just starting the tufts make good feed, but after the stems appear it is much less palatable to cattle and all kinds of stock. The Agricultural Report for 1878 quotes Mr. C. Mohr, of Mobile, as saying this is "one of our most common grasses, covering old fields and fence rows, and extensively growing in the dry, sandy soil of the pine woods. Much despised as this grass is as a troublesome, unsightly weed, it has its good qualities which entitle it to a more charitable consideration. In the dry pine woods it contributes, while green and tender, a large share to the sustenance of the stock." There are several other species less abundant than these, but much like them in quality or mode of growth. They are useful to pioneers, but their place should soon be supplied by grasses or other forage plants of better quality. No doubt these could be improved in time by judicious selection of seeds and careful cultivation for some generations.

Pomological.

THE YELLOWS IN PEACH TREES.

JAMES HOGG.

LATELY, in looking over some old farm and garden magazines, I found the disease known as the "Yellows" which is so injurious to peach trees, discussed by many writers, all of whom failed to determine what it is, or how it originated, and our most expert pomologists of a later day are equally puzzled as to its origin, and baffled in their efforts to find a cure for it. So far as I am aware, none of our botanists who have made a specialty of vegetable physiology and pathology, have turned their attention to it. This is unfortunate, for if they were to devote themselves to the elucidation of these subjects, the results of their labors would be of great value to cultivators, of nearly, if not of quite, as much importance as the study of the kindred sciences in animal life, has in the hands of the veterinary surgeon been to the breeder and grazier. When reading the description of the symptoms of the disease, the accounts of its virulence and the proofs of its contagiousness, I was struck with the analogy it bore to some diseases incident to animal life. I propose to give some suggestions on the subject, hoping that the attention of some of our botanists, especially of those who have had a medical education, may be drawn to the subject.

The first appearance of this disease among peach trees was in 1797 in the neighborhood of Philadelphia, whence it spread rapidly through Delaware, New Jersey, Maryland, New York

and the New England States, and then worked its way westward, almost totally destroying the orchards then existing. The disease is characterized by two peculiar symptoms:—the premature ripening of the fruit; and the growth of very slender shoots from the body or large limbs of the tree. The first symptom is always manifest, if the tree is in fruit, but all the fruit is seldom affected the first season, the disease only showing itself on one or two of the larger branches, the fruit on which ripens from two to four weeks before its proper time. The fruit is insipid or slightly astringent in taste and more or less purple in color, or having purple blotches which frequently reach to the stone, producing purple specks or lines throughout the pulp. The fruit diminishes in size for two or three years, when the tree dies, every twig and branch and even the roots being thoroughly diseased.

The second symptom generally, but not always, manifests itself the first season of the disease. The stems of the slender shoots vary in size from that of the smallest to that of the largest knitting needle. The leaves are thickly set on these stems, are very narrow and small, and quite different from those of the natural size. In color they vary from a reddish hue to yellow or white. The shoots come out in clusters, sometimes singly, most commonly on the body near the root, on the large limbs and occasionally near the extremities of the branches. These are well marked signs of the disease, and are not to be attributed to the worm or any other malady to which the tree is subject.

So poisonous and contagious is the disease, that a knife used in pruning a diseased tree will communicate the malady to a healthy tree, if it is afterwards pruned with it. Seedlings raised from the stones of diseased trees will develop it, even when budded from healthy ones. Buds from diseased trees inserted into healthy stocks, either of the peach or plum, will disease the stock; and the roots are as contagious as the rest of the tree, for if fresh, healthy trees are planted where the diseased trees have stood, they will become diseased. Some even say that the disease can be communicated by the branches of such trees coming in contact with those of a healthy tree.

No cause has yet been discovered for the disease. It attacks trees grown in all kinds of soil, perhaps fewer in rich, heavy soils than in light sandy soils. It is exclusively an American disease, being unknown in Europe. Mr. William Prince of the old Flushing nurseries, conjectured that the contagion was carried from one tree to another by the pollen distributed by the winds or by bees, and this theory is the one generally accepted by pomologists. If it is correct—and I think it is—then it probably is a disease of the procreative organs of the flower, similar in character to syphilitic and scrofulous poison in animals.

This may be a strange opinion to advance, yet I think it may be found to have some foundation, if we consider the analogies between vegetable and animal life, which modern investigation has brought to light. It is known that many plants have a temperature higher than that of the atmosphere surrounding them, and that some flowers, especially at the time when fertilization takes place, show this difference in a very marked degree, in some the difference being over 50 degrees We also know that when the proper time for fertilization has arrived, there is generally, if not always, an exudation from the stigmas. We have in Diatoms—minute vegetable organizations—plants which have the power of incrusting themselves with shells like oysters; in the antheridia of Cryptogams we have curious filamentary bodies called phytozoa, which are closely analagous to the spermatozoas found in animal life. Lately, it has been announced that, when we get down to the lowest, microscopic protoplasm cells, they are all of the same character and develop into vegetable or animal organisms indifferently. We have so-called carnivorous plants which appear to require animal food to attain their full development; and some microscopists claim to have found rudimentary nerves in the leaves of some plants. We well know that plants sleep at night and require rest. The various modes of reproduction among plants from the lowest to the highest classes, have their parallels both in principle and in plan in the corresponding classes of animal life. Respiration and perspiration are alike common to both, and in many other points there are similar analogies.

The colored blotches, the general *malaise* and enfeeblement of the tree, and its virulent contagiousness through the organs of reproduction, are certainly suggestive of a similarity to the diseases I have mentioned, modified, of course, by the difference in organism. The late Dr F. I. Bumstead, who was the Ricord or the Diday of this country in the treatment of the disease first mentioned above, says in his voluminous work on that subject, that a diseased father may infect an ovum in the womb of a healthy mother, who may herself be contaminated through the fœtal circulation. This he states to be an established fact, and that it is admitted by Ricord, Diday, Depaul, Acton, Harvey, Tyler Smith and Balfour, all authoritative writers upon this specialty, although the contamination of the mother through the fœtus is not always a necessary consequence of a contaminated ovum. Dr. Bumstead was also a botanist of large attainments, and in exchanging views with him on this subject, he saw no reason why some of the diseases of plants might not be communicated to healthy plants through the pollen of those which are diseased.

BROOM SEDGE.—ANDROPOGON SCOPARIUS.—FIG. 208.—(SEE FIRST PAGE.)

It will not do to say, with unproven dogmatic assertion, that the Yellows is caused by changes in climate and in atmospheric condition, for it does not attack all the trees in an orchard simultaneously, but spreads gradually from one or two diseased trees; neither is it due to injuries from insects, for none are found upon them that could produce any such results. Over-production, to which the peach tree is very prone, may have something to do with it, by enfeebling it and destroying or injuring its powers of reproduction. In that case, thinning out the fruit would be a preventive, for the energies of a plant are devoted to the production of the seeds and are readily exhausted by over-production. No cure, or mode of cultivation that will effect one is yet known, so that the only mode of staying its spread, is to take out the diseased trees, root and branch, and burn them as soon as the symptoms show themselves.

I am strongly inclined to the belief that other diseases among fruit trees are analagous to those found in animal life. The cracking of the fruit in many varieties of pears, the pear blight, the black-knot in plums and cherries, and such diseases as gangrene in some plants, I think are of this character. They are commonly attributed to insects or to atmospheric influences, or to some mechanical action of light or heat upon the juices of the trees; but after years of reading and observation I can only arrive at a Scotch verdict of "not proven." I think that the line of investigation should take another direction than that which has been hitherto pursued, and that the obscure diseases of vegetable life, of which we know so little, might have some light thrown upon them, were they studied by those who have a knowledge of the diseases incident to animal life. It is certainly an interesting and important field for investigation, and I commend it to our Agricultural Department and Agricultural Colleges.

Timber or Fruit—Which?

Many amateurs and too many regular nurserymen have an idea that thrifty, rapid growth is a benefit in growing young fruit trees. The young plants are placed in very rich soil, highly cultivated and forced along at the most rapid rate. These men are only growing timber, and very brash stuff at that; for, to have fruit trees to bear and mature good fruit and to be also long-lived, we must not force matters at all. The soundest and most valuable timber grows the most slowly, and is never found in wet soils which would induce late growth, and consequently imperfect ripening of the season's growth.

In growing fruit trees, if it is found that the soil is too rich, or too wet, resort must be had to transplanting, or root-pruning. This may be accomplished on a small scale by cutting off all roots outside of a circle, say, of three feet from the trunk with a sharp spade; but if there are too many, use the plow to cut the roots, throwing a furrow from the rows, to be turned back again before winter sets in.

To insure heavy crops of sound fruit, plenty of roots and perfectly ripened wood is required, but the roots should be near at home—near the trunk while the tree is young. Older trees which bear must be allowed to spread their roots, unless the soil close to the tree is enriched annually. This is the best plan, as wandering roots work slowly, and are apt to travel so far from the trunk as to get out from the shelter from the hot sun, which the foliage above would give them.

To get a tree into bearing early, where the life of the tree is not an object, it is only necessary in June to root-prune quite close to the tree. This is an attack upon the life of the tree, and at once timber growth is stopped, and fruit buds form that season for next year. Forcing fruit trees in a nursery, to make them look well, then selling them to a green-horn, who follows the same plan to produce fruit, is killing the goose to get two golden eggs.

S. RUFUS MASON.

Dodge Co., Neb.

Horticultural.

TOMATO—LOGICAL.

THIS fruit (it is certainly more like a fruit than a vegetable) is susceptible of vast improvement by a moderate degree of attention. It is so very luxuriant in foliage, and so prolific of fruit, that it overbears, and is sure to produce large quantities of inferior tomatoes—inferior in size, shape, color and flavor. There is no garden plant which will respond more quickly to proper care and fertilizers, and none that will so amply repay the amateur or professional gardener for studying its necessities.

The seed in the hot-bed must be forced along rapidly, and the plant kept stocky by frequent root-pruning after the second pair of leaves appear. It must be transplanted twice to cooler beds to induce roots and stockiness; must be set out in the ground only after all possibility of cool nights is over; then left to itself (except thorough hoeing and weeding) until flowering begins.

Supposing that the plants are now well grown, we will begin to stimulate and repress. Water every third day with good, rich liquid manure all through the season. This will produce an enormous growth of new shoots and close foliage, and enable the plant to bear well. Nip off three fourths of these shoots, leaving those which bear the most flower buds; tie the long, heavy stems up to laths stuck into the ground, exposing the fruit to the full sun; mulch heavily all round the main stem for three feet, and thin out the fruit where it grows too closely.

This thinning out requires an amount of moral courage which few amateurs possess. The fear of not having enough tomatoes is a dreadful feeling, but when we once learn that a few splendid large fruits are infinitely better in every way than a great many small, ill-shapen ones, we learn to look upon the excess as enemies to the plant, exactly as we view the great green worms, and then our courage comes.

Now for seed for next season!! More moral courage, and a repression of that curious longing for the first fruits, which all amateurs experience, must govern us, or our seed for next year will produce later and weaker plants. Select the earliest fine tomato; *cut* off every other one from the same cluster; tie loosely around its stem a white string as a mark, and grow that particular fruit as if all your future enjoyment of tomatoes depended upon it—as it really does. When dead-ripe on the vine, pick it and at once wash out the seeds, and dry them in the shade. Tomatoes are said by some to be very unwholesome food, but I have never yet found any ill effects from them, except when there was none to be had; then they do distrub my system terribly.

S. R. M.

RASPBERRY BLIGHT.

THE New Jersey Experiment Station received some time ago from E. Williams, Esq., of Montclair, Essex Co., N J., specimens of raspberry canes which had been killed by some cause. Mr. Williams says that the disease prevails over a wide extent of country, that it has entirely ruined some plantations and its injurious effects are experienced in many others. The specimens were submitted by the Station to examination by the Camden Microscopical Society and the following report has been received from them:

"The canes were found to have their epidermis ruptured in many places, the result of a growth of a fungus which had attacked them either during the winter or in the early spring months. In order to determine the species, one of the canes was submitted to J. B. Ellis, Newfield, N. J., a reliable authority on microscopic fungi. His reply is as follows:

'On receiving the stems of Rubus, I went and looked at my red raspberries which were all killed to the ground last winter and I found the canes near the ground had the bark ruptured like your specimens. The trouble with my canes was the red rust (Uredo) which took the leaves off, the middle of last summer, thus enfeebling them so that they died before the middle of January. There was a fungus on one of your specimens, an Asteroma, perhaps, or the mycelium of some fungus, but I do not think this *caused* the trouble. If, as in my case, the Uredo was the cause, the prevention of this would be a remedy, to effect which enrich the ground and cultivate well to cause a strong growth, and if necessary further, apply lime or sulphur to the affected leaves.'

In this instance, as in many others, we may see that a weakened or diseased condition offers the opportunity for a fungoid attack, showing by analogy the intimate relations between vegetable and animal life. When our systems are reduced from their normal condition by over-exertion, or by weakened vitality, our bodies are more liable to disease than if the normal condition were maintained If the growing plant is kept healthy and vigorous, fungoid attacks detrimental to its existence are not to be expected, as the conditions are not offered for them. This healthy condition of vegetable growth can best be had by cultivation, and a supply of good manure in proper season. And here must be sought the remedy in the case of the Rubus blight.

"ISAAC C. MARTINDALE, Chairman."

"The best fertilizers for promoting the healthy growth of the raspberry," says George H Cook, Director of the Experiment Station, "will probably be barnyard manure with from 200 to 400 pounds of muriate or sulphate of potash per acre. In case barnyard manures cannot be got, the potash manures may be used alone broadcast, or they may be composted with muck or loam. In any case, however, care must be taken to have the manures well mixed with the soil, so that they may not injure the plants."

PROPAGATING STRAWBERRIES.—When the last berries are picked, the plot should be thoroughly weeded, and if new plants are not desired, all runners should be cut off To obtain extra-strong young plants, plunge, in July, four inch pots in the ground to the rim, fill these with soil, and let the first joint of each strong runner take root in a pot, and pinch off the tip of the runner. Such plants can be transplanted with ball and will be much stronger from the start than those produced by the ordinary method of propagation

Farm Topics

NOTES FROM THE RURAL GROUNDS.

Japanese Judas-Tree.—Cercis Japonica.

We are indebted to Japan for many beautiful things, some of which, though introduced several years, are still rare, and not half as well known as they should be. One of the most beautiful is the Cercis Japonica, a veritable dwarf among dwarf trees, our own specimen, about seven years old, being less than five feet high. It blooms in early spring, before the leaves appear, and all the wood, except last year's growth, is literally covered with its beautiful, pea-shaped flowers. Its picturesque form, whether in flower or leaf, would delight an artist. Its proper place is as a specimen on the lawn some five or six feet from the edge of a walk. It is one of the few trees entirely free from insects. Our own specimen is now for the first time abundantly set with fruit; but whether it will reproduce itself from seed we do not know. It is distinct from C. Siliquastrum and our native species, and is found in few catalogues, but is worth a great deal of trouble to procure.

Glaucous Fescue Grass.—Festuca Glauca.

One of the prettiest objects in our herbaceous border just now (and at all times), is the Festuca glauca, perhaps the most beautiful of all dwarf grasses. Its graceful form and unique color are simply charming. It is not a new plant, but among us it is yet so rare as to be seldom seen. It is not only beautiful, but very useful and thoroughly hardy. We use it not only in the border, but in the greenhouse during the winter. It seems never to be out of place. In the sun or in the shade; in the border or in the shrubbery; as a plant for filling in or placing along the edge of the table in the greenhouse, room, or conservatory; in a hanging basket or on the rim of a vase, it is always beautiful and seems to adapt itself to all places alike. We would on no account be without it.

Out of Place.

People who travel on the New Haven R. R., have their attention arrested at Woodlawn Cemetery by a huge anchor laid diagonally on the slope of the lawn; not an anchor of iron, but one of "ribbon lines." There are doubtless those who admire this, but we do not. We have no fault to find with its mechanical execution—and it is purely mechanical. The colors are gay and striking, and serve to arrest the attention, which was, no doubt, the object of those who made it. We object to it, however, on the score of propriety and good taste. From this point of view it is wretchedly bad, and altogether out of place in Woodlawn Cemetery, the natural features and furnishings of which are very beautiful. Whatever may be thought of "carpeting" and "ribbon lines" elsewhere, they are altogether out of place in a cemetery. There, of all places, we should have Nature in her pure and simple forms of which flowers constitute a most attractive feature. We should not be disappointed if the dead rose out of their graves some night, and pitched that anchor into the Bronx River.

Lygodium scandens hardy.

It will interest all plant growers to learn that the Japanese Climbing Fern (Lygodium scandens) proved to be hardy last winter. The spores from an old plant came up freely all over the house, and some of the young plants were, last year, put in a slightly sheltered border, prepared for hardy Lady-slippers—Cypripediums. The plants are now growing freely. The past winter, it is true, was a mild one; but it was very changeable, and more trying to plants than a greater degree of continuous cold. Our thermometer, notwithstanding, went 5° below zero. We have put out other plants in various exposures for further trial. Plants for trial should be put in the ground early, to enable them to become well established before winter.

Fruits.

Late Emerald and Early Ruby gooseberries have again mildewed. We now give these up as useless in these grounds. Porter and Downing are, as usual, crowded with fruit.

Clapp's Favorite Pear, at six years old from the nursery, is 12 feet high and is bearing its second crop. It is a fine grower.

Grapes.—Wilder, Goethe, Salem (Rogers's) are full of flowers—so are Eldorado and Secretary (Ricketts's); also Concord and Delaware. Victoria and Lexington (Miner's Concord Seedlings) are in bloom for the first time. Florence (Hubbard) is in bloom, though this is but its second year. Lady Washington bears two racemes of flowers. Newburg and Highland, also Mr. Ricketts's, are blooming for the first time. Several of our own seedlings, four years old, are also in bloom for the first time.

Peaches are laden with fruit, and the fruit is laden with rose-bugs which are fast destroying them. We do not remember ever before to have seen so many rose-bugs. Late Tuckahoe, Jewell's Late White, Honeywell, Steadly and Leatherbury are all bearing abundantly—most of them for the first, several for the second year. We received them three years ago from Messrs. A. Hance & Son for trial.

Bassett's American Plum is again wreathed with fruit, which thus far we have found neither curculio-proof nor of any value for eating. The latter, however, was never claimed for this little plum.

Blackberries were never more heavily set. We shall have several new sorts to report upon.

Raspberries.—Pride-of-the-Hudson fails entirely again. We shall not get a berry. It was unfortunate for Mr. Roe that this berry ever stood a winter on the Hudson, for it has disappointed many persons that have reported to us, and perhaps thousands who have not. Gregg is well set with its close clusters. Montclair was not injured by winter and is full of sets.

Erwood's Everbearing, is very hardy, too, and full of sets. Delaware was killed back. Cuthbert, though not so prolific this season as Montclair and one or two others, is very vigorous, and has not been injured by the past season in the least. Brandywine, Highland Hardy, are also in fine condition. Henrietta and Belle de Fontenay (probably the same) have not been harmed. The old kinds Naomi (Franconia) and Hornet will not fruit this year. They rarely ever do, being too tender for our winters.

Quinces, though they bloomed profusely and the season seemed highly favorable for the setting of fruit, will bear a small crop.

"Champion," the new seedling of the Messrs. Hale, though planted in the spring of last year, bears two quinces. The tree is scarcely three feet high.

FINGER-SPIKED INDIAN GRASS.—ANDROPOGON FURCATUS.—FIG. 209.—(SEE FIRST PAGE.)

WESTERN FARMING.—VII.

Drought No 2.

W. I. CHAMBERLAIN.

I closed my last with the question whether concerted action in agriculture could so change the physical condition of any region subject to droughts, as to render them less frequent and severe. I think it can. The reverse of this has often been proved true. I mean that wide-spread mismanagement and neglect have often brought on or increased droughts. The destruction of forests notoriously leads to such results. Neglect of proper tillage has done the same. Palestine was once a land "flowing with milk and honey." Now, robbed of its forests and without proper cultivation, its hills once green with vineyards and olives are covered only with stunted shrubs, and the land o longer receives both "the early and the later rains." The destruction of the forests in parts of Ohio to furnish wood, timbers and railway ties, has since my remembrance greatly increased the frequency and severity of our droughts. No doubt their re-planting would have the reverse effect, if they were largely planted and given time to grow. But this requires much faith and patience, great expense and loss of use of land, the delay of many, many years, and a concert of action hard to secure. Are there other and shorter methods for the dairy regions of Northern Ohio? Take the recent history of Kansas, so well known to all, as a help in answering this question. Droughts are still somewhat frequent and severe, especially in Western Kansas, but by no means so frequent or so severe as even a few years ago. The rain area has steadily *followed the area of actual increased tillage* westward, and both have gradually but surely and largely encroached on the area once rainless in summer. Thousands of square miles are now fertile and well watered fields, that once stood on our maps within the boundaries of "The Great American Desert." All who are familiar with the growth of Kansas agriculture know this to be the fact.

Now what is the cause of this? Simply a change in the physical conditions of the country *caused by the hand of man.* Is this atheistic? I think not. God "sends his rain upon the evil and the good,' but he sends it in conformity to certain meteorolgical laws, known in part at least.

By observing carefully these laws, and making certain physical changes, we may "move the arm that moves the world." Not by simple prayer that *our* fields should be watered by a species of favoritism, but by complying with the laws by which He works. And as an earthly monarch is more honored and beloved if he rewards conduct according to established principles of justice, than if he rules by unreasoning favoritism, so, it seems to me, a God who thus rules is more worthy of our honor and love than one who rules in the way of special favoritism. At all events, the God who rules the universe seems to rule in the first of these ways. Conduct seems to be rewarded or punished in its own plane. For instance, the farmer who is agriculturally wise and skillful, is rewarded by agricultural success, even though he be a moral monster, while even the veriest saint in temper and moral conduct, if he be agriculturally lax or even unskillful, shall suffer agriculturally therefor. But I am in danger of forgetting that this is not a theological discussion. I commend this line of thought to the clergy. "Whatsoever a man soweth that shall he also reap" is a good text to preach from.

Now, in Kansas the reasons of the change were obvious. Generations of buffaloes in pasturing its prairies had tramped "The Great American Desert" like a floor. The rains of even the rainy season fell on such earth almost as on a roof, and ran off in torrents down the streams, leaving a dry, compact soil and subsoil. From this soil and subsoil there was little possibility of evaporation in summer, and still less to invite the precipitation of moisture upon it. In fact in summer the surface became so dried and heated by the winds and the heat of the sun that the fall of rain upon it was well-nigh impossible. It does not rain upon Sahara even though clouds full of moisture try to pass over it, wafted by the winds. The heat from beneath dissipates those clouds into invisible vapor. The mixture of cooler air, usually from beneath, with warm moist air is necessary to precipitate moisture in the form of rain or even dew. Every child knows how dew forms even in day-time on the outside of a pitcher of cold water. This cold surface robs the warmer surrounding atmosphere of a portion of its moisture, and the more moisture there is in the air, and the greater the difference between the temperature of the air and of the pitcher, the more will "the pitcher leak" as children express it.

Now it happens in a similar though not in the same way that the cooler surfaces of lakes, ponds, swamps, forests and even *cultivated fields* produce rain. Such surfaces increase the moisture in the adjacent atmosphere, and make it more likely that cool currents from below shall mix with the moist, warm atmosphere above and produce condensation of vapor in the atmosphere, and precipitation in form of rain. Where the physical conditions of a region are such as constantly to send upward cooler currents into an atmosphere constantly fully charged with moisture, rains are almost constant, and often immense; cool currents are heavier and hence remain below, unless forced upward by some cause. But often a range of hills or mountains will send upward cool trade winds and seem to wring out all the moisture in the atmosphere. Sometimes the conditions are reversed, and warm, moist monsoon winds, rising along the mountain sides, meet a cooler atmosphere and precipitate all their own moisture. Such is often the case in the tropics, for example, at Cherrapongee, India, where the rainfall from this cause is absolutely immense, being 610.3 inches instead of 30 or 40 as in most parts of this country.

The point I wish to make is this: God, indeed, as I have already quoted, "sends His rain upon the evil and the good." But he does so because he sends it according to definite laws already understood, in part at least. One of His laws, briefly stated in Scripture as a moral truth, is not less surely a physical one. It is this: "He that watereth shall be watered also himself;" or, in other Scripture language, "To him that hath shall be given." Nor is there injustice in the law, but wisdom and beneficence. It is the law of accumulation and reward. At all events, it obviously *is the law*, both moral and physical, and wisdom tells us to shape our course accordingly. In regard to rainfall the law seems to be that if any region has its soil in condition to receive and retain in proper absorption a large part of previous rainfalls, it is *more likely* to get future rainfalls. The Kansas soil is, by cultivation, fast coming into that condition, and its farmers are fast receiving their reward in more frequent and abundant summer showers. Cannot we do the same thing on the "Western Reserve" of Ohio? Generations of cows have tramped our pastures and even our meadows till they have become hard and arid in summer time. They often become as hot and dry almost as the desert of Sahara, and when they once become so dry as they often do in May, for reasons given in my last, it is hard for showers to begin in June, and so about once in five years we have a fearful four months drought. In other years we have a four weeks drought in May and often another in July or August.

Now I fully believe that concerted action

can greatly change all this. If a large portion of area is *put under cultivation* for crops, it will absorb the spring rains and invite the summer showers. This year, in May, I laid out several thousand feet of tile drains. Part of it was in spring-plowed land, part in growing wheat and part in spring grass land. In the first, both soil and subsoil were thoroughly moist, even after four weeks of drought. In the second the *soil* was partly dried by the growth of the wheat, but the subsoil was thoroughly damp. But in the third (the grass ground) both *soil and subsoil* seemed as dry as dust to a depth of three feet. "Seeing is believing," and I have often seen the same thing before in draining. There was truth in the sarcastic remark of the grain-raising, Stark-County Dutchman to the long-faced, drought-bemoaning, Western-Reserve dairyman. He said: "Yon shoost raise plenty of wheat and oder grain, and you gets plenty rains in harfest. Shoost try him once!"

Proper cultivation of the soil in our dairy regions and the devotion of a considerable part of our area to grain and vegetable raising, are, it seems to me, our remedy for drought. It may, yes, will, necessitate the tile-drainage of much of our clay soil; but so much the better. Not only will concerted cultivation be our remedy, but individual cultivation, as I showed in my last, will prevent the disastrous effects of drought when it occurs; and this fact will, in time, lead to general cultivation. If the latter does not entirely prevent the occurrence of droughts, it will prevent their crippling our industry for the summer and bringing financial distress. Wheat and corn can stand drought. Exclusive dairying is a mistake, I think, in this region. Indeed, exclusive pasturage belongs to a rude, uncivilized age, or to rough, hilly, non-arable regions, and the sooner we find it out, the better. We are already learning it. My own farm will harvest more wheat this year than some whole townships did five years ago. And I find that the more I plow, within reasonable limits, the more cows I can keep, and *vice versa*. The straw increases the manure pile, and the latter increases next year's wheat and straw, and the sale of wheat and the buying of shorts increase both the ready cash and the richness of the manure. On drained clay soil, dairying and grain-raising go admirably hand in hand. I shall preach and practice this doctrine till I see good reason to believe it false. And when all my neighbors practice it, as many already do, I believe our droughts will be diminished in frequency and severity, and their effects be far less disastrous when they occur.

Farm Economy.

THE TRUTH ABOUT IT.

[The object of articles under this heading is not so much to deal with "humbugs" as with the many unconscious errors that creep into the methods of daily country routine life.—Eds.]

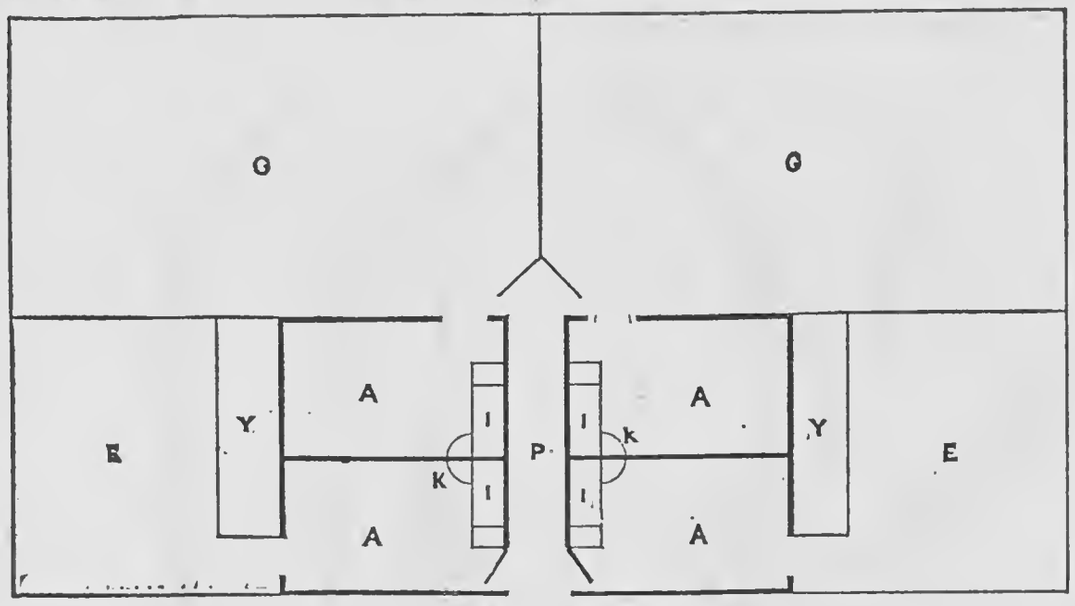
ENSILAGE OF GREEN FODDER.

HENRY STEWART.

Ensilage is having a "boom," with other things more or less important. The boom has evidently for its purpose the making of money, for there is talk about patenting some of the proposed devices for making it more effective, or at least this result is claimed for the said devices. Moreover, one may know all about it by buying "my little book," and the corn for producing the fodder may be had of the author of the said book for 60 cents a pound. "There's money in it," doubtless, if a sufficient number of persons can be induced to buy the book and plant the corn; not to say anything about making patent silos to put the corn in. The truth about this matter is simply this: ensilage has been practiced for many years, and in the simple manner in which the fodder has been preserved it has been a profitable practice. But with the costly modern appliances with which the practice is now encumbered, it is questionable if it can be made to serve the purpose of a farmer, or can be of any use excepting as one of the modern improvements adapted to the fancy farming of lawyers and other professional business men, who find in such pursuits agreeable relaxation from business cares and an easy way of disposing of their surplus funds.

Stripped of all nonsense of masonry silos, which cost more than a good barn, and of useless refinements, the practice is nothing more than an old-fashioned method of preserving green fodder, pressed compactly in air-tight pits or trenches dug in the ground and covered with earth. In fact, the pit itself is only a matter of convenience; the fodder could be as well preserved in the same manner in which potatoes or roots are pitted, if only it is effectually kept from contact with air. Notwithstanding all the fuss about the so-called new method, there are farmers within 50 miles of New York who have been practicing ensilage for several years. The old-fashioned plan of pitting apple pomace or of keeping it tightly pressed down in barrels or boxes is but another plan of ensilage in all essential points.

Originally the silo was a trench dug in the ground three or four feet deep, six or eight feet wide, and as long as might be needed, and in this corn fodder, as it is brought from the field; green, newly-cut clover or lucern; or



PLAN OF STABLE FOR BULLS.—Fig. 210.

beet-pulp or leaves were packed and pressed down as compactly as possible. A small quantity of salt was scattered in the mass as it was packed, and when the trench was filled, the fodder was heaped up three or four feet high above the surface; this was covered with straw and then with earth a foot or two in depth, beaten down very solidly. In a short time, as might be expected, the green, succulent fodder would heat and ferment to some extent and until the oxygen in the mass was exhausted, when the change was arrested, and if the covering was kept close and tight to exclude air, the fodder remained in that condition until removed for use some months afterwards. The mass shrunk and settled down, pressed by the weight of the earth upon it, and this was beaten firmly as each subsidence took place, until the heap was reduced, perhaps, to the level of the surface, and the whole contents were inclosed in the trench. This is the whole of the process of ensilage as it has been practiced for forty years in Europe.

Recently, however, some French journalists and agricultural writers have doubtless improved the practice in some respects, by lining the walls of the trench with cement or masonry and covering it with a roof, and by cutting the fodder into chaff. The feeding value of the preserved fodder, however, remains the same. As compared with green fodder, it is improved to some extent by the process of fermentation in digestibility and nutritive value, but not in any greater degree by the more costly character of the improved silos. These are useful, if at all, in saving labor in the work by their convenience and permanent stability. That is all. The improved process is one to be tested before it can be made of general use, as few farmers have $500 to spend on an experiment which may perhaps save $20 yearly.

The Herdsman.

A STABLE FOR BULLS.

L. S. HARDIN.

Of the great number of practical and fancy breeding farms it has been my privilege to visit, I do not recollect ever having seen a distinctive building designed and set apart for the special occupation of bulls. They are usually put in box-stalls in different buildings, and while the favorite breeding bull often has a small yard to exercise in, others that are only held for sale usually have to stand chained in one place for an indefinite period. Even the most complete breeding establishments have been designed with no thought for the comfort of the younger bulls in winter, outside of the limited accommodations of a box-stall or a place in the stanchions. The design herewith submitted was originated and used by myself for many years on my place near Louisville, Kentucky, and was found to meet all the requirements demanded of it so completely that I am tempted to submit the design to criticism and adoption, if thought necessary or advisable by those who have felt a need for such a building. It is generally conceded, and often claimed as absolutely necessary to health and vigor, that bulls should have some exercise, and to my way of thinking they are all the better for a moderate amount of exposure. In the stable here represented, the floors of their stalls were kept clean, but no bedding was ever given them, while they had the full run of the yards. These should be made as large as circumstances will admit of.

Every breeding establishment should have two bulls to breed from. This will save the dangerous necessity of introducing new blood; for these two strains can be crossed and bred together, if judiciously done, to almost an unlimited extent. These two bulls are given the larger yards, G, G, and if the fences are solid—as they certainly should be—there will be no ill-feeling between the bulls. When the fence is built, be sure and put the stringers on the *inside* of the posts. The boards are put on upright, and face inward. The bull cannot then push any of them off, as he is apt to do if the boards are nailed on the outside of the posts. The partition between the two bull yards should be doubled, with broken joints, so the bulls cannot see each other. It is very wrong to have doors made to the stalls; for the bulls are certain to get them loose playing with them, and then tear them from the hinges. There should be no opportunity given them to get into mischief.

The water tubs, K, are stationary, partially sunk in the earth and supplied by pipes from the cistern, laid under ground. The stalls are six feet by ten, and there is a sliding door over the mangers, I, I, so the feeding can be done from the alley-way.

In summer these water tubs must be cleaned out at least twice a week, for it is astonishing how foul the water becomes by meal and other ground foods getting into the tub. The alley-way should be four feet wide, and the sliding doors over the mangers kept always closed, or the bulls will get to "blowing" at one another, which is a novel but a fearful sound. The roar of a lion is but little more terrifying to the uninitiated.

When a number of cows happen to drop their calves about the same time, two at least, if not more, of these stalls can be utilized for breeding purposes, though the door openings should then be closed to keep the calf from getting swamped in the manure pits, "Y." These pits should not be more than three feet deep and walled with stout boards to keep the banks from caving in. The upper story of this building may be utilized for grain or other purposes, or the structure may be like my own—but one story high. It was never my practice to take the bulls out of these yards for service, but to turn the cows into them. If the bull was vicious or unruly, a long four-horse whip would master and control him. He feared the crack and sharp cut of it more than the effects of a club or other blunt instrument. It was never my misfortune to have such a bull; but I have seen the above plan practiced on bulls that required such treatment.

A stout bar should be run parallel with the manger and about two feet above it to keep the bull from rearing up and putting his front feet in the manger, which he is certain to do if not prevented. Jersey bulls are usually light, active and energetic, so that it is refined cruelty to keep them constantly tied up in a stall or even confined to a box-stall. At the same time they are far more apt to become impotent if not allowed some exercise. If turned into the pasture with the cows, you not only lose the date of taking the bull by many of cows, but your high-toned Jersey bull is a dangerous customer to meet in a large pasture, and few purchasers with ordinary physical prudence can examine the cows with comfort while this obstreperous gentleman is taking into consideration the question whether or not he will resent the intrusion. The right place for a Jersey bull is a small yard, with a comfortable stall attached to it.

STOCK NOTES.

Transportation of fresh meat across the ocean by cold air instead of ice, is now being agitated. Our readers may be curious to know how this is done. The carcasses, after being dressed, are quartered, and then hung up in a close compartment on board ship. Cold air is now introduced into this, by an apparatus made for the purpose, worked by a small quantity of steam from the ship's boilers. The air is compressed, then rapidly exhausted, and worked over and over again to continue the process. There is a great saving of ship's bulk by using this cold air instead of ice, as it does not occupy more than one-fourth the room to keep the meat cold, sweet, and fresh, till its arrival at its port of destination. There is another advantage in the use of this cold air, and that is, if the ship's voyage be prolonged by any accident, it can be kept up indefinitely; whereas ice might be exhausted, and the meat spoiled before getting into port.

A Great Mass Meeting of Short-horn Breeders and all interested in improved cattle, is to come off at Lexington, Kentucky, early in July—just before the large sales of cattle are to begin there. The day previous to the commencement of these, all present will be invited to partake of a public banquet at the Phœnix Hotel. Speeches will follow, and a free interchange of opinions on cattle interests in general and particular. We have no doubt, the results of this great meeting will be much to the benefit of all participating, and we call the attention of our friends to it, no matter in what quarter of the United States they may reside.

A Great Butter Short-horn Cow.—Elcanor, belonging to W. Armitage, of Yorkshire England, made 24½ pounds of excellent butter from the cream of a single week. Her portrait is now inserted in the English Herd Book. Thus it will be seen when bred for the purpose Short-horn cows can excel in the dairy as well as at the shambles. We have well attested accounts of their giving, over and over again, from 30 to 39 quarts of milk per day of a fairly rich quality.

For the Royal English Agricultural Society's Annual Show, which is to come off at Carlisle in July, 486 horses have been entered, 434 cattle, the same number of sheep, and 146 pigs. The prizes offered for them are £5,676, about $27,500—an encouraging sum to be distributed among the breeders of choice live stock.

Remedy for Worms in a Horse.—In reply to a late inquiry in "Querist," a correspondent writes that in his experience the following recipe has never failed to cure:—half a cup of pure hard-wood ashes finely sifted and mixed dry with the mash. If one dose should not be sufficient, repeat it after a day or two.

Dairy Husbandry.

MARKET TERMS FOR BUTTER AND CHEESE.

To those who are familiar with them, the current terms of trade seem simple and appropriate enough, but to the stranger, and often even to an interested party, the exact meaning of these queer terms are as unintelligible as Hebrew verbs. Every dairyman and dealer, however, should be familiar with the language of his trade, not only in usual phrases of commerce, but even in the local "slang" of the market he sells in; for each market has its own pet phrases. The terms that I shall review and do my best to throw a reasonable amount of light on, are those in use in the city of New York, and with few exceptions they are more or less used in all the important markets of the country.

When one merchant listens to the story of a big or brilliant sale told by another merchant, if he does not altogether believe it, he calls the story a "little off color." If it is a simple narrative that challenges his belief he says, "He is giving it to me straight." "Funny business" implies that there is some crookedness in the transaction. There are, of course, numbers of these local phrases that are often exceedingly apropos, of so concise a meaning that it would require quite a lengthy explanation to convey the same idea.

In dealings in cheese and butter there is a slight difference in the terms used, though they are often used convertibly, the one for the other. The term "culls," more particularly applied to packages (printed usually "poks") of butter, though sometimes to cheese, means those that have been left out of lots, either rejected or not needed. This creates a loss on the "culls" not always through the fault of the maker, though usually it occurs from want of good quality in the goods, or proper taste and neatness in selecting and making up the vessels that contain the butter.

A term that often misleads the stranger is "spot stock" or "spot lot," which simply means a lot of packages, either butter or cheese, that are on the spot; that is, in the city and not on consignment to arrive in the future; for "futures" are traded for in butter and cheese the same as for stocks and bonds. The term "outside quotations" means the two extremes—the highest and lowest prices.

The means by which these "prices" or "quotations" are arrived at are interesting

In former times, commonly known as "those good old times," in large towns and cities the merchant who handled the greatest value of goods and, consequently, was the most important character in the trade, would be appealed to every morning by the smaller dealers to learn what he was paying for certain classes of goods. His dictum generally governed the market, and being able to put the price up or down at his sole pleasure, he would often do it to suit his own stock on hand to the evident disadvantage of his contemporaries, who might have small stocks while he had large, or *vice versa*. To take this large power out of the hands of individuals and put it where all could reach the benefit of it and have it work harm to no one, "Boards of Exchange" were organized.

The Board of Exchange in this city is an association of cheese and butter merchants who meet every noon in a large room called "'Change." Here the Secretary calls the meeting to order, and calls in a loud voice to know if any one has butter to sell, calling first "creamery, State," then "Western," "selections," "firsts," "seconds" and "thirds," these terms applying to the quality of the goods offered. After the sales of butter, he calls "cheese"—"fancy," "good to fine" and "poor to fair." The purchases are all made without inspecting the goods, but a standing committee settles all disputes that may arise between the parties to these trades, and one of the committee is appointed an inspector to examine the goods, if called upon to do so. The terms above used by the Secretary are all defined in the by-laws of the association. After 'Change is adjourned a committee meets to determine what quotations shall be, and, governing themselves by the sales and purchases made that day on 'Change and outside transactions that they know of, they set the quotations. The general knowledge as to the number of packages received in the city and exported, prices, sales, etc., is all considered private information and not to be given to any one who is not a member of the Exchange.

The following terms used at the Exchange have the meanings following: "Straight lines or lots" means packages of uniform quality and appearance usually coming from the same maker or shipper. "Home demand" applies to sales in the United States, while "foreign market," of course, means any market out of the country, though England and Germany take fully ninety-one hundredths of our butter and cheese that are sent abroad. "Pails" are the return-butter pails that come mostly from Orange county or makers nearby who require the packages sent back to them. "Tubs" are usually Welsh tubs and other makes of like size and appearance. "Firkins" are the small barrels in which butter is packed, while "half-firkins" are the same sawed in halves. "State creamery" means that made in New York, while "Western" means from any State west of New York. "Imitation creamery" means butter ground together until of uniform appearance and put up in tubs like regular creamery. "Factory" butter is usually a little better than creamery, it being made at cheese factories where the top cream only is skimmed off. The term "unbroken invoices" means all the goods included in an invoice, thereby not allowing picking over or culling. "Ohio flats" are a certain style of cheese made much flatter than those of the usual shape; it may be full-milk or skimmed. "Lard butter" is a mixture of pure lard and about 10 per cent. of good butter. H.

The Poultry Yard.

ADVANTAGE OF HENS HAVING A GOOD RANGE.

LEAVING home late in November last, to be absent till the following May, I had my little flock of white Hamburg fowls removed to a neighbor's, for fear they would be stolen, if allowed to remain at my untenanted place. To keep these fowls from mixing with his own, my neighbor had to confine them to a yard of about 20 feet square adjoining their roosting house. During this time, they did not lay half as many eggs as a similar flock had done kept at home during three months of the preceding year. In May, I brought these hens back to my own place, where they have a good run on a grass lot and a small space of plowed ground. A few days after this they began to increase the number of their eggs, and in about a fortnight, they more than doubled them daily—some days, trebled them. As their food and water were precisely the same at both places, I can only account for this increased egg-production by the hens having a run where they could get plenty of fresh grass, some insects, and pick up various things from the ground, which we can not well observe, and which are known and appreciated only by the hens themselves. Hamburgs and Leghorns are great grass eaters, and I have sometimes thought that when of a good quality it was equivalent to one-fourth of the other food given them for their nourishment. When kept by my neighbor, the poultry had pork scraps occasionally, which were equivalent, for meat, to the insects they now catch in the open field. A.

Miscellaneous.

THE OUTSIDE AND THE INSIDE OF SOME THINGS AGRICULTURAL.

The Growing Taste for Rancid Butter.

IT is a curious fact that in the discussions which have been going on for months past on the question of oleomargarine *vs.* butter, no recognition has been made of the existence and steady increase of the taste for rancid butter among the heartier-feeding and robuster class of laboring men. To be sure, this form of a depraved or cultivated taste is scarcely seen or noticed in the butter and cheese-producing portions of the country, nor so much in cool latitudes; but when one gets into great cities with their dense population, or into towns or cities of any size, south of the Ohio River, the existence of a decided and increasing taste for rancid butter becomes as plain as any other new thing. After all, what are the physiological or other reasons why stout stomachs may not acquire a liking for butter in a certain stage of decomposition as well as for some kinds of cheese—Limburger, for instance, which to many persons is as offensive, both to taste and smell, as the best or worst of the kakodyles.

It will probably be shown, in course of time, that the obstacle to the wide and general adoption of oleomargarine as a complement to common food, will not be found in the fact that it is an artificial production, or that it is made out of offensive and unhealthy materials, but that, being fat or tallow, and these alone, or mostly, it does not satisfy a want which centuries of civilization have created in the human stomachs. It is possible, if means were taken to ascertain the direction of popular taste, the lower grades of butter might be so handled as to suit it, and to the satisfaction and profit of all concerned; for in the light of the facts before us, we can scarcely doubt that, in course of time, there will be as widely divergent tastes for butter as for cheese, with as wide difference in the smell and flavor of the butter of the future, as between the new and delicate full-milk, and the fully matured and strong-scented Limburger cheese.

Kumyss.

How many readers of the RURAL NEW-YORKER have heard of Kumyss or are aware of the extent to which it is being manufactured in Chicago and consumed in that city and its vast two or three hundred miles of neighborhood? Kumyss is fermented cows' milk, the word being an adaptation of Koumiss, the Tartar appellation for fermented mare's milk. Kumyss is a food, not a medicine—or rather belongs to a class of foods, which are at the same time medicines, like blood, cod-liver oil and buttermilk (which it considerably resembles) of animal, and huckleberries and celery of vegetable origin. The chemical composition of a quart bottle of the Tartar Koumiss (which that made from cow's milk closely resembles), according to the analysis of a London chemist of reputation, is as follows:

Water	10,662	grains.
Alcohol	193	"
Caseine and Albumen	128	"
Lactose	582	"
Lactic Acid	130	"
Fat	36	"
Ash	90	"
Carbonic Acid	180	"
Total.	12,000	"

Kumyss is a pleasant, wine-like beverage charged with carbonic acid, generated in course of fermentation. It is put up in strong bottles and drawn by a champagne tap. It has all the properties of milk in more digestible form, and is admirably adapted to cases where milk, under the ordinary form, cannot be taken and digested. Its manufacture is a difficult and delicate rather than a costly process, and for this reason it is at present confined to few hands. But it is so valuable as a food medicine that its consumption must be, sooner or later, greatly extended and its manufacture accordingly. This brief description of Kumyss is the "outside" of some of the new things agricultural, the "inside" being that, sooner or later, dairymen and milk producers may quite reasonably anticipate and be prepared for, a vastly increased demand for milk, over and above that wanted for butter and cheese and town and city consumption.

Potash.

It is probable there is no one subject occupying the attention of horticulturists and fruit growers more than potash and its relations to the successful production of fruits, and especially the sour fruits. One can scarcely take up a publication devoted to any form of agriculture, without coming across the experience of some cultivator of fruits, who reports the beneficial effects of the use of potash in the form of its commercial salts, or ashes leached or unleached. Here, it is the case of barren orange trees which have been made fruitful; there grape vines have been rescued from the dominion of blight, mildew, and rot; in one place pear trees, liberally fertilized, have been saved from blight; in another, the yellows have been banished from peach orchards, and besides, it is known and conceded that on soils otherwise comparatively barren, if they are the product of shales and rotted granite, the most productive apple orchards are to be found. In the matter, too, of vegetables which have sour juices, like pie plant and the tomato, manures and fertilizers for them are powerful for their good, in proportion to the quantity of potash they contain. Moreover, we are told that potash is the base, without which few or none of the vegetable acids can have an existence, and that in its absence, there can be neither starch elaborated nor sugar formed. Yet with all these experiences in its favor and all these facts made known, chemists, whether agricultural or otherwise, have left us in the dark as to the why and the wherefore, as to the method and the manner in which potash acts in producing these phenomena on vegetable life, growth and development. And this leads to the suggestion, that if some one having opportunity, inclination and leisure, would undertake the task of going over half a dozen of the better agricultural papers and magazines of the country and gathering from them all the items relating to the good or bad effects of potash when applied to fruits and vegetables, such a collection, if published, would not only be exceedingly valuable to the practical gardener and fruit grower, but also help to solve the problem of the *role* of potash in the life of vegetation. B. F. J.

WHAT OTHERS SAY.

GRAIN FOR MILLING.—The Millers' Exhibition now being held at Cincinnati, is proving very successful. Among the reports made to it by special committees appointed to investigate various subjects, the following on "Grain for Milling" is of special importance to farmers:—We have met with much difficulty in determining which is the best wheat for milling in the United States, on account of the vast extent of wheat growing districts, extending through twenty-three degrees of latitude and fifty-seven degrees of longitude, having a length of 2,800 miles and a breadth of 1,700, covering an area of 3,260,000 square miles, embracing all the States in the Union but three, and the entire Territories, with every variety of soil and climate. We find the same varieties of wheat grown in different States, while possessing the same general properties, differing materially in value for milling. The Fife wheat of Northern Minnesota and Dakota is far superior to the same variety grown in Iowa, Wisconsin, or Illinois. The Boughton or Tappahannock wheat of Virginia, Tennessee, and Georgia, is much more rich in gluten than the same kind grown in Indiana, Ohio, or Illinois.

WE ALSO find a great diversity of opinion as to the merits of particular kinds of wheat grown in same localities, making it a difficult matter for your committee to determine which are really the most desirable varieties of wheat for milling purposes.

We are of opinion that a general discussion at this meeting of the association, where all the large wheat districts are fully represented, will do more to settle which are the most desirable wheats to use than any report your committee would be able to make. From the information before your committee, mostly obtained from correspondence, we find the following varieties among the best for milling purposes:

Winter Wheat—Longberry Amber, Lancaster, Indiana Red, Alabama, Orange, Velvet Chaff, Boughton or Tappahannock, Jennings.

Spring Wheat—Minnesota Fife, China, Mammoth or Rio Grande.

The Longberry Amber is extensively grown in Virginia, and, with the Lancaster, is most sought by millers, being rich in gluten, and possessing properties very desirable for shipping to warm climates.

The Indiana Red is spoken highly of as a fine glutinous wheat; also the Alabama, the latter being but little raised, owing to its light yield per acre.

The Jennings is a white wheat, hard, gives excellent color and good strength.

The Orange makes a good family flour of fair strength, and yields well in flour.

The Velvet Chaff possesses good strength, and yields fairly in flour, is an early variety, grows a stiff straw, and is well adapted to strong and rich soils, where most varieties would produce too rank straw and lodge.

The Boughton or Tappahannock is highly spoken of in some localities, while in others it is not considered a desirable wheat; it is a white wheat, not particularly rich in gluten, but makes a good family flour; is easily damaged by moisture.

The Fultz and Clawson are taking the lead with farmers, yielding largely, but are very undesirable for millers, being soft and weak and containing little gluten compared with the first-named varieties.

The Clawson is used somewhat to mix with damp, strong wheat.

In spring wheat the Minnesota Fife is incomparably the best of any spring variety. It is rich in gluten, very hard, and yields immensely in middlings for purification and manufacture into patent flour; it is essentially "bread-making" wheat, producing a large number of pounds of finest bread from a fixed number of pounds of flour. This wheat is grown extensively in the Northwest, attaining its greatest perfection in extreme northern latitudes, particularly in Northern Minnesota and Dakota. In Wisconsin and Iowa it is much the best spring wheat grown.

The Rio Grande, China, or mammoth, is a large-berried, heavy wheat, yielding well in flour, and next to Fife in glutinous properties, it is particularly adapted to weak lands, having a rank growth of straw, and standing drought remarkably.

The Canada Club we consider the next best spring variety, but it is soft; it makes an excellent family flour when strength is not a particular object.

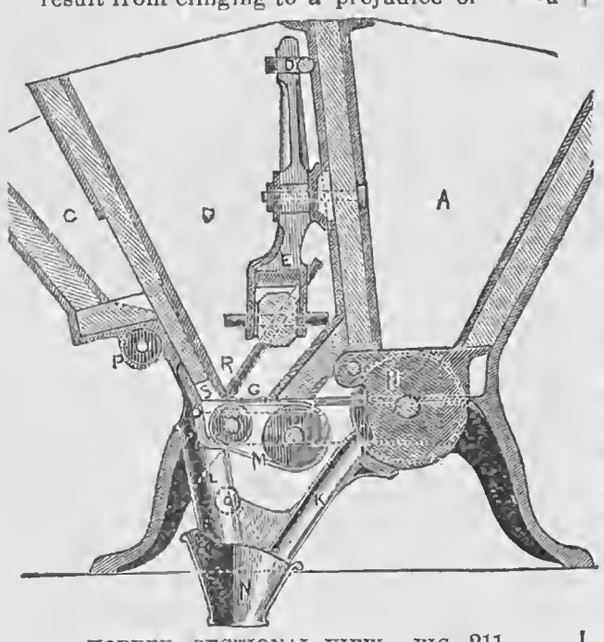
The Lost Nation or Prussian Fife we consider the poorest spring wheat grown, having a thick bran, very soft, weak in gluten, not even making a white flour. It is grown extensively in Wisconsin, Iowa and Minnesota, yielding well, and is considered by farmers as being safer for a crop than Minnesota Fife, China or Club.

"WALDO" the instructive correspondent of the Ohio Farmer says:—"I live in a neighborhood where broom corn is extensively grown, and those who have followed the business regularly have done well at it, but once in every few years the price goes up to a figure which makes it very profitable, and there is a large number of farmers who, with no experience in managing the crop plant largely of it, and I have known the price to fall in one year from $200 to $40 per ton. As this is below the cost of production under any circumstances, and it will cost an inexperienced farmer much more to get the crop ready for market than the one who understands it, it is easy to see that the new beginner is likely to get enough of it in growing one crop. As I look back over my own experience for twenty-five years on the farm, I can trace more failures and losses to changes than to all other causes combined, and it has been a dear lesson learned in the school of experience, to stick to a regular system in farming. 'But,' do you ask, 'should we make no changes, but follow in the same ruts worn by our ancestors?' By no means; but because your neighbor has cleared $40 per acre on a broom corn crop, or made a fine profit on wool, don't put your whole farm in the former, or sell off your stock and invest in sheep."

SPEAKING OF CHICORY, the Grocer says:—"But the most of it is kiln-dried, and after roasting is ground into a brownish red powder, to be used as a mixture with or substitute for coffee. It is stronger than pure coffee in equal quantities, and gives a good color to the decoction. It has a large consumption among the poorer classes of Europe, and is used largely at European hospitals on account of its superior qualities of nutrition and a total absence of nervous stimulating qualities, such as are found in coffee. The nutritious substance, according to the analysis, represents 66 per cent., while coffee represents only 31 per cent. A great deal of this favorable result must be attributed to the presence of a kind of starch in the root, which is transmuted by kiln drying into gummy extractive matters of highly nutritious character. Chicory is considered abroad, as the most suitable of all substitutes for coffee, as the aroma which is developed by the roasting of the chicory root, is similar to that of coffee, when roasted.

[Most of the ground coffee purchased at coffee or grocery stores is largely adulterated with chicory—and the adulteration, in our opinion, is a very desirable one. We would ask our readers to purchase a pound of bean coffee and have it ground. Then add from one-eight to one-quarter of a pound of good chicory and mix them well together. We think that, prepared just the same as pure coffee, except that a less quantity serves, it will generally be preferred—at least, by those who are not informed of the adulteration. Chicory is a composite flower (Cichorium Intybus), resembling the Ox-eye daisy, though blnish in color. Though somewhat scraggy in its growth, it is still showy, and may easily be cultivated in garden plots. The roots may be saved, dried in the oven, and ground the same as coffee.—EDS.]

CIRCUMSTANCES ALTER CASES.—"One thing is certain, obstinate controversy is seldom productive of large yields," says Conrad Wilson in his Station Record. "Fifty bushels of wheat per acre, or a hundred bushels of corn, though possible under right conditions never result from clinging to a prejudice or delu-



HOPPER, SECTIONAL VIEW.—FIG. 211.

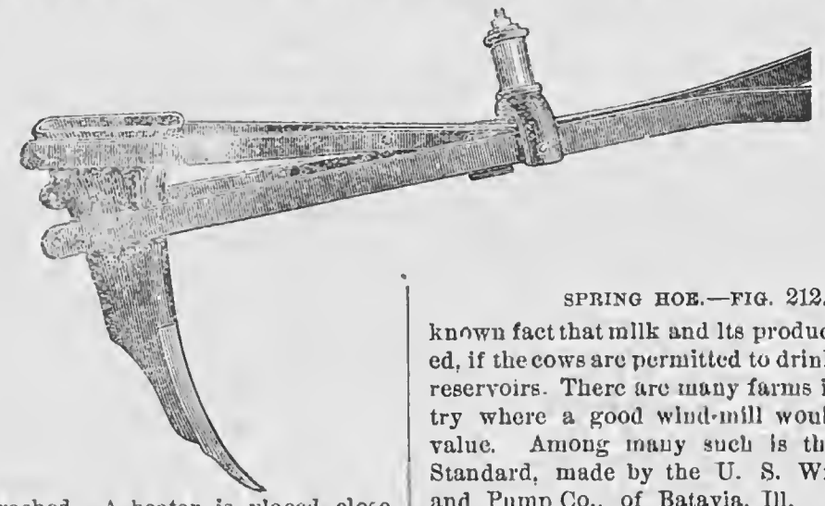
sion. One man may astonish us with the yield he gets by plowing three inches deep, while another gets a result equally magnificent with ten inches. Yet if the two cases were reversed, both crops would be failures. Each of these men is right for his own locality and conditions, but not necessarily right for another man, or another farm This has been so from the beginning, and will be so till the end of time."

IN England if butchers deal in bad meat they must expect to get into trouble. A butcher at Brighton, says the Agricultural Gazette, was a few days ago sent to prison for a month with hard labor for having unwholesome meat in his possession. A portion of the stuff had been manufactured into sausages and sold to another butcher, who is now in prison for having disposed of them to customers. The sentence is unusually severe, but the Bench explained that they had determined to put a stop to the traffic in diseased meat.

THOUGH rather late to be serviceable the present season, we commend the following remarks of Professor Beal: Agriculture is a pretty broad field to work in, and if a man expects to carry on all branches of it in one establishment successfully, he will awaken sooner or later to a great disappointment. Some thing or things must be made specialties. Now it is a question in my mind just how good a vegetable garden a farmer can afford to have. If he aims to make one as good as his neighbor's, who is a market gardener, he will very probably fail in some of his main farm operations sufficiently to neutralize the success of the garden test. My impression is quite in accord with that of the essayist (Mich. Pom. Soc.) when he indicates that the farmer can afford to do pretty well in the garden what he can do by horse-power. The garden of the farm can be made to furnish the larger part of an excellent living for the family at a slight expense, if deftly managed; but most farmers do not seem to know how. They seem to think the garden must be a piece of ground set off and dedicated to this purpose forever, to be shut in by a high fence, to be entered by a small gate, to be ornamented with beds of short rows lifted up higher than the general level. Perhaps this notion is an imported one from some country where land is high and horses are not, at any rate it does not apply to us, and I commend to the farmer a system of long rows which can be attended to by a horse and cultivator like any other farm hoed crop. When once such a plan as this is adopted the garden will not be called an expensive luxury, and making garden will not be the dread of the year.

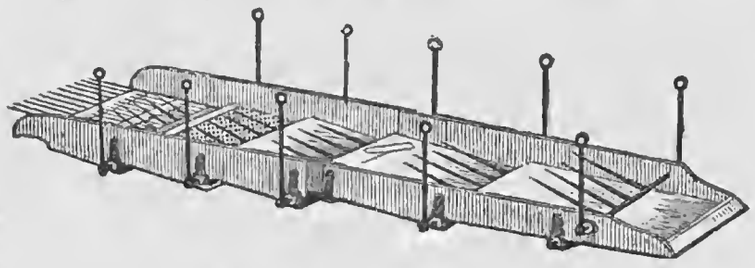
men in this connection, their long experience has enabled them to construct a machine admirably fitted to meet these needs. The specimen of the "Invincible" separator herewith represented, is a 36-inch cylinder designed expressly for steam power, having extra length and extra rakes or shaking fingers. The firm also build another machine, with a 33½-inch cylinder, to be operated by steam power, and two others, one with a 27 and the other with a 30-inch cylinders for horse power. The separator is constructed diverging from the cylinder to the discharge end, a feature which with the circular top, allows plenty of room for the straw to be well shaken up on its way to the stacker. In the steam machine the separating pan is 51 inches wide, giving, with the great length and extra rakes, ample separating capacity. The pan is cut into two equal sections (Fig. 213) each of which is operated by two pitmans attached to the double crank shaft. Thus they work one against the other, and this alternate motion of the two sections produces a counterbalance that relieves the separator from much of the strain.

The front section of the pan is swung directly under the cylinder, and, the concave being perforated, a large amount of grain passes through and is separated in the very operation



SPRING HOE.—FIG. 212.

of being thrashed. A beater is placed close to the cylinder directly in the current of the grain and straw, causing a stoppage of the entire mass, which then drops down upon the first set of rakes or shaking fingers, so that by this immediate agitation of the straw at the cylinder, the separation is begun at once, and is fully completed before the straw is delivered to the straw-carrier. The lower or rear pan is perforated, and, acting as a riddle, keeps the shoe free from straw and much other mat-



SEPARATING PAN.—FIG. 213.

ter liable to clog the sieves. The shoe, placed directly under this rear pan, has a strong blast and abundant sieve room, and is the most effective now in use for cleaning the grain. A folding straw-carrier in two sections is furnished in lengths to suit, and can be adjusted to any angle while in motion. A novel feature of the straw-carrier is the device for regulating the run of the carrier belts, keeping each

WIND-MILLS.

THE waste of time and the hard work are by no means all the objections to hand-pumping. Every intelligent farmer knows that neither the boys nor the hired help are always reliable, and the old gentleman himself is sometimes tired or absent from home in the evening; the stock are neglected until next day, when the cattle, almost famished, fill themselves so full of cold water on a winter's morning, that they stand and shiver for hours, to their great injury; and if water is any considerable distance from the yard in brooks or springs, in severe weather they will not go for it until very thirsty; when the results are the same. Every stock raiser also knows that cattle are more or less uneasy, and become unruly when not well supplied with water, and are continually breaking through inclosures, damaging crops, and straying from home in pursuit of it.

An artificial pond, in warm weather, soon becomes offensive and filthy, and cattle that are forced to drink of it or die from thirst, become subject to disease, while it is a well-known fact that milk and its products are tainted, if the cows are permitted to drink from such reservoirs. There are many farms in the country where a good wind-mill would prove of value. Among many such is the Halladay Standard, made by the U. S. Wind Engine and Pump Co., of Batavia, Ill.

THE BUCKEYE GRAIN DRILL

FOR more than 23 years this drill has been before the public, and in that period its reputation and sale have extended over the whole country. It is made by the well-known Messrs. P P. Mast & Co., of Springfield, Ohio. The new drill brought out by the same enterprising firm last season, has proved a great success both as a plain and combined drill. In this connection we herewith give illustrations of their new land measurer, which is a new departure in land measures. This is placed in the end of the hopper (Fig 215); but is so incased as not to be disturbed by the grain. It indicates the acres and portions of acres sown. In Fig. 211 is shown the hopper bottom of the combined grain and fertilizer drill, with the grain, fertilizer and grass seed sections. A, represents the wheat or grain hopper; B, the hopper for fertilizer; C, the grass seed hopper; D, pitman connection; E, the agitator arm; F, the agitator with pin moving over the belts; G, galvanized bottom with openings over the belt; H, wheat or grain feeder and cup; K, spout or conductor from wheat hopper; L, spout or conductor from fertilizer hopper; M, leather belt for feeding fertilizer; N, spout to which rubber tubes are attached; P, grass-seed feeder; R, slide for regulating the quantity of fertilizers; S, is the point where the fertilizer is discharged from the belts.

The fertilizer and grain hoppers are combined in a double hopper; both grain and fertilizer passing down through the hoes are deposited together in the ground. The method of feeding the fertilizer consists of a series of endless belts carried by two shafts on which are a series of small pulleys—the whole being placed in the bottom of the hopper. The fertilizer coming in contact with these belts is carried back and dropped into the tubes, the quantity being regulated by a parallel slide

as to sow a large or small quantity as desired. There is also an agitator moving very slowly in the hopper which prevents any possibility of arching. At Fig. 212 is shown the spring hoe—an important improvement furnished with a solid rubber spring.

LAND MEASURER.—FIG. 215.

Last season we illustrated the new force-feed principle of this drill, and since then over 6,000 of the new drills have been thoroughly tested in practical farm work in all parts of the country, and in all cases they are reported to have given entire satisfaction.

Zinc Collar Pads.

OF the many answers we have received to our inquiry about the above device, in the RURAL of May 29, we have room here for only a couple, which, however, may be taken as fair specimens of the rest.

S. L., Sharon Center, N. Y., Says:—"That zinc collar pad is all it is said to be. I have tried it with satisfaction on a horse. The neck has healed; and the mane is growing again, although the horse is used every day."

R. H. C., Orleans, Neb., says:—"Five years ago, while 'freighting on the plains' Jerry's neck became so sore that he could graze only on a sidehill. I gave him a zinc collar pad and in in a few weeks his neck was entirely well, without having been idle a day. I discontinued its use, and the soreness returned. For the past four years I have not allowed him to be harnessed without the pad, and he has not had a sore neck for the last four years, and that is all I know about the zinc collar pad."

Everywhere.

RURAL SPECIAL REPORTS.

ILLINOIS. Edwardsville, Madison Co., June 5.—The wheat crop prospects here are finer than for years. The acreage sown is about 25 per cent. more than ever before known. As our farmers now have the self-binding harvesters they have crowded every available piece of land with wheat, leaving hardly enough for corn, etc. We have just begun harvesting here. Corn looks well. Oats are very short, owing to the dry season. Fruit will be a full crop. Apples and peach trees are overloaded. Berries and grapes look well. Strawberries are just ripe—a large yield and fine berries. The Army-worm has made its appearance in different parts of the county; but too late to hurt wheat, I think. C. P. B.

ILL., Ludlow, Champaign Co., June 5.—Until about the middle of May farmers hereabout had little to complain of save one or two violent and destructive downpours of rain, and corn planting went on vigorously, but a period of hot, showery weather followed which so hindered the work that probably as much has been planted during the last two weeks as during the first half of May. That first planted has generally received the first plowing, and the stand is on all sides reported good. It was feared the wet period had injured wheat and oats, but the weather at present, cooler and dry, is favorable. Potatoes promise well—few beetles. There is unusual freedom from insect pests. Strawberries and cherries are abundant and ripe, worth from eight to 10c. per quart, retail. Apples are not as abundant as the profuse bloom promised. Late corn planting and a prospective early harvest will make the next six weeks a busy season for farmers. "G."

IOWA, Viola, Linn Co., June 7.—We have had heavy rainfalls for the last week, washing out in some places to the disadvantage of the railroads but not of the crops as yet. The rains came in time to save the grass. The weather had been very dry through April and May, more so than usual. Oats and corn look well for the season. If the rains will hold up long enough to enable the farmers to head the weeds in the corn we are pretty sure of a good crop. I did not get my Ennobled oat sowed as soon as they should have been, but they are branching out nicely. Two of my Ables Sibirica are up. None of the magno-

INVINCIBLE THRASHER.—FIG. 214.

Industrial Implements.

THE "INVINCIBLE" THRASHER.

THE Invincible Thrasher, a cut of which is here presented to our readers, is made by Roberts, Throp & Co., Three Rivers, Mich. The wide popularity it is winning is a well deserved tribute to the mechanical skill and persistent efforts of its manufacturers and patentees. Having spent nearly a life-time in studying the needs of farmers and thrasher side in line one with the other. Thrashermen have been annoyed a great deal by the tendency of the carrier belts to "climb," as it is termed, and this improvement will be appreciated. One of the most striking features of the entire machine is the improved elevator which carries all the tailings through a closed chamber up an inclined plane outside the separator, without angle or shake spout, direct from the tailing spout of the shoe to the cylinder; so perfect is its operation that sticking and spilling are entirely avoided. But space forbids any more extended description of this excellent thrasher. We advise all our friends interested

lias have made their appearance yet. The beets are up looking fine; so are all of the flower seeds that the RURAL sent. The Cow-peas I did not value for this section, although I planted them. I think they will be worth little in Iowa where grass and grain grow so luxuriantly. Strawberries are getting ripe; the raspberry canes were badly winter-killed. Apples and cherries are mostly blighted from cold winds. D. C. W.

NEW JERSEY, Red Bank, Monmouth Co, June 10.—The ravages of the army worm upon the wheat, corn and timothy crops in Ocean and Monmouth counties and other parts of New Jersey continue. The rapidity and thoroughness with which these worms do their work are appalling, and coupled with the late drought this new scourge is likely to make the year 1880 one of serious disaster to a large part of New Jersey. About Long Branch the worm appears in the greatest numbers. Forty loads of sod cut on Tuesday by Superintendent McKay, of Hollywood, to replace bare spots, were totally eaten up in three hours, looking as though a fire had swept through them. In the vicinity of Freehold the worm has made terrible ravages upon the corn-fields. Between Red Bank and Long Branch the Central New Jersey Railroad track is black with the worms which are traveling westward. C. H. C.

NEW JERSEY, Shrewsbury, Monmouth Co., June 7.—The new pest, the army bug, which has just put in an appearance here, is completing the terrible destruction commenced by the great drought. Reports from Long Branch, Mechanicsville, Morrisville, Middletown and Tinton's Falls say that the ravages made by this bug have been very severe. It is reported that acres of timothy and rye were destroyed in one night. On the farms of Samuel Hendrickson, near Rumson, and George Stillwell, at this place, the damage is very great. About Freehold and Marlborough, and on toward Keyport, the bugs are found in great numbers and move in solid phalanx. When once they attack a wheat, rye, corn or grass field they do not pass out of it until they have left nothing edible in it. The "bugs," for some cause, avoid clover fields, but will strip a timothy field quicker than a mowing-machine. The greatest depredations are reported at New Bedford. The appearance of the bug was sudden and it was not recognized, twenty years having elapsed since the army bug last visited this region. One instance of the destruction accomplished by the pests was noted on Wednesday night last in the fact that the bugs entered an eight-acre lot of timothy, ready for harvest, and in twenty hours totally destroyed it. L. M. R.

NEW JERSEY, Long Branch, Monmouth Co., June 8.—Hollywood Park, the summer residence of John Hoey, of New York, and the pride of Long Branch, has been almost devastated of its beautiful lawns by the army worm, 40 acres having been destroyed since Saturday. The worms are moving in multitudes toward the sea, and have taken possession of the piazzas of the hotels. The drives are also black with them. L. H.

N. Y., Fluvanna, Chautauqua Co., June 3.—Crops are looking well: corn is coming up: grass fair. I am cutting my orchard grass for soiling—well headed out Wheat is heading a little and looks well. Potato beetles are over-abundant. A timely rain has averted serious injury from drought. Crops in general are looking well. My weevil eaten peas, sown at the rate of 14 pecks to the acre, are about as thick now as when I usually sow eight pecks of pretty sound peas. H. A. W.

N. Y., Mineola, Queens Co., L. I., June 9.—The army worm has made its appearance in Queens County in remarkable numbers, causing extensive damage to the grain crop. The worms are working north in Oyster Bay town, and fields of wheat of thirty acres each have been destroyed. H. R.

OHIO, Fostoria, Seneca Co, June 1.—The wheat crop is splendid in this section of the State; there is every prospect of a larger yield to the acre than we have had for years No foe has molested it and the acreage sown is larger than I have ever known. At present the weather is very wet—too wet for corn.

A. S. W., M. D.

OHIO, Camden, Preble Co., June 1—My Mold's oats are two feet high and have tillered out finely—they are far ahead of our native oats. My mangels are doing well, though I sowed the seed too thick and had to transplant a lot of them; but the weather has been so favorable that they are getting on finely. My Cuthbert raspberries are growing first-rate. Corn is coming on well; meadows, I think, will be light; wheat is good, but we can never tell how a wheat crop will turn out until we get it in the bushel, it is subject to so many casualties. The prospect is fine for oats and flax. So far as I have seen there will be but few cherries; but we shall have a good crop of apples. W. M.

PA., Derry Church, Dauphin Co., June 3.—We have had a very dry season—had no rain of any account for about five weeks until May 29, when we had a very fine soaking rain, which lasted till the next afternoon. Previous to the rain, the roads were very dusty and the earth quite dry. Wheat, rye and oats look well; corn is rather backward. Grass is short and the hay crop may not be very good. Fruit promises to be abundant. S. E. R. S.

PA., Waynesboro, Franklin Co, June 7.—We have had fine rains since my report of 19th ult Grass will be an average crop. Wheat has blossomed and is excellent. Corn now grows rapidly—stands eight inches and less About 50 children have died here of diptheria within the last six months, and there are some cases yet. D. B. M.

TENN., Nashville, Davidson Co., June 9.—The report of the Commissioner of the Bureau of Agriculture for May says that; owing to the dry weather in the early part of the month, serious apprehension was felt for the safety of all the crops, but the propitious rains of the latter part of the month have materially changed the condition of things. He makes the following averages for the crops named: Wheat, 67; corn, 94; tobacco, 77 in Middle and 81 in West Tennessee. The fruit prospect is very fine except in regard to peaches, which will not be an average crop. The grass crop is unusually fine, and will be large. The cotton average for West Tennessee is over 100, and for Middle Tennesee 97. R. M. R.

VA., Petersburg, Dinwiddie Co, June 8.—Not only crops are suffering seriously from the protracted drought, but in some adjacent counties the streams are fast drying up. Mills which never before suffered from want of water are compelled to cease operations. The Appomatox River at this point is so low that the mills here are making only half time. Without an early fall of rain, serious results may follow. R. Y.

VA., Newbern, Pulaski Co., June 7—My Fultzo Clawson wheat is looking well. As it is a new sort, I didn't think it prudent to sow more than a half acre of it. It is perfectly clean, and will be harvested about the 20th inst. My Broughton and Fultz wheats will be harvested in from three to five days from now The former is included in my experiment plot of 27 acres, and is unusually fine. Both of these varieties can be relied on for extreme earliness. In an emergency they could be cut here now without any risk of the kernels shrinking much. H. L. W.

The Queries.

ANSWERS TO CORRESPONDENTS.

[Every query must be accompanied by the name and address of the writer to insure attention.]

Castrating Lambs.

W. L. M., Little Rock, Ark., asks when and how should lambs be castrated.

ANS.—The operation should be performed as early as possible, as there is danger of ill effects resulting when the lamb has become older. A lamb a week old may be deprived of the whole scrotum and testicles, by one stroke of a pair of shears, without any danger or the loss of more than a few drops of blood. But when the lamb has become some months old, the organ has become fully developed as to nerves and vessels, and a more careful operation must be performed. An excellent method is for the operator to sit upon a long bench, with one of the lamb's hind legs beneath each of his thighs, the head and fore-legs being held by an assistant. Taking the scrotum in the left hand, he presses the testicles toward the lower end, making the skin tight and smooth. He then makes a free incision with a sharp knife at the bottom of the scrotum beneath each testicle; the membranes which surround them are cut through, the cords and vessels which are attached to them are scraped, not cut, asunder, and the operation is completed. To castrate a mature ram, an incision is made at the bottom of each compartment of the scrotum, each testicle being removed separately, the cords and vessels being always scraped asunder. The main point to secure is to have the wound at the bottom of the scrotum, so as to allow the pus, which will form within it, to escape. If this pus is retained in the wound, it becomes absorbed, inflammation is communicated to the adjacent parts, and a fatal termination is likely to ensue. To prevent this, a small lock of wool is sometimes left in the wound, by which it is kept open and the danger averted.

Asparagus Culture.

J. B, East Schodock, N. Y., has a muck swamp which he is getting under subjection. He would like to plant it to asparagus, and asks, 1, if asparagus can be grown on that kind of soil, and will it thrive where there is water standing at times; 2, how deep should the roots be set and how to proceed with their culture.

ANS.—1. If the muck swamp is thoroughly drained so that no water will, at any time, stand within two feet of the surface, asparagus may be grown there successfully; but if it is liable to inundations at odd times, or if it can only be partially drained, neither asparagus nor any other crop can be relied upon. In this latter case, it will be best to seed it down with grass and turn it into permanent meadow. When properly drained, asparagus generally grows to an immense size on muck land. The roots do not send up so many sprouts as on a heavier soil, but these are usually large and vigorous. 2. Plant in the spring strong one-year-old plants. They should be set in rows three feet apart, and the plants one foot apart in the rows and six inches deep. The first year all the shoots should be allowed to remain and strengthen the plants, and only a very few should be cut the second year, and it is preferable to leave them all, this season also. The fall treatment consists in cutting off the tops, and in December give the rows a covering of long manure, which is to serve as a winter protection. In the ensuing spring this manure may be dug under, and the rows should, in addition, have a light dressing of salt scattered over the surface.

Olive Culture.

E. D. R., Winfield, Kan, inquires for information about Olive trees, their culture and where they can be purchased.

ANS.—Olives in the North can be grown only as greenhouse plants. In the Southern States they thrive well and are grown with ease. Little more culture is given them than the mere setting out, although pruning and special culture after the style of European olive yards would doubtless benefit them The best variety in this country is said to be the Mission olive of California, and doubtless California is the best place in which to buy olive plants. They are grown on the Pacific Coast to a considerable extent, and several nurseries have them for sale. Olives can also be purchased to advantage in the South of Europe; but only in small quantities. Nurserymen seem to neglect, both in Europe and America, the culture of olive plants, notwithstanding the fact that as a crop it is profitable in Southern Europe as well as in many sections of the Southern States. It is not at all likely they would stand the winters of Kansas, but they can be readily grown in the greenhouses and obtained for the purpose in very small numbers from The Parsons and Sons' Co., Flushing, L. I., or from Wm. Saunders, Agricultural Department, Washington, D. C.

Inflammation of the Fetlock Joint.

C. E. M., Lower Kingsclear, New Brunswick, has a young mare that became lame over two months ago in the fore fetlock. He got a bottle of Kendall's Spavin Cure, and after using it a few days, the place swelled very much, and seeing the tumor was going to "gather," he poulticed it with carrots and it broke in three places—two on the outside and one on the inside of the leg. He kept on poulticing for about a fortnight and now the joint is again swollen just as badly as ever, and the mare is just as lame as before. Two of the sores have healed, but one on the outside still runs a thin substance that thickens as it flows down the foot, and he asks for a remedy.

ANS.—From the description this is a case of "synovitis" or inflammation of the joint, and the consequences are serious. Spray the joint for a few days with cold water four or five times a day; after which take tincture of iodine and water, equal parts, and inject with a fine syringe half a teaspoonful once a day; at the same time paint the joint with the tincture twice a day until it blisters. The horse should be kept in the stable until after the blister dries, tied so that he cannot use his tongue on the affected joint.

Paralysis in Sows.

L. H. E., Chapman, Kan., has a sow about 13½ months old which had six pigs on April 9. On May 20, she lost the use of her hind legs. The pigs have been weaned, and the sow has been well fed on swill, corn and weeds; but she does not get up, though her appetite is good and she is in fair condition. She can use her fore-legs well, but not the hind ones. The trouble seems to be in the back, kidneys and hips, and our friend asks for a remedy.

ANS.—This is a form of paralysis quite frequent in the lower animals, resulting from various causes, as injuries to the back, blood poisons, and *eating poisonous weeds*. Commence treatment by a good cathartic (jalap one to three drachms), after which small doses of strychnia (one-third grain), should be given twice a day, and apply a blister of mustard along the spine and three inches on each side from the withers to the sacrum.

L. M., Clarke Co., Ky., says that in July and August several sales of Short-horn cattle will be held in Clarke and Bourbon Counties, Ky., and some Canadian farmers have written that they would come and buy stock at these sales, if it is allowable to carry cattle from the United States into the Dominion for breeding purposes, and our friend asks us whether it is allowable or not.

ANS.—By the Order in Council, issued at Ottawa about April 28, the introduction of American cattle into Canada was prohibited, except in transit, under specified restrictions No exception was made, so far as appears by the telegram received at the above date in this city, in favor of American cattle for breeding purposes.

Brood Sows.

S. R. H., Topeka, Kans., asks how long can sows be profitably kept for breeding purposes.

ANS. As a rule it is well not to keep them after they are four years old, for thenceforth their powers of gestation generally grow weaker, and they are not so likely to save all the pigs they may drop. A brood sow is generally at her best when from two to three years old, alike in the number and quality of her pigs and in the amount of milk she secretes. If the sow drops her first litter when about a year old, each subsequent litter will usually increase until the fourth.

Miscellaneous.

S. W., Rochester, N. Y., says: Twenty-seven years ago a father gave to his son a trust deed of a farm which was to remain his during his life-time. At the son's death, the property was to belong to the grandson. The trustee never qualified or acted as such, and died a dozen years ago; and the grandson has died since; but the father still lives. Some time ago he mortgaged the farm; the mortgage has been foreclosed and the farm sold at sheriff's sale. The purchaser never knew of the trust deed until an action was begun to recover in behalf of the son to whom it was originally deeded, and we are asked, 1, whether a recovery can be had, and, 2, whether a judgment dated previous to the mortgage would be a lien upon the farm.

ANS.—The statute of limitations would seem to be a sufficient bar to the establishment of the son's title; at all events, an unrecorded deed could not defeat the right of the purchaser under foreclosure sale. A judgment docketed prior to the mortgage would remain a lien in preference to the latter for ten years, after which time, no levy having been made, the lien would be raised in favor of incumbrances or purchasers in good faith.

J. W. C., Lovettsville, Va., sends a plant for name, the seed of which was found in his clover seed. He has tried to extirpate it for several years, but without success.

ANS.—It is Lepidium campestre, a sort of Pepper-grass called Yellow-seed. It belongs to the order of Cruciferæ to which also belong all such plants as nasturtiums, cress, cabbage, horse-radish, radish, &c., &c. Being an annual it is not difficult to get rid of, if prevented from going to seed.

M. R. Seneca Falls, N. Y., asks whether the age of the stallion has anything to do with the character of his progeny.

ANS.—The records of race horses and trotters seem to indicate that the age of the sire has little or no influence upon the character of his get, as some of the best of these, both as performers and sires, have been the offsprings of two and three-year-old colts, while others have been the progeny of sires from 25 to 30 years old, or even older.

S. H., South Oshawa, Ont., asks, 1, if rye bread is wholesome; 2, is rye a sure crop in northern Ontario; 3, how many bushels per acre should be sown on new land; 4, is it a good feed for horses and pigs.

ANS.—Rye bread is the "staff of life" for whole nations, there can therefore be no question as to its wholesomeness. 2. Yes. 3. One and a half to two bushels. 4. It is, but it is not much used as a feed for animals, except as a foddering crop, for which purpose it is excellent sown, say, in August for late fall soiling or in the fall for spring soiling.

J. B. P., address mislaid, asks whether the plants from the magnolia seeds sent out by the RURAL will blossom without grafting or budding, and how would it do to graft an oleander on a magnolia.

ANS.—Yes, they will blossom in due time without grafting. The oleander could not be grafted on a magnolia. It is only plants of a close relationship that can be grafted upon each other.

A. F., Camden, Maine, has 1,000 pounds of ground bone, and he asks how much muriate of potash he shall mix with it to make a good manure.

ANS.—It will depend upon the character of the land to which it is applied, and the crop that is to be benefited by it: about 200 pounds will do for a general-purpose manure.

L. A. W, Farmingdale, N. Y., asks, 1, how to propagate syringa and hazel-nut bushes; 2, whether a specified pump is a good one.

ANS.—1. Propagate the syringa by cuttings, suckers and by division of the old bush; the hazel is propagated by nuts planted in the fall or spring. 2. Yes.

THE
RURAL NEW-YORKER.
PUBLISHED EVERY SATURDAY.

Address THE RURAL NEW-YORKER,
No. 34 Park Row, New York.

SATURDAY, JUNE 19, 1880.

It pays well, as we have often said, to pass coal-ashes through a fine sieve—a flour sieve, for instance. This sifted ashes when perfectly dry, as it should be kept, is one of the best substances with which to mix London Purple, Paris-green or Hellebore for the destruction of potato beetles, fruit slugs, currant and gooseberry worms and the like. Being lighter than plaster or flour, it does not fall so quickly, but settles upon every part of the plant—the stem, the under part of the leaf as well as the upper part. It may be said also that it adheres to leaves for a longer time and is not so readily washed off by rains.

Hints about work may be useful or simply ridiculous. It may even be admitted, to stretch a point, that farmers are so careless as to need reminding every month of what work should be done, and reasonably that many valuable suggestions may be made that will really be of advantage. But these suggestions should be timely and in advance of the season, that a reader may be instructed in good time. It is hardly reasonable, however, for a leading journal to recommend farmers to roll their clover fields in May to drive any roots that may have been lifted by frost back into the ground. All such roots will be dead; or, if still living, a heavy roller would bend them over and break or crush them and certainly finish them. In May clover is far too advanced for rolling, and in fact clover never should be rolled. Grass may be rolled with advantage, but to hint that clover should be rolled in May argues very little accurate knowledge about the plant.

The Army Worm is fast disappearing from those parts of Long Island first infested, after working an amount of damage which it would be difficult to estimate. Its appearance in many other parts of the Island is reported. The present hot weather, however, will probably put an end to their depredations. The most efficacious method of destroying them has been that of plowing trenches about the infested fields. In loose soils it is almost impossible for them to climb steep ascents. We dug a hole four inches deep with a hoe, placed therein fifty and watched them for an hour. Not one succeeded in reaching the top, the soil constantly giving way under their short, stubby legs. Another excellent method of catching them is that of laying boards about the fields. The Army worm creeps under these for shelter from the hot sun, and may thus be captured in immense quantities. Under one board 20 feet in length, we have found, on turning it over two or three times a day, as many as 500 at once.

Poultry and the Army Worm.—The most important note of experience we have to make respecting the Army worm is this: It will be remembered that we confined our flock of poultry—about 75 in number—in a fenced garden, about half an acre, or a little more, in area. Here were two plots of wheat—Silver Chaff and Shumaker—and between them the Rural Sorghum and fodder corn. The Silver Chaff was perhaps one-half destroyed when the fowls were confined within the inclosure. The Shumaker was not so much injured. But the pests were destroying the corn rapidly, the leaves being only a few inches in hight. The hens were thus shut in for two days. The third day there was scarcely an Army worm to be found. Though we saw them eat a goodly number, we cannot believe that the sudden disappearance of the worms was because the hens eat them up. One would suppose that there were worms enough to supply a feast to 75 fowls for a week at least. In other fields of our farm not accessible to the poultry, the worms are at this writing (9th inst.) as abundant as ever.

Pinching.—Pinching is a species of pruning so far as it is used in horticulture. Its fitness for other purposes we need not discuss. During the month of June wonders can be accomplished by pinching the young growth of our finest evergreens, such as spruces, Silver firs, pines, etc. Especially do the Silver firs respond to this treatment. A specimen of the Nordmann's Silver fir, for instance, may be kept in perfect symmetry by pinching the leader and a few rampant side shoots while in their softest stage of full growth; and not only that, but the same plant may be made to take on the most comely curving and weeping shapes by simply pinching a part of the upward tending shoots. In fact, in the case of many plants, the use of the pruning-knife might be almost discarded, if pinching were practiced intelligently from an early age.

Many know what an influence on the size and quality of grapes is exercised by a system of well devised pinching. The sap may be thus forced back from the mere production of excessive wood, and employed in nourishing embryo grapes by simply pinching off some of the young growth beyond the newly formed bunch. Nor is pinching less valuable for the development of the beauty of ornamental trees.

But let us utter one word of warning against pinching too much and removing too many leaves. Our hot, changeable summers bear heavily on plants thus treated. Europeans can pinch very closely in their more equable and moister climate. But when Europeans come over here and treat our plants as they have been accustomed to manage their own at home, something is sure to suffer.

HONOR TO WHOM HONOR IS DUE.

Gratitude has been defined by a satirist as "a lively sense of favors to come." The sharpest point in the best satire is its close approach to similitude with truth, and the edge of the above adage lies in its very close application to the common events of human life. It is said that "the good that men do lives after them," and "the evil they have done dies with them." But this is far from true in ordinary affairs, indeed the contrary is the more frequently true. Perhaps one of the most useful men was Benjamin Franklin, to whom we owe the introduction of many of our commonest but most valuable household and industrial conveniences, many scientific discoveries and a vast amount of practical sense and wisdom bound up in small packages and known as proverbs, which are only inferior in the aggregate value to the proverbs of Solomon himself.

As an agricultural nation, we should never forget, as we use plaster or dilate upon its value as a fertilizer, that it was to Franklin's observation and ready application of valuable things to practical purposes, that we owe the introduction of plaster for this use. He observed the effect of this mineral upon the grass at the gypsum quarries, near Paris, and on returning home he tried it with remarkable effect, and thus brought it into use as a fertilizer. This truly scientific observer was the first to discover that lightning was simply an electrical discharge, and his discoveries led to the use of lightning rods as means of safety from the lightning stroke. We recently remarked that it was to his sagacity we owed the introduction of Broom corn, and it is but just that now and then our indebtedness to such men should be recalled lest their services may be forgotten and our gratitude fail to be bestowed as it deserves to be.

OUR CEREALS.

The Bureau of Statistics has lately published some interesting data in regard to the production and distribution of cereals in this country. In the 10 years from 1868 to 1878 our total production of cereals increased from 1,450,000,000 in the former year to 2,302,000,000 bushels in the latter. Of the whole national supply only three per cent. was exported in 1868 and ten per cent. in 1878, while in the twelve months ending June 30, 1879, nearly eleven per cent. of our entire yield was sent abroad—246,000,000 bush. Of corn we keep for home consumption 93½ per cent. of all we raise; of barley, 88 per cent.; of rye, 80 per cent.; of wheat, 75 per cent.; of oats, 99 per cent.; while the whole amount of our buckwheat is kept for home use.

Although corn is grown in all parts of the country and constitutes five-eights of our whole cereal crops, less than one-fourth of the States grow more than they require. Nearly all the surplus is produced by the single group of Ohio, Indiana, Illinois, Iowa, Nebraska, Kansas, and Missouri. Michigan, Wisconsin and Minnesota produce hardly enough for home use, while the seven States above named yield at the average rate of sixty-two bushels to each inhabitant. As late as 1859, the fifteen slave States produced 52 per cent. of the whole corn crop; but at present it is doubtful if any of them grows enough for home consumption, for in 1877 all the Southern States produced only 10,000,000 bushels more than in 1859, while the yield of the other States had swelled in the same period from 400,000,000 to 900,000,000 bushels. The center of production has moved west more rapidly than north, until now forty per cent. of the entire yield is raised beyond the Mississippi.

In the great corn belt the number of swine and cattle raised is proportionally much larger than in other sections, especially in Indiana and Illinois, and here most of the surplus corn is concentrated in these animals for shipment to other States and to Europe. Owing to the deficiency of capital to buy animals in the more newly settled States, much of their surplus corn is exported in the bulkiest form, and that, too, over the greatest distances, owing to their remoteness from market.

Of our wheat the Atlantic States produce only 17 per cent. against 30 per cent. in 1860. The central States in the same period have fallen from 54 to 40 per cent.; while the trans-Mississippi States have risen from 14 to 42 per cent. The New England States produce only three-tenths of a bushel of wheat to each inhabitant; the Middle States three and a third bushels per head; that is, only a trifle over half what they need; while Kentucky and Tennessee produce about six bushels; the Southern, Atlantic and Gulf States nearly as much; and are therefore over self-supporting, for owing to the large amount of corn consumed by negroes and others in the South, an average of about four bushels of wheat per head is held to be enough from Maryland to Texas. The area suitable for wheat in the Far West is much larger than that adapted to corn, inasmuch as the former can be grown from 2,000 to 5,000 feet above the level of corn culture, so that vast regions in Washington Territory, Dakota, Wyoming, Idaho and Montana, from which corn growing is virtually excluded, are admirably adapted to wheat culture.

BREVITIES.

Professor Riley says: "The worms (Army worms) abound during wet springs, preceded by one or more very dry years." This is evidently incorrect in the present case.

One of our plots of wheat, Yellow Missouri, presents a remarkable appearance. It consists of stems and heads only, every leaf having been devoured by the Army worm.

There is no plant that the Army worm seems more fond of than Timothy. There is scarcely a head left in the vicinity of the Rural Farm. During a short ride last Friday there were so many worms in the road that the tires of the wagon wheels were "muddy" with their mashed bodies.

We have ascertained that there is an atrocious amount of swindling going on (hereabouts at least) in the matter of selling hay by weight. For instance, a load of hay sold a few days ago was honestly weighed near the Rural Farm and a certificate given for 1,700 pounds. The purchaser, upon reaching Brooklyn or at some intermediate place, had it weighed again, and this load of hay under that certificate, as we ascertained by following it up, was sold in Brooklyn for 3,100 pounds!

A correspondent (S. G. C) writes us: "I think the Aquilegia is a humbug. I could send seed that is much ahead of those in color, size and beauty." Our correspondent is mistaken. The Bebb's Hybrid Aquilegias will not bloom until the second year. We distinctly stated that this seed was mixed with common and perhaps *worthless* sorts, but that enough of the "Bebb's Hybrids" would be found in each package to enable each subscriber to grow several plants.

Mr. W. I. Chamberlain is preparing to make an extended tour of agricultural observation through the great West and examine carefully the work done and the methods employed in some of our wide-awake Western States. After his return, the Ohio State Board of Agriculture, of which Mr. Chamberlain is now secretary, will hold a consultation with a view to decide more definitely as to its future work, so as best to promote the true interests of Ohio agriculture. In this work the Board asks and should receive the hearty co-operation of all.

Tornadors have been unusually numerous and destructive during the past week. One in Iowa killed 20, chiefly women and children, and wrought an enormous amount of mischief over a course half a mile broad; Illinois was visited by another; Texas and Maryland by others, and yesterday (Sunday) we had a juvenile one in this city and neighborhood. The aggregate loss in demolished homesteads, ruined crops, fences, barns, etc., must be up among the millions—to say nothing of the still more deplorable loss of so many human lives. The latest accounts from northern Texas tell us that the tornado and rain-storm noticed last week were far more disastrous and destructive of life and property than the first accounts represented.

A friend in Monmouth Co., N. J., writes us: "Rose bugs, for the first time since I have been here, have badly attacked my grapes. I could find no remedy for them in the books, except picking them off by hand. The servant girls and all turned out to do this, for it was a serious job. At second picking we did not get nearly so many as at first. I think a third picking will clear them out. Do you know any remedy for them?" We do not know of any better remedy. A good idea is to plant, near vines, plants which they prefer; such for example, as Sassafras, Spiræa sorbifolia and others. At the Rural Farm, Rose bugs have never before been so abundant. Ripe and ripening cherries are crowded with them and the same may be said of young corn plants and even potato leaves.

It costs but little more to raise Percheron horses than common animals, and the half-breds bring double prices; three-quarters to seven-eighths-bred, three to four times as much; full-breds all the way from $500 to $3,000 each. Next to Percherons, fine carriage horses pay best, and the West has a little material on hand to produce such, and can rapidly multiply it if disposed. Trotting horses are always a complete lottery, and the general breeding of them—especially by farmers—is attended in the long run with a heavy loss. It is, moreover, demoralizing to farmers' sons now growing up, and we want to turn their attention from this gambling business.

Gardening Illustrated" is the name of a floricultural weekly journal of 16 pages published in London by Mr. Wm. Robinson, founder and editor of the Garden, which is now well known and justly esteemed in America. This "Gardening Illustrated," though first published but two years ago, we learn from trustworthy authority, has reached a circulation of 50,000 copies per week, which is probably a greater number than that of all the other journals of the same class published in England combined. We congratulate Mr. Robinson who, for his never-faltering love of "The art which does mend nature—" has wrought great good in the horticultural world.

The Agricultural Gazette of May 24 says, referring to the Royal Speech upon the opening of Parliament:—"It has not one word in recognition of the straits of British agriculture. It is certainly no wish of ours that agriculturists should be treated in any way different to other classes. And that legislation should be carried on for the general interests of the nation, and not for those of any particular section, is a truth we do not care to dispute. Yet the cheap satisfaction of knowing that their trial has not been unnoticed—as well as the good faith and spirit with which that trial has been endured—might have been afforded to the tenantry of Great Britain without any one being the worse for this acknowledgment having been conceded."

The Pacific Rural Press of April 17th, is a double number. That is, it is just about twice the size of the Rural New-Yorker. We are always pleased to see evidences of prosperity and enterprise in our agricultural and horticultural press, which, according to all accounts (with a very few exceptions), is not so well sustained by the farmers of our farming country as it should be. The pressure of farm work at this season often renders it difficult for us to look through our exchanges promptly. Hence it is that the Rural Press of the above date escaped us until now. The editors thus modestly refer to the number. "It has cost a long pull on the editorial oar; it has gone down into the publishers' pockets to the lower hem. If it is good, we are glad of it. If it is poor, no harm will be done except to our own conceit."

Sunstruck Hemlocks.—Having enjoyed special opportunities for observing the effect of the recent drought and excessive heat on many thousands of evergreens, we wish to express our sympathy for the hemlocks. They have been in many cases literally sunstruck. The ground was hot and dry and the hemlocks just in their tenderest growth. Under these unfortunate conditions, the sun's rays, made fiery by the heat of 95 degrees Fahrenheit in the shade, struck many hemlocks to the heart in an hour. In one instance we observed a broad-leaved hemlock (Abies Canadensis macrophylla) that had grown vigorously three years in the same spot utterly dead, sunstruck. And this case is only one of several similar cases we have noted. Other evergreens suffered at the same time, and even the young growth of deciduous plants was burned in spots, yet nothing has been, according to our observation, as much scorched and killed as the hemlock and its varieties.

We have recently had the pleasure of visiting two of the most successful small fruit-growers who ship fruit to this market, namely Mr. J. T. Lovett, Little Silver, N. J. and the Rev. E. P. Roe, Cornwall-on-the-Hudson. Mr. Lovett is now thoroughly established and his well stocked nurseries are kept in excellent order. Both places had suffered from the recent severe drought, especially the strawberry crop. We found that the strawberry season in New Jersey was at least eight or ten days earlier than at Mr. Roe's place. Mr. Roe has about 100 varieties of strawberries, and some of the newer sorts are very promising. One plant of the Bidwell picked out at random, was laden with a fruitage of 75 berries, ripe and green, besides abortive flowers; another plant of the Seneca Queen, also taken at random, had 48 berries. Mr. Roe's ideal strawberry culture is hill culture with the rows three feet apart and the plants one foot apart in the rows. We have had a number of the best new strawberries engraved and shall in due time present them to our readers.

Typhoid Fever from Milk Affected by Impure Water.—An outbreak of typhoid fever recently took place in England, caused by using milk contaminated with fever germs. A physician was sent to the farm from which the milk came, to ascertain the cause of this. The farmer showed him the brook where he washed his milk cans, and the water looked clear and without any sign of pollution. But the physician was not satisfied with this examination, and being confident that there must be pollution somewhere, he followed the stream up for two miles, and then found pollution enough to poison a large town. A sewer emptied here into the brook, a stagnant cesspool overran into it in wet weather, and near-by in the water, lay a number of putrid carcasses of pigs and calves, which had died probably of typhoid fever, for that had been prevalent lately among the domestic animals around. This shows the wicked carelessness of people in not immediately burying dead animals deep in the ground, at a distance from any well, spring, or stream. It should also incite all where a fever breaks out, to search instantly for the cause and persevere till it is ascertained and removed.

Literary Miscellany.

THE PRESS AND THE PLOW.

We envy not the princely man,
In city or in town,
Who wonders whether pumpkin vines
Turn up the hill or down.
We care not for his marble halls,
Nor yet his heaps of gold,
We would not own his sordid heart
For all his wealth twice told.

We are the favored ones of earth,
We breathe pure air each morn,
We sow, we reap the golden grain,
We gather in the corn.
We toil—we live on what we earn,
And more than this we do—
We hear of starving millions round,
And gladly feed them too.

The lawyer lives on princely fees,
Yet drags a weary life,
He never knows a peaceful hour,
His atmosphere is strife.
A merchant thumbs his yardstick o'er,
Grows haggard at his toil;
He's not the man God meant him for;
Why don't he till the soil?

The Doctor plods through storm and rain—
Plods at his patient's will;
When dead and gone, he plods again
To get his lengthy bill.
The printer—bless his noble soul!
He grasps the mighty earth,
And stamps it on our daily sheet,
To cheer the laborer's hearth.

We sing the honor of the Plow,
And honor of the Press—
Two noble instruments of toil,
Each with a power to bless.
The bone, the nerve of this fast age,
True wealth of human kind;
One tills the ever-faithful earth,
The other tills the mind.

JOHN ASCOTT'S DAUGHTER.

BY CHARLES RICHARDS DODGE,
Author of "Louise and I."

(Continued from page 381.)

CHAPTER XV.

THE NEW OWNER.

The day following the sale was cold and dreary. It had rained incessantly from day-break, and there was every prospect of a long storm. Within, without, was dark and gloomy. May was sitting by the window, her forehead pressed against the pane to cool its burning fever, and was alone with thought. Her eyes seemed to rest upon the bed of myrtle trailing beneath the window, but in truth they were so filled with the heavy mists that hung upon their lids, she saw nothing, nor heeded nature's tears, even, as they fell patter, patter upon the sill before her. George had come in from his chores quite early in the day, and for an hour had been sitting in another part of the room in a large rocking chair, his hands clasped together behind his head, his face turned upward to the ceiling. Neither had spoken for the full hour and each felt that but one drop more was needed to fill their cup of misery to overflowing.

"It is over, May," said her husband, at length, "and we are just where we stood a little over two years ago."

"Yes," she answered, sadly.

"We have lost our home——"

"But we have health, George—that is a great blessing in itself. Then you will have all the money you first put into Maplewood, and a little for the two years, hard work. Let us be thankful——"

It was bravely begun, but her voice faltered, and she did not finish the sentence. George arose from his seat and nervously paced up and down the room for some moments, his hands crossed behind him.

"If I only knew what that dignified old fellow was going to do with the farm—" he commenced reflectively. "Skinner is coming to-morrow with the papers, and then I suppose, we shall know all about it."

"Yes—we shall know all about it," his wife answered, giving a peculiar emphasis to the words. She paused a moment, and then added: "And I shall leave dear old Maplewood forever."

"It is that, that makes it so terrible to me," George exclaimed with feeling. "Oh heaven! was ever a man's life more unfortunate.'

At this juncture carriage wheels were heard in front of the house. The horses stopped, some one alighted and stepped upon the broad door-stone; there was a knock at the door and in a few moments George was astounded to see the tall figure of his father enter the room.

"Why father!" he exclaimed.

"It seems you've not forgotten me."

"No, sir. I have not forgotten you."

"And I don't intend you shall," Mr. Ashton answered looking out from under his great shaggy eyebrows in the direction of May. "*You're* well, are you?"

"Will you be seated, sir?" she asked, starting to leave the room.

"You're coming back, ain't ye? I want to say something to ye."

"I presumed I should be intruding."

"Well, no, I guess not. Sit down both of ye. So you are in trouble, George?"

"I *have* been in trouble, but it is all over now."

"It is, eh? That's all right, and leaving Maplewood won't come so hard."

"Do you come here to taunt me, father."

"Well no, but I heard the farm was sold yesterday, and I came round to see if I could do anything for ye."

"Rather late for that. You could have helped us day before yesterday considerably."

"Let me see. Six thousand and something it went for. That gives you back your aunt's money, perhaps with interest, for the two years. That's better luck than might have befallen ye."

"Is that all you have come to say?"

"That's *about* all I have come to say to you, and after I have had a little chat with your wife I'll go."

He turned towards May, and for a momont there was an awkward pause.

"Umph! hem! I never thanked ye for that butter you was good enough to leave with Saray for me a year ago. It was *very* good butter. Hem I was sorry when it was gone. I—I—didn't treat you jest right that day, but fact is—ahem!—you appear to be a different sort of a gal from what I thought you were. To tell the truth, I've made up my mind that there's a good deal of the Ashton about ye—your father was too fond of books to suit me—so I—well—I didn't like the notion of your being turned out of the old place a second time, and—there! I guess I'd better go home before I do something foolish. Here's the deeds, May, I bought Maplewood myself, and as your father—poor man—wasn't able to give it to ye, jest take it as a weddin' present from me, *improvements* and all."

"Father!"

"Forgive me, May, for the trouble I've made ye. I'm a crusty old dog, I know, but tho sayin' never too late to learn or never too old to mend, or something of the sort, fits me exactly. We'll let bygones be by-gones and say nothing more about it."

"Father, you have made us happier than you can know."

"Never mind the thanks, George. It's ended all right, so we'll rub out the old score and begin again. But I told ye, if you displeased me and married the Ascott gal, not a cent, and I've stuck to it. I will say for your comfort, however, that you've run the farm mighty pretty—all to that mortgage business, but it'll be a lesson for yo in the futur' never to put on improvements, or do anything in fact *with other people's money*. Not even Mrs Ashton's here. But I'll warrant ye she's got sense enough to take care of her own—trust May for that. Now, daughter, just let me take a look at that young man I've heard so much about, and I'll scamper."

"Of course you will stay to dinner, father," said George. "You mustn't drive back in all this storm."

"Of course you will stay," May urged. "I've—more of that butter."

"There, I'll stay," and the old gentleman's eyes twinkled merrily.

He stayed to dinner and spent the afternoon; then he stayed to tea, and finally stayed all night, and as the morning dawned with bright skies and a clear, sweet atmosphere after the storm, he stayed all the forenoon to go over the farm with George. It seemed like a dream to the young couple after the dark experience of the last week, and it is safe to assert that three happier people could not be found in S—— than the three that gathered around the family board upon this bright June day.

CHAPTER XVI.

CONCLUSION.

Five years have passed since May Ashton came into possession of Maplewood. With capital at his command George has become a successful farmer, and is accumulating a fair share of this world's goods. His father is still hale and hearty and takes a just pride in his son's achievements. He is a frequent visitor at the farm, spending weeks at a time with his children, or to come more nearly the truth, with his grand-children, for he makes a complete nursery-maid of himself upon these occasions.

John Ascott Ashton is a blue-eyed, fair haired little fellow, nearly six years old, his mother's idol and "her own boy" in every sense of the word. Elbridge Ashton Jr., almost three, is a chip of the *old* block—a thoroughly wide-awake irrepressable, his grandpa's idol of course.

"What are you going to do with the boys, George?" the old gentleman asked one day, as they were playing in the library.

"Bring them up with the idea that they must earn their own livings." George answered "I shall give them liberal educations, and then let them follow the bent of their inclinations."

"Elbridge there, reminds me of his father when he was a little cub. I guess you had better send that boy to the scientific school, and he'll take care of the family one of these days. The other fellow, though, is an Ascott; he wants regular college larnin' and perhaps someday he'll turn out a member of Congress or a minister—or something. Who knows?"

William and Charles are jogging along in business with fair success. They often spend Sunday at the farm and are proud of their younger brother and his wife. Sarah and May see each other very often and have grown to love each other almost as own sisters. May's old friends at N—— are still warm and friendly, and George will ever remember, with gratitude, Mr. De Fondville's kind offer of assistance, at the time the farm was sold, even though the letter was delayed in transit until the farm was in May's possession.

Old Silas Wilkins and his good wife are still alive, but George has leased the farm, allowing the old people to remain upon it. The old gentleman does little work, but he still continues to give good advice and loves an argument as well as ever. He says he believes in book-farming, "perviden a man has got a powerful sight o' common sense into the bargain."

A word for George and May; they have never forgotten the lessons of their early farm experience nor the dark cloud that threatened the happiness of their married life. As a pilot learns the dangerous reefs and shoals but to avoid them, so they are steering their precious bark, by a sure chart and compass, over a sunlit sea toward that fair haven where storm is never known.

Here let us leave them—floating down life's stream together—successful through earnest purpose, happy in their success, mindful of the nobler aims of life, while living for each other, and proving to the world that love and duty ever should go hand in hand.

BREAD-MAKING IN SPAIN.

The bread in the south of Spain is delicious; it is as white as snow, close as cake, and yet very light; the flour is most admirable, for the wheat is good and pure, and the bread well kneaded. The way they make this bread is as follows: From large, long panniers filled with wheat, they take out a handful at a time, sorting it most carefully and expeditiously, and throwing every defective grain into another basket. This done, the wheat is ground between two circular stones, as it was ground in Egypt two thousand years ago, the requisite rotary motion being given by a blindfolded mule, which passes around and around with untiring patience, a bell being attached to his neck, which, as long as he is in movement, tinkles on; and when it stops he is urged to his duty by the shout of "arra mula" from some one within hearing. When ground, the wheat is sifted through three sieves, the last of these being so fine that only the pure flour can pass through it; this is of a pale apricot color. The bread is made in the evening. It is mixed with sufficient water with a little salt in it, to make into dough; a very small quantity of leaven or yeast in one batch of household bread as in Spain, would last a week for the six or eight donkey loads of bread they send every day from their oven. The dough made, it is put into sacks and carried on the donkeys' backs to the oven in the center of the village, to bake it immediately after kneading. On arriving there the dough is divided into portions weighing three pounds each. Two long, narrow wooden tables on trestles are then placed down the room, and a curious sight may be seen. About twenty men, bakers, come in and range themselves on one side of the table. A lump of dough is handed to the nearest, which he begins kneading and knocking about with all his might for about three or four minutes, and then passes it on to his neighbor, who does the same, and so on successively until all have kneaded it, when it becomes as soft as new putty and ready for the oven Of course, as soon as the first baker has handed the first lump to his neighbor, another lump is given to him, and so on until the whole quantity of dough is kneaded by them all. The bakers wives and daughters shape the loaves for the oven, and some of them are very small. They are baked immediately.—*Colorado Farmer.*

WHAT A VOLCANO CAN DO.

Cotapaxi, in 1738, threw its fiery rockets 3,000 feet above its crater; while in 1754, the blazing mass, struggling for an outlet, roared so that its awful voice was heard at a distance of more than 600 miles. In 1797 the crater of Tunguragua, one of the great peaks of the Andes, flung out torrents of mud which dammed up the rivers, opened new lakes, and in valleys 1,000 feet wide made depcsits 600 feet deep. The stream from Vesuvius, which in 1837 passed through Torre del Greco, contained 33,000,000 cubic feet of solid matter; and in 1793, when Torre del Greco was destroyed a second time, the mass of lava amounted to 45,000,000 cubic feet. In 1760 Ætna poured forth a flood which covered eighty-four square miles of surface, and measured nearly 1,000,000,000 cubic feet. On this occasion the sand and scoria formed the Monte Rosini, near Nicholosa, a cone of two miles in circumference, and 4,000 feet high. The stream thrown out by Ætna in 1810 was in motion at the rate of a yard a day for nine months after the eruption; and it is on record that the lava of the same mountain, after a terrible eruption, was not thoroughly cool and consolidated ten years after the event. In the eruption of Vesuvius, A. D., 79, the scoria and ashes vomited forth far exceeded the entire bulk of the mountain; while in 1660 Ætna disgorged more than twenty times its own mass. Vesuvius has sent its ashes as far as Constantinople, Syria and Egypt; it hurled stones eight pounds in weight to Pompeii, a distance of six miles, where similar masses were tossed up 2,000 feet above the summit. Cotopaxi has projected a block of 100 cubic yards in volume a distance of nine miles; and Sumbawa, in 1815, during the most terrible eruption on record, sent its ashes as far as Java, a distance of 300 miles of surface, and out of a population of 12,000 souls only 20 escaped.—Weekly Journal.

FLOWERS.

Parisians are genuine flower lovers. Even in the densest quarters of Paris you may see peeping over lofty walls, or at the bottom of some tunnel-like archway, fragments of groves, which, on nearer acquaintance, will be found to be cooled by fountains and adorned by statuary. Romancers exaggerate them into parks, but as a rule they cover only a few square yards. In the Faubourg St. Germain, it is true, there are some delightful gardens of considerable extent, where one may walk by moonlight and listen to the buzz of the mighty city around. Those who cannot enjoy the luxury of a plot of ground make gardens in green boxes on their window-sills, or buy pots of sweet basil, the heliotrope night-shade, jasmine and mignonette at the Qua, aux Fleurs. On certain days of the year—the Ste. Marie, for example, every third person being called by that name—the streets of Paris resemble a fragrant Birnam wood. Everybody is moving about, bearing gigantic bouquets or portentious pots of flowers, for it is the custom to make presents of this kind on such occasions. The imperial flower is the violet—a singular desecration of that modest child of the woods.

HOME.

I never saw a garment too fine for man or maid there never was a chair too good for a cobbler or a cooper or a king to sit in; never a house too fine to shelter the human head. These elements about us, the glorious sky, the imperial sun, are not too good for the human race. Elegance fits man. But do we not value these tools a little more than they are worth and sometimes mortgage a house for the mahogany we bring into it? I had rather eat my dinner off the head of a barrel, or dress after the fashion of John the Baptist in the wilderness, or sit on a block all my life, than consume all myself before I got to a home, and take so much pains with the outside that the inside was as hollow as an empty nut. Beauty is a great thing, but beauty of garment, house and furniture are tawdry ornaments compared with domestic love. All the elegance in the world will not make a home, and I would give more for a spoonful of real hearty love than for whole shiploads of furniture and all the gorgeousness all the upholsterers in the world can gather—Dr. Holmes.

VARIETIES.

If "conscience makes cowards of us all," ought not the best soldier to be one without a conscience?

If a man can be happy and contented in his own company he will generally be good company for others.

To attain long life—love nothing too violently hate nothing too passionately; fear nothing too strongly.

Moderation is the father of health, cheerfulness, and old age. Excess has a family too numerous to be counted.

Edison will next turn his attention to the construction of an electric pan-cake machine for Vassar College.—Boston Post.

What makes people so discontented with their own lot in life, is the mistaken idea which thoy form of the happy lot of others.

NEW PUBLICATIONS.

The Prodigious Adventures of Tartarin of Tarascon. Translated from the French of Alphonse Daudet 12mo. Cloth, $1.00. Paper, 50 cents. Boston, Lee & Shepherd.

"The Prodigious Adventures of Tartarin of Tarascon," by Alphonse Daudet, is a very picturesque book—a very good satire—and admirably translated. Indeed, Mr. Minot has caught the author's style so well, one might easily believe at times he was reading the original. The book differs very much from Daudet's more recent works. It has a breath of fresh life about it which if not so finished in style, is very charming. The pictures constantly bring Gerome to mind. The satire, if not original, is presented in an original way. Tartarin is a would-be hero. "Don Quixote and Sancho Panza in the same man! You understand what an ill-assorted household theirs must be! What combats! What altercations! Tartarin-Quixote, getting excited over Gustave Aymard's narratives, and crying, 'I go!' Tartarin-Sancho, thinking only of rheumatism and saying, 'I stay!'" Tartarin-Quixote persuades himself that he has been, and fought, and conquered. He tells the simple Tarasconians, who idolize him, grand stories of his achievements. "He does not lie; he deceives himself. The descriptions of Algiers and of African scenery elsewhere are very vivid. One can almost see the colors. Of course poor Tartarin is cheated and made fun of in all directions. In his good nature, generosity and untold wealth, he is not unlike the Nabob. It is a foundation for the reality of all future stories from Tartarin-Don Quixote.

The True Story of the Exodus of Israel, together with a brief view of The History of Monumental Egypt, Compiled from the work of Dr. Henry Brugsch-bey, edited with an introduction and notes by Francis H. Underwood. Price $1.50. Boston, Lee and Shepard.

"The True Story of the Exodus of Israel" sounds like a challenge. But whatever may be the conclusion to which it leads, the main question is—Is it true? If it is *not* true, people may still believe that the waves of the Red Sea continue to roll over the chariots and armor of the drowned Pharaoh's host. If it *is* true, it will lead to a more reasonable view of the ancient story. Dr. Brugsch, after thirty years of exploration and study, has been able to fix the residence of the Israelites in Egypt, and the birth-place of Moses. Having a thorough knowledge of the geography, ancient and modern, he shows the errors of the translators and commentators. This account Dr. Brugsch declares to be wholly in accord with Scripture. The book is valuable in other respects, especially for the new light thrown upon the immense antiquity of the kingdom, and its wonderful monuments with their wealth of historic inscriptions. It is illustrated with a map of Ancient Egypt, reproduced from the original in Dr. Brugsch's "Egypt under the Pharaohs."

Odd or Even. By Mrs. A. D. T. Whitney. Boston: Houghton, Osgood & Co.

This new novel by Mrs. Whitney adds another to the list of her many interesting productions. While free from the sensational characteristics of a host of modern books, it partakes of the freshness of the times. The delineations of character and pictures of scenery are points of excellence. To be in communion with the people and in view of the scenes so vividly portrayed would be a pleasure not always experienced. The reader concludes upon reflection that imaginary powers are exceedingly elastic, or that the writer's path in life has lead through naught but flowery vales. Her standard of morality is elevated and calculated to impart a lesson which none should fail to heed.

Elsie's Widowhood. By Martha Finley. Published by Dodd, Mead & Co., New York.

This little book is designed to prove a pleasing story and also a means of showing how trial and affliction may be borne with untiring grace, if the love of Christ be the motive power.

BRIC-A-BRAC.

As it will soon be time to ask: "What are the wild waves saying?" we take this early opportunity to candidly confess that we do not know.

If there's a note that's due, you bet
You'd better remember it while you may:
For it's important you shouldn't forget
To-day was to-morrow yesterday.

A HUSBAND telephoned to his wife: "What have you for breakfast, and how is the baby? The answer came: "Buckwheat cakes and the measles."

THERE was a lady named Ella,
Who carried a silk umbrella:
There came a typhoon
Which made it a balloon,
And floated her off with her fellow.

A STORY is told of General Butler's sarcastic retort upon a Massachusetts judge whom he was teasing for a ruling favorable to a cause he was defending in court. The judge got out of patience at last, and somewhat testily exclaimed: "Mr. Butler, what do you think I sit here for?" The General quietly shrugged his shoulders and replied: "The Court has got me now."

"HERE, John, don't eat those crackers up,"
Said she with a hateful snap;
"They're some I've saved on purpose
To put in the baby's pap."

"Well," said John, edging for the door
And reaching for his hat:
"What makes you look so cross about it, then?
Aint I the baby's pap?"

THE PARROT'S PRAYER.—Capt. James Etchberger has a parrot who can say several words in good English. The parrot used to be in the room in which the Captain's family met to pray. One morning the parrot went out into the garden, when a large hawk flew down and caught the parrot in his claws, bearing it off over the tree tops. All at once the parrot shrieked out, "O Lord, save us! O Lord, save us!" which frightened the hawk so much that he dropped his prize

NEVER SO STRANGE A YEAR.

THERE never was so strange a year;
The seasons seem all out of gear;
The summer took so much of fall,
We had no autumn days at all;
The fall, in order to get square,
Took all of winter it did dare;
And winter evens up the thing
By lingering in the lap of spring.—Puck.

AN old farmer out in Indiana says, that for his part he don't know where the present rage for trimming bonnets with birds is going to end Only four or five years ago he bought his daughter a humming-bird; next year she wanted a robin, the next a pheasant, and afterward he had to chain up his Thanksgiving turkey or she'd have had that perched on top of her head.

FATE OF A DASHING YOUNG MAN.

A dashing young man in St. Paul
Loved a maiden exceedingly tall;
Two nights in a week
He would muster up cheek
And make the fair creature a call.

One day her pa shouldered his gun,
And went out to discover the son
Of a sea-cook who would
On a young heart intrude,
And say he was only in fun.

He met the young man in his store,
And blew him out through the front door;
A father-in-law jury
Let him off in a hurry,
But the boys shunned that girl evermore.
—*Chicago Times.*

SAYINGS BY JOSH BILLINGS.—Those who are too proud to enquire what a thing kosts when they buy it, are the fust ones to find fault when they cum to pay for it.

Thare iz a grate deal ov religion in this world that is like a life-preserver, only put on at the moment ov extreme danger, and then half the time put on hind side before.

Pashunce iz a good thing for a man to hav, but when he has got so much ov it that he kan fish all day over the side ov a boat, without enny bait on hiz hook, laziness iz what's the matter ov him.

It iz the prudes in this world that need the most watching, coquets are too karcless to be dangerous. Most men are like a hop vine, if they don't hav sum kind of a pole to klimb, and then stik to it, they won't promulgate much hops.

ONLY a woman's hair,
Binding the now to the past,
Only a single thread
Too frail to last.
Only a woman's hair
Threading a tear and a sigh,
Only a woman's hair
Found to-day in the pie.
—Steubenville Herald.

HOW SHE AVENGED HERSELF.

In the absence of the head of the household, the nurse furnishes the census-taker with the information he desires:

"My master," she says, "is an idiot."

"Completely?"

"Completely. Not of the violent kind, but harmless. His wife is eighty-two years old. Only one child, a son aged thirty-five. No, he can neither read nor write."

"Thank you, mademoiselle."

"Do not mention it, sir."

"Catharine," says the butler, when the official departed. "Where do you expect to go when you die? You know master belongs to the Academy, and missus is only thirty, and their boy is at the infant school."

'I know it; but I'll teach them to sack me for having a few habitual discre a ies in the marketing account. Avenged !"

Queries to the moved:

Well, how do like your new quarters?
Are you all settled yet?
How did the stove-pipe fit?
Did the carpet stretch out all right?
How did the crockery pan out?
Found your tooth-brush and razor yet?
How does the furniture look now?
Don't you wish you had never moved!
Yonkers Statesman.

AN EDUCATED HORSE.

"You ask if we have any particularly bright horses," replied a hook and ladder man. "Here is Peter; he's been with us nine or ten years, and we rather brag on him. Let me introduce you. Peter, here is a chap from the Detroit Free Press."

Peter nodded his head and pawed the floor.

"Peter, have you been to a fire to-day?"

He shook his head.

"Were you out yesterday?"

He nodded.

"Peter, how old are you?"

The horse pawed thirteen times with his right foot.

"That's right, old boy. Do you remember when a loafer stabbed you at a fire?"

He did.

"Where is the scar?"

Peter bent himself almost double to bite his hip at a spot where a scar could be traced.

Now, Peter, show the Detroit man how you take your place at the pole.

Down went the chain, and the horse covered the distance at two jumps.

"Now walk round the truck and come and take my hat off."

The horse obeyed to the letter.

"Now," continued the man as he laid down on the floor, "step over me."

Peter lifted up his feet very high and stepped softly over, and returned to his stall.

"That horse is one of us," said the man as he brushed the dust off and sat down. "We can rest the foot of a ladder on his back and he will not move. Wherever we stand him at a fire there he will stay without watching He eats with us, chews tobacco, likes beer and would learn to play dominoes in a week if he could only handle them.—New York Letter.

PARABLES.

I knew a man to whom the boon was given
Into the beauty of eternal heaven
To gaze one wondrous day:—
He looked,—and turned away.

I knew a man upon whose dazzled sight
Once, through the utter blankness of the night,
A star of Truth did rise:—
He saw—and veiled his eyes.

I knew a man who stood one summer morn
Between two paths; and him a voice did warn:
"This path,—not that, my brother!"
He heard—and took the other.

I knew a man to whom a human soul
Turned trustful once with sweet self-uncontrol:
Before Love's supreme call
He faltered—and lost all.—*Barton Grey.*

"MY boys," said a strict churchwoman to her children at the beginning of the recent Lenten season, "I should like very much to have you deny yourselves something during the solemn weeks of Lent. Will you do it?" "I will, mamma," said Johnny, a sedate child, who was very fond of griddle-cakes; "I'll do without my cakes in the morning." "That's a good boy. And what will *you* give up, Harry?" she asked of his little brother, a bundle of the purest mischief that ever lived, who was fond of play, but had no love for books. "Oh, I'll give up going to school, mamma, for my part," was his ready answer.

YOUNG ladies who wish to have small mouths are advised to repeat this at frequent intervals during the day: "Fanny Finch fried five floundering frogs for Francis Fowler's father."

SNATCHES OF HISTORY.

CARDS were invented in France in 1390.

Windmills were first known in Spain, France and Germany in 1299.

Alexander the Great died 323 years before the Christian era.

Mexico was colonized just one hundred years before Massachusetts was

The Egyptians made glass and colored it beautifully three thousand years before Christ.

The first building of the Egyptian pyramids is supposed to have been about 1500 years before Christ.

Excess in dress was restrained by law in England under Edward IV, 1465, and again in the reign of Elizabeth in 1574.

Sir John Chardin, in his "Travels in Persia," says that the Persians smoked tobacco long before the discovery of America.

The Habeas Corpus—the people's writ of right, passed for the security of individual right—was made a law May 27, 1672.

Charles Lamb was born of very humble parents, and received his education at Christ's Hospital, London, a great free public school founded in June 155, by Edward VI., the boy-king, only ten days before his death.

Lord Macauley was born at Rothley Temple, the country-seat of a relative, on the 25th of October, 1800. He died on the 28th of December 1859, at his residence, Holly Lodge, Kensington, a north-western suburb of that modern Babylon—London.

The Romans looked upon the comet of the year 44 B. C. as a celestial chariot of fire conveying the soul of Julius Cæsar to the skies. The great comet of 1600 was deemed a presage of the revocation of the edict of Nantas. Even that of 1811 was thought to have forshadowed the Russian campaign and the burning of Moscow.

For Women

CONDUCTED BY MISS RAY CLARK.

DOMESTIC GREETING.

AS HOMEWARD comes the married man
He's met by wife at door,
With fond embrace and loving kiss,
And—"Baby's throat is sore!

"And did you think to stop at Brown's
And get that marabout
I ordered yesterday? And, dear,
Fred's boots are all worn out?

"I'm glad you are so early, John,
So much I miss you dear——
I've had a letter from Mamma—
She's coming to live here.

"How very glad you look, dear John;
I knew that you would be—
The flour's out, the butter, and
You must send home some tea.

"That plumber has been here again—
If you don't pay he'll sue:
And Mr. Prendergast called in
To say your rent was due.

"Fred's trousers are all cotton, John;
You thought they were all wool—
O! that reminds me that your son
Was whipped to-day at school.

"The roof has leaked and spoiled the rugs
Upon the upper hall;
And Jane must go, the careless thing!
She let the mirror fall.

"To-day, as she was moving
(The largest one, dear John),
Of course it broke: it also broke
The lamp it fell upon.

"What makes you look so grave, my love?
Take off your things and wipe
Your feet—and only think, to-day
Jane broke your meerschaum pipe,

"Oh, John! that horrid, horrid word;
You do not love me, dear,
I wish that I—boo-hoo—were dead—
You're cross as any bear."

BRACKET AND COVERING.

WHEN the mantel lambrequin described in my last article, was finished, there was a half yard of brown canton-flannel left and there was a corner that needed a bracket. A cover to a wooden cigar pail was sawed to fit the corner. I have learned to use saw, hammer and nails very well, and insist upon my girls learning also, so we are not dependent upon the busy farmer and his "men" for any little work that requires their use. The bracket was covered with the cloth tacked on smoothly with window shade tacks, and a lambrequin eight inches deep, cut in three irregular scollops and pinked. The points to fit or t · fill in the scollops were of dark blue opera flannel Each brown scollop was decorated with two slender lily leaves of salmon-colored flannel vined with green silk and button holed loosely on. Between the leaves was a lily bud of white flannel embroidered with scarlet and blue in herring-bone stitch. (Never mind following nature very accurately; improve on her!!) The points were embroidered with herring-bone and chain-stitch in bright colored silks and worsted. The ends of the scollops and points were finished with tassels of the salmon-colored flannel tied with blue. The bracket is very bright, pretty and cheap.

The cigar pails can be found at any tobacco store, and cost only 10 or 12 cents, pail and cover. The pails we find very durable and useful on the farm.

A high, narrow mantel in the "spare room" is decorated in a fanciful Japanese manner that I may describe at another time. MRS. O. W. D.

HOW TO MAKE A CARD RECEIVER.

IN the autumn when the long brown cones had ripened on the Pine, Norway Spruce, and other Fir trees, it struck me that something pretty might be made of them; so, after comparing their beauty, I decided on the cones of the Norway Spruce, and accordingly collected a quantity of them.

Our center table had no card receiver and I had no money to buy one I concluded therefore to try if one could be made of the cones; I cut each scale or shell from them, and sewed them on six leaves of exactly the same size, cut from card-board.

These leaves were wider at the top than the bottom, when I had sewed the brown scales on them, so that each scale covered the one above, to the point where nature had burnished it.

I sewed all six scale covered leaves together, and covered the seams with scales. This formed a bottomless basket measuring 8 inches across the top, and each leaf forming a scallop. I next cut a card-board bottom, which measured 4 inches across, this I covered with glazed cambric, the color of the scales, and sewed firmly at the bottom of the leaves; I then put another row of scales around this to hide the stitches. The basket was lined with quilted crimson satin, and finished around the top with a silver cord.

The scales I varnished with copal varnish and after this had dried off, I set my basket out for use.

EULALIE.

WHITEWASHED BABIES.

A MISSIONARY stationed at one of the South Sea islands determined to give his residence a coat of whitewash. To obtain this in the absence of lime, coral was reduced to powder by burning. The natives watched the process of burning with interest, believing that the coral was being cooked for them to eat. Next morning they beheld the missionary's cottage glittering in the rising sun white as snow. They danced, they sang, they screamed with joy. The whole island was in commotion. Whitewash became the rage. Happy was the coquette who could enhance her charms by a daub of the white brush. Contentions arose. One party urged their superior rank; another obtained possession of the brush, and valiantly held it against all comers; a third tried to upset the tub to obtain some of the precious cosmetic. To quiet the hubbub, more whitewash was made, and in a week not a hut, a domestic utensil, a war-club or a garment but was as white as snow; not an inhabitant but had a skin painted with grotesque figures; not a pig that was not whitened, and even mothers might be seen in every direction capering joyously, and yelling with delight at the superior beauty of their whitewashed babies.—Chambers' Journal.

ABOUT WOMEN.

Eugenie has arrived at Cape Town, South Africa.

A college for young women is about to be established at Norfolk, Va., by the citizens of that place.

Mrs. John C. Green has given $100,000 to the American Sunday-school Union, to be used in developing a higher order of Sunday-school literature.

The Queen has declined to let the Prince and Princess of Wales occupy Windsor Castle during the Ascot races unless they will allow her to revise the list of their guests.

Mrs. Harriet Beecher Stowe and her family have returned to Hartford, Ct., from their winter home in Mandarin, Fla. Her orange grove at Mandarin during the last year brought her a profit of $2,000 an acre.

Adelaide Neilson blushingly acknowledged to a reporter that this is her final farewell to America, and that she is going to change her name—or Addie new one to it.

Mrs. L. A. Cones, of Cincinnati, has recently been appointed official reporter for the courts of Washington county. This, says the Dayton Record, is perhaps the first case of a lady's being appointed to such an office in this state.

MISS KATE FIELD will soon go to Europe to consult Worth with regard to dress, to see about establishing relations between the London and New York Ladies' Co-operative Dress Associations, and to procure fresh music and novelties for her monologue.

Madame Jenny Lind Goldschmidt lives in a large and pretty house in South Kensington, within a few doors of Madame Albani. It is surrounded by trees and flowers, and furnished with the modern art draperies and quantities of pictures and old China.

The local examinations of high and middle class boys and girls at Cambridge, Eng., the past year, show that the girls care much more for English history than the boys, and that many of them have acquired a most useful grasp of the principles of political economy.

Miss Howard, a popular lady physician at Tientsen, China, is a Canadian girl, and received her education at the Michigan University. For successfully treating the wife of a prominent Chinese statesman, she has been sent to Pekin in a royal barge loaded with presents.

Mrs. John M. Paul, "Miss Belle Cook," of California, who was to ride the twenty-mile race on horseback next September at Minneapolis, Minn., with a prominent female rider of Minnesota, was attacked by a robber a few days ago at her home, wounded by two pistol shots and struck on the head with a pistol.

Mrs. Gladstone, the wife of the famous English statesman, is said to be the most popular member of the distinguished family to which she belongs, mainly on account of her faithful discharge of the duties appertaining to her social position, and the thoughtful kindness and consideration she habitually displays in her relations with deserving women who belong to the classes frequently snubbed by aristocratic ladies.

Miss Lizzie M. Guthrie, whose name is widely known in connection with missionary enterprises in India and Japan, died on Saturday in San Francisco. She was on her way to Yokohama, having been in this country the greater part of the past year recruiting her health. She was going out again under the auspices of the Woman's Foreign Missionary Society of the Methodist Protestant Church, and was the first missionary sent out by that society.

At the marriage of the Princess Pauline of Wurtemburg, to Dr. Willem, the clergymen in a brief address preceding the ceremony reminded the bridegroom that in marrying him the royal bride had surrendered a good deal that was grand and valuable in life. When the bride's turn came, however, to make the marriage response, she added to the syllable "yes" the following words in a quiet tone: "I declare I give up nothing that can at all be valued in comparison to the happiness awaiting me, and I consider my lot a most enviable one."

QUEEN VICTORIA'S DAUGHTERS.—Of the five daughters of Queen Victoria, the Princess Beatrice, the youngest, will soon have remained the longest unmarried. The Crown Princess of Germany married at eighteen; the late Princess Alice, of Hesse, was married when she was nineteen; the Princess Helena married at twenty; the Princess Louise, who had until that time remained longest single, when she married the Marquis of Lorne, was about the same age that her young sister is—that is, twenty-three. It is natural enough that there should be gossip and rumors about the wedded fate of the last of the quintet. Romance has not been absent from the stories told about her, but the truth seems to be that the princess has chosen, up to this time, to be the confident and companion of her mother, the queen, rather than to leave Windsor, Balmoral and Osborne, without any of the daughters of the widowed monarch.

Sabbath Reading.

ENEAS RESTORED TO HEALTH.

BY SOPHIA C. GARRETT.

[*Acts*, ix *Chap.* 33—34 *Verses.*]

For eight long years, the suffering Eneas lay
In weariness upon his lowly bed,
When morn's first rosy flush
With soft, fair light, illum'ed the eastern hills,
He slowly raised his drooping head,
And from the open casement gazed
Upon the scene that met his longing eyes
Wher'er he turned them.

Around him stood fair dwellings
Wreathed with graceful vines and fragrant flowers,
And shaded by majestic trees,
Among whose branches gleamed rare tempting fruit;
All gemmed with countless drops of glittering dew;
And these in wondrous beauty met his raptured gaze.

For eight, sad, weary years
Had he looked forth upon the varied scene
Of blushing morns in early spring,
Or when bright summer glorified the earth;
But never seemingly before
Had they revealed themselves to him
With such enchanting loveliness
As on that fair sweet morning,
When the noble man of God
Sought out his lowly couch
Where he had lain so patiently
Eight slowly passing years,
And said to him: "Eneas,
Jesus Christ maketh thee whole!
Arise and make thy bed."

O, words of wondrous meaning!
Miraculous the change they wrought
Upon the palsied Eneas.
He rose with thankful heart
And walked abroad in health,
With manhood's strength and vigor,
Like a new joyous being
Endued with life a-fresh,
By the All-Wise Creator.

GRAPES AND THORNS.

We must not hope to be mowers
And to gather the ripe gold ears,
Until we have first been sowers,
And watered the furrows with tears.

Is it not just as we take it—
This mystical world of ours?
Life's field will yield, as we make it,
A harvest of thorns or flowers!—*Alice Carey.*

REMEMBRANCE OF GOD'S NAME.

"I have remembered Thy name, O Lord, in the night, and have kept Thy law."—Psalm cxix. 55.

We remember many things when awake in the night; indeed, it is often the activity of memory that keeps us from sleeping at that season; and well is it for us, if, like the Psalmist, we can so employ those wakeful and often weary hours, as to find the highest refreshment in them, by making them seasons of communion with God. The remembrance of His character; it means the thought of all that He is to us, as our Father in Christ Jesus, all wise to guide, all merciful, all good, all sufficient; there is much here to afford food for remembrance. It means, too, a remembrance of all that He has been to us, of all that He has done for us, of all that He has revealed to us in the past. "Commune with your own heart upon your bed, and be still" when you thus remember the name of the Lord! For such remembrance may be sorrowful, yet it opens the door to pure and holy gladness to all those who love His name. Think also of all He has promised to do for us! this opens a wide field.

But if in the night watches there is comfort in such remembrance of God, still more in the night of affliction, when oppressed by sorrow, bereavement, anxiety or sickness, do we find in the remembrance of this name a strong support. For true it is, and will ever be, that "the name of the Lord is a strong tower: the righteous runneth into it, and is safe." And though we may truly say, "But, alas, I am not righteous!" the revelation of this name as revealed in Jesus Christ the righteous, through whom we have access and acceptance with the Father, is a ground of confidence for the sinner which can never be shaken. Through His dear Son the Lord has made Himself known to us; "the only begotten Son, which is in the bosom of the Father, He hath declared Him."

Dear, patient workers for Jesus, look up for the grace that is sufficient for all difficulties and all discouragements, and look on by faith to the day when you shall see, what God asks you perhaps now to take on trust, that "your labor is not in vain in the Lord."

In that day you shall find how the long years of "ploughing were not lost, but were most surely preparing the way for the precious seed; how every grain you once scattered for Him, watered by your prayers, and perhaps by your tears, has been guarded and watched over by your Lord, and turned into golden sheaves, to be laid down by you in the day of harvest at his feet, saying, "Not unto us, O Lord, not unto us, but unto Thy name be the glory,"

"He knows." What a wonderful confidence in His heart and resources is silently implied in that word! If He knows that you need, you may be quite sure that you will not want. "He knows;" and His fatherly heart is our guarantee that to know and to supply our need, are one and the same thing with him; and His deep treasure of exhaustless good is our guarantee that our need can never go beyond His fulness, nor He ever, like us, see a sorrow He cannot comfort, a want that He cannot meet.

Truth, when it is won, is the possession of the whole nature. By the action of the whole nature only can it be gained. The king must go with his counsellors at his side and his army at his back, or he makes no conquest. The intellect must be surrounded by the richness of the affections and backed by the power of the will, or it attains no perfect truth.—*Phillips Brooks.*

Take comfort! Earth is full of sin,
But also full of God.
The staff supports thy trembling limbs,
While falls the needed rod.
There's sorrow, and Jehovah;
There's toil, and blessed sleep;
Let smiles then blossom round your lips
As oft as eyelids weep.

"Did it ever strike you," said one, "what grand men we ought to be, who have been praying so many years?" If prayer to us has been a reality, if besides being petition it has been communion with God, how near him ought we to be by this time, and how like him ought we to have become. Communion with Christ should make us Christ-like.

Many a true heart that would have come back like a dove to the ark, after its first transgression, has been frightened beyond recall by the angry look and menace, the taunt, the savage charity of an unforgiving spirit.

The laws of nature are not, as modern naturalists seem to suppose, iron chains by which the living God, so to say, is bound hand and foot, but elastic cords rather, which he can lengthen or shorten at his sovereign will.—*Philip Schaff*

If you tell your troubles to God, you put them into the grave; they will never rise again when you have committed them to him. If you roll your burden anywhere else it will roll back again like the stone of Sisyphus.—*Spurgeon.*

Domestic Economy.

CONDUCTED BY EMILY MAPLE.

PEN THOUGHTS FROM "EVERY-DAY HOUSE."

ANNIE L. JACK.

"Let it alone," said our family naturalist, as a little visitor was intent on stoning a small toad that was hiding under a currant bush. "What for?" queried the young citizen, and the answer our country boy gave was—"Because he is one of our best workers and asks no wages." The same two lads exchanged the same kind of remarks over a lace-winged fly that was deemed a fit victim for torture, and it occurred to me, as I listened, what a pity that among other *'ologies* children are not taught to know friends from enemies in the insect world. We cherish the toads in our garden as a company of useful scavengers, and do not like to see them injured. A friend of mine, whose dahlias were troubled by slugs, found that by sowing seeds of lettuce around every plant, the slugs would feed on them and not touch the dahlias. When the latter get strong and hardy, the lettuce can be hoed out. We have to study these things when engaged in land culture, and it is within the province of all the younger members of a family, to make this a practical part of their education. I always like to see the little girls in a house carry any specimen they may find of the Calosoma to their house plants, for nothing is more useful to clear plants of the green aphis than these pretty little spotted creatures. A large rose bush that had been housed all winter and subjected to repeated tobacco fumigations was cleared of insects this spring as soon as set out-of-doors by a pair of yellow birds, that made its leaves a daily resort for food. The knowledge of these things is very useful to amateur florists and gardeners and a part, I think, of household economy, for it is indeed an adornment to every home to have clean and insect-free plants, that add to the beauty of home and every-day life.

HOW I SAVE MY SLEEVES.

ALICE P. ADAMS.

To me it is always aggravating in the extreme when I have put on a clean calico to be obliged to roll up my sleeves while I wash the breakfast dishes and perform sundry household duties. When I take them down they are full of wrinkles, soon become limp and soiled, and my dress has to be washed long before it would otherwise become necessary. Moreover, fashionable sleeves are so small that it is almost impossible to push them above the elbow.

I have known women who never rolled their sleeves and yet always looked as neat as a pin, but mine have to go up, or else they are spotted and splashed—that is, until lately. One day, when passing the Chinese store in Los Angeles, a bright thought came to me, and I went in and inquired for the straw Chinese cuffs that men use to protect their wrists when pruning orange trees, etc.

I selected the smallest pair, for which I paid 25 cents, and as they were rather loose, when I reached home I sewed on each a small tag of drilling. Now I save both my sleeves and temper, for every morning when I commence my work I slip on my cuffs, fasten the bits of drilling to my sleeves with safety-pins, and there they are, and generally stay until I am ready to put on an afternoon dress. I don't think I have once rolled up a sleeve since my purchase was brought home; I never even take off my linen cuffs when I wash the supper dishes, and I never had so few holes to patch, for they are a protection against *wear* as well as dirt.

I do not know whether these cuffs can be procured in the East or not, but if so I would advise each of the Rural sisters to invest in a pair, for though they cannot, strictly speaking, be called "things of beauty," they are "a joy forever."

SUGGESTIONS.

Rectified benzine for moths.

Keep a bouquet of fresh flowers upon your dining-table.

Scales of fish may be loosened by pouring hot water over the fish.

Why not butter the *edges* of slices of toast bread, as well as the center?

Housekeepers, fresh fruit has come. Do away with pies and puddings.

In cooking fish, preserve the shape if possible. It improves the appearance, if not the flavor.

Never make jelly in damp or cloudy weather—it will be neither firm nor clear.

If you roast your own coffee, do it with the greatest of care, as herein lies the secret of success in coffee making.

To young housekeepers we would say that in cooking it is far better to have a few, very few, dishes delicately and carefully prepared than to provide more and have them less inviting.

Of the numberless and worthless remedies for getting rid of red ants that annually go the rounds, that of sprinkling guano upon the pantry shelves is one of the latest.

Cure for a Felon.

I believe it is better to scatter a felon, thereby saving pain and trouble. The following prescription I had from an old lady, with the affirmation that in the course of a long life, she had never known it to fail if applied in season, and I can add the same, having had an opportunity to test it several times in my own family—the last time, only the past week, and with complete success. The first time I tried it the felon had been in progress several days, and become very painful, with red streaks running up the arm, while in the armpit the glands were swollen, forming what is commonly known as kernels; but after two days' application of the plaster, the swelling and pain ceased, and the felon was "no more." Take equal parts of lard, soap, salt, and spirits of turpentine. Shave the soap, and mix with the other ingredients, and apply as a plaster. Some use kerosine, where turpentine is not at hand, but I prefer the turpentine. If the skin is thick it is well to soak in hot lye before applying the plaster.

Mrs. W. C. Gifford.

DOMESTIC RECIPES.

Pickled Cherries.

Take fine ripe cherries with stems on, and to each quart allow a pint of good vinegar and a coffeecupful of white sugar. Boil sugar and vinegar together ten minutes, skimming as needed. Pour cold over the cherries. Spice may be added if you please, but the stones give a pleasant flavor of themselves.

Raspberry Jam.

Clean the fruit and crush *thoroughly*—this prevents its becoming hard. Boil 15 minutes before adding sugar—three-quarters of a pound of sugar to a pound of fruit—and then boil 30 minutes longer. Jams require almost constant stirring, and a small wooden paddle with a handle at right angles is the most convenient article I know of to do this with.

Mrs. Brown.

Drop Biscuit.

One quart of fresh buttermilk; one beaten egg; two tablespoonsful of melted butter; a little salt and a teaspoonful of soda. Flour for a stiff batter. Drop with a spoon into hot gempans and bake in a quick oven.

Dry Bread.

To a cup of sweet milk add a little salt, a spoonful of sugar and a beaten egg. Into this dip slices of dry bread; let soak a minute and fry on a buttered griddle until a light brown each side, Mrs. R. C.

Croquettes of Fish.

Remove all bones from dressed fish; mince; add seasoning, and for a small quantity add one egg beaten with a teaspoonful of flour and one of milk. Make into little balls; brush the outside with an egg, dredge with cracker crumbs, and fry to a deep brown. A nice gravy can be made by adding a pint of water and an onion to the bones, heads and tails; boil, season and thicken, Mary B.

New Publications.

THE

WELCOME CHORUS!

A NEW SONG BOOK FOR

High Schools, Academies and Seminaries,

BY W. S. TILDEN.

PRICE $1.00, OR $9.00 PER DOZ.

A grand good book, of 255 pages, well filled with the best Part-Songs, a large collection of Sacred Music for practice, and opening and closing exercises, also the elements, on a new plan. Specimen copies mailed, post-free, for $1.00.

Take with you to the Seashore or the Mountains, one of Ditson & Co's splendid volumes of Bound Music More than thirty are published. Some of them are:

Arthur Sullivan's Vocal Album	$1.00
Gems of English Song. 68 Songs	2.00
Gems of German Song. 79 Songs	2.00
Sunshine of Song. 68 Songs	2.00
Gems of Strauss. 80 Waltzes, &c	2.00
Cluster of Gems. 43 Pieces	2.00
Home Circle. Vol. 1. 170 Pieces	2.00

Also take for the summer THE MUSICAL RECORD which will bring new music every week. $2 per year.

OLIVER DITSON & CO., Boston.

C. H. Ditson & Co., 843 Broadway, New York. J. E. Ditson & Co. 1228 Chestnut St., Phila.

Miscellaneous.

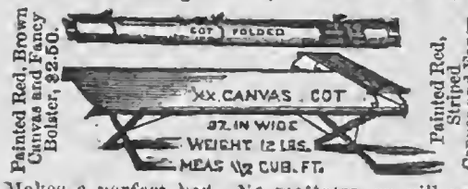
500 Male and Female Agents wanted immediately for an honorable, light, local business. An article of consumption needed in *every family.* Large profits. Thousands of patrons.
C. L. VAN ALLEN, Albany, N. Y.

Are sold by all Hardware and Harness Dealers. There is no one owning a horse or mule but what will find in this line of goods, something of great value, and especially adapted to their wants. COVERT M'F'G CO., West Troy, N. Y., Sole Manufacturers.

$777 A year and expenses to agents. Outfit Free. Address P. O. VICKERY, Augusta, Maine

AGENTS WANTED EVERYWHERE to sell the best **Family Knitting Machine** ever invented. Will knit a pair of stockings, with **HEEL** and **TOE complete**, in 30 minutes. It will also knit a great variety of fancy work for which there is always a ready market. Send for circular and terms to The Twombly Knitting Machine Co., 469 Washington St., Boston, Mass.

XX COT (not painted, White Duck) $2.



Makes a perfect bed. No mattress or pillows required. Better than a hammock, as it fits the body as pleasantly, and lies *straight.* Folded or opened instantly. Self-fastening. It is just the thing for hotels, offices, cottages, camp-meetings, sportsmen, etc. Good for the lawn, piazza, or "coolest place in the house." Splendid for invalids or children. Sent on receipt of price, or C. O. D. For **50 cents extra**, with order, I will prepay expressage to any railroad station east of Mississippi River and north of Mason and Dixon's Line. For **75 cts.** in Minnesota, Missouri and Iowa. **HERMON W. LADD, 108 Fulton St., Boston**; 207 Canal St., New York; 165 North Second St., Philadelphia; 94 Market St., Chicago, Ill. **Send for Circulars.**

KIDNEY-WORT

The Only Medicine

That Acts at the Same Time on

The Liver, the Bowels and the Kidneys.

These great organs are the natural cleansers of the system. If they work well, health will be perfect; if they become clogged, dreadful diseases are sure to follow with

TERRIBLE SUFFERING.

Biliousness, Headache, Dyspepsia, Jaundice, Constipation and Piles, or Kidney Complaints, Gravel, Diabetes, or Rheumatic Pains and Aches,

are developed because the blood is poisoned with the humors that should have been expelled naturally.

KIDNEY-WORT

will restore the healthy action and all these destroying evils will be banished; neglect them and you will live but to suffer.

Thousands have been cured. Try it and you will add one more to the number. Take it and health will once more gladden your heart.

Why Suffer longer from the torment of an Aching back? Why bear such distress from Constipation and Piles?

Kidney-Wort will cure you. Try a package at once and be satisfied.

It is a dry vegetable compound and

One Package makes six quarts of Medicine.

Your Druggist has it, or will get it for you. Insist upon having it. Price, $1.00.

WELLS, RICHARDSON & CO., Proprietors,

10 (Will send post paid.) **Burlington, Vt.**

CLINTON & BRO., Clintonville, Ct.

GENESEE VALLEY FARMS FOR SALE. Some of the finest residences in the Valley, near R. R. Inquire soon of JOHN SHELDON, upon the premises, at Moscow, Livingston Co., N. Y.

The request often made by publishers that readers will mention their journals when answering advertisements, seems to us a very reasonable one. Such mention is a helpful and friendly act to the journal mentioned and enables the advertiser to determine which journals are the best advertising mediums. Reference to our advertising columns will show there is not one advertisement of an exceptional or ambiguous character admitted. In so far as this is possible we hold ourselves responsible for their high-standing and trustworthiness.

News of the Week.

MISCELLANEOUS.

Monday, June 14.

The result of the Chicago Convention has taken the country by surprise. Gen. James A. Garfield of Ohio was nominated for President, and Chester A. Arthur for Vice-President. Grant, Blaine, Sherman, and Washburne all went down, and a comparatively obscure Senator from Ohio received the nomination. The Democratic Convention, which will be opened at Cincinnati the 14th inst. will in all probability create as much excitement as the one just closed....The Barnum's museum company, organized with $3,000,000 capital, and including Barnum, William H. Vanderbilt and others, has bought the Madison Square property for $800,000, and will erect the largest exhibition building in the world, including under one roof a museum, opera-house, coliseum, theater, hippodrome, tropical garden, etc., to be finished and opened early next year.....Bogus medical diplomas have been issued by the faculties of several medical colleges in Pennsylvania. Prominently among these are named the American University of Philadelphia, and the Eclectic Medical College of Pennsylvania. John Buchanan, Dean of the former institution, also known by an *alias*, and a couple of other officers have been arrested ....Ex-Gov. Albert G. Brown of Mississippi, was thrown from his horse into a pond and drowned, near Jackson, Miss., on Saturday last. He had served his state in the legislature, as Governor, as Representative in Congress and as U. S. Senator for many years. Like many another retired statesman, he considered farming, in the abstract, the noblest of occupations.

Another terrible disaster, involving great loss of human life, took place in the Long Island Sound on Friday night the 11th inst. The steamer Narragansett of the Stonnington line on her trip from New York to Boston, having about 300 passengers on board, was run down and sunk by the Stonnington, another steamer, coming from Boston. The immediate cause was an impenetrable fog, through which the lights could not be seen; but it appears that the ship owners are not blameless for not having provided the boats with electric lights, nor are the officers held entirely guiltless in public opinion. The Narragansett ran across the bow of the Stonnington and was struck amidships by the latter, the blow crushing in her wheelhouse, and upsetting the boilers and furnaces. A panic ensued among the passengers. The boats were found out of order, the lights were extinguished by the collision, and even the life preservers could scarcely be found. The coals from the furnaces put fire to the ship, and in an incredibly short time, the ill-fated steamer burned down to the water's edge and sank. Of the 300 passengers, as nearly as can be ascertained, about 50 found their death either in the water or in the flames. The boats from the Stonnington and from the steamer City of New York, which had come up in the meantime, picked up the rest. It is reported that several persons who saw themselves face to face with death, deliberately blew out their own brains.

AGRICULTURAL NEWS.

That first barrel of flour from this season's wheat, that arrived in this city on May 6, from Americus, Ga., and which was sold here for $15 for the benefit of the Episcopal church of that lively little town, has been resold in London, England, for £5—about $25....New Orleans papers state that from the present outlook a magnificent crop of sugar will be harvested this season....The annual election of the Butter, Cheese and Egg Exchange was held here on June 10, with the following result: President—Washington Winsor; First Vice-President—George B. Douglas; Second Vice-President—W. H. L. Totten; Third Vice-President—E. C. Williams; Fourth Vice-President—B. E. Van Valkenberg; Treasurer—John A. Smith; Secretary—T. Mortimer Seaver; Members of the Executive Committee—John A. Willet, Lloyd L. Seamen, L. F. Dodd, C. A. Meader, M. B. Miller, William H. Ludlum, F. Blohm, J. H. Meyer; Inspectors of Election—C. B. Brown, L. W. Butler, John C. Mahr.. .The honey crop of the United States is assuming large proportions. Its annual value is now estimated at $8,000,000, and that of wax at $6,000,000. Our exports of honey and wax are steadily increasing....A disease among the swine of Passaic county, N. J., lately broke out, and is said to baffle veterinary skill. Large numbers have died with it....Last year dogs in Illinois killed 27,338 sheep, valued at $65,384—more than all the sheep-killing dogs in the Republic are worth....The sale of Short-horns, at Kansas City, May 19th and 20th, by the Hamiltons and others, aggregated 190 head, averaging $117.47, producing a total of $22,320....An exhibition of apparatus and products relating to bee culture, will be held at Schwerin, Germany, on August 18th and 30th next....The visible supply of wheat has decreased 800,000 bushels, and the visible supply of corn has increased 623,000 bushels.....In the Northern part of N. Y., a number of creameries and several Limburg cheese factories have not opened this spring for a lack of milk. Many farmers in that section sold off one-half or two-thirds of their dairy stock last season, before the rise in dairy products took place, and this season cows are so high, comparatively, that they cannot afford to buy....A telegram from London, on June 8, says:—"A monthly cotton circular states that Egypt can hardly be expected to yield another monster crop, and so far the indications are quite the other way, the plant being very backward. Authorities say it is from three weeks to a month later than last year."....A farmer in Dearborn County, Ind., had a roof 14 feet square come crashing down into his orchard during a tornado, four weeks ago, and has not yet been able to ascertain where it came from, even after diligent inquiry in the track of the hurricane.....A Chicago paper says:—"An operator furnishes the following synopsis of the expenses in sending a bushel of wheat from this city to Liverpool: Storage here, 1¼c.; freight to Buffalo, 6c.; marine insurance, 1¼c.; Buffalo charges, ⅝c.; canal freight, 6c.; expenses in New York, 1c.; ocean freight, 8c.; ocean insurance, 1c.; total 24⅝c. The Beerbohm quotation of 10 shillings per cental last week is equal to $1.44 per bushel, leaving $1.19⅜ per bushel as the present value here based on present quotations in England."....The first wheat of the new crop from Virginia and South Carolina was sold on 'Change at Baltimore, Tuesday, June 8. It comprised 450 bushels of the Fultz variety, and brought $1.55 per bushel.....The raising of Angora goats in Western Texas is increasing, and is alleged to be a profitable business. It is said the meat is much better than mutton, and each goat yields about two pounds of hair annually. In the Eastern markets it is worth now fifty-five cents per pound... May-beetles have been swarming to an unusual extent on the oaks around Mobile, Ala., during the past month, absolutely defoliating the oak forests.....A premium of one cent per pound on beet sugar, made in Massachusetts this year, will be paid by that State, provided the quantity does not exceed 700,000 pounds.....It is estimated that the orchard fruits or the United States approach an unusual value of $75,000,000. The New Hampshire apples are said to be the best in the country. The varieties most prized there are the Early Williams, Hubbardston, Nonesuch, Golden Pippin and Baldwin. These, together with the Rhode Island Greening, Connecticut Russet and Porter, are used for the export trade. New Hampshire produces annually $750,000 worth of fruit.....The Mark Lane Express of June 7 in its review of the grain trade during the past week, says: "In consequence of the showers the wheat crop has gained strength, is growing rapidly and is now coming into ear in the earlier districts. At the market on Monday, the first cars shown were grown in Sussex from red winter American. Unless there is some unexpected change, the harvest prospect is fairly promising. The deliveries of English wheat at the provincial markets have been less than half of those of the corresponding week last year. Holders show considerable firmness, which prevented any decline being caused by the improved appearance of the growing crop. Imports of foreign into London have been made moderate. There was an unusually small proportion of American. Arrivals of Indian have begun and assume an increased proportion which bids fair to compensate largely for the contrated Russian export. Business during the week was quiet and prices of most descriptions were unchanged. Red winter American improved 6d. per quarter in consequence of small offering. Relative to the announced intention of the American ring to force up the price of red winter before the end of June, the probability of a material advance is remote, as the London trade has hitherto shown extreme disinclination to follow the American speculative fluctuations. Arrivals at ports of call have been very moderate The demand for wheat was less active in consequence of the favorable weather and buyers having supplied themselves freely. Both red winter and No. 2 spring declined slightly. The coast is now bare of maize, the nominal value being about 25s. 5d Buyers of wheat for shipment, despite lower offerings from America, continue very reserved. There is a moderate demand for maize at about the late rates. The imports into the United Kingdom for the week ending May 29 were 722,221 cwts. of wheat and 130,189 cwts. of flour.....

Be careful when working with Paris-green about potato vines. Last week, a lad of our acquaintance, says an Exchange, who was mixing the poison for the purpose of killing potato bugs, rubbed his sleeve across his sweaty forehead, and in a few minutes his face swelled so as to blind him for several hours, threatening permanently to destroy his eyesight....North Carolina is taking an active interest in fish culture. All the leading streams in that State are now being stocked with the best varieties of fish Seth Green says that if the State would only protect the fish it plants there would in five years be five fish a day for every inhabitant....The farmers of Maine have felt downcast in prospect of a light crop of hay; but late rains have cheered them, and they now consider the hay safe....The next Stock Show, at Chicago, will come off from the 15th to 20th of November, 1880....The Twentieth Annual Fair of the Oregon State Agricultural Society, will be held at the Fair Grounds, near Salem, commencing on Thursday, July 1st, 1880, and continuing until Thursday evening, July 8th. Half-fare rates have been secured on all the railroad and steamer lines on the North Pacific Coast. M. Wilkins, President. E. M. Waite, Secretary....Much machine-belting is now made in California from the entrails of sheep. It is said to be far stronger and more durable than that made of hemp....A Jersey Red sow, owned by Howard Darnell, of Mount Laurel, N. J., lately gave birth to a litter of twenty-two pigs....

The dreaded army-worms can now be found in some wheat fields about Freeport, L. I., and they are increasing in numbers.....Gen Miles, the Indian fighter, says that the average Colorado squatter sells his gun and ammunition to Indians for about four times their value, and expects to have a new gun and ammunition furnished him when the Indians begin to kill....Col L. L. Polk, Commissioner of Agriculture of North Carolina, has resigned.....The first cotton bloom was received at New Orleans Saturday, June 5th, from Washington county, Mississippi, 125 miles above Vicksburg....Four men are reported to have been hanged last week by a mob in Brown county, Texas, for "crookedness with cattle"....The new beef-canning establishment at Chicago is killing 100 head of cattle per day, which number will be increased when the larger runs of Texas and Western cattle come forward....Cotton culture in California has been revived after having been dropped in '77. A thousand acres have been planted this season, and Californians are sanguine that cotton will soon rival wheat and wine in the Golden State....Prof. C. V. Riley thinks that the army worm will not stay long in its present quarters; but will move north with the ripening grain.

Late wool market reports are as follows: Buyers in Ohio are offering 42 to 43c., but farmers are not disposed to accept less than 45c. for choice XX. An observer says: We think it would be better to accept less and set new life into trade, for by this action prices could be run up 5c. per pound before the end of June. In New York XX Ohio is quoted at half a dollar, though a few sales of XX have been made at 55c. Ohio, Pennsylvania and West Virginia washed fleece, medium combing, and delaine, were placed at 52@55c. at latest dates. The Lexington (Ky.) Live Stock Record says: "There is clearly a combination of the Eastern wool dealers to hold off and depress prices....

The New Seal

of the World's Dispensary Medical Association of Buffalo, of which Dr. R. V. Pierce is president, consisting of Aesculapius, the Father of Medicine, surmounting the globe, fitly symbolises the world-wide reputation gained by the Family Medicines of Dr. Pierce now manufactured by this incorporated company and sold in all parts of the world. With a mammoth establishment, the World's Dispensary and Invalids' Hotel in Buffalo, and a correspondingly large branch establishment in London, this Association make medicines for the whole world—not only that but they personally examine and treat with special medicines thousands of cases. Among the most celebrated of the proprietary or family medicines are Dr. Pierce's Golden Medical Discovery—the great blood purifier, and Dr. Pierce's Pleasant Purgative Pellets (little pills)—and Dr. Pierce's Compound Extract of Smart-Weed—for bowel affections, colds and painful attacks, as colic, neuralgia, and rheumatism,—Favorite Prescription furnishes relief from female weaknesses, and kindred affections. All sold by druggists.

The Library of Universal Knowlenge.—The American Book Exchange continues to push this work with commendable celerity. The ninth volume, with articles from *Lepisma* to *Mullion*, has just appeared, and the tenth is to be ready before the end of June. The types are marshalled at the rate of 50 pages per day, and at that rate the first fifteen volumes, which will include the entire reprint of Chambers's Encyclopædia, may be completed within the next ninety days. This speed does not appear in any way detrimental to the excellence of the mechanical work, which, on the contrary, has been steadily improving since the start. People not already numbered among those who have bought the nearly half million volumes of this work sold since its publication began, will note with interest that during June they may order these fifteen volumes for the pittance of $6.

Patent Metallic Heel Stiffeners.—By a special act of Congress, approved by Pres. Hayes April 1, 1880, the Commissioner of Patents is directed to correct Letters Patent dated, July 9, 1872, No. 128,843, and erroneously granted to Barsaloux, James and Lyon, for a metallic stiffener for boot and shoe heels, known as Lyon's Patent Metallic Heel Stiffener. The bill provides that when said Letters Patent is corrected, it shall be as good and valid as it would have been had it been issued in such corrected form. The Letters Patent was corrected April 7, 1880, and issued to Mr. Nelson Lyon, Albany, N. Y.

Thrashermen know the annoyance and cost attending the use of a horse-power that is continually breaking down. There is a horse power made that is an exception; it is strong, runs light and though over two thousand are in use not a bull wheel has yet been called for. The fact is that the strain is so equally distributed that no breakages occur. This power is the double pinion four-wheel Woodbury, made by J. I. Case, Threshing Machine Co., Racine, Wis., who are making the largest line of steam and horse power threshing machinery of any one in the United States.

A Reliable Remedy.

Kidney-Wort not only cures bad cases of piles and all disorders of the kidneys and liver, but is a reliable remedy for a debilitated constitution. It acts on the bowels as a mild cathartic, carrying off the useless and obstructing elements which cause sickness.

Thousands of ladies to-day cherish grateful remembrances of the help derived from the use of Lydia E. Pinkham's Vegetable Compound. It positively cures all female complaints. Send to Mrs. Lydia E. Pinkham, 233 Western Avenue, Lynn, Mass., for pamphlets.

Such names as Dr. O. W. Holmes, Washington Irving, and Ex-President Van Buren, have borne testimony to the efficacy of Whitcomb,s Asthma Remedy, which is for sale by druggists.

The Markets.

SPECIALS FROM ALL CENTERS.

Until Saturday, June 12.

Butter, Cheese and Eggs.

Baltimore.—Butter—The receipts are full and the market is tending in buyers' favor, though on choice stock the figures lately current are maintained. We quote New York Creamery at 22@23c, New York State new at 20@21c, Western new at 16@18c for choice and 12@15c for good to prime, and near-by stock at 11@15c ₱ lb, for good to choice Cheese—The arrivals are fair, but were mostly affected by the hot weather, and are slow of sale. Prices are nominally unchanged, and we quote New York State at 13½c for choice and 12½@13 cents for good to prime, and Western Factory at 12c for choice and 11@11½c for good to prime and 9@10c for fair to good. Eggs—The demand is brisk and the market is firm at 12½@13c per dozen for Western and 13@14c for near-by.

Cincinnati.—Butter—There has been some improvement in the tone of the market during the week, for, although the receipts were a little more liberal, packers have taken hold more freely, and have taken the better grades of Dairy and some fine Creamery for putting in the fruit house; they have been the principal buyers of Dairy, paying 10@12c for good to strictly prime. They expected to get prime stock at 10c this season, but finding there was no certainty of that they have gone in pretty liberally at 12c, and for fancy Creamery they have paid 20c. If it was not for this demand prices would be much lower, for the current consumptive demand is largely supplied by the suburban production. Fancy Creamery sells at 19@21c and fair at 17@18c, choice Western Reserve and Dairy at 13@15c, prime Central Ohio 11@12c, medium do. 9@10c and inferior 6@8c ₱ lb. Cheese—There is no accumulation of stock here, but the current receipts are fully equal to the current demand and the market is easy at 9@9½c ₱ lb for prime to choice factory. Small lots of full-cream cheese sell at 10c. Eggs—The demand has been less active, and as the prices current a week ago induced larger shipments to this market prices declined, and they close dull at 10c per dozen.

Chicago.—Butter.—Only a moderate volume of sales was accomplished during the week and the market again ruled weak. A gradual accumulation of stocks is noted, and the pressure to sell is sufficient to keep values unsettled. There were free sellers at the following quotations: creamery, 17@19c; good to choice dairy, 14@16c; packing stock, 10½@11½c; grease, 5@8c. Cheese remains without much activity, and the tone of the market is by no means as firm as during last week. Prices are fully 4c per lb higher than one year ago, and an early break in the market is looked for the trade generally: Full cream, new, 11@11½; part skim, new, 9@9½; full skim, new, 5@7; low grades, 4@5. Eggs were in fair demand and steady at 9½@10c. per doz.

Chicago.—Wool—The market for this leading staple continues to rule dull, the feeling weak and unsettled, and price easy and in buyers' favor, though no changes have occurred in the quotations since our last report. Asking rates from store for eastern Iowa, Wisconsin, and Illinois wool range as follows: Tub-washed bright 45@46c ₱ lb; do. dingy and coarse 40@42c; fleece-washed medium 40@45c; do fine 36@40c; do coarse 35@37c; unwashed medium 27@30c; do coarse 20@25c; do fine bright 24@26c; do heavy 17@20c; bucks' fleece 16@18c. Consignments from western Iowa, Nebraska and Kansas sell at about 2c ₱ lb less than this range, and burry and poor conditioned lots at 5@5c less. Colorado wool (unassorted, is quoted at 25@28c ₱ lb for medium to fine; 19@25c for coarse to medium, and black at 21@23c.

PRODUCE AND PROVISIONS.

New York, Saturday, June 12, 1880.

Beans and Peas.—Higher freights for Havana have checked the export demand for beans. The local trade is seasonably dull and the general market shows the tameness of all grades to be had at inside rates for salable lots. Green peas lower; $1.62½@1.67½ for Wis. lots, in shipping order. Southern B. E peas quiet at $1.90@2 ₱ 2 bush. bag. Marrow beans, prime, $1.60@1.62½ other, $1.50@1.60; medium, prime $1.35@1.37½; other, $1.20@1.30; pea, $1.45@1.65; white kidney, $1.60@1.70; red kidney, prime $1.45@1.50; other, $1.30@1.40; black, $2.20 Lima, $5.

Receipts of beans for week, 4,300 bush.; exports, 339 pkgs.

Butter.—An unusual active export demand, amounting to 32,300 pkgs, has prevented prices from falling off, and with the ruling reasonable figures for the fine class of stock arriving the market closes firm and a shade better on selected State. Shippers have paid inside rates for all grades, their special want being fine. 3,900 of the above export total goes to the Continent, the other to Great Britain. The quantity has never been exceeded but once. Western butter has a good demand, but State is so fine and cheap that the former has not its sometime economical precedence.

Creamery, fine, 20@21c.; good to prime, 19@20c.; fair to good, 18@19c.; sweet cream, fine, 19@20c.; sweet cream, fair to prime, 18@19c.; State, firkins, choice yellow, 18@19c.; fair to prime, 17@18c; pails and hf. tubs, choice, 18@19c.; good to prime, 15@17c.; fair to good, 17@18; poor, 13@14c; State, Welsh tubs, prime, 18@19c; fair to good, 17@18c.; poor, 13@14c. Western imitation creamery, 12@17c; dairy, fresh, extra, 15@17c.; good to prime, 15@16c.; fair to good, 14@15c.; poor to fair, 13@14c.; factory, full grass, fine, 15½c.; good to prime, 14@15c.; fair to good, 13@14c.; poor to fair, 12@13c.

Cheese.—The export movement has been much larger this week reaching 97,000 boxes. This has been brought about by yielding prices after opening at 12½c., the market finally settled to 12c. with a few "specials," however, reaching 12¾c.

Latest sales are 12@12¾c for choice full cream, 11¾@11¾c. for good and fine; 10¼@11c for fair Ohio factory flat at 10½@10¾c. for good to prime; 9¾ 10¼c. for fair and good Ohio; 3@6c. for skimmed.

Receipts for week, 99,500 boxes.

Exports for week, 95,561 boxes, Liverpool cable, 67s.; steam to Liverpool, 35s.

Cotton.—There is a liberal business and a firm market. The latest prices are for June, 11.73@11.75c.; July, 11.82c.; August, 11.89@11.90c.; September, 11.30@11.33c.; October, 10.90@10.91c.; November, 10.73@10.75c.; December, 10.75@10.76c.; January, 10.83@10.85.

Quotations for spot cotton are based on American standard of classification and no cotton in store running in quality out more than half a grade above or below the grade quoted.

Dried Fruits.—The market has been very quiet and showing no important change.

Latest prices are for N. C. apples, fair to good, at 7@8½c., choice, at 9@9¾c.; New York State quarters sliced at 7¾@7¾c.; patent evaporated in cases, choice at 14@15c.; good and prime 13¾@14c.; evaporated, sliced at 13@13c. Evaporated peeled peaches, good to choice, at 26@28c.; North Carolina peeled choice, 16@17c.; Georgia prime at 15@16c.; fair to good at 13@14c., common at 10@12c., unpeeled halves at 7@8c.; do, quarters at 6@6½c. Pitted cherries at 17@18c. Blackberries nominal. Raspberries at 28@30c. Plums at 17@17½c.

Eggs.—Receipts for week, 11,500 bbls.; do. last week, 13,500 do. The market has assumed considerable strength under smaller receipts and a marked steadier demand. Stale and doubtful stock is pretty well out. The best d's have been ice stored, but when they open on a warm day when the losses are heavy. Few N. J. or L. I. arriving.

Near Points, 15@16c.; State and Penn., 14@14½c.; fresh, 13½c., State and Western Canadian 13½c. poor grades 12½@13c.

Flour.—There have been liberal offerings and prices unsettled and lower, leading to a fair trade.

Latest prices are at $4.75@3.50 for inferior to very fancy superfine State and Western; $3.85@4.00 for poor to good extra State and four-hoop lines; $4.00@4.25 for good to strictly choice do; $3.75@4.00 for inferior to good shipping extra Western, and $4.00@4.25 for good to choice shipping extra do, (very choice to fancy lots held higher); inferior to very good white wheat ex... $4.40@5.25; very good to fancy do, at $5.25@6.50; red and amber winter wheat, inferior to choice trade and family, at $4.40@6.00; round hoop Ohio 4.10@4.65; and trade and family brands of do, at $4.75@6.00; St. Louis at $4.40@5.35 for inferior to good extra; $5.35@6.50 for good to fancy; Minnesota clear, very in-

ferior to fancy, at $3.75@5.75; Minnesota "straight," very poor to very fancy, at $5 10@7.25, and patent inferior to fancy at $5.50@8.25; unsound stock at from $2 25@5 00; city mill extra at $5.00@5.20 for good to choice West Indies; do. for England, $4.15@4.75 for very poor to very choice; do. trade and family extras, $5.10@6.75; do. for South America, $5.90@6.35; No. 2 at $2.25@3.40 for poor to fancy.

Receipts for week: flour, 93,350 bbls.; corn meal, 3,475 bbls.; wheat, 1,883,400 bush.; corn, 1,198,400 bush.; oats, 656 750 bush.; rye, 2,277; malt, 80,970; rice, 250 pkgs.

Exports: Flour, 58,600 bbls.; cornmeal, 2,506 bbls.; wheat, 2,074,900 bush.; corn, 369,600; oats, 3,000 bush; peas, 2,400 bush.; rice, 398 pkgs.

CORN MEAL.—Sales at $2.50@3 for Western, and $3.15 for Brandywine.

FRESH FRUITS.—Quite a variety begins to show Strawberries are in moderate supply New Jersey nearly done shipping and nothing from the South. A good commercial display of large berries is a feature of the year, and but for the unfavorable weather there would have been an immense offering. Long Island is shipping to other points this season. Jucundas, Great American and other fancy seedlings have sold at 20@30c. ₱ qt.

Up-river good to prime ₱ qt. 10@12c.; fair, ₱ qt 8@9c.; good to prime ₱ 8 to qt. cups 3@4c.; Staten Island, ₱ pint 4@5c., hulled, ₱ 100 bask. $1.00@2.25, Jersey, prime ₱ qt. 7@8c.; poor to fair ₱ qt 6@6c.; pints 3@4c; Apples, Norfolk green, ₱ bu. crate $1.25@1.50. Cherries, Jersey sweet, choice ₱ lb. 8@8c.; common 3@5c.; sour, 5@6c. Raspberries Blackcap, Md. and Del. ₱ qt. 8@12c. Whortleberries Jersey ₱ ½ bu. box $2.50@3. Gooseberries Md. ₱ bush $1.50@2. Watermelons Fla. prime, ₱ 100 $10@11. Peaches, Ga., Beatrice ₱ peck $1.00@2. Peanuts are held steady but the advanced prices have checked the demand and there is very little doing. Hickory nuts nominal. Peanuts, Va. hand-picked, ₱ lb. 5½@6c.; extra prime, 5½c.; prime 5c.; shelled, 5½@6c., hickory shellbark, ₱ bush 90c.@$1.

GRAIN.—Wheat has been active, the shipments for the week reaching 2,100,000 bush. Prices have ruled weak; latest sales are of No. 1 white at $1.25¾@1.26; do., June, at $1.24@1.24½c. No. 2 white at $1.23@1.23½; ungraded white at $1.23@1.26; No. 2 red at $1.38@1.28¾; do., June, at $1.21@1.27½; do., July, at $1.15¾@1,16¼; do., August, at $1.11¾@1.12¾; ungraded red at $1.24@1.27½; mixed winter at $1.24@1.28½. No. 2 amber at $1.27; choice Green Bay spring at $1.20; No. 2 Chicago and Milwaukee spring at $1.18@1.19; No. 3 spring at $1.10; ungraded Duluth spring at $1,16½. Corn has been in good demand with prices variable; latest sales are of New York No. 2 at 51¾@51¾c.; do., June, at 50¾@51¾c.; do., July, at 49¾@50c.; New York steamer mixed at 53@54c.; ungraded mixed Western at 46@53c.; No. 3 at 50c.; New York yellow at 56c. delivered; steamer white at 52½c.; low mixed at 52½c. Oats are active and prices closed stronger; latest sales are of No. 1 white at 44@45c.; No. 2 white at 39¾@40c.; No. 3 white at 39c.; New York No. 1 at 42c.; New York No. 2 at 38½@39c.; do., June, at 38½c; No. 3 at 38c.; ungraded white Western at 39@44c.; ungraded mixed Western at 37@40c.; white State at 43@46c.; mixed State at 40@41c.; No. 2 Chicago at 39c.

HAY AND STRAW.—The market shows decided strength, with moderate receipts and a steady, fair trade.

Shipping hay quoted at 75@80c.; retail lots at 80@85c. for medium, and 95@$1,10 for better qualities; clover, 65@70. Straw at $1.15@1 20 for long rye; 60@70c. for short rye, and 55@60c. for oat.

Exports for week, 2,100 bales.

HOPS.—The market shows a steady moderate trade from brewers, and prices well supported. Quotations are for:

	Cents per lb.
New York, fancy	Nominal
New York, new crop, good and choice	33 @36
New York, new crop, medium	31 @33

LIVE STOCK MARKETS

NEW YORK, Saturday, June 12, 1880.

BEEVES.—Receipts for week, 12,925 head; do. last week, 15,587 do. The entire week has been an active one and the close shows an advance upon Wednesday's transactions. Export live stock has had a busy week. Light Montana cattle were sold at 8¾@8¾c., to dress 55 lbs.; Colorado and native stillers at 8¾@9¾c., to dress 56 lbs; corn-fed Colorados at 9¼@9¾c., to dress 57 lbs. The balance of the offerings were native corn-fed steers, which were sold at 9c., to dress 56 lbs., to 10¼c., to dress 57 lbs.—latter price for two car loads of choice selected steers for export alive.

MILCH COWS.—There is a fair call for prime cows and $60 has been paid; poor to good quoted at $25@40c.

VEAL CALVES.—There is a good demand, but the market does not seem to need enlarged receipts.

Live calves, Jersey and Bucks Co., choice, 6c¾.; prime, 5½@6c.; State, choice, 6@6¼c.; do. prime, 5¼@6c; fair to good, 4@5c.; poor, 3@4c.; Mt. Holly, fair to choice, 5@6c.; buttermilk, 3@3¾c.

SHEEP AND LAMBS.—Receipts for the week, 32,372 head; do. last week, 32,652 do. Sheep were dull, but prices remain about as during the week. Butchers got pretty well stocked up with lambs yesterday, and had but few wants to-day. The market was therefore slow, and generally ¼c. off. Sales of sheep were at $4@5.85; of Southern and Western lambs at 6¾@7c., and of Jersey do. at 8@8¾c.

SWINE.—Receipts for week, 26,731 head do. last week, 22,177 do. The receipts go direct to city killers and there are no late public rates for Western. A few Va. hogs sold at $4.35. City-dressed easier, 5¼@5¾c., the latter for pigs.

FARM IMPLEMENTS & SEEDS.

FOR SALE CHEAP.—Two Durham Cows. One Durham Heifer, one Alderny Cow. Address S. E. BLACKWELL, 53 East 20th Street, New York.

DAY'S Kidney PAD

A CURE for the most prevalent and fatal diseases that afflict mankind FOUND AT LAST. Internal medicines never did nor never can cure KIDNEY DISEASE. STOP IT NOW; apply Day's Kidney Pad AT ONCE, and be cured of all affections of the Kidneys, Bladder and Urinary Organs. It is the only treatment that will cure NERVOUS AND PHYSICAL DEBILITY, and that distressing complaint, "BACK ACHE." It will annually save many times its cost in medicines and plasters, which at best give but temporary relief. Sold by Druggists or sent by mail on receipt of price, $2. Our book, "How a Life Was Saved," giving a history of this new discovery and a large record of most remarkable cures, sent free. Write for it.

SILOS! ENSILAGE!

THIS METHOD OF PRESERVING FODDER CORN, HUNGARIAN, &c., will undoubtedly be quite extensively adopted, but before these crops can be preserved they must first be raised. The Hay Crop is sure to be short this year, and farmers will need therefore to plant Fodder Corn and Hungarian to eke out the short Hay Crop. For this purpose use the

STOCKBRIDGE.

MANURE. From 2 to 3 bags to the acre, costing $10 to $15, has given very large returns. Orders can be filled the same day they are received, if our local agents have not this kind in stock,

Chambers's Encyclopædia.

15 Vols. Over 13,000 Pages. Price During June, $6.

Among the wonderful things which have been accomplished for lovers of good books by the "Literary Revolution," perhaps the most wonderful is the reproduction of this great Encyclopædia at a merely nominal cost.

It is a verbatim reprint of the last English edition, in 15 beautiful volumes, clear nonpareil type, handsomely bound in cloth, for $7.50; the same printed on finer, heavier paper, wide margins, and bound in half Russia, gilt top, price $15.00. The first nine volumes are ready for delivery. Vol. 10 will be ready June 20. The remaining volumes will be completed by October next.

$6. An Amazing Offer. $6.

The more widely and rapidly these volumes are scattered, the greater is their influence in inducing other purchasers of this and our many standard publications. Accordingly we give special terms to early subscribers.

To all whose orders and money are received during the month of June, we will supply the 15 volumes, in cloth, for $6.00, and in half Russia, gilt top, for $12.00. To any one sending from any place, where we have no special agent (usually the leading bookseller of the town), a club of five orders, we will allow a commission of 10 per cent. The volumes issued will be sent at once by express, and the remaining volumes when completed.

A specimen volume in cloth will be sent, post-paid, for 50 cents, or in half Russia, gilt top, for $1.00, and may be returned at once, if not satisfactory.

The "CHAMBERS'S ENCYCLOPÆDIA" comprises the first 15 volumes of our "Library of Universal Knowledge," and the remaining volumes, complete in themselves, will be sold separately when published.

Standard Books.

Library of Universal Knowledge, 21 vols., $10.50.

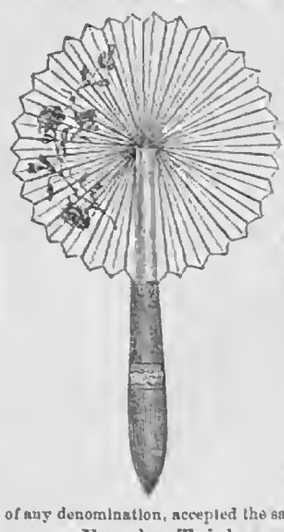
THE MAGIC CIGAR FAN.



THIS is a novelty as useful as ornamental, and makes a delightful present to a lady, the presentation always causing great amusement. To all appearance it is a genuine Henry Clay cigar of superior quality. But on pulling the top, a dainty white frill appears, which soon spreads out into an elegant circular fan, of which the cigar is the handle. On closing the fan, it grows smaller and smaller, gradually but surely disappearing within itself, until only the brown cigar is left. Where it comes from or where it goes to, is a mystery difficult to unravel. An immense deal of fun may be had by young men placing it among their cigars and offering it to a friend as an "extra imported brand." The fan can be opened and closed very rapidly, is strong and compact, can be carried in the pocket or cigar case, and is always ready for use. Price, 30 cents, three for 75 cents, or $2.50 per dozen, by mail postpaid. Clean Postage Stamps, of any denomination, accepted the same as cash. Address,
Eureka Trick and Novelty Co.,
P. O. Box 4614. 39 Ann St., New York.

Young Men and Ladies to learn Telegraphy. Good situations guaranteed. Address with stamp
J. A. SHERIDAN, Supt., Oberlin, Ohio.

Reading for the Young.

THE MEADOW LARK.

SWEET, patient watcher on thy lowly nest,
Thy meek head peering o'er the meadow grass:
"All motherhood is in that tender breast"
As near thy secret bower my footsteps pass.

The deep, deep blue of June's delicious sky,
Can tempt thee not to rise and soar away;
Love-taught, thou canst resign without a sigh
Freedom and song upon this summer day.

Unconscious teacher! may we learn from thee
The holy lesson of unselfish love—
That adding patience to our faith, we be
Made meet for the inheritance above.

LAURA S. HAGNER.

THE CHILDREN'S ACRE.

J. E. Mc. C.

EVERY one of the Graham family was a singer, from the oldest boy Albert, down to the baby who sat up in her cradle and hummed "Home, Sweet Home" before she could speak a word. The concerts they used to have around the evening-lamp, when the day's work was done, were better than a great many you pay money to hear. They did not shell corn in the evening at their house. The father even took the pains to make himself a music-stand to hold his singing-book more conveniently.

Now, it is no wonder that such a musical family should take a notion to buy an organ. The children talked and wished a good deal about it, and finally one evening Sophie asked,

"What will you give us, father, towards an organ? Mother could teach us to play, and we will all save up and deny ourselves and earn money until we get it paid for."

Now, their father had thought a good deal about this himself, but had not said anything for fear it would not be done, and he did not wish to make the children uneasy and dissatisfied. He worked hard himself so that he could educate his children well for he felt deeply the force of the truth, that children can grow up but once. But if the children were willing to take hold with a will may be the instrument could be bought.

"But, Sophie, it must all be paid for, cash down in the start. No paying by installments for me. I have been bitten that way a time or two, and have had enough of the business. I suppose you are willing to take the commodity I have the most of, and turn it into cash."

"Oh yes sir," said Albert, his mind running on grain. "We'll turn anything on the farm into money that you will give us towards it."

"Well," said the father with a twinkle of his gray eyes, I will give you an acre of ground."

The children exchanged glances and looked a little caught, but Sophie answered with enthusiasm. "Its a bargain just get the ground ready and I will take my portion and set it out in onions. I have always thought I should like to try my hand at raising something on my own hook."

Sophie was a born farmer's daughter and loved the out-door work of the garden full as well as washing dishes. Indeed, she could not well see why it was not quite as interesting to cultivate rows of fine vegetables, which looked beautiful when growing and "came to something," as it was to drag into the house in the fall and drag out again in the spring great crocks of green things which did not even blossom very often. Any way, you could not convince her that the one kind of work was any less lady-like than the other.

The ground was duly prepared, and the children set to work with a will; even six-year-old Kate had her corner, and there was not a weed to be seen there all summer. Whenever the market wagon went to town there was almost always something to sell from the children's acre, and the little savings-box filled up with small coins. It was rather slow work, but when the last fall crop was taken off they had three-fourths enough money to buy the most coveted instrument. Now mother came down handsomely with her summer savings from the poultry yard, and when all was again counted and the eyes of the happy children feasted on their riches, father said to George: "Take the spotted calf over to Mr. Hall's to-morrow morning. He shall have it, and that will make out your sum. I guess it will do us all more good in that way than in any other."

So it all came about in very a easy, natural way, and nobody felt the poorer. The children had worked hard over their acre, but they had learned a good deal also, and nobody can estimate the worth of such a lesson in thrift and economy and industry. There was a pleasant reminder of their efforts always standing there in the cozy east-room, ready to cheer and brighten the dullest day.

It was not the last of their earnings. They said they had just learned how. Many more comforts and luxuries were added to the house from time to time as the result of their industry. Father and mother never grudged them the means, and encouraged them to the extent of their ability. The additions were commonly made about Christmas time, so that festival always passed off most delightfully, and they felt almost like rich folks when they surveyed their treasures. The Grahams had found out the secret of making a little go the farthest, and getting the greatest amount of comfort out of their resources as they went along.

A CROP OF CORN.

A TRAVELER in one of the New England States recently passing by rather a sterile field planted with corn, observed a white-headed, well tanned freckled-faced boy, leaning thoughtfully over his hoe handle in its midst, with his right, bare foot braced firmly against the calf of the left leg. Stopping his carriage in the road, opposite the boy, he bid him a "good morning," to which he was smilingly responded, and said: "You seem to have rather *small* corn growing here, my lad."

"Wa-a-l, yes," he replied with a long drawl, "that's sartin true, but recollect, mister, it's *dwarf* corn."

"Exactly," says the traveler. "Yet don't you think the stalks are looking extra yellow?"

"Of course," answered the boy, setting down his right foot on the ground from its resting place against his left leg, "for we planted *yaller* corn."

"Pray, now," continued the traveler, "do you expect to get more than *half* a crop from such a poor field, and especially as you do not seem to be working very hard at it with your hoe just now?"

"No, sire," replied the boy with a broad grin, "for we plant it on *shares*, so ye can't expect more than *half* a crop, could ye?"

Here the traveler subsided and drove along.

LETTERS FROM THE COUSINS.

A Letter from Hawaii Nei.

HAWAII NEI has again favored us with a long and welcome letter. The cousins will remember that she wrote us last fall, but until now nothing has been heard from her since. It is pleasing to know that she has not forgotten her RURAL Cousins, and it is to be hoped that we shall hear from her more frequently in the future. Here is her letter:

HONOLULU, May 9th, 1880.

DEAR UNCLE AND COUSINS:—It is some months since last I wrote, and many things, both sad and joyful, have happened during the interval. Before I proceed further, let me thank you, Uncle Mark, for the seeds you so kindly sent me. I was real glad to receive them; I began to fear that you had forgotten me. A few days ago I had prepared a box with some rich earth, and planted in it some of all the seeds, except "Sweet Mignonette" and "Surprise Musk Melon;" the former I planted in a small box, the other in a nice corner of our garden that is fenced off from the chickens. Now I patiently wait for their "up sprouting," and hope they will thrive; will report progress next time.

Let me see; I believe my last letter was printed Nov. 22d. I miss a leaf of that paper and shall be sorry if it contains my letter, for at the end of it is quite a lenghty response from Uncle Mark. The missing sheet was lost during my absence. Aha! Tell you about my trip? Certainly, if Uncle Mark will grant me space for a condensed description. As my father was suffering from ill-health, a sea vogage was proposed. On the 18th of February we left Honolulu, on the bark "Kalakana," for San Francisco. Our passage of seventeen days passed very pleasantly. Very early on the morning of March 7th we sighted Farellones. On the largest of these islands, as perhaps some of you know, is a revolving light which can be seen at a great distance. A tug took us in through the "Golden Gate" to the "Golden City of the West." Here let me state that this was my first visit to your great America. I have been to Germany, but we traveled around Cape Horn. We had a four month's passage going, and were within three days of a six months' passage on our return. How is that for a voyage?

The day of our arrival in San Francisco it blew very hard; that night we had a "norther." Our ship rolled worse than when we were at sea. During our visit we met many friends we had no idea of meeting, and made many new and pleasant acquaintances, who made our three week's stay pass swiftly and pleasantly, with drives through Golden Gate Park, visiting the new conservatory (where I saw many beautiful and rare exotics), and from there to the Cliff House to hear the seals roar, then along the hard sand beach to the "Ocean House," to Woodward's Gardens, etc. In fact we visited all places of note; nor must I omit my drive through East and West Oakland, where I saw many beautiful homes, on to Berkely, and through the adjoining grounds of the Berkely State University. If I was a boy wouldn't I study doubly hard, if I could go to a school where the surroundings are made so pleasant for the scholars. RURAL Cousins of both sexes as well as all readers of the RURAL, let me advise you, one and all, to learn what you can in your youth, and learn it well, so that when you grow older you will not regret misspent days. I sincerely pity children who crave for knowledge and cannot have the opportunity of an education, but much more so do I pity those that have the chance and opportunity *and do not* improve it. Those misspent days never return. Boys and girls, take "upward and onward" for your motto, and act up to it. "Where there's a will, there's a way," you may be assured; then strive to find it. But to return; it was rumored at the "Golden Gate Academy" (in Oakland) that a Hawaiian girl would visit there that day, and I tell you truly, by the stares I received I began to wonder if I was an ogre. Every room we passed a head would bob out, and, for excuse the owner would ask my companion, who attends the academy, a question. As we left I turned and saw two windows, with little else to be seen but handkerchiefs waving. I dare say those young fellows would have stared with eyes opened a little wider, had I but spoken a few sentences in native, as I did in San Francisco one evening. While out for a walk we passed through a store, and in answer to all the clerks, who came forward as we passed their counter, my companion and I would turn to each other, speak native, and pass on. I do not think they understood us. In this manner the days glided by. Our visit over, we returned home on the "Kalakana," feeling very much recruited by our trip, and are again busy at our daily duties.

The fever that has been visiting us for the last six months, has I am glad to say left at last; but oh! It has left many a vacant chair in loved homes and many an aching heart; loved ones have passed to the other shore, where we shall meet them by-and-by, happy thought, consoling balm. One of the first to succumb to the dread fever, was a young and lovely girl, lovely in disposition and love in name; I think hers was one of the saddest deaths Honolulu ever witnessed; the oldest (not only) daughter of the family, beloved by all who knew her and her sweet winning ways. She was my most intimate friend, I having no sisters or brothers, and hers being much younger than herself we were as twin sisters, and shared each other's joys and sorrows. Intimate friends, schoolmates, Sabbath school scholars, and later on teachers, side by side we walked for seven years. Yet God took her from this world. She is free from care and trouble, and we remember her as a well beloved friend, lent to us for a little while, then taken home; her image will go with us through life, the remembrance of her often keep us from wrong doing.

But I fear that I am tiring you, so thanking all for your kindness in listening to me, and Uncle Mark for not looking at the waste baskot, I will bid you good-night with Aloha nui to all.

HAWAII NEI.

P. S. Our crater Mokuaweawea (summit crater or Mouna Loa) on Hawaii is very active; so much so that people at Laihaina Mani can see to read a newspaper at night. How wonderful are God's works! A like brilliant eruption has not happened since 1868. In consequence of the eruption we have rather warm weather. H. N.

DEAR UNLE MARK:—I guess that you think that we have forgotten you in spite of the many reminders we have had in the shape of corn, grape seeds, and also a large package of seed from your Free Seed Distribution. If we do not have good gardens and fine shrubs and flowers it will not be your fault; and here let us thank you for all. But how can you afford to do it? That is a query that we should like to have answered. We are going to have a garden all our own this year, with flowers and vegetables. Our grape seeds are coming up. The corn you sent us the frost cut down, but we have a little left to plant. With love to yourself and all the cousins we close.

CLARENCE and JOHNIE CROOK.

Shiawassee Co., Mich.

DEAR UNCLE MARK:—I take my pen in hand to thank you for the seeds you were kind enough to send me. I got all but one package of vegetable seed which the mice got. We have had a very hard winter. In January the snow was three and a half feet deep. We have but a very small garden this year. I have a bed each of lettuce, radishes and onions. I study reading, spelling, arithmetic and writing. We cannot take the RURAL this year, but papa has found a mine, so if we get rich we will take the RURAL the rest of our lives. Now I must close, for I must feed the chickens. Good bye.

LAURA MCGEE.

BRIEFLETS.

PLANT corn or other fodder crops whenever it is possible to do so—if you don't, you will be in a "fix" next winter. . . . . First sound, ripe cherries at the Rural Farm June 1st. . . . . The political papers are full of a glorious contempt for consistency—as Col. Forney calls it—that they may better serve their country! . . . . . Progress says: "If the agitation of the woman suffrage movement continues, its adversaries may finally be driven into the adoption of the effective and complimentary argument based on the idea that the fair sex already possesses so much power, that if the ladies were allowed to vote they would be irresistable, and that the only chance man has for relieving himself from utter and hopeless subjugation is to retain a monopoly of the elective franchise." . . . . Mr. Fowler remarks, in the Country Gentleman, that the worst neglect in American farming is insufficient preparation of the soil. . . . . Again he says: "If we had no weeds in our hoed crops few farmers would give as much cultivation as is needed. Thus we learn that even weeds are a 'blessing in disguise,' and the old prediction respecting the earth, that thorns and thistles it shall produce for man's sake, is fully verified." . . . . "As to the power of linseed oil to prevent pear blight altogether, if applied in time, I can only state the fact that I have a number of Bartlett and Flemish Beauty trees, about eight years old, to which I have applied the oil each year since they were planted, and they have not as yet shown any blight." This is the experience of a correspondent of the Prairie Farmer. . . . . We find the following rather remarkable statement in the London Farmer: "Ostriches are known to be very voracious. They will snatch a bright button off one's coat or swallow pipe, tobacco, fire, and all, if you approach too near to them whilst smoking. Ostrich breeders have an unlimited stock of stories as to the thieving and digestive faculties of the ostrich. An ostrich that died suddenly at Rome was a fair sample of this kind. It had been long on exhibition, and suffocated itself a day or two ago by thrusting its neck between the bars of its inclosure. A post-mortem examination took place, and there were found in its stomach four large stones, eleven smaller ones, seven nails, a necktie pin, an envelope, thirteen copper coins, fourteen beads, one French franc, two small keys, a piece of handkerchief, a silver medal of the Pope, and the cross of an Italian Order." . . . . "From nurses who know more than the doctor, and who will not carry out his directions, good Lord deliver us."—Ag. Gazette. . . . . Mr. S. M. Pearsall says (Mich. Pom. Soc) that it was many years before he learned how successfully to make an asparagus bed, viz: prepare the soil for 18 inches or two feet in depth and do not cut until the third year. . . . . Select the low lands for celery. Mucky soil is excellent. It is a marsh plant by nature. . . . . So far as at present known, the peach tree disease of yellows is incurable and there seems no doubt it is highly contagious. Wherever it makes its dread appearance the tree should be destroyed, else the entire orchard and neighboring orchards may be considered as doomed. . . . . Grape vines planted this spring will be weakened if more than one shoot be permitted to grow . . . . . We often wonder why Mr. C. M. Hovey, whose horticultural contributions are frequently seen in English periodicals, so rarely writes for home journals. Is it that he is more interested in foreign horticulture than in our own? . . . . . We find the two following items in the N. Y. Herald under the heading of "RELIGIOUS:"

In Michigan social etiquette permits a bride to be married without gloves because that's the way she handles the groom after marriage.

A Wisconsin woman has been married fifty-eight years and has never missed building her own kitchen fire. Her husband is probably the oldest fire-escape on record. . . . . .

Mr. Rowe, of Michigan, says: "No matter how much care we may give the Osage orange hedge, portions will die out in severe winters." . . . . . Mr. Taylor says: "With proper plants in proper hands farm hedges can be made profitable. Men need to study this matter as thoroughly as tree or fruit growing." Mr. Gulley asks: "Are they growing more or better hedges in the Eastern States than fifty years ago, or are they not gradually giving up the business?" . . . . . Now is the time to make the garden profitable. . . . . Sow buckwheat before the 20th for this latitude. . . . . There is probably no better late winter squash than the Hubbard. . . . . A new disease and a new remedy. We see the following advertisement posted up in New Jersey: "A Jersey cure for Jersey chills."

PERSONAL ITEMS.

A farmer living in Midland township, Ohio, was killed by lightning on the 10th. He leaves a large family.

In Todd County, Ky., Silas King was instantly killed and Marion Lindsey so injured that his recovery is doubtful, by lightning on the 8th inst.

A little girl's face was distinctly photographed by lightning upon a window pane in Laurel, Ohio, during a recent thunder storm.

Henry Davis was killed while working in a barn near Brown township, Ohio, on the 10th. The barn was also burned by the lightning stroke.

A farm house belonging to J. L. Fenton, situated at Harristown, Ill., was struck by lightning the other day and three of the inmates were knocked senseless.

While unhitching their team, Ashbel Wells and his son, of Fairview township, Mo., were stunned by lightning on the 11th and one of the horses was instantly killed.

Marion Moseley of Henry County, Georgia lost his total supply of fall pork and bacon by one stroke of lightning. The hogs, ten in number, were under an oak.

A demolished house and the instant death of a Mrs. Martin and her two children, was the work of a lightning stroke at Priceville, Ill., on the 10th inst., at midnight.

Lightning destroyed the house of Job Ennis, a Mennonite, of Winnipeg, Manitoba, on Saturday, June 5, killing Ennis. His wife expired from shock on Sunday.

Lightning struck the barn of Jacob High, near West Jefferson, Ohio killing Henry Davis, who had taken refuge there, and burning the building and its contents.

Lightning cut queer antics at Jasper, Mich., on the 10th inst. It struck the windmill of Nathan Shumway, completely shattered the stone pump, and, following outside, killed two cattle

Edward Sevier, of Murrayville, Illinois, was struck by lightning on Sunday afternoon, June 6th, at Russell's Pond, and instantly killed. His clothes were torn from his body and his shoes thrown a great distance.

The first instance on record of the killing of a mule by lightning occurred at Bard, Iowa, last Friday morning. The bolt struck the barn of J. H. Hartman in the roof at the gable, made a hole four inches in diameter through the hay down nto the stables, instantly killing three horses and a mule. The flash did not set the hay or woodwork on fire.

"Something Wonderful in It."

"Lungs feel easier and better by fifty per cent. I am better than I have been for six months. My cough is nothing to what it used to be; *scarcely notice it.* Go to bed at night, and scarcely cough once before I am asleep, and scarcely wake until broad daylight. *Surely there is something wonderful in Compound Oxygen!*" So writes one of our patients Our Treatise on Compound Oxygen, containing a record of many remarkable cures, *sent free.* Drs. SOMETHING NEW!

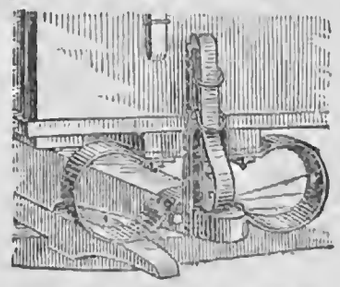
PULLIAM'S PATENT

BOLSTERS SPRINGS for FARM WAGONS.



This valuable device is suited to wagons of any size—made of the best steel and warranted—are attached by four bolts through the bed—can be put on by any person. They remain on the wagon for all uses and work equally well whether with empty or loaded wagon. There is no use for a sprung seat—they make a comfortable spring wagon out of a farm wagon—and save largely in wear and tear. We want Agents every where. Send for description and prices, and mention this paper.

SEMPLE & BIRGE MFG. CO., St. Louis, Mo.

NOYES' HAYING TOOLS,

FOR STACKING OUT IN FIELDS OR MOWING AWAY IN BARNS.

Anti-friction Hay Carrier.

Grapple Fork.

Save labor and Money.

Are simple, durable and cost but little.

No trouble in getting over high beams, or to the end of deep bays.

Hundreds are in use.

"Victor" one-horse Wheat Drills.

(4 and 5 hoed,)

For Sowing Wheat, Rye, Barley, in fallow ground or in standing corn.

Force feed; simply constructed. The five hoed is adjustable for different widths, and is just what every small farmer ought to have, saving the price of a two horse Drill.

Manufactured only by **EWALD OVER.**
[Send for circulars.] **Indianapolis, Ind.**

Humorous.

SPARKING aeross a garden fence admits of a good deal being said on both sides.

Do you see that spring over there?" said a settler in Arkansas to a stranger. "Well, that's an iron spring, that is; and it's so mighty powerful that the farmer's horses about here that drink the water of it never have to be shod. The shoes just grow on their feet nat'rally."

A Reform in the Stomach.

How to institute it? that's the question. How to get rid of this abominable disorder, that daily torments the sufferer in a hundred complex ways, the very proteus of maladies. Listen, friend dyspeptic, your stomach needs invigoration. Hostetter's Stomach Bitters is the best tonic of the age. Begin that at once, and you will have initiated a process of cure; which, if you give the medicine the fair trial it deserves, must infallibly result in your recovery. A tablespoonful three times a day of an agreeable, appetizing and pleasant preparation is surely preferable to the futile and unpleasant remedies so often taken. Renewed relish for food, increase of stamina, nerve tranquility, untroubled rest, these are among the benefits conferred by this pure, highly sanctioned remedy.

PAYNE'S FARM ENGINES

Established 1840.

The Pitts Agricultural Works,

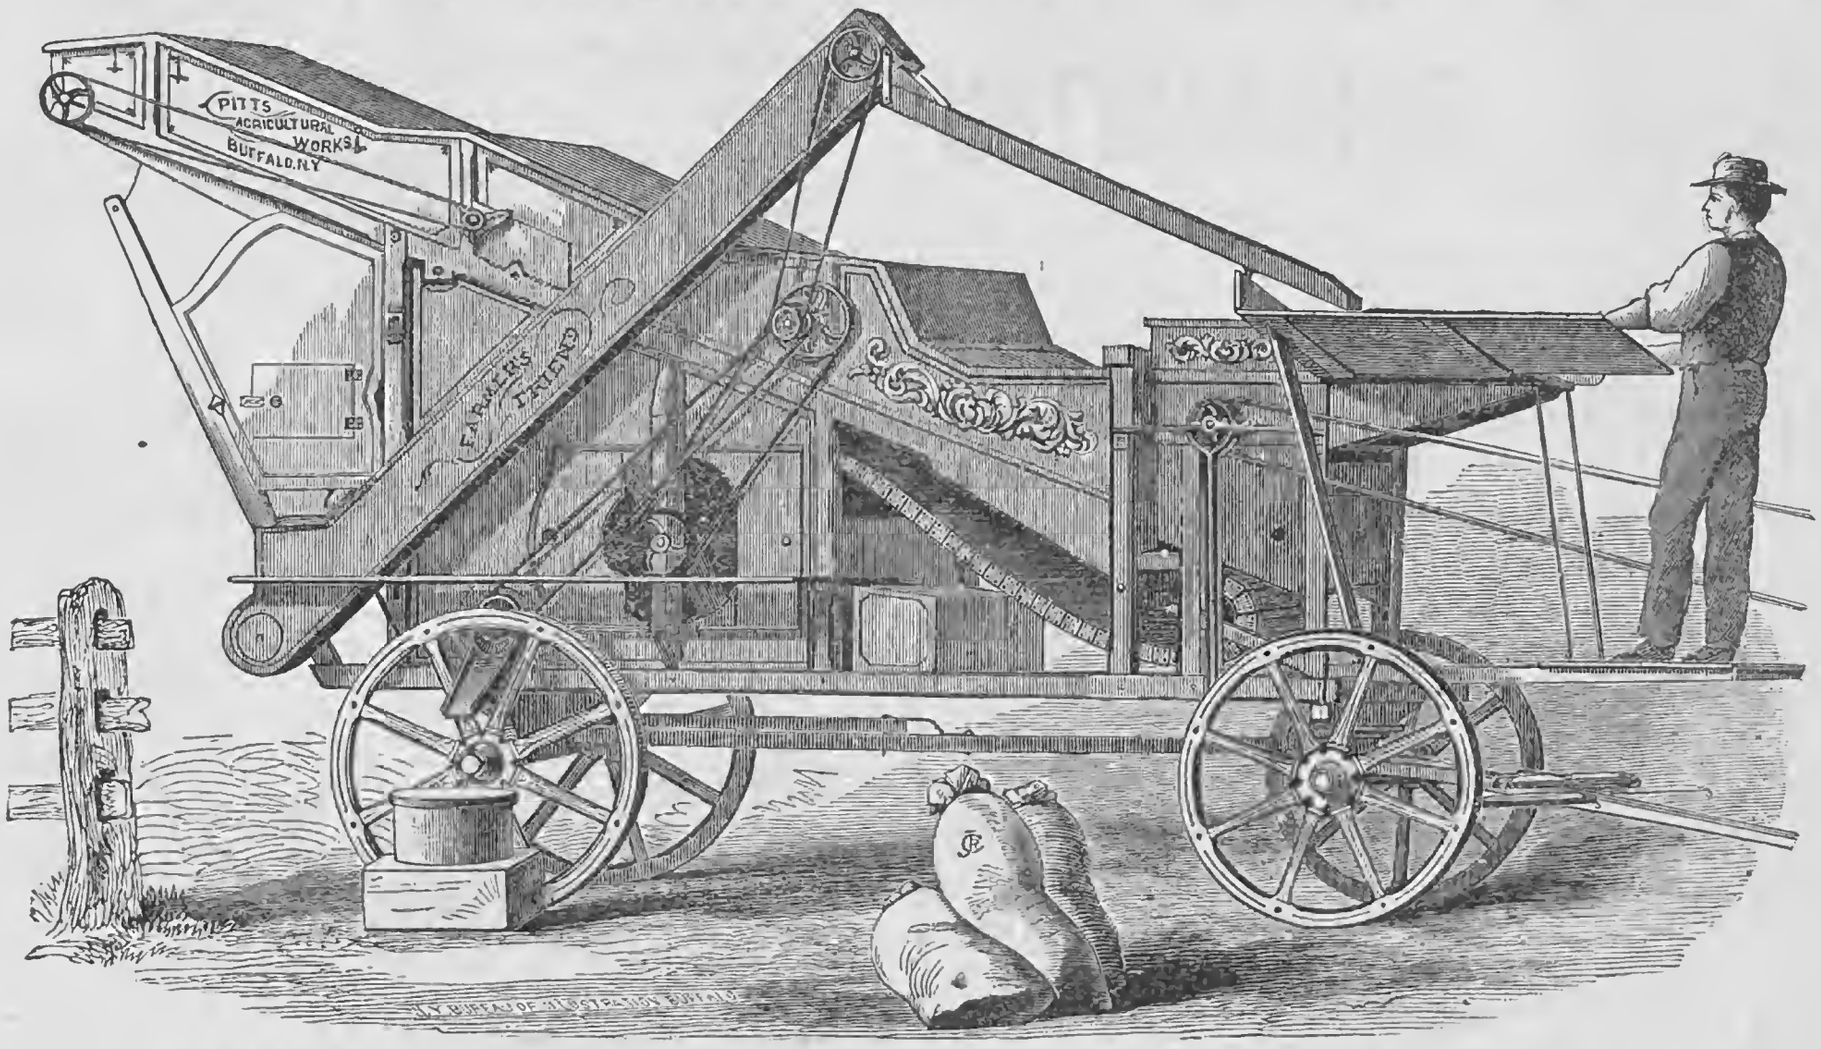
BUFFALO, N. Y., U. S. A.

(Successors to John A. Pitts, Brayley & Pitts and James Brayley,)

SOLE MANUFACTURERS OF THE CELEBRATED

BUFFALO PITTS GRAIN THRESHERS AND CLEANERS.

Rice Threshers, Double Pinion Horse Powers, &c.



The "Buffalo Pitts Grain Thresher and Cleaner" threshes from the head Wheat, Oats, Barley and Rye, Flax Seed and Timothy Seed, separates the Grain or Seed from the Straw, and Winnows and Sifts from it all Chaff and Foul Stuff, delivering the Grain or Seed IN A CLEAN, MARETABLE CONDITION.

It does its work Thoroughly and Completely without Waste of Grain or Seed, and with less power (for the same amount of work) than is required on any other Thresher and Cleaner.

It is built in the Most Substantial Manner, of the Best Materials, and is Handsomely and Durably Painted and Ornamented. It is Simple in Construction, Easily Managed, and not likely to get out of order. Various sizes are made, increasing 4 inches in length of Cylinder and width of Cleaner for each size, from 24-inch Threshing Cylinder, with 32-inch Cleaner, to a 48-inch Cylinder, with 56-inch Cleaning Parts, with capacity to Thresh and Clean from 300 bushels (180 centals) to 3,000 bushels (1,800 centals) per day.

The Belt Threshers are extra strong framed, have extra Heavy Solid Steel Cylinder Shafts, with Pivot Point Bearings, and in every way are built with special reference to use with Steam or Water Power. Special attention is given to the building of Threshers and Cleaners for Foreign Countries. Thirty years' experience in this department, during which the BUFFALO PITTS has victoriously competed with every other first-class Thresher in the world, enables us to furnish for each section a Thresher peculiarly adapted to the wants of the country for which it is intended. For Price Lists and all information, address

Rural Architecture.

A CHEAP GREEN-HOUSE.

PETER B. MEAD

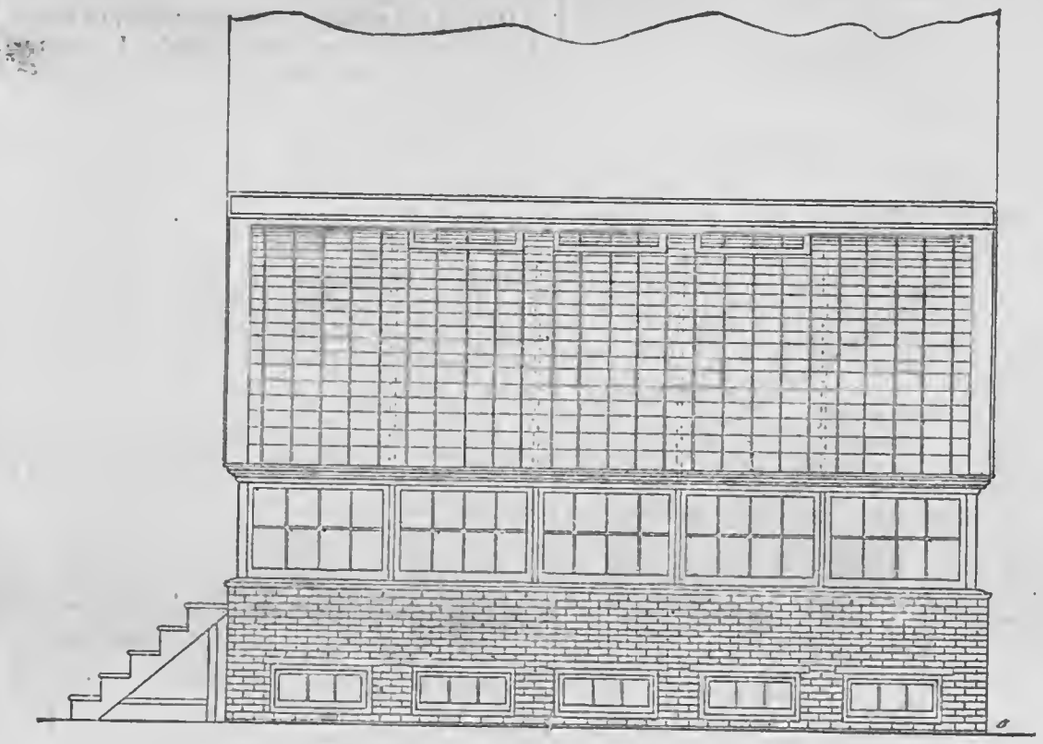
FOR years past, at intervals more or less brief, inquiries have been made, through the horticultural press, for *cheap* green-houses. Evidently the meaning has been, for houses costing very little money, and the inquiries have been answered accordingly. The dominant idea, in both the inquiry and the answer, has been the primary or first cost, ignoring altogether other and more important considerations, without a strict regard to which a truly cheap house cannot be built; and that is beginning to be well understood now, even by those who formerly favored this kind of so-called cheap structure, in which the cost of repairs exceeds the original cost of building. Hence, and happily, they are beginning to disappear, being replaced by something better and really cheaper.

It may be convenient, or even necessary, where one occupies hired or leased land, to put up a sheltering shed of glass and wood for the temporary protection of plants; but pray, do not call them plant houses. Even in such a case, however, much better may be done. I have made plant houses a specialty for more than twenty years, and during all that time have studied to reduce the cost of construction, and have invariably found the path of economy to lie in the direction of good material and good workmanship. Without these, a cheap plant house can no more be built than a good coat can be made out of shoddy. The frame or body being well built, the ultimate cost may be reduced in the treatment of eave and gutter moldings, and the omission of labor-saving apparatus; but in the latter case, only where human labor is very cheap.

I make the above remarks on so-called cheap plant houses to pave the way for the introduction of an example of what I consider a cheap house. This particular style of house is chosen because it meets the wants of a class of amateur plant growers whose claims to consideration have been almost entirely overlooked among us. I have special reference to lady amateurs; but the reference will reach quite as well to many amateurs of the other gender (a growing class, I am happy to say), and to the comparatively few (I am sorry to say) among our clergy who love to devote a portion of their time to the culture of fruits and flowers.

The structure seen in the accompanying illustrations, it will be observed, is attached to and forms a part of the dwelling. It is susceptible of various modifications, as will be explained farther on. In the present case, necessity determined the form of the house, as it will in many other cases. No other could have been adopted without considerably increasing the cost, and this was not to be done. The space now occupied by the ground plan (Fig. 218) was a covered area, built up to the ground surface (o) with a stone wall. This wall was repaired and retained, and in order to place the floor of the green house and that of the dining-room on the same level, an eight-inch brick wall some four feet high, and pierced with windows, was built on the top of the stone wall, which converted the area into a useful room, now used as a laundry and store-room. The shaded spaces in the ground plan denote the position of the mullions. The outlines of the tables (a) and walks (b) are also shown here. The narrow walk at the back was made for convenience in reaching the plants. All the plants in the house (except some hanging baskets) can be easily reached without leaving the floor.

The floor beams (g) and flooring are shown in the section (Fig. 220). The floor is made of narrow yellow pine laid in white lead and oiled. Referring to the ground plan, b is the walk, two and a-half feet wide; a, is the table arrangement, which is flat, and not shelving. In the absence of an earth floor, the want is partly supplied by making the tables three inches deep, and filling in with clean sand, which is kept constantly moist. The edges and uprights are of yellow pine trimmed with black-walnut moldings, which look very neat. The bottom of the table is of spruce, thickly coated with stone paint, and is sound after two years' use. At c is the pump. This is a Blount Universal Force Pump, which draws water from a cistern outside, and discharges it into a good-sized tank under the table. The pump is fitted with a three-way cock, so that water may be drawn from either the cistern or the tank at pleasure: this is a great convenience, and especially beneficial to the plants.

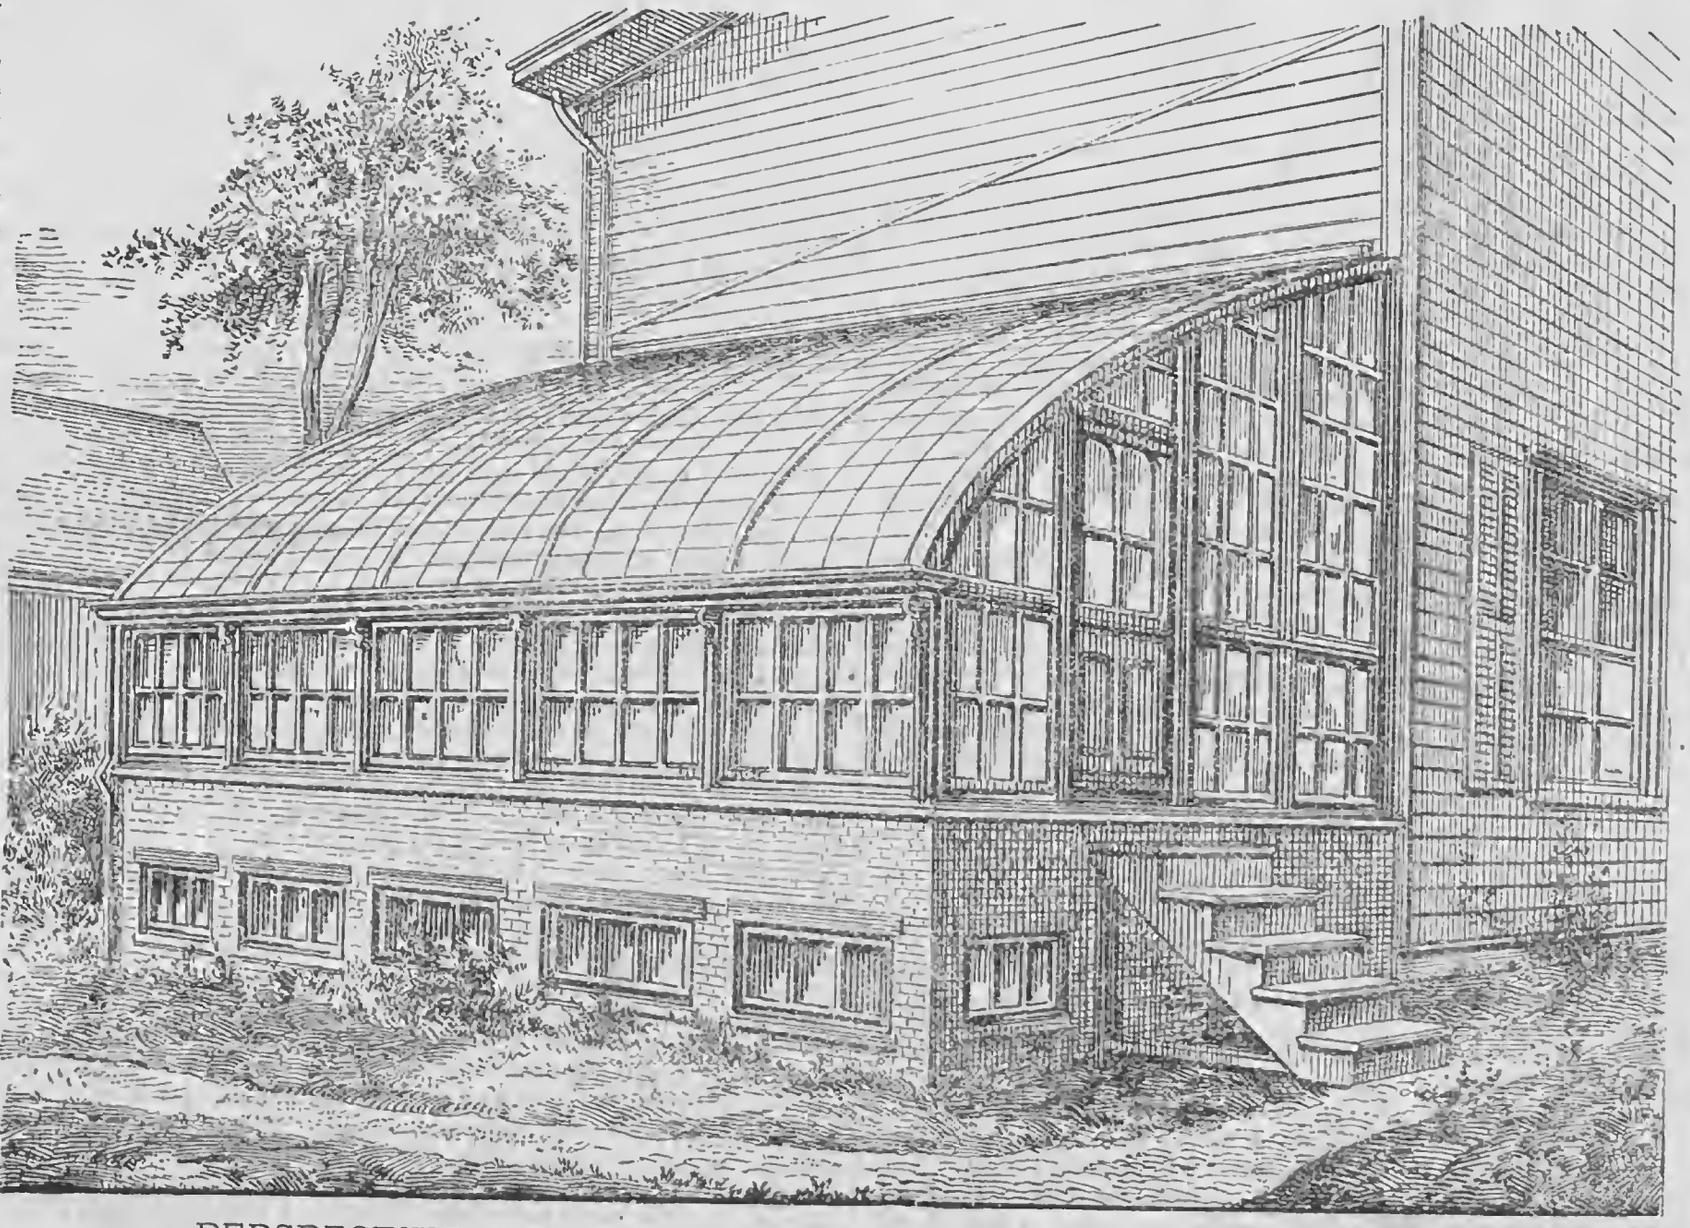


FRONT ELEVATION OF GREEN-HOUSE.—FIG. 216.

The section (Fig. 220) shows the arrangement of the rafters (r), purlins, plate (n), sill, (l), hot water pipes, (i), and the position of the boiler, f, in the laundry room below. This is Weathered's smallest boiler, and is capable of heating a house three or four times the size of this. It is so inclosed with brick-work as to form a hot-air chamber around it, and the hot air is conveyed to the dining-room, which it keeps comfortably warm in the coldest of weather.

The end elevation (Fig. 219) shows the positions and arrangement of the end sashes, door, steps, etc. The front elevation (Fig. 216) shows the arrangement of the front upright sashes, roof, etc. The rafters and mullions are fifty-two and a half inches apart from the centers, to meet the requirements of the glass used, and covered on the top and bottom with half-round molding. The sash bars are one by one and a half inch, and placed ten and a half inches apart from centers. French glass of selected second quality is used throughout the house, and is bedded in Davis's cement, the best glazing material I have ever used. The finishing coat of paint on the inside is white zinc; on the outside it is tinted a soft gray. The eave and gutter moldings, without being heavy, are so formed as to give the house a finished appearance. This may be varied to harmonize with the architecture of the house to which it is attached, and yet it must have an expression of its own: a plant house must always show that it is a plant house, and not a bit of pretentious architecture.

The ventilating sashes in the roof at v, Fig. 220, as well as those on the sides, are fitted with Weathered's improved ventilating apparatus, by which all the sashes are moved at one operation, which saves a great deal of vexatious labor. The material and the workmanship throughout are of the best description. It is an excellent growing house, and is much admired. The house is 23 feet long on the inside, and 13 feet wide, and cost, including the laundry, heating apparatus, and all the labor-saving appliances noted above, about $650: certainly not a large sum for a first-class house with so many conveniences. It was built for Mrs. W. H. Summers, of Mamaroneck, N. Y., a most excellent amateur in the proper sense of the word. She



PERSPECTIVE VIEW OF GREEN-HOUSE.—(Costing $650.)—Fig. 217.

has a choice collection of plants, which she grows well, and claims to receive a large share of pleasure and comfort in ministering to the wants of her charming pets in the winter, without exposing herself at any time to the inclemency of the weather. The world would be brighter and happier if this class of amateurs were greatly multiplied. It is a good field for the RURAL to labor in. Fig. 217, (see first page) is a photographic perspective view of the house, which will enable the reader to form an opinion of its general appearance and effect.

Being limited as to space, I can only add a few suggestive remarks. A house of this kind can be adapted to almost any style of dwelling. If a room should not be wanted below it, the house would be better built upon the natural soil, even if it had to be entered from the dwelling by descending steps. This would also materially lessen the expense. The cost could be increased by hipping the roof, which would add to the effect without injuring the house for its specific purpose. The cost could be lessened by using plainer moldings, and omitting some altogether. So, too, the cost could be much lessened by moving the ventilating sashes separately by hand; but I doubt the wisdom of such economy. In other ways the cost could be increased or lessened to meet the requirements of each case, which an expert would readily point out; and without the advice of an expert nobody should attempt to build a plant house.

Another style of house, detached from the dwelling, and adapted to the wants of amateurs of the sterner sex of moderate means, I propose to describe and illustrate on a future occasion; and perhaps something for men of means who employ gardeners, and do not need to count the cost of every penny spent on a structure which ornaments their grounds, enhances the value of their property, gratifies their pride, and in many instances, I should hope, their æsthetic tastes.

A SCIENTIFIC SUMMER-HOUSE.

"HA! ha! ha!" I hear some one say, "here's a fellow gone daft upon science; let's read him anyway." My summer-house has eight sides, an octagonal pyramid roof, seven seats, a doorway and a center table. It is of ample dimensions for seven friends, and is practically convenient as well as scientifically delicious—if anything can be delicious which one can neither eat nor drink. To prevent the wood-work from rotting in winter, I dispense entirely with hardy vines around it, which greatly injure all such structures. I employ, instead, the "wild cucumber," an annual plant native to Nebraska, with beautiful, serrated, palmate leaves, remarkably clean, totally free from all kinds of worms or insects, of extremely rapid growth, bearing in the latter part of Summer clusters of small white flowers, and later seed vessels as large as a walnut and of the same shape, having a number of curiously-shaped seeds, a little like watermelon seeds. By June the vine covers the whole house with its beautiful foliage which, overlapping, hangs down, very much resembling some styles of fancy-shaped slates on house roofs. Now, my friends, enter and be seated: I will take the seat on the north side—the doorway is on the south.

"I wonder what time of day it is?" some one asks. Well! you will notice that the sun is at the west of the door and shines upon the octagonal table, casting the shadow of one post directly across it, cutting the center at 45 degrees to a north-and-south line. It is therefore afternoon, and just about the middle of it. "Which way is the wind?" asks another. What perfume do you notice? "Why, that's plain enough, it's mignonette. Well, the mignonette bed is just southwest of the summer-house.

If you come here at nine in the morning the shadow of another post (there are just eight in all) would fall upon the table in an opposite direction, and if the wind was northwest we should be perfumed with roses, as the rose-bed is in that direction; heliotrope to the south; four-o'clock to the west; carnation to the north; cleome to the southeast; jassamine to the east, allyssum to the northeast.

"How remarkably cool and pleasant!" says another. Yes, quite so. You see our screen of broad leaves nearly shuts out the heat of the sun, and laying over each other shingle-like, but loosely, entices the air from the surface upward and directly into the interior where we sit, creating a constant draft, passing out through a ventilator in the center of the roof. In this arbor we are never troubled with insects, dead blossoms or horticultural rubbish of any kind. We sit and read, write or meditate as our fancy dictates; we never eat or drink here, hence no flies

Beds of gayly-colored flowers surround the house, which contrast finely with the dark green of the cucumber leaves. The scientific name of this vine is "Echinocystis lobata," that of the house itself, "Octagonalll enjoyyourselfsis"—the first of Greco-Latin origin, the second pure Nebraska vernacular. Now where's the man who laughed at me before he heard my story? S. RUFUS MASON.

Floricultural.

ORCHIDS.

BRIDGE OF ALLAN N. B., May 19, 1880.

I BEG to inclose you a list of the orchids in flower in my father's collection (Alexander Paterson, Fernfield, N. B., with short descriptions of the other interesting plants; also notice of the progress of the fine plant of the Anthurium Scherzerianum (Flamingo plant) copied with illustrations from the London Garden by you in your number for November, 21, 1874. In addition to this there is a notice of my father's plant of the white variety of the Flamingo plant—Anthurium Scherzerianum album Williamsii—purchased by him about five years ago from Mr. B. S. Williams, Paradise Nurseries, London, and said to be the finest variety of it. Yours faithfully,

W. D. PATERSON, L. R. C. P. and L. R. C. S., Edinburgh, Scotland.

Utricularia montana.

Platycerium grande (the Elk's Horn fern from Queensland)—the two barren fronds measure five and one-half feet across, and the fertile frond droops from the center, presenting a most grotesque and singular form. It is exceedingly rare for this fern to develop its fruiting frond in this country, and this plant is declared to be the finest in Europe.

Platycerium biforme (a form of the Elk's Horn from Borneo), an exceedingly rare and most interesting species.

Mantisia saltatoria—"the Opera Dancer"—a most curious and rare plant belonging to the order Zingiberaceæ (the Ginger order). The bracts, as is common in this order, are brilliantly colored, those of this plant being a delicate lilac from the sides of which spring the flowers, lilac and yellow, and shaped like the figure of a dancing girl. It is called Mantisia from its great likeness to the "Mantis," or Praying Fly of India.

The Flamingo plant, since its illustration in the RURAL NEW-YORKER, has increased to fully double the size it was then, and is now in great beauty, having nearly 100 fully-expanded flowers on it and more to come. A few years after this plant was in the collection, Mr. Thomson, gardener to His Grace the Duke of Buccleuch, at Dalcith Park, had a small piece of it in exchange for another variety. This plant is now at Drumlanrig Gardens, Dumfriesshire, another of His Grace's fine places, the gardener there being Mr. Thomson's brother. This plant is noticed in "The Garden" for this month, May 15, 1880, as follows: "Anthurium Scherzerianum—a splendid specimen of this at Drumlanrig has 60 blooms on it in various stages of development. Those fully open measure quite five inches long and three inches broad. It is the kind known as Dr. Paterson's variety."

Anthurium Scherzerianum album Williamsii (White Flamingo plant) was brought out by Mr. B. S. Williams, Paradise Nurseries, Upper Holloway, London, about five years ago when this plant was purchased, and is said by Mr. Williams to be one of the best plants he knows. It has exactly the habit of the red variety, the spath being a fine ivory-white, with canary-yellow-colored spadix. This and the red are said to be the two finest varieties in cultivation.

Horticultural.

KOHLRABI AS A SUBSTITUTE FOR CABBAGE.

SINCE the ravages of the Cabbage worm have become so severe I have been almost discouraged about trying to grow any cabbages for family use; but I have found in the kohlrabi what I consider a good substitute for it, and I will endeavor in this article to show readers of the RURAL how easily they can grow this desirable vegetable.

During the past two or three years, or since I have been raising the kohlrabi, I have recommended its culture to a great many people and I think I can safely say that one-half of those to whom I have recommended it, did not know what it was or how it grew. If any such read this article, I will say to them, by way of explanation, that it is a vegetable intermediate between the cabbage and turnip, the edible part being the bulb which grows just above the surface of the ground.

Right here I would say a word in regard to cooking it. In the first place it is necessary to be very careful and peel it thickly enough to remove all the woody fiber which sometimes grows to a considerable depth on the surface of the bulb. Then our favorite mode of cooking it is to slice it very thin and boil until tender, which will take anywhere from two to four hours, according to the time of the year and the growth of the bulbs; that which is quickly grown being more tender and requiring less time. The later in the season it is kept the longer boiling it requires; but, at any rate, it must be boiled until quite tender; for else it is not fit to eat. When tender, chop with a knife and season the same as sliced boiled cabbage, and I have never found any one who was fond of the latter who did not think the kohlrabi an excellent substitute for it. It is also very good boiled the same as turnips, having something of the flavor of both the cabbage and turnip.

As to its culture, this is a very simple matter, as it is grown in much the same way as turnips. For early use I commonly sow it in a seed-bed, and transplant to about eighteen inches apart; and for later use, sow it in drills in the garden, and thin the same as for Rutabagas. For winter use it may be sown as late as the latter part of June, or even from the first to the tenth of July, so it is not yet too late to try it for this year, if any one wishes to do so. E. J. B.

Arboricultural.

EVERY-DAY NOTES.

The Preservation of Freshly-planted Trees and Shrubs during Drought.

ORDINARILY, people exercise the greatest care and solicitude for freshly planted trees and shrubs that have not enjoyed the benefit of rain within a space of less than a week after transplanting, especially if the season be late and the sun hot. The effort put forth is often even great in proportion to the really considerable value of the end desired. It is true that a large quantity of water administered during the cool of the day is highly beneficial to the plant, provided the quantity be sufficient to penetrate to the very tips, or lips, as it were, of the smaller roots. To supply such quantities of water in ordinary practice is almost impossible. The labor required would be arduous in the extreme. This may be readily understood when we consider the fact that really copious waterings seldom penetrate more than a couple of inches. The simplest and shortest methods of preserving the freshly planted shrub or tree employed by horticulture as developed at the present time, consists of a combined system of puddling and mulching. By puddling is meant a thorough encasing of the roots with thick mud by immersing them in an artificial puddle made close-by the spot where the tree or shrub is to be set out. If still farther precautions are desired, and the tree or shrub is of considerable size, water may be poured about the plant in the partially filled hole. Dry earth must be immediately thrown in, and the surface kept stirred from time to time in order to open the pores for the reception of dew and rain. It is important to avoid as much as possible any baking of the ground adjoining the tree. The value of mulching is in such cases great. By applying a covering of short hay, straw, tanbark or dry leaves immediately around the tree, not only is the ground retained in a mellow condition, but a large portion of the moisture is prevented from evaporating. If it be considered desirable to give more water at any time, the mulch can be removed and then replaced when the watering is finished. Whatever water one may choose to give the plant in this way afterwards, will, of course, help, but without puddling and mulching the application of any reasonable amount of water to a bush or tree will be like a drop in the bucket.

Disbudding Rhododendrons.

The value of the principle of obtaining quality at the sacrifice of quantity is well understood as an abstract statement. And, in many cases, even in horticulture, the value of its application is more or less comprehended The present popular methods of cultivating strawberries and grapes, are notable instances of this comprehension, but hardly any one thinks of employing like methods of improving the blooms of hardy, flowering shrubs. Take, for instance, the rhododendron. Every one wants a plant loaded with buds, that is, flowers. One of the greatest charms of the rhododendron in the eyes of most people, is the very fact that the flowers may be enjoyed at once after planting. It is hard, indeed, therefore to persuade people to select rhododendrons without buds, by telling them that the plant will grow much better the first season if it does not have the additional strain of flowering. They feel the sacrifice too great to warrant their waiting a whole year for flowers which might be enjoyed at once, notwithstanding their belief in your assertion, that if it has flowers now, the plant will scarcely bear any the following year. But there is for the truly wise lawn-planter a still more intelligent management of such plants, whereby the blooms will not only be reserved for the second year, but will even then be half taken off by thumb and finger in their partly developed state as buds. By this plan the flowers may be distributed equally and effectively among the green leaves, may be greatly developed in size, and, above all, insured in moderate abundance for another year, whereas ordinarily there would be, the following year, few or no flowers whatever. Thus, by sacrificing quantity of flowers to quality, we gain in every way, gain even where at first we seem to lose; for the larger size and superior beauty of these rhododendron flowers scattered among the rich evergreen leaves are very evident when compared with the mass of solid bloom on the same plant as usually grown. We may, moreover, give the widest scope to this principle of quality *versus* quantity, as just illustrated by the rhododendron, for everywhere, alike in fruit, flower, and foliage, the practice of a strict economy and concentration of choice qualities will develop increasingly valuable results. S. PARSONS, JR.

Field Crops.

DOES BUCKWHEAT DETERIORATE THE SOIL?

THERE has been considerable discussion among farmers in this locality recently on the above question, some maintaining that buckwheat is one of the most injurious crops which can be put on a piece of land, while others claim it to be one of the least exhaustive. I remember in conversation with an uncle of mine, some years since, on this subject, he referred to the fact that it was generally conceded to be the best crop to mellow and subdue a tough piece of land, and he made the remark that in his opinion it subdued it on the same principle on which a pugilist subdued his opponent—by knocking him down, and then beating him until he was conquered; or, in other words, by taking the virtue all out of the soil.

But my own observation and experience do not go to prove this theory correct, and I am inclined to the belief that, at least, it is not more exhaustive to the soil than most other crops. I will give the result of one experiment I have made in growing successive crops of buckwheat on the same piece of land.

In the spring of 1876, I broke up a piece of sod, something over an acre in all, and without any manure sowed it to buckwheat, and harvested from it 20 bushels of grain. The next year from the same field and without any fertilizer, I harvested 28 bushels. The following year, with the same treatment, the same field gave a yield of 32 bushels, and last year I estimated the yield to be about the same as the

year before; but did not measure it separately from the product of another field. I seeded the field down last year, and at this time it promises fair for a good yield of grass.

Judging from this test, and from what I have observed for several years, I am not prepared to accept the theory that this is a very unprofitable crop to raise, on account of being injurious to land. FARMER.

Entomological.

DAMAGES OF THE CLOVER-ROOT BORER AND OF THE CLOVER-SEED MIDGE.

PROFESSOR I. P. ROBERTS.

THE recent surprising and unaccountable failures of clover either to produce hay or seed, have been explained by the presence of two very dangerous insects. On the University Farm we have been obliged to plow up all our clover ground—some eighteen acres—because of its unproductiveness occasioned by the borer. When the injuries which the clover had suffered first became apparent this spring, it was generally supposed that it had been winter-killed; but upon a careful examination of the plant, it appears that the borer injures the crown of the plant which will often still retain life enough in the roots to make a slight start in the Spring, but will then wither down to the ground. The habits of the borer have been ascertained by Prof. Riley to be about as follows:—

During the Summer the insect has been found in all stages, as larva, pupa and adult, and it hibernates in any of these stages, though the adults are generally most numerous at the time of frost In the early Spring months the insects issue from the ground and pair. The female then bores into the crown of the clover plant and there deposits several eggs which hatch out in about one week. At first the young feed in the cavity where they were hatched, but soon burrow down into the roots where they change from the larva to the pupa state.

On the farm the clover of last year's seeding has not been so badly injured as that of older growth, and the experience of the farmers of this county will lead them to plow up all clover after the first year. So far, this would seem to be the only alternative to escape the ravages of the insect. We have discovered the pest at work not only upon the common clover but also upon Lucerne—Medicago sativa—and Black Medick—Medicago lupulina. The injury caused by the Clover-seed midge is of quite another character from that of the borer, and is especially evident at the present time. The clover in both the first and second crop fails to blossom, although the clover-heads are hard, as though full of seed, and have an appearance as though about to blossom. When the separate flowers are opened, they are found to contain the yellow larvæ of the midge. The midge seems to stunt the growth of the plant, thus materially injuring it for hay, which lacks the fine aroma it should possess.

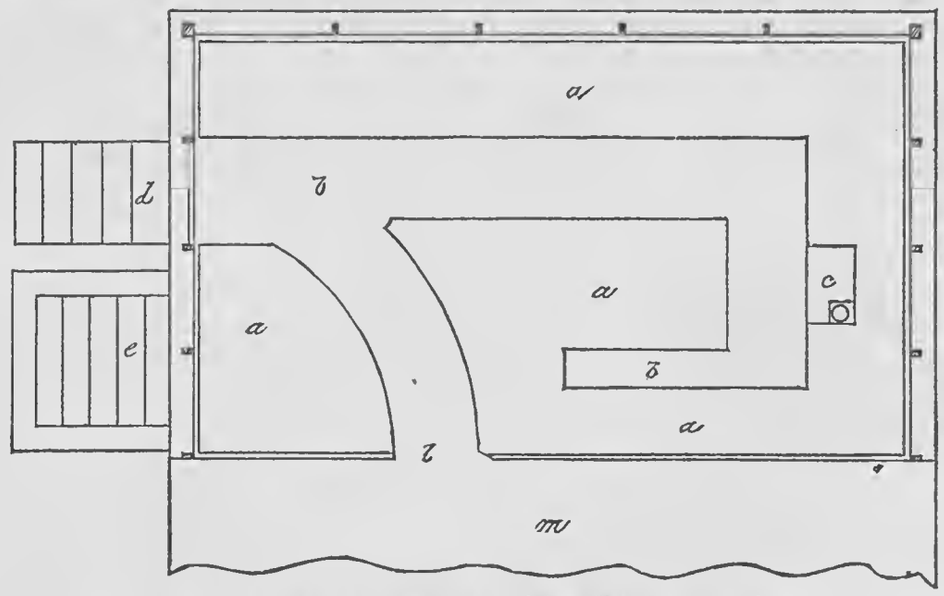
As they also attack the second crop of clover it would appear that they are two-brooded. The insect affects clover just as the Wheat-midge or weevil affects wheat, and the former bids fair to become quite as dangerous as the latter. The habits of the insect are quite similar to those of the Wheat-midge, as ascertained by Prof. Riley. The larvæ, when grown, fall from the clover-heads and hide in the leaves and loose soil where they form a small cocoon in which they assume the pupa state. The flies begin to issue in September and later, and during the following Spring. In this locality no clover seed has been grown for the last three or four years. As yet, there has been no remedy discovered, and it is only to be hoped that their natural enemies will multiply faster than they.

Cornell University.

THE ARMY-WORM AND THE ENTOMOLOGICAL BUREAU.

ON June 13th, Prof. J. Henry Comstock, the Entomologist of the Department of Agriculture addressed a letter to Commissioner Le Duc, in which he gives the result of his investigation of the irruptions of the Army-worm into Kent Co., Del. He states that in every instance the pest appeared first in wheat, but the greatest injury was done to the corn, which, being young and tender, was eaten to the ground wherever it was encountered. He gives a condensed account of the natural history of the worm, which is substantially the same as that briefly outlined in the RURAL of June 12th. The best means of preventing a recurrence of the pest in cultivated fields, he thinks, would be to inspect any low-lying lands in the neighborhood, and if any Army-worms are there discovered to destroy them either by burning over the land, if possible, or by poisoning with arsenic, Paris-green, or London-purple, or by any other means of which the local condition will admit. It would be well to burn over all the low-lands in the vicinity each winter, thus destroying the hibernating insects; for he agrees with Dr. Asa Fitch that such locations are their usual lurking-places.

When they have begun their ravages, the best method of destroying them, he thinks, is by crushing with rollers or by poisoning with arsenic, Paris-green, or London-purple.



PLAN OF GREEN HOUSE.—FIG. 218.—(See first page.)

Either of these substances can be applied rapidly by mixing with water and using a fountain pump or garden syringe. The second line of defense is by means of ditches and pits dug around the infested field or that to be protected. The ditches can be made quite rapidly. First plow a furrow with the "land side" next to the field to be protected, and then with a spade make this side of the furrow vertical, or if the soil be compact enough to admit of it, overhanging. When the ditch is completed, holes should be dug in it from one foot to eighteen inches deep, and from twenty to thirty feet apart. The sides of these holes should also be vertical, or, if possible, overhanging. The worms, unable to climb up the vertical side of the ditch, will crawl along the bottom of it and fall into the holes, where they will soon perish. Where the soil is sandy, so that the ditch cannot be made with a vertical side, it should be dug deeper than in other cases, and the side made as nearly perpendicular as possible, so that when the worms attempt to crawl up, the sand will crumble beneath them and cause them to fall back again.

The Apiarian.

TO WHAT EXTENT SHALL WE INCREASE OUR BEES.

A QUESTION of the greatest importance to most bee-keepers is, how can we secure the largest amount of surplus honey, in the best marketable condition? Can it be best done by a continued increase in colonies, or is there a limit at which the increase becomes unproductive and unprofitable? I believe all authorities admit the possibility of any given district becoming overstocked. When this limit is reached, either from an insufficiency of pasturage or from an indisposition of the bee-keeper to increase his stock from any cause whatever, what is the best system of management to secure the greatest amount of honey, with the least cost? Is there any management reduced to a system, by which we can control and prevent further increase of colonies, and make the whole increase of bees continue to store surplus honey, instead of swarming?

These are questions of much greater importance to most bee-keepers than the one so often discussed as to the best method of increasing the number of colonies; for since the introduction of movable frame hives and the new system of managing bees incident thereto, together with the great fertility of Italian queens, the increase of an apiary to almost any desired extent, in a comparatively short time, is rendered an easy matter. With anything like skillful management, the number of colonies may easily be doubled annually, and may even be tripled or quadrupled. As the increase is in geometrical progression, the number in a few years would become enormous, and overrun all bounds. Say that we already have fifty colonies, and take the lowest ratio, in three years more there would be four hundred; and in three more sixteen hundred; which to most bee-keepers would be an alarming increase. It is true I have made no allowance for mishaps in wintering or otherwise; but I have taken the lowest ratio, and it is well known that the Italian bees, in anything like a favorable season or district, will send out two or three natural swarms, and the first swarm sometimes send out others. Our territory thus becomes overstocked, and instead of our bees gathering large quantities of surplus honey, our pasturage affords only enough to take our strongest colonies through the winter, leaving the weaker ones to be doubled up, or to perish.

To say nothing of overstocking the territory, there are but comparatively few bee-keepers who make apiculture their only business, to the exclusion of all others. Most of them are farmers or mechanics, who cannot devote their whole time to their bees, or even so much of it as is necessary to attend to forty or fifty colonies, especially at swarming time, which usually occurs at a very busy season of the year. And suppose they succeed in saving all the swarms, after having gone to the expense of procuring hives for them, what are they going to do with them? They already have as many as they can conveniently give the necessary time to for profitable management. There are but few places where the annual increase of an apiary can be sold. There are places, if you required an empty hive to be furnished, where you could scarcely give the swarms away. In consequence, some bee-keepers are compelled to resort to the brimstone pit, to keep the number of their colonies within bounds.

I know some intelligent bee-keepers who practice this, and contend that, under the circumstances, it is the most profitable way they can be disposed of. A few persons can make a large number of colonies profitable, when they are raising Italian queens for sale, and have a demand for them. But there is not one in a thousand of the host of bee-keepers who wish to keep more than from 10 to 50 colonies, to supply their families with the delicious sweet, and furnish some surplus for sale, to assist in paying for the family groceries, and for the purpose of affording recreation for their leisure hours. In order to do this satisfactorily, we want a system of management by which swarming can be controlled and prevented, and the increase of numbers be made to store surplus honey in the most suitable condition for market, instead of storing it in an additional number of hives for the support and wintering of an increased number of colonies. I will hazard a few suggestions in regard to this system:—

First, keep no more bees than your field will support. If you have as many colonies of bees as can be sustained during the working season, and secure sufficient stores for winter, little surplus need be expected. In such case the result would naturally be that a few strong colonies would give some surplus; the medium ones might just squeeze through the winter; and the weak ones starve to death. Under such circumstances, one half the number of colonies would give double the surplus that the whole would do. Second, procure hives, and if possible chaff hives, with surplus room for 150 pounds of honey, or thereabouts. Place in such hives the working force of your common colonies. You may thus secure double or triple the working force in each colony, and secure from the one colony 150 pounds or more of surplus honey. This may be done if your bees swarm, by placing two or three swarms in the new hive. An old maxim among bee-keepers is: "Large hives for surplus; small hives for increase." "LIGURIAN."

Farm Topics.

THE OUTSIDE AND THE INSIDE.

THE MISTLETOE'S description in the RURAL of June 5, and the wood-cut on the same page, give a tolerably correct idea of the *outside*, as concerns the Mistletoe, but one quite insufficient as respects the *inside*. Beside being a very odd, if not a strikingly beautiful plant, there are a charm and attractiveness about it to Northern eyes which look upon it for the first time, which it is impossible to describe. As the writer saw it for the first time last year in a journey down south to the Gulf, it was observed in higher latitudes as often on the Honey locust as upon any other tree, though, farther south, it infested nearly all trees, except, as Mr. Ravenel says, the pines. Familiar with the foreign estimates of the Mistletoe as a strongly nitrogenous fodder plant, the writer offered a branch of it to a mule that seized and eat it with as much relish as it would a stalk of green corn, and Col. Stuart, the owner of a large Merino sheep ranche, near Ocean Springs, Miss., who was standing by, said his sheep would follow the wood-cutters and greedily snatch it from the limbs of new-fallen trees. Besides, it is seldom to be met with on any trees below the easy reach of stock or man—and the only branch seen in a ride of many miles, within ten feet of the ground, was on a Honey locust where thorns protected it from stock. Of its value as a fodder plant, M. Isidore Pierre, a distinguished agricultural chemist, says: "I have often heard tell in Normandy that cows are exceedingly fond of the Mistletoe, and that one could readily call them up from considerable distances by showing them a bunch of it. Besides, skillful and experienced dairymen have informed me that the plant improved the quality of milk, by strengthening the animal, and thus they always reserved a certain quantity particularly for such cows as were about to have calves." Acting on this information, M. Pierre made a careful analysis of the plant and found it to contain, in a green state, 93 per cent. of nitrogen, and in a dry state, 25 per cent. And he also found that the branches and leaves contained nearly the same amount of nitrogen, and he drew the conclusion that, whether in a green or dry state, the Mistletoe contains more of this valuable principle than any other fodder plant he knew. In conclusion, he says: "I could name several proprietors in Normandy who annually gather something over 1,200 pounds of Mistletoe from the apple orchards, to the great advantage of the trees and to the equal satisfaction of their milch cows."

These facts may be of value to our Southern friends where there is a great scarcity of fodder, and especially suitable fodder for milch cows at certain seasons of the year, and at the same time lead them to reverse their estimate of the Mistletoe as a robber and a thief having no redeeming trait of character and no saving side.

PIGEON AND POULTRY MANURE.—There is considerable difference of opinion as to the best and most profitable use that can be made of these fertilizers. And as in a multitude of counsellors there is wisdom, and from the whole testimony in the case the truth is to be

made ont, the writer hegs to offer his experienee in this matter. Having previously made experiments on Indian corn, Sweet and Irish potatoes, tomatoes and a variety of other garden vegetables, and getting what was thought to be insufficient results from the amount of fertilizer expe' ded. last year about this time he made a trial of the valne of this sort of fertilizer upon a small piece of rich, old pasture land. The six months' accumulation of the dung of 100 pigeons and that of half as many fowls was spread upon an eighth or tenth of an aere after the grass had been eaten quite close, and no other attention was paid to the experiment further than to suffer the stock to eat off the remaining grass produet of the year, whieh did not seem to have increased. But quite early this spring the Blue-grass sod took an unusually deep color and started before any other part of the field, and a full bite of herbage had started before half a bite could be found on any other spot. As the season advanced, the grass was seen to thicken up at the bottom, and by the first of May a part of the effects of the application of the fertilizer was to he seen rather in the density of the color of the grass and the thickness at the bottom than its rank growth. But the value of the application remains to be told in the statement that stock seek this fertilized patch in preference to any other lot in the pasture and would, if suffered to do so, eat off the grass and leave it as short as upon a shaven lawn, at the same time, while the gates are open to other fields, neglecting good grass standing up to their knees. Evidently in the case of the land of these pastures, which were originally prairie land of the best class and the deepest soil, the fowl and pigeon dung acts as the best of all known foods and fertilizers for the Blue Grass and white clover of which the sod is composed, and it is plain, too, there is that in it which produces a very strong and thick growth of herbage—and that herbage is of the sweetest and most nutritious character. The writer has satisfied himself that the best of all uses for the kinds of fertilizers under notice, is to broadcast them as often as the dovecotes and fowl houses are cleaned out, on meadows and pasture lands, and though the experimenter may have to wait a year before he gets a return for the expenditure, it is sure to be a satisfactory one in the end.

Barbed Wire Fences.—The Rural says "we should be glad to hear from our readers who have tried them, how well, or ill, they are pleased." Quite as much to learn personally the cost of a first-class barbed wire fence, and its value for turning stock, as for any other purpose, the writer, in the summer of 1879, built 40 rods of it, in front of some lots in a town of some importance in central Illinois. The style adopted was copied from that in use on the Illinois Central Railroad, and consisted of five wires, three barbed and two plain, stretched between white-cedar posts 16½ feet apart. Beginning at the surface the wires were respectively 6, 8 8, 10 and 12 inches apart, making the total hight of the fence four inches less than four feet. These are not the distances adopted by the Ill. Cen. R. R., but they are better for the town than the country. On trial of the fence, it was found necessary to substitute barbed for plain wire on the second and fourth strand, to prevent cattle from reaching their heads through the upper space, and small boys crawling through the lower. For a year the fence has answered its purpose admirably, and though cows, horses and other stock have grazed in the streets alongside of it, none have broken through, though two or three have been caught, but not seriously hurt or long held, nor has the wire been broken, though subjected to a great stretch and strain. The cost of the fence was about one dollar per rod, divided as follows; posts (very good ones) 25 cents each; three strands of best galvanized, double strand and barbed steel wire, 45 cents; ten strands common iron wire, 16 cents; braces, staples, labor, etc., 14 cents; total $1.00. Buying materials in large quantities and contracting on an extensive scale, the railroad makes a better fence for 85 cents a rod; and large farmers, building two, three, or four miles, or more, might reduce the cost to nearly the same figures. But experience has already taught one farmer that five wires are not at all necessary, nor four, nor three either, and the thing has been simplified to the extent of stretching two wires, 16 to 18 inches apart, on oak posts standing two rods each from the other, and making that a sufficient fence against all stock and swine. Nor has it been found best to stretch the wires at all taut, the common way of building now being to roll the wire into the wagon, and reel it off and fasten as the team moves along.

Making its first trial of barbed wire some five or six years ago, the Ill. Cen. R. R., has adopted it definitely, and as fast as the old wooden fence gives way it will be replaced by barbed wire, so that in course of the next ten years it will own three or four thousand miles. Most of the other railroads are fencing their lines in the same way, and the time is not far off (at least so it appears) when little other fence (live hedges excepted) will be seen in the prairie and timber-cleared portions of the West.

"In respect to the objection that the fence is a barbarous invention and inflicts unnecessary injury on stock accidentally or willfully attempting to break through, the answer is that stock very quickly get educated up to the point of knowing what it is and avoiding it, and the other answer is that if one has neighbors who indulge in the breeding of breachy stock, or lives among a people against whom one has to protect himself by carrying arms, the right of either is not recognized to dictate what a sufficient fence shall be, or whether the arms of defence shall be a pistol, shot-gun or a club. It is an outrage that in a civilized country a man must defend his lands and crops against his neighbors' unruly cattle; and thanks to the common sense of our earlier and later law-makers, the common and the statute law is against it, though in neither has it been often enforced. The chief arguments in favor of barbed wire fencing are these:

1. It is strong and cheap.
2. It will neither blow down nor burn up.
3. It will last a long time.
4. It is not possible (except by live hedges, which are very costly to make and maintain) to defend our farms in the old way because there is neither material nor space enough to do it.

SHORT-HORN HEIFER, FUCHSIA.—FIG. 221.

The Herdsman.

AN EARLY IMPORTATION OF DUTCH CATTLE.

T. H. HOSKINS, M. D.

That the Dutch breed of cows (for a time erroneously known in this country as the Holsteins, and more lately designated as Dutch-Frisians) are attracting more and more attention as dairy cattle is quite apparent. The herds are increasing in numbers and in size, and those who handle them seem more than satisfied with their quality for the purpose to which they have been bred. They give immense messes of fairly good milk, and though the humorous Harris Lewis charges them with adulterating their milk with water, this will, no doubt, be regarded as a merit by purchasers of market milk, as the natural adulteration leaves less excuse for the artificial; and if the views of Dr. Sturtevant and Col. Curtis regarding the pernicious nature of Jersey milk as an article of diet, are to be generally accepted, we shall be obliged to look upon the Dutch cows as supplying a great need.

Many suppose that this breed of cattle is of very recent introduction, but they have been well known in the State of Vermont since early in the present century. The Hon. William Jarvis, of Wethersfield, Vt., famous for his connection with the introduction of the Spanish Merino sheep into America, also imported from Holland a bull and five cows, which were kept upon his farm and bred pure, both during his life-time and since. Several herds of this strain are now in existence and are highly valued as dairy beasts, not only for market milk and cheese, but for butter also. I have been quite familiar with one of these herds for the last 14 years, they having been kept in this county. During the long time they have been in New England, they have undergone some modifications, being not now so bulky as recent importations, more quick in their motions and better adapted to upland pastures for that reason. They have lost little in their aptitude for milk secretion, while the quality of the milk for butter making has improved. Mr. C. W. Bellows, of Pepperell, Mass., who possessed a herd purchased directly from the Jarvis farm, wrote of them in 1868 as follows: "They are large enough for all practical purposes, and produce more milk and that of a better quality for butter than any other breed I have kept. The cows weigh from 1 000 to 1 250 pounds, live weight, are very quiet and gentle and hold out through the season, giving a good flow of milk for 10 or 11 months, with proper food. The butter is colored as highly as that produced by the Jerseys, and I think it is finer flavored. The bulls are also quiet and gentle, so much so that I never had to put a ring in the nose to handle them at any age."

The herd of Dutch cattle with which I am most familiar was derived from the Bellows' herd, and first owned by Carlos Pierce, of Stanstead, Quebec, only an hour's ride from my home. It was afterwards purchased by Thomas Baker, of Barton, Vt., whose splendid farm of 600 acres lies but half an hour's ride by rail south. In Mr. Baker's hands for 12 years it averaged from 25 to 50 head of thoroughbreds, kept entirely for butter, which always sold at an extra price in the Boston market. I have seen this herd frequently, and the butter also. It was as good butter as I ever saw or tasted. The herd was remarkably uniform in its yield, a poor cow being rare among them. I have no memorandum of the yield, but it was large. Mr. Baker has recently sold his place and removed to Dakota, and the farm and stock are now owned by a party with whom I have no acquaintance.

For some reason, chiefly, I think, because the owners have not been pushing men, the Dutch cattle of the Jarvis strain have never attained much popularity. Mr. Baker never seemed anxious to sell any of his, but occasionally other farmers had some of them, and they were uniformly liked for milk, for butter, for cheese, for working cattle and for beef. The Jerseys have now got such a hold upon the affections of our butter dairymen that they will rarely hear of any other breed, and it is a mere chance whether the Baker herd will long be kept up. The later importations, being larger and, perhaps, deeper milkers (though the milk is probably proportionally poorer), will doubtless have the preference with the fancy farmers. But the Dutch stock has stood the test of upwards of 60 years' practical use for dairy purposes in Vermont, and stood it well. This is a fact worth noting.

Our Animal Portraits.—The accompanying portrait, reproduced from the Agricultural Gazette (Eng.), represents Mr. Bliss's Short-horn heifer, Fuchsia, winner, the other day, of the first prize in her class at the Oxfordshire Agricultural Show, England. Although only 19 months old she weighed 1,473 lbs., live weight, and is remarkable, too, for her fine bone and powerful muscular arms and thighs. As well shown in the engraving, she is an extremely beautiful animal with an elegant head, set off by handsome, waxy horns; splendid back, ribs and hind-quarters. She is a soft, silvery roan in color, and thoroughly feminine in character. In her is combined the best blood of the Bates' Duchess tribe with that of the Knightley Princesses, her sire being Grand Duke of Geneva 2d, and her dam Princess Royal, by Grand Duke of Lightbourne, the same strains being also combined twice more in her pedigree.

STOCK NOTES.

A fine Stock Farm.—One of the finest stock farms in this section is that of Mr. Thomas Barbour, situated on the Passaic River, near Paterson, N. J., consisting of woods, and springs, and fine pasture lands of over 100 acres, fronting on Dundee Lake, Passaic River, within five minutes of Dundee Lake Station. The country is picturesque and beautiful, with a fine view of the Orange Mountain range, the first to strike the eye of the mariner on reaching the Narrows. The improvements are of the very best character. A fine mansion of ample proportions and elegant exterior is beautifully situated on the crest of a hill, commanding an extended view of the surrounding country, with wide, close-shaven lawns adorned with shrubs, plants, and flowers. Mr. Barbour is a prominent member of the American Jersey Cattle Club and at the late great sale of choice cattle of that breed under the management of Peter C. Kellogg, he made some excellent additions to his herd. As shown in our account of the sale in the Rural for June 5, his purchases amounted in the aggregate to $3 600. The most notable animals among them were Empressa II two years old, one of the Prize-Medal Herd at the N. Y. State Fair, 1879, for which, together with her one-day-old calf, he paid $835 and refused an offer of $1000 just after the sale. For Maple Blossom, a heifer in milk, 27 months old, with her two-days-old calf he paid $580. Her sire, Niobe Duke, 2364, was winner of the first prize at the N. Y. State Fair, 1878. Godiva II, and Timid, both heifers 18 months old and both by Niobe Duke, cost him $325 and $200 respectively; while for Bibi, heifer, 20 months old, he paid $225, and $310 for Sunlight, cow 4½ years old, and $250 for Lady Adelaide of the same age.

The Stallion Morgan Black Hawk.—We see it stated that this horse is still living at Milton, Delaware, 37 years old and a number of his colts near by are over 25 years old. We should like to know as to the truth of this, if any of our readers can inform us. It is not often that a stallion reaches this age, and when he does it is worthy of record.

Twin Colts.—Four thorough-bred mares in the stud of Lord Falmouth, of England, have thrown twins, which is very extraordinary, for it is rare for a mare to do this, although it is frequent with cows.

Dairy Husbandry.

THE DAIRY COW.—No. 1.

HENRY STEWART.

The Value of a Cow.

The cow is our most valuable domestic animal. In its life it supplies us with food, from infancy to old age, and after it has spent a useful life every portion of its carcass is of value for some indispensable purpose. Its flesh, blood, hide, hair, horns, hoofs, entrails, all to the last fragment, are turned to some good use. A cow is generally considered as a business animal, either for raising grazing beeves or for dairy purposes. But it is equally serviceable for the domestic use of a family; and a family that can keep a cow is assured of a considerable portion, and that the most desirable, of its food supplies.

The chief object of this series of articles is to show that the family cow is a most valuable family possession, and to induce the thousands of persons who can keep a cow if they will, to do so, by showing to them the advantage and profit that may be gained by it, as well as to remove the common, but erroneous, idea which prevails, that it is altogether too troublesome and disagreeable a business, by telling in a plain and concise manner how a cow may be procured or raised, fed, cared for and made the most of. As the greater includes the less, so all this information will apply not only to the one cow dairy, but to a small dairy of two or three cows, as well as to larger dairies; for if one can keep a single cow in the best manner, it is reasonable to suppose that we may keep a score or a hundred; and what is good for one is good for many more than one. It is, therefore, hoped that among the interested readers of these articles there may be a large number of dairymen, who may, perhaps, permit the remark that there are some of their number who have got something to learn on this subject as well as those who have never yet kept a cow.

The Value of Milk as Food.

Some time ago it occurred to a person who was engaged in milk dairying that a lady customer suddenly increased her order from two quarts to six, and sometimes seven quarts a day, this milk being supplied *ad libitum* to her children both for food and drink. As the milk cost seven cents a quart, the dairyman suggested that his customer would find it better to keep a cow, and offered to advise her how to care for it if she did. The idea was seized upon; the lady procured a family cow and the dairyman lost his best customer. If the ease of keeping a cow and the value of milk as food were generally known, many other mothers would do likewise, and would do well in doing it, for there is no other kind of food that is so healthful, agreeable and nutritious for infants, children or grown persons as this; and

there is no other that is capable of being prepared in so many and such varied ways. Milk consists of the following substances. Other food articles are given as a basis for comparison:

	New milk.	Skimmed milk.	Cheese.	Lean beef.	Bread.	Oatmeal.	Potato.
Per cent. of nitrogen or flesh-forming matter..	4.1	4.1	28.4	19.3	8.1	12 6	2.1
Fat	3.9	0.7	31.1	3.6	1.6	5.6	0.2
Other fat-forming substances	....	....	....	....	51.4	63.8	18.8
Sugar	5.2	6.1	....	....	....	....	3.2
Mineral matter	0.8	0 8	4.5	5.1	2.3	3.0	0.7
Water	86.0	88.0	36.0	72.0	37.0	15.0	75.0
Market price per pound.	3c.	1c.	15c.	20c.	4c.	3c.	1c.

Milk contains every element required for the growth of the human body in the precise proportions needed for perfect digestion and assimilation, and consequently perfect health.

But it is not in respect to its nutritive qualitie alone and its sole use as a single article of food that it is worthy of regard; its cheapness as compared with other staple articles of food, and the relative cheapness of some of those staple food substances which are most agreeably used with milk, are subjects which may well be studied over in considering the figures given above. For instance one and a-half pound of oatmeal is more than equal to one pound of lean beef, and costs but about one-fifth as much money. If two pounds of milk are added to the oatmeal, the cost is increased to 10½ cents, but considering the value of the fat, these are really worth two pounds of lean beef (free from bone and waste) and cost but a fourth as much. The usual daily ration necessary to keep a hard-working man in steady condition is two pounds of bread and one pound of lean beef, costing 28 cents. But one pound and three-fourths of oatmeal and two pounds of milk daily have been found ample to keep a laboring man, weighing 150 pounds, in steady condition at hard field work, the cost being 11½ cents.

In feeding the family of an average workingman, the cost of the food is most often a question of deep consideration. In the majority of American families the expenditure is scanned and counted with some interest; and where the income is but narrow, and there are children to be fed and brought up so that they may become strong and healthful, the supply of milk is something of more than common importance. The cost of this is, of course, to be considered, but the quality is of still greater moment. To have pure milk not only free from adulteration, but healthful and free from disease-communicating germs derived from diseased cows is of paramount consideration. What one buys no one knows with certainty; but the milk of one's own well-cared for cow is above suspicion; its purity and goodness are unquestioned. These qualities are far above price, even as a matter of economy in a poor family; how much more then in those where every comfort and luxury are at command; so that every family should keep a cow; some because they cannot afford to do without it, and others because of the comforts and luxuries of it.

The Money Value of a Cow.

A good cow, such as a careful person would select, will yield from 12 to 16 quarts of milk daily when fresh, to three or four at the end of 10 months, when about to go dry in preparation for calving again. This will amount to an average of eight to ten quarts a day for 300 days, or 2 500 quarts, at least, in a year. Each quart is worth to a family six cents at the least; that is, the ordinary milk supplied by dealers or farmers, costs at least that price; but this is not equal in value to the milk from a good well-kept family cow. If the owner of such a cow has a surplus of milk, it can be very readily sold for six cents a quart to neighbors who will be glad to have such a chance, so that the income in money from a family cow may be estimated at $150 a year. If butter is made, the 2,500 quarts of milk should yield 250 pounds of butter which is worth 30 cents a pound, or $75, and the skimmed milk, which we see from the above table is deficient only in fat, and is actually better on that account in many cases, especially as a beverage for delicate persons, is worth two cents a quart, or nearly $50; in all $125. It will serve a sufficiently good purpose, however, to take $100, as the gross yearly income from a good cow and as a basis for computing the actual value of the animal where milk can be sold for five or six cents a quart. Elsewhere the relative value will bear an even ratio with the cost, because where milk is worth less, the cost of keeping is less. The object is to show that there is a profit in keeping a cow, and having gained a basis for reaching the income, the next point to consider is the cost of keeping her and the exact profit realized in money, leaving other advantages to speak for themselves. But it ought not to be forgotten that there are cows that will not produce half the above-mentioned quantity of milk, and that will not milk for 10 months out of 12. But there are cows that will do this, and enough of them; and it is the business of those who want such cows to look for them and not be content to take a poor one at a less price; because a poor cow will eat as much as a good cow and will cost as much for lodging and care; so that the profit of keeping a cow will depend altogether upon her character. Nevertheless, there are hundreds of dairymen, who should know better, who keep cows that do not pay for their feed, and, strangely enough, they continue to keep them while knowing this.

Industrial Topics.

HOW AGRICULTURAL MACHINERY IS SOLD.

In buying his agricultural implements and machinery does the average farmer pay due attention to the standing of the various manufacturers of the goods he may want to purchase, and to the reputation these wares have won throughout the country? A pretty wide acquaintance with the agricultural classes in this and other sections compels me to believe that he does not. Years ago, the manufacturers of such goods sold them directly to the consumer, either for cash or on short time, the date of payment seldom exceeding four months from the time of purchase. Then the reputation of the maker and of his wares was the first consideration with the purchaser. To-day the most glibly persuasive agent, and the one who can give the longest time, is the man who makes the largest number of sales, often irrespective of the character of the goods he offers. In this case, the farmer in addition to paying sometimes an excessive price for the article he purchases, has also to pay the following charges:—First, for the agent's time and commission, second, interest on the price of the article during the time given for payment, third, a premium for risks of bad debts; fourth the cost of collection.

By buying for cash, of course, the three last of the above items can be avoided; but often even a more serious loss would be escaped if the intending purchaser would take time to investigate personally the merits of the implement or machine he may stand in need of, instead of being guided in his selection by plausible travelling agents, many of whom, having no local reputation to lose, care only to sell the goods they handle. Not a few of the machines sold by some of these glib-tongued gentry are of such a nature that, however well they may work under the direction of the salesman, and however fine a show they may make for the time, they will not stand the wear and tear of a single season. Moreover, it happens not seldom that when the easily-persuaded buyer wants the "extras" which he will be compelled to buy or give up the machine, he discovers that they cannot be had without incurring the delay and expense of sending for them to a distance, as there is in the neighborhood no regular dealer who keeps them.

Complaints on these and other accounts are loud from time to time throughout the country, but still the business of the loquacious agent of inferior goods flourishes, and his success compels the better class of manufacturers, in self-defense, to send out their agents too all over the country, in order to enable them to hold their trade. Of course, the consumer has, in the end, to pay for these also. The only way I know of by which the farmer can avoid the burthen of these unnecessary charges, is to pay attention to the advertising columns and notices of any good agricultural paper, which accepts advertisements only from the makers of first-class tools and machines, and go directly to the manufacturer or some trustworthy local agent for the goods he there finds recommended, paying cash whenever possible, and obtaining a guarantee that the article bought will do all that is claimed for it. In such a way he will get a prime article at a considerably lower price than he would have to pay for an inferior one purchased in the usual manner. Owing to the present mode of doing business, the various expenses of selling some agricultural machines and collecting their price, are actually, in the aggregate, higher than the original cost of manufacturing them.

The faults of this system can hardly be laid at the doors of the first-rate manufacturers, for these would prefer to dispense with traveling agents, so that there would only remain the manufacturer to build, the general dealer to sell and the consumer to buy, leaving the commission man and the collector out in the cold. The other day I asked one of the largest manufacturers of agricultural machinery why he did not deal directly with the farmers who needed his goods, selling cheaply for cash, and he answered that he would be glad to do so, but in that case, the agents would combine against him, and—although he is making some of the best machines in the country—they would run him out of the market. Is there any remedy for this excess of middlemen?

Adams Co., Ill. W. R. R.

THE USE OF IMPROVED FARM IMPLEMENTS.

It is an exceedingly easy matter to see why the farmer of the West, with his broad acres of smooth land without any obstacles of any kind, is largely benefited by the use of nearly the whole catalogue of farm implements, but for use upon very many of the farms of New England it is an entirely different matter. The difference of conditions renders an entirely different system of farming necessary. In the first place, upon many of the hillside farms there is such a profusion of rocks that the earlier settlers, in order to fence fields for culture, constructed of the smaller holders many small, irregular-shaped inclosures still thickly dotted over with large rocks which require immense labor in their removal. The New England farmer is, as a rule, industrious and hard-working, and is quite likely to wear out under the continual strain of labor necessary to bring his farm into fair working condition. Then with small fields, with here and there a rock protruding from the soil, is it any wonder that, however strong the desire, the tiller of the soil is prevented from the use of such implements as require large fields and smooth surfaces for their successful working. 'Tis true all the spare time of the farmer is spent in preparing limited surfaces for the use of the mowing machine and horse-rake, but it is rare to see a tedder in use, or any of the implements employed in planting corn or potatoes. And, too, the cultivation of the crop must be largely by hand. Is it any wonder then that the farming should be carried on upon a much less extensive scale than at the West, in fact, what might be termed upon a very small scale? And yet the New England farmer has met with fair success. While he has not accumulated his surplus by thousands, he has provided comfortable and pleasant homes, neat in their appearance and surroundings, provided with those little comforts that go to make life a pleasure. And, besides, his family is in the full enjoyment of all religious and educational privileges, railroad and postal communication, with those opportunities for the enjoyment of a variety of scenery, that are entirely wanting in the West, where farm machinery is largely used.

Scientific and Useful.

CONNECTICUT AGRICULTURAL EXPERIMENT STATION.

BULLETIN 44 —JUNE 12, 1880.

POLLARD FERTILIZERS: CAUTION.

The readers of the first bulletins of this Station will remember that in August, 1877, analyses were published of two so-called "Improved Fertilizers," purporting to be made by Pollard Bros., then of New Haven.

These fertilizers, a "Composition for Grass" and a "Composition for Vegetables," were sold to some extent in the vicinity of New Haven for $32 per ton. They consisted essentially of dried harbor mud with a little bone dust added and were commercially worth $1 per ton.

In January last the papers announced the discovery by H. M. Pollard, of Providence, R. I., of a new and valuable fertilizer made from night soil, and shortly a sample of "Concentrated Privy Guano" was brought to the Station by a party who gave his name and address as F. C. Cook, 119 Ellsworth Ave, New Haven, and who represented the sample to have been sent him by the manufacturers, Pollard & Cook, of Providence. In February the same person brought another sample which he stated was taken by himself in New Haven from a lot of ten tons which he had purchased for his own use.

These samples were duly analyzed—the first completely, the second partially, and the reports of the analyses were made out in the usual form, signed by me and mailed to F. C. Cook. April 3 the analyses were published in Bulletin 38, and thus the reading farmers of Connecticut were apprised of the fact that the "Concentrated Privy Guano," offered for $65 per ton by Pollard & Cook, of Providence, was not made from night soil but was a mixture of nitrates and phosphates of ammonia, potash and soda, commercially worth about $130 per ton.

The last advices about the Pollard Fertilizers come from Philadelphia, where, according to the letters of an inquiring correspondent, one Dr. H. M. Pollard, representing himself to have been at one time State Chemist to Rhode Island and afterwards to Massachusetts, has been disposing of the right to make a patent fertilizer, the composition of which is attested by analysis over the signature of the writer of this bulletin, giving its value at $127 59 per ton. My correspondent writes that he obtained this information from a party who had agreed to buy the right for a certain section of Pennsylvania for a considerable sum of money, to whom Pollard represented that the fertilizer could be made for $13 56 per ton, and that the right to manufacture it had been sold for Easton, Pa., for $500 and had been negotiated for Allentown and Reading, and for Baltimore.

It would thus appear that H. M. Pollard "discovered" the Concentrated Privy Guano and obtained its analyses from this Station for the purposes of a swindling expedition on which he is now engaged.

FERTILIZER ANALYSES.

418 Castor pomace, from H. J. Baker & Bro., N. Y.; sampled by L. S. Wells, New Britain, from stock of F. Ellsworth, Hartford.

422 Strictly pure ground bone, manufactured by H. J. Baker & Bro., from stock of S. B. Wakeman.

424. Manhattan Blood Guano, from stock of G. H. Staples, Westport.

422 and 424 were sampled by S. B. Wakeman, Sangatuck.

S. W. JOHNSON, Director.

Industrial Implements.

THE PAXTON FORCE-FEED GRAIN DRILL.

This drill, made by the Harrisburg Car Co., of Harrisburg, Pa., has an improvement worthy of special notice. The shovels are made triangular, so as to make a furrow about four inches wide, in which the seed is evenly distributed by a bell or oval-shaped distributor, which is suspended in the lower end of the shovel, thus giving every grain or seed sufficient room to germinate, grow uniformly, and produce more grain to the acre than it will by any other method of sowing. These shovels can be attached to all kinds of grain drills, old and new, and we predict that this Company will have many calls for them to be used on other drills than the Paxton. This drill has a fertilizer and grass-seed attachment, and this is so arranged that it requires only a moment to change it from the rear to the front of the machine.

To increase or diminish the amount of seed to be sown, no change of wheels or gearing is needed, but merely the turning of a thumb-screw, which can be done in a moment.

The hoes or shovels are shifted with a lever or rod by the operator in an instant. During a recent visit to this Company's office, one of our staff examined the workings of this drill, and he is strongly of the opinion that, taking all the advantageous points into consideration, the Paxton has but few equals. For circulars and cut of drill write to the manufacturers.

Miscellaneous.

WHAT OTHERS SAY.

NETTING FOR GRAPES.—A writer in Coleman's Rural World says that his plan in using netting has been to tear off a piece, say 12 inches wide, double it over and sew it on the open side with a sewing machine, and then run a seam across one end. His little girl made 1,600 of these bags and did not complain of the amount of the work. Thus made, they will last three years or more when put away.

His boys, nine and eleven years of age, put them on the bunches and gather them at the top, and tie a cotton string at the top of the bunch. The boys could bag 300 bunches in a morning without feeling overworked. Oftentimes he found it a really fascinating work himself, and first-rate recreation for a June morning. The bags were put on when the grapes were about one-third grown.

The second method is that of inclosing in paper bags. When Mr. Bateham, of Ohio, first suggested this novel plan, he considered it an absurdity. He could not imagine how a bunch of grapes, shut off from sunlight and air, could properly mature with good color and flavor. He resolved to give it a fair trial. One fact is worth a great deal more than many theories; and, starting out with prejudice against Mr. Bateham's plan, after a first trial he must confess himself a convert to it and its advocate.

This year he put on 2,000 paper bags. The results were most satisfactory. The grapes ripened evenly with the best of coloring, fully as early as when not inclosed, and with a flavor equal to any grown without the bags. More than this, the bunches came out of the bags with a splendid bloom and as perfect in every respect as it is possible for a grape to be. The paper bagging prolonged the season for nearly a month. They are very cheap, and are more easily put on than the netting, and the grapes cannot be touched by the birds.

The bag is slipped over the bunch when the grapes are about one-third grown, folded together about the stem, and a pin stuck through the folds. This is all the fastening necessary. Care must be taken, however, to make a small slit in the bottom of the bag, for, unless this is done, when a heavy rain falls half a pint of water will get into the bag, and, standing around the grapes, will injure them, or by its weight tear the bag off. Merely pierce the bottom with the blade of a knife.

THE New England Farmer has much faith in the future of the sugar industry in this country, but trembles for the lazy and shiftless farmers who have invested in the enterprise with high hopes of success, but without a due appreciation of the requirements necessary for securing profitable crops of beet roots.

CROPS AFTER PEAS.—The New York Herald has the following: A Massachusetts farmer says that he has planted the following crops, all with good success, after the early peas have been marketed and the vines pulled: squash, horse-radish, cabbage, all kinds of turnip, sweet corn, tomatoes, spinach, rye for fodder, clover to plow under, corn fodder and string beans. By getting two crops from the land the peas do not cost much, except the cost of the seed, picking and marketing. The second crop is the profitable one, as there is but one coat of manure applied for both crops.

COL. FORNEY says: "Of 257 members returned to the British Parliament 150 are merchants, manufacturers, or connected with commercial pursuits, only 52 are lawyers. There is a growing belief in some quarters that the composition of Congress would be improved by a decrease in the number of lawyers sent to that body, and an increase in the number of business men. The nation could get along very well with less talent for buncombe speech-making if it were supplanted by a greater amount of practical familiarity with our varied interests and industries."

THE London Ag. Gazette has the following: "The vastly increased circulation of cheap daily newspapers, filled with general news, has, we fear, not helped the study of useful agricultural literature, the reading of these papers absorbing much of the time at disposal. We trust, however, that efforts are now being made to instil into our young agriculturist a knowledge of, and love for, agricultural science, which may prove beneficial. We shall thus obtain a larger number of farmers at once practical and scientific, active and watchful on the farm, ready to learn from the experience of the best farmers of this or other countries, and willing to impart any useful information they may be able to give to their brother farmers."

THE DETECTION OF OLEOMARGARINE.—The detection of oleomargarine in butter, when the adulterating material is made, as it can be, in a careful and cleanly manner, is not easy, nor certain, except by methods which only a skilled chemist can execute. Several simple tests have recently been given in the papers, but my own experience with them has shown that they can be relied upon only when the oleomargarine is poorly or carelessly made, or when the butter consists entirely of oleomargarine simply flavored by the small proportion of cream with which it is churned. Of these tests the following has given the best results within my hands: Over a piece of good butter as large as a chestnut, in a wine glass pour about twice its bulk of ether, stir it up until the fat is all dissolved. Let it stand for a few minutes till the undissolved salt has settled to the bottom, pour the clear solution off into a tablespoon and set it aside for an hour or two, or till all the ether has entirely evaporated; perform the same operation with a piece of oleomargarine, and on comparing the two fatty residues, the latter will be found to have a more or less distinct tallowy odor, which may become more apparent if the spoon is held for a moment in the hot steam from the boiling tea-kettle; the residue from good butter has no such odor; but genuine butter may be adulterated with half its weight of oleomargarine, and the adulteration cannot be detected by this test. When genuine butter is heated to a temperature several degrees above the boiling point of water it foams much more than oleomargarine does when treated in a similar manner; I have found that this test enables us to distinguish genuine butter from genuine oleomargarine, but it is no more serviceable than the other for detection of adulteration of the one with the other. No one should place much dependence on either of these tests, without going through with the same operation with genuine butter at the same time, or at least not until thoroughly familiar with the different results given by the two substances under the conditions of the test.

We find the above in the agricultural columns of the New York Tribune, from the pen of Professor G. C. Caldwell.

COL. F. D. CURTIS holds that the cows we have are better than we give them credit for; that proper feed and care will greatly improve the quantity and quality of their product. To allow a cow to fall off in flesh, while giving milk for butter-making, is erroneous in the highest degree, and will be quickly detected by the expert in the butter trade, when the butter product is placed upon the market. The better the cow, the more danger of this error, for the reason that her nature works to milk-forming, and, if her system is not provided with proper nutriment, the result is, first, her fat, and then her lean meat or muscle, are gradually transformed into milk, and the butter from such milk will be deficient in flavor, aroma, texture and color, whatever the season of the year, or however well made. In short, it will be a fair competitor with the oleomargarine or tallow product of the present day.

AVOID all five or ten-minute churns that have an action on the cream, says Mr.. Curtis. Such churns injure the grain of the butter, and will be sure to tell against the butter when it is placed upon the market.

PROFESSOR ARNOLD says: "The assertion is often made, and many people believe, that water washes out the flavor of the butter; but it only cleanses the butter of the buttermilk, sugar and milk acid which may adhere to it, just as clarifying sugar removes from it the foreign matters which modify its true flavor. The flavor of butter consists of fatty matters, which do not combine with water, therefore, cannot be washed away by it. The effect of washing upon the keeping quality of butter depends upon the purity of the water with which the washing is done. If the water contains no foreign matter that will affect the butter, it will keep better for washing the buttermilk out than by kneading it out."

CHEAP REFRIGERATORS.—The Farm and Fireside, of Springfield O. has this to say about these:—Take two wooden boxes, one three inches larger in every way than the other. Line the inside box with zinc. Fill the space surrounding it with dry sawdust, or, better, with fine charcoal. Let the cover to the inside box be covered with a piece of woolen blanket. Let a small piece of pipe pass from the bottom of the inner box down through the bottom of the lower box, so as to allow the water from the melted ice to flow off. This is just as good as many of the patent ice chests at less than one-fourth the cost.

"STATE laws are needed to define the duties and obligations of transportation companies within the jurisdiction of the State, and national laws to regulate inter-State commerce."—The Husbandman.

SPEAKING of Judge Balcolm, a venerable member of the respected Farmers' Club of Elmira, the Husbandman, which gives weekly reports of its valuable proceedings, says: "Venerable in years, rich in experience, the Judge has undiminished interest in agriculture, and for the good service rendered in his profession, is regarded by the Club with warm affection. Although verging on fourscore years, he has the mental elasticity of robust manhood, and as a farmer, is the Nestor of the Chemung Valley. There was another farmer at the meeting more advanced in years, Mr. David Neish of Brecsport, who has nearly completed his eighty-third year, yet on his departure he mounted nimbly from the ground to the seat of a high carriage unaided, and with as much apparent ease as at any period of his life." It is very pleasant to meet and to talk with farmers who, to a good old age, have preserved alike good health, sound minds and an undiminished interest in agriculture.

NEW ABUTILONS.—Mr. B. S. Williams, London, England confidently recommends them as being superior to anything yet sent out, both in color, habit, and profuseness of bloom.

The Abutilon is one of the most useful decorative plants we have, and can be had in flower all the year round; for cutting purposes there is nothing better.

Charmer.—A grand acquisition, with bright rosy crimson flowers of fine shape, dwarf, and profuse.

Crimson Banner.—Habit dwarf, compact, very profuse, deep crimson, of fine form.

Golden Nugget.—Flowers roundish, of fine form and substance, rich orange inside, outside rich orange veined with crimson.

Purity.—Flowers pure white, an improvement on Boule de Neige both as regards size and substance, very profuse.

Purple Emperor.—Large flowers, good substance, rosy purple, distinct and pretty.

Queen of the Yellows.—This variety has very large flowers, of fine form and substance, lemon-yellow, very distinct.

Violet Queen.—Flowers of fine form and substance, of a bright violet color, very distinct, and quite a new color amongst Abutilons.

The above are selected from a large number of seedlings.

NEW CALADIUMS.—The following Caladiums are quite distinct in character to any hitherto offered, and may be considered the origin of a new type. The leaves are generally long and narrow, not so arrow-shaped as the ordinary forms, and having a peculiar grotesque appearance.

Adnescens.—Leaves from 12 to 15 inches long by three to four inches broad, bronzy red veined with crimson, margin pale green, very distinct and fine.

Fulgidum.—The leaves of this variety are from six to nine inches long by four to six inches broad, rather oval in shape, center salmon rose with rich metallic hue with bright veins, broad margin of pale green.

Metallicum.—The leaves of this very distinct variety are from nine to twelve inches long by three to four inches broad, the center rose with a bronzy metallic band on each side, the margin pale green and wavy.

Pulcherrimum.—Leaves from nine to twelve inches long by four to six inches broad, the center transparent white with a broad margin of green, beautifully spotted; very distinct.

THE ONE BEST APPLE.—In Secretary Garfield's late Report of the Michigan State Horticultural Society, the question was asked: "Which is the one best apple?"

President Lyon explained:—If all the apples were stricken from the list save one, what one would we choose to save for Michigan?

Mr. Bitely.—From my present experience in the market and the home—for dessert, cooking and all uses, considering the tree as well as the fruit I should take the Baldwin.

Mr. Selover.—The Baldwin has many points of merit, but I would want a hardier tree and a fruit of better quality, hence would save the Northern Spy.

Judge Lawton.—I would agree with the gentleman in his choice.

Mr. Harrison, Kalamazoo.—I should choose the Wagener, because the tree is smaller and bears earlier in addition to the good qualities of the Spy.

Messrs. Williams, Dorr and Pearsall chose the Baldwin as their favorite.

Mr. Avery, Grand Traverse.—The Wagener will suit more tastes than either of the others mentioned. The Baldwins are in poorer condition, as to health of tree, than almost any other variety in the State.

Mr. Merriman said he was glad the opinion of any man was not final in this matter—even his own—still his choice would be the Wagener.

Mr. Chilson thought he should choose his location and save the old Rhode Island Greening.

Mr. Lyon.—It is desirable to bring out opinions as to first, second, third, and fourth best, which are based upon actual experience. I could not choose the Wagener because of the peculiar tendency to overbear, nor the Baldwin because it lacks hardiness. I rather favor the Northern Spy.

LE CONTE PEAR.—The Southern Farmer's Monthly (Savannah, Ga.) says of this:—So far we have heard no complaint against the justly esteemed LeConte pear, which seems destined under all variations of our climate to maintain its reputation for vigor, fruitfulness, and freedom from blight and insect depredations. The bearing trees promise their usual crop of fruit, and thousands of cuttings put out during the winter are flourishing for the trade.

THE Fruit Recorder has the following:

GOLDEN LAWS OF YE STRAWBERRY.

I.

Strawberries choice wouldst thou procure?
Dig deep and mulch and strew manure.

II.

To make the fruitful vines endure,
Dig deep, and mulch and strew manure.

III.

To make assurance doubly sure,
Dig deep, and mulch and strew manure.

Stern cynic, here is naught to scoff at,
On these three laws hangs all the profit.

THE introduction of white grapes, says a writer in Colman's Rural World, has proven a great blow to grape-loving birds, for I have never yet observed one that was smart enough to discover that a white grape was good for eating.

MR. PIERCE asked if potatoes can be grown a number of years on the same piece without diminution in yield, if well supplied with barn-yard manure. Mr. Laing said that he heard a gentleman say that he had grown potatoes on the same spot, 30 years, and the last crop was the best. Had used barn-yard manure, only. Mr. Ross said that his father planted the same spot in the garden 25 years without diminution of yield and that it had been planted nearly that length of time since, and appears to do as well as ever. Hog-pen manure had been used mainly. The above is taken from the proceedings of the W. New York Farmers' Club, as reported in the American Rural Home

Everywhere.

RURAL SPECIAL REPORTS.

ALA., New Market, Madison Co., June 9.—The wheat crop is now cut and the yield is very poor, owing to rust. Oats are fine and there is a prospect of a good yield. Cotton is growing finely, and a large acreage has been planted. Corn is laid by, of good color. Rain is abundant and the weather cool for this latitude. Grass is luxuriant and pasturage fine. Gardens are prolific in all except cauliflowers which seem rusted. The Telephone peas are fine, some weevil-eaten, did not come up. The flower seeds are growing finely. We had a very mild winter, Sweet potatoes left in the ground last fall in full sprout. Irish potatoes abundant and large. Fruits of all kinds in abundance in season. I find the Sharpless strawberry well adapted to this climate, giving prodigious fruit. Miner's Prolific is nearly equal to it. The Cuthbert raspberry is all that is said of it—a great acquisition. Grapes are in abundance. We have no reason for complaint of the seasons or of fruits, vegetables or field crops, except that our wheat is short, but a larger acreage will make up for this. The health of the country is good. I have planted largely of Blount's corn, which is now laid by. The ground has been sown broadcast with Cow-peas. G. D.

CANADA, Collinville, Lambton Co., June 8.—I planted 110 bug-eaten peas and of them 46 only came up. More might have grown if I hadn't destroyed some while looking if they were germinating. This inspection showed that the insects have eaten some of them. The peas I planted were McLean's Little Gem. Those that grew have been in bloom a week, and have beaten the Telephone. The seeds the RURAL sent me are not growing well, though I had a nice place for them. The Cuthbert raspberry and the willow as well as the mangel and oats are growing, however; but the Cow-peas, planted on June 3rd are not up yet. I have a few hills of Amber sugar-cane that are also growing. I sent to Kansas for a little of the Rice corn and it is thriving, and so is the Dourra which I am testing. We are having lots of rain here now and the ground is very wet. Crops mostly look good. Some of the fall-sown wheat is fine and some poor. There is quite a sprinkling of all the sorts of fruit that grow in this section, but the insects are quite plentiful, and we hope no June frost will visit us to kill things. Potato beetles and grasshoppers are abundant. I was in hopes that these heavy rains would kill the 'hoppers, but they still hop lively. They ate our onions and carrots close to the ground last year, besides injuring the oats very much and doing a good deal of other damage. I have a small piece of Defiance wheat grown from the seed saved from the RURAL'S distribution last year, and it is looking good. A SUBSCRIBER.

CANADA, Listowell, Perth Co., Ont., June 7.—The Defiance wheat looks well and is a good-sized patch this year. The Mold's oats look splendid. I sowed them as thin as I dare and now they look almost too thick. The other seeds are *all* sown in a bed by themselves in the open garden; but so far not many of them are up. I did not put them in until the ground was fit for cucumbers; this being my first year here, the soil is not just what I should like. We have had a very dry Spring, so that the farmers have got in their seed in very good order, and the rain since has brought it on fast, though the rainfall was so heavy as to wash out a good many peas. The fall wheat

has been badly killed out around here many fields having been plowed up and resown to a spring crop. Fruit promises to be abundant, especially strawberries. Gooseberries and currants were a little hurt by the late frost.

A. J. C.

ILLINOIS, Baileyville, Ogle Co., June 12.—The weather the last three weeks has been showery and at times quite wet, with occasional hard wind-storms. On the 4th inst. the wind, which blew from the south and continued for several hours, did considerable damage in this section by blowing down trees, some wind-mills, farm buildings, etc., and blew a large amount of fruit off the trees. Warm and pleasant now. The crops in general are promising, but a large portion of the winter wheat failed and was plowed up this spring and the ground seeded to other crops. That which was sown among corn-stalks last fall did not do so well as what was sown on suitable soil in open fields and put in well with the drill. The troublesome experiment of seeding among the standing corn will not soon be repeated here again, except when farmers have no other spare ground for fall seeding. Corn, potatoes and garden vegetables are doing well. Our Beauty of Hebron potatoes are very promising. Most of the surplus grain has been marketed of late at lower prices than those offered last winter. W. B. D.

KAN., Fontana, Miami Co., June 7.—Frequent rains since May have changed the face of affairs materially in this vicinity. Wheat is far better than many farmers thought it could turn out on account of the drought. Corn is growing well and, indeed, all the spring crops seem to be doing finely. Our gardens are always splendid. My first ripe raspberries I ate on May 30. The weather ruined my strawberries, but my raspberries, I think, can't be beat. J. J.

KY., Owensboro, Daviess Co., June 14.—The past week was the wheat harvest week, though some was cut as early as May 31st, and some remains to be cut. The crop in this neighborhood is good in quantity and very good in quality, so far as I have examined. Oats are low and the crop will be short owing to a dry May. Corn is looking well. The weather is too dry for tobacco; a great deal will be set yet if we have a season; some plants are getting too large. Fruit is a fair crop, except budded fruit, which will be scarce.

J. W. S.

NEBRASKA, Wilsonville, Furnas Co., June 5.—The drought has been very severe in this part of the State this season. There has been no rain since September last to wet the ground more than two inches deep. It is raining some now, as I write, and from appearances there will be a heavy shower. The crops are suffering very much. The rain will be too late to save spring wheat, but will help the corn. Many have not planted yet, the ground being too dry to plow. Fall wheat was mostly killed out last winter, more from dryness than from cold weather. Rye and early-sown fall wheat look very well. Fruit trees are in good condition. Owing to our peculiar, sponge-like soil, only the surface of the ground becomes dry, except in severe drought, and deep-rooted plants seem to be doing just as well as though we had plenty of rain. It is a general remark of new settlers, that they never saw soil which would hold moisture like the soil in Nebraska and Kansas. Land that has been cultivated several years is in much better condition than new land. Many settlers are leaving on account of dry weather, being unable to stay, as there is little or no employment to be had, and the prospect for a good crop is very discouraging. It seems to me Congress ought to grant homesteaders leave of absence for a season instead of making the laws more stringent. It is literally impossible for many homesteaders, on the frontier, to subsist without leaving their lands for a while, often being obliged to go from one to two hundred miles. Corn is worth 40c.; wheat, $1 25; oats, 50c.; rye, 50c.; millet, 60c.; potatoes, $1; butter, 15c.; eggs, 8 to 10c. The oldest settlers in this county have never before known a failure in the winter wheat crop, which generally yields from 20 to 35 bushels per acre. Spring wheat yields from 15 to 30 bushels; corn, 35 to 75; oats, 40 to 60; rye, 20 to 35; barley, from 30 to 45 bushels. There is a heavy immigration coming into the county in spite of dry weather. Nearly all the government land is taken up, and old settlers are selling out to parties who have more money and enterprise.

W. T. B.

NEW JERSEY, Lakewood, Monmouth Co., June 15.—If from the RURAL office you draw a line south 14, and west 44 miles, it will strike Lakewood—a post village and station on the Southern New Jersey railroad, in Brick Township, Orange Co., N. J., until recently known as Bricksburg. Its geographical position may be further defined by stating that it is nine miles west from the Atlantic Ocean and the same distance due north from Tom's River. Here we find a village regularly laid out, containing many attractive residences for about 800 inhabitants. The hotel has accommodations for about 75 guests, and is well patronized by persons suffering from diseases of the throat and lungs, who come here in the hope of obtaining relief, in which hope they are seldom disappointed—and by families seeking a quiet healthful abode.

But I have been most interested in the agricultural resources of the neighborhood. I had long heard of the barren lands of New Jersey, and had desired to visit them, and here they are. Leaving the more fertile sections of Monmouth County, with its red, gravelly soil from which Red Bank has very naturally derived its name, we rapidly approach a different formation, where the surface of the soil is mostly as white as the sand of the sea beach and to all appearance as unproductive. But looking from the sand to that which comes from it, we are surprised to see the luxuriant foliage and strong growth of its productions. Notwithstanding the excessive drought, all crops are looking well, but I am told the product is not likely to be as good as on average years. Strawberries especially have suffered from drought, but the late rains have come in season to help all the other crops. There is something incomprehensible to me in the virtues of the sand. With that of other sections I have been well acquainted, and judging from that, I should expect to find this as barren as I was inclined to believe it from reports; but the facts are otherwise. The sand merely turned with a plow—there is no sod to speak of—gives, with very little care, fair returns for the labor bestowed upon it. I would not be understood as representing that extravagantly, or even what in some sections would be called moderately large crops, can be grown here, but that an industrious, frugal man can readily make a living for himself and his family is beyond question. "Go West" is not the best advice to give those who are seeking homes. There are thousands of immigrants passing through New York every week for the distant West, who could more advantageously stay within a hundred miles of that city. Within a radius of ten miles from Lakewood there is unoccupied fertile land enough to give employment and livelihood to thousands who go further and do worse—land that can be purchased at low prices and on long time, and of which large areas can be readily worked, the product of which, if not so much for its acreage, will find a ready market at much higher prices. The nature of the soil and its favorable location shorten the season when the husbandmen cannot work. Vegetables and small fruits can be raised abundantly, and come to perfection in time to bring high prices in the cities where they will arrive, if not quite so early, fresher and in much better condition than from further south.

There is certainly one drawback to this section—it is not naturally a grass-growing region. This sand although it bears well at first, will require fertilizing. Nature has, to a certain extent, provided for this by deposits of green sand marl which seem excellently well adapted for the purpose, and I have no doubt the luxuriant Cow-pea, when plowed under, will prove as advantageous as in the Southern States. Still the want of good stable manure will be felt, and this will only be had in any quantity when grass is grown, unless the system of ensilage, now being experimented with in New England, shall be successful. I see no good reason, however, why moderate crops of grass should not be grown, particularly in the lower places. I have omitted to say anything of the extensive cranberry bogs in the neighborhood, of which there are many, because these do not seem to be directly connected with the general agricultural features of the country.

My impression is that for a man with small capital this is a good section. It is often said, and probably with truth, that the most money can be made where the land is the best; but to get such land and to work it is often out of the power of the man who has little to begin with. By locating here he has the advantage of good society, churches and schools, all of which many pioneers sadly feel the need of. He is in the midst of the highest civilization, instead of in a rude and uncultured country where his children must grow up in keeping with the surroundings. And not the least consideration is, he is in a locality where he will not be likely to lose time on account of illness, and the doctor's bill for his family will not eat up what he can save by his labor, for there is probably no more healthful location than this in the entire country. L. A. R.

PENN., Milford, Pike Co., June 13.—Reports just received here from the counties of Northampton, Monroe, Pike, and Wayne, Penn.; Sullivan, Delaware and portions of Orange, N. Y., and Sussex, N. J., show that the crops will be far better than was anticipated a few weeks ago. For the past two weeks copious rains have fallen in most of the counties named, and grain of all kinds, and vegetation generally, have taken a sudden leap and are now growing finely. Previous to two weeks ago there had been no rain for several weeks, and grass and grain seemed to remain stationary. Grass stopped growing, and fearing the crop would be almost an entire failure, many farmers in the remote districts of the Pennsylvania counties began selling their cattle. But the change within the past two or three weeks has been very marked. Although the stalks of rye and wheat will be considerably short, the heads are of fair size, well filled, and farmers still hope for a good yield of these staples. The oat crop will be unusually light, and in some places will be hardly worth harvesting. Corn and potatoes are nearly two weeks late. The former, it is thought, will yield nearly the average crop. The yield of potatoes is doubtful, from the fact that the Colorado beetle has made its appearance in the Delaware Valley in great numbers, and is already at work stripping the leaves of potato stalks at an alarming rate. These destroyers first made their appearance in this section four years ago, when the crop was an almost entire failure. Two years later they also did much damage, and it is feared the crop this year will also be greatly injured by these pests. The remedy resorted to by many farmers is Paris-green, while other farmers will not use it. Owing to the long-continued drought, with the exception of apples the fruit and berry crops in this section will be light. Along the upper end of the Delaware Valley the fruit was injured by the frost, and will be very scarce. R. H. M.

PA., New Lebanan, Mercer Co., June 17.—We are blessed with plenty of rain now and everything looks well and promising. The dry weather has hurt the grass crop somewhat and also kept the corn back a good deal. It was planted early enough, but did not come up for so long that it looks small for this time of year. Wheat will be a good average crop, if nothing occurs to injure it in any way. From present appearances, fruit is going to be plentiful. Of small fruits, such as berries, there will be a large amount picked and sold. The farmers of this section are go-ahead people; they take an interest in everything and try to improve and see who can have the best sort of stock, crops, etc. A good many sheep are raised, and brought a good price in the spring. A good many were bought in the expectation that a high price would be paid for wool; but there is not much excitement about wool buying yet; no buyers are out, and it is selling for 35 and 40 cents per pound. Produce prices are as follows: wheat, $1 10 per bushel; corn, 30 cents; oats, 30c.; butter, 12½c. per pound; eggs, 8c. per dozen. J. E. C.

PA., Waynesborough, Franklin Co., June 17.—In a few days some wheat will be cut. It has ripened a week earlier than in other years. It is somewhat straw-broken by flies; also damaged somewhat by the Army worm, which is doing much injury to the growing corn and grass (except clover) in some sections. These worms are greedily devoured by the swine where they can get at them. The potato bugs seem to be more numerous than for a year or two past. The fruit crop has a good prospect.

D. B. M.

RURAL FARM, June 15th.—We have rain at last—though not enough. But the clouds look as if a steady rain were at hand. Timothy and clover between the Army-worm and the drought will not harvest one-eighth of the usual crop. Corn is growing finely. Shumaker and Fultz are the first of our wheats to begin to ripen. Potatoes are growing finely, and we are much less troubled with beetles than in years past. In spite of Army-worm, Rose-bugs and myriads of other insects; in spite of drought, we shall, from present appearances, harvest an average crop of everything but hay.

The Querist.

ANSWERS TO CORRESPONDENTS.

[Every query must be accompanied by the name and address of the writer to insure attention.]

Phosphoric Acid.

R. M., Steubenville, Ohio, asks what is the precise difference between soluble, reverted, and insoluble phosphoric acid.

ANS.—As clear a definition of these terms as any we have seen, is that given by Prof. S. W. Johnson, of the Connecticut Experiment Station. He says:—

Soluble phosphoric acid implies phosphoric acid or phosphates that are freely soluble in water. It is the characteristic ingredient of superphosphates, in which it is produced by acting on "insoluble" or "reverted" phosphates with oil of vitriol. It is not only readily taken up by plants, but is distributed through the soil by rains. Once well incorporated with soil it shortly becomes reverted phosphoric acid.

Reverted (reduced or precipitated) phosphoric acid, means strictly, phosphoric acid that was once freely soluble in water, but from chemical change has become insoluble in that liquid. It is freely taken up by a strong solution of ammonium citrate, which is therefore used in analysis to determine its quantity, "Reverted phosphoric acid" implies phosphates that are readily assimilated by crops, but have less value than soluble phosphoric acid, because they do not distribute freely by rain.

Insoluble Phosphoric acid implies various phosphates not freely soluble in water or ammonium citrate. In some cases the phosphoric acid is too insoluble to be readily available as plant food. This is true of the South Carolina rock phosphate, of Navassa phosphate, and especially of Canada apatite. The phosphate of raw bones is nearly insoluble in this sense, because of the animal matter of the bone which envelopes it, but when the latter decays in the soil, the phosphate remains in essentially the "reverted" form.

Making Cider from Summer Apples.

T. D., Boise City, Idaho, asks can any cider be made of summer apples, so as to keep during the winter.

ANS.—It can; but only ripe apples should be used, and such varieties as produce cider containing a large percentage of sugar. Such cider when properly fermented and refined, being handled in the cool and even temperature of a good cellar, will keep very well through the next winter. In the Middle States crab apples ripen in August, and make cider of 25 deg to 30 deg. of strength which will keep for years without refining. Generally speaking, it is poor policy to make early apples into cider for winter use; it may be done, but it is only profitable with a few varieties like the crab Harrison, etc. A large share of early apples are imperfect and unripe. The cider contains too much starch and albuminous substances and too little sugar. Fermentation is strong and rapid. The weather being warm makes it still more unmanageable; while later in the season all these conditions are changed. The starch of the apple is changed to sugar by nature's process, enriching the cider. When the weather is cool fermentation is slow and easily managed, and the business which, early in the season, would have proved unsuccessful, becomes, later on, safe and profitable.

Miscellaneous.

L. H. R., Fairfax, Va., asks what is the best remedy for Rose-bugs besides hand-picking.

ANS.—When they infest the bushes in great numbers it is sometimes practiced to shake them off on a sheet and burn them. Again, it is recommended to hang about the plants, open-mouthed bottles half-filled with a mixture of sweetened water and vinegar. Many may also be killed by pouring boiling water on the ground under the bushes, but this must be done on the first appearance of the insect before the wings are formed.

A. J. C., Listowell, Ont., wants to know how to raise pines, Horse-chestnuts, Mountain Ash, etc., when to gather the seed and when to sow it.

ANS.—Gather the seed in late summer, fall or winter; all kinds of tree seeds do not ripen at the same time. Just when they may be gathered can easily be learned by keeping an eye on the sorts it is desired to propagate. Sow in rows as soon in the spring as the ground can be worked.

H. D. E., Palmer, Mass., would like to know how to dry hard soap; he can make it well enough but it shrinks all out of shape when it dries.

ANS.—This is a trouble that has puzzled more than one amateur soap maker. Do not dry it in the sun, but in a shady place, as in an airy garret and the cakes will retain their shape.

E. W. S. Portlandville, N. Y., asks whether it would be safe to remove the roots of an old asparagus bed at this time to another place and whether the moved plants will produce a crop next year.

ANS.—Fall would be better. The roots are strengthened by allowing the foliage to mature. It will produce next year sparingly; but should not be cut.

Inquirer, Sharon Center, N. Y., asks which way should the rows of drilled corn run so as to get most benefit from the sun—north and south or east and west.

ANS.—If planted in drills running east and west, the south side gets more sun than the north side. We should prefer to have the *rows* wide north and south.

D. R. Mc. A., Lynn N. C. sends a rhododendron for name.

ANS.—Rhododendron maximum.

COMMUNICATIONS RECEIVED FOR THE WEEK ENDING SATURDAY, June 12th.

C. M. thanks.—H. S.—E. B., we shall investigate. Thank you for information.—G. D., New market, the name is indistinct.—S. L.—A. B. A.—L. A. W.—G. A. G. Jr.—M. E. S.—F. H. S.—A. S. S.—F. D. C.—S. THE
RURAL NEW-YORKER.
PUBLISHED EVERY SATURDAY.

CONDUCTED BY
ELBERT S. CARMAN.

Address
THE RURAL NEW-YORKER,
No. 34 Park Row, New York.

SATURDAY, JUNE 26, 1880.

WHAT WILL THE HARVEST BE?

Upon the receipt of this number of the Rural New Yorker, we would be glad if our readers would advise us at once of the condition of the leading crops of their respective districts—wheat, corn, cotton, potatoes, hay, apples, pears, etc., etc. We are now at work upon the What-will-the-Harvest-Be number of this journal, and desire to make it as explicit, trustworthy and valuable as possible to our readers, to whom, in a great measure, we must look for the information sought.

The first brood of grubs from the Potato Beetle is now hatching out. Many of our farmers may not be aware that these larvæ cannot endure the contact of ashes, plaster and the like. If knocked off the leaves many of them fall on the hot soil and perish.

We shall soon begin the publication of strawberry portraits of new varieties. Many of the originals have been kindly furnished by Peter B. Mead, E. P. Roe and J. T. Lovett. The others have been raised at the Rural Grounds the present season. These portraits are true likenesses. We have not selected the largest fruit, as those engaged in the trade are too prone to do, but the average fruit, by which alone a strawberry or any other fruit should be judged.

We have found it quite serviceable to go over grain infested with the Army worm and knock the pests off. The slighest touch dislodges them. A rope, as a clothes line, may be drawn over belts 20 feet in width by men each taking hold of an end. Thus thrown to the ground they begin their travels instead of at once returning to feast upon the grain or stalks about them. If trenches are dug about such fields, vast numbers may be captured and destroyed in this manner.

Within a few years past the problem of increasing the yield of corn by improved methods of cultivation, has been warmly discussed, and, no doubt, with benefit to the farmers of the land. The average farmer will not raise one hundred bushels of shelled corn per acre, but the successful efforts will, at least, induce him to strive to increase his yield. It would be well if a great deal more thought and investigation were given to increasing the yield of potatoes—looking to which we shall have a few words to say in our next "Free Plant and Seed Distribution," which will be announced in the Fair Number of the Rural New-Yorker, soon to be issued.

The Beet Sugar Industry.—The beet sugar industry seems at last to have taken a permanent footing in America. A thriving factory is at work in Maine, another in Delaware, two in California, one is seriously proposed to be built at Oswego, N, Y., and one is to be built in Missiquoi Co., Canada. The State of Delaware offers $3,000 in premiums for the best crop of sugar beets for the encouragement of the culture, and in one year the Agricultural Department distributed 4,764 quarts of sugar beet seed. The general interest taken in this subject may be destined to result in a vast benefit to agriculture. We know that sugar can be profitably made from beets; we know that beets can be grown; all that seems to be needed is to bring farmers and manufacturers into practical business relations with each other.

CRUELTY TO ANIMALS IN TRANSIT.

If it be true that "man's inhumanity to man make countless thousands mourn," it may be held to be small matter for surprise that man should inflict still greater inhumanity upon the *inferior brutes*. Nevertheless the fact of this greater inhumanity and cruelty, beyond expression in its atrocity, ought to be made known that the better instincts of mankind may be awakened in regard to it. Although man has lawful dominion over the beasts of the field and may legitimately use them for his purposes, even to the extent of slaughter, yet cruelty in the exercise of this right is to be reprobated in the severest manner. In general, personal interest is sufficient inducement to prevent injurious treatment of animals, but in the commercial handling of live stock the miserable beasts are put into the hands and charge of persons who have no interest beyond doing their work in the most easy and rapid manner, that their pay may be made as remunerative as possible. Here personal interest operates against the natural sentiment, and that, added to long usage and familiarity with cruel devices for the management of frightened and unruly animals, is the cause of practices most abominable and cruel.

Without going into particulars, one pertinent fact which is made public in a mere business way, may be cited as an illustration. For a long time past pork packers have complained of the damage done to shoulders and hams by the cuts and stabs inflicted upon the hogs by means of brads and spikes used by persons engaged in driving and loading the animals, and tanners have complained in regard to the injuries to hides from similar causes, to say nothing about those from excessively deep and unnecessarily large brands burned into the flesh of cattle. New York packers' losses and complaints have at last become so serious that the attention of railroad agents has been called to the abuses, and their interference to prevent them demanded. The extent of the abuse may be imagined from the statement made, that of one lot of 3,500 hams sold recently by a Chicago packer only 1,400 could be shipped, owing to the damages caused by cuts, stabs and bruises upon them. Three-fifths of these hogs had been so cruelly abused that the hams were unsalable except as damaged ones. If one-half the hogs were injured on the hams, doubtless a large majority of the remainder were ill-used in other ways, and the total misery inflicted upon the whole nine million of hogs packed in 1879, must have been appalling in its enormity. Fortunately the cruelty takes on a final form of a loss of 25 cents per ham, which is sufficient to force the packers to the help of the Humane Societies which are without much credit in the estimation of railroad employes and hog-drivers. The packers' complaints will be listened to, else the loss will fall where it will finally have the effect of stopping the cruel practices. But what an amount of mute and helpless suffering is represented by those 25 cents.

TRIAL OF WHEATS AT THE MISSOURI AGRICULTURAL COLLEGE.

Last year, upon the farm of the Missouri Agricultural College (Columbia), Professor Tracy tried upwards of fifty different kinds of wheat, and his report, we should suppose, would prove of much value to farmers in general, as well as to those of Missouri. Among the varieties tried, we select the following as having yielded the largest quantities of grain per acre:

	1878.	1879.	
Amber	20.16	31.03	Smooth
Arnold's Hybrid	33 23	36.56	"
Clawson	28.07	39.42	"
Delhi	14.42	39.60	"
Dott	31.04	36.40	Bearded
Egyptian		32.19	"
Fultz	15.23	35.90	Smooth
Gold Medal	17.39	34.68	"
Jenning's White	24.96	35.90	Bearded
Michigan Wick	28.32	34.71	"
Muskingum	21.92	32.73	Smooth
Nursery	13.30	38.62	"
Polish		35.20	"
Post	19.49	34.04	Bearded
Red May	27.52	32.46	Smooth
Shumaker	30.56	37.20	"
Silver Chaff	17.82	38.47	"
Treadwell	19.52	52.38	"
White Rogers	38.72	38.74	Bearded
Zimmerman	16.32	32.05	Smooth
Russian No. 3	8.50	35.66	"
Russian No. 12	9.41	37.48	"

Professor Tracy says that the land, a clayey loam sloping to the south, was plowed about September 1st six inches deep. On September 25 it was thoroughly pulverized three inches deep with a revolving harrow, and on September 28 the seed was sown with a drill at the rate of one and one-third bushel per acre. No after cultivation was given to the crop. In August, 1878, a portion of the land was manured with slaughter-house refuse, which was composted with earth in 1876, and was applied at the rate of five two-horse wagon loads to the acre; the remainder of the land was manured with stable manure at the rate of twenty loads to the acre. The wheat was sown so that each variety was grown on land having each kind of manure. The slaughter-house refuse gave the largest straw, but the brightest and the plumpest grain came from the land having the stable manure.

Through the courtesy of Professor Tracy we shall be enabled to give our readers engravings of several of the above wheats which produced the heaviest yields, together with all the information we may be able to glean respecting them.

THE RISE OF SOUTHERN AGRICULTURE.

Among the most assuring and encouraging signs of the return of national prosperity are the rapid strides which Southern agriculture is making. Every one of the Southern States is increasing the area of cultivated crops. The neglected plantations are again being brought under cultivation; the cattle interest is growing in importance; new settlers are taking up land and raising it in value; the lumber business is assuming prodigious proportions in wooded districts. Georgia alone produced 300,000,000 feet of lumber during the past year, worth more than $5,000,000—handsome proceeds from a single industry. The cultivation of vegetables for Northern markets, especially in Florida and Georgia, is developing in a highly gratifying manner. Where a few years ago the exports amounted to a few hundred crates, the shipments may now be numbered by as many car-loads. But perhaps no State is growing in wealth more rapidly than the Lone Star State. Secretary Sherman asserted in a recent public speech that three years ago Texas yielded barely enough revenue to meet current expenses, whereas, without increasing the rate, the surplus for March and April last amounted to $26,000,000, and there is every reason to suppose that the total surplus for the present year in that State will not be less than $100,000,000. The tide of financial prosperity indicated by these figures must enrich the farmers and ranchmen as well as the Treasury and the capitalists.

It is mainly to the heavy immigration into the State and the enormous development of its agricultural resources that these encouraging results must be accredited. Not only has the Lone Star State, ever since the war, been receiving large additions to her population from Europe and the North, but some sections of several of the other Southern States have been nearly depopulated of all their best citizens who have abandoned their worn-out lands and gone to build new homes on the virgin soil of Texas. But although this State has had the advantage of a heavier immigration than any of her sisters, the energy which has been the chief motor in her advancement is not confined within her borders, but in late years has been more or less characteristic of the entire South, especially in the direction of its chief industry—agriculture. The farmers or planters have felt assured that theirs is a paying business, rightly conducted. It is to be hoped that Southern agriculture may continue to grow as it has begun, till all the rich resources of the country shall have been fully developed. Let the several States make suitable provisions for their agricultural colleges. These institutions are proving themselves to be of great value in the North as teachers and champions of agriculture, and there is no reason why they should not be as available in the South. They should not merely be schools in which young men are taught the science of farming, but they should, by experiments and investigation, penetrate into the unknown fields of agricultural research and throw light on the many puzzling questions that now perplex the farmer.

BREVITIES.

There were some remarkably fine Petunias shown at the late exhibition of the N. Y. Hort. Society. The flowers were large and delicately fimbriated.

We are glad to know that Mr. Russell P. Eaton, so long of the New England Farmer, is now editor of the Merrimac Journal, of Franklin Falls, New Hampshire.

We are trying the experiment of raising tomatoes from seeds sown in the open ground. We think that the advantages of raising plants in the house or frame, and transplanting in late May or early June are somewhat overestimated.

The turf of the grounds of the Mineola Fair Association is always green—even in heat and drought such as we have of late experienced. This turf is made up mostly of Danthonia spicata (White Oat grass), a fine, wiry grass, common in dry and half-sterile soils.

June 21. A note from the Rural Farm informs us that rain is sadly needed, but that wheat is looking splendid. Of all our varieties Shumaker is the first to ripen. This is a bald variety. The heads are as large as those of Clawson, though the grain is somewhat smaller. We know nothing as to its quality.

Now is the time to get rid of a large second brood of potato beetles, by destroying the eggs of the first brood. It is of little account to kill the early beetles if the eggs deposited upon the underside of the leaves are left to hatch. Where potatoes are given hard cultivation, the egg masses can be easily removed at the same time, leaf and all, with little extra labor.

The Army-worm is fast disappearing. As in all such excitements, the damage actually done has been greatly exaggerated. One of the silliest recommendations for its destruction by the press has been that of rolling infested grain-fields. This would surely ruin the grain crop, and three-quarters of the worms would escape unharmed.

We are sad to hear of the death of M. Souchet, of France. For the improvement of the Gladiolus, now one of our most beautiful and prized bulbous plants, the world is more indebted to him than to any other person. As we remember, it must have been eleven or twelve years ago that we imported one dozen corms of his then new varieties, for which we paid $24.

The Beurre Clairgeau pear is often spoken of as worthless. The Gardeners' Monthly (April) says of it: "This pear is voted in the United States as not fit for any mouth." Our contributor, Gen. Noble, commenting upon this, says that it is by many considered not only handsome, but in "its season about as good as any." In some soils and situations this is true. We have eaten Clairgeau pears that were buttery, rich, melting. Nevertheless, according to our best pomological authorities, it is, as grown in most places, of poor quality.

A few days ago the President of the Calcutta Chamber of Commerce, addressing a meeting of that body, said that he feared that India, with its ignorant population and crude methods and machinery, could not compete with this country in the production of wheat. From Russia a like opinion reaches us with regard to that country, and for the same reasons. It is not to any superiority of our soil that these two rivals attribute their own poor prospects in the competition, but to the greater intelligence of our farming population, and the greater efficiency of our agricultural implements. It's well to bear this in mind, and to begrudge no effort to increase both.

The ways of the Army worm are not easy to find out. Last week our farm was alive with them, while there were comparatively few in the fields of our neighbors. Now we have comparatively few, while our neighbors' fields are infested. As we write this note, some of our neighbors are picking the worms off of their corn by hand, while others are plowing and digging trenches so as to cut off their retreat or advance into other fields. But really the actual damage thus far wrought, great as it has been, if we may judge from our own observation, has been much exaggerated. It is a rascally ill that brings no good whatever. Our cherries are as abundant this season as ever before. Usually the crop is shared with hundreds of Cat-birds and Robins. This season these friends seem to be feasting upon the Army worms and the cherries, save for the Rosebug, are left to ripen.

Before the incumbency of the present Commissioner of Agriculture it had been, for years, a reproach to the Department that it was merely a seed-store for supplying Congressmen and their friends with choice seeds and plants gratuitously. Gen. Le Duc, breaking through the old-time custom of his Department, distributed the seeds directly to applicants, much to the discontent of not a few members of both Houses of Congress, but especially of those of the House of Representatives. Besides the pleasure of making presents to their friends at the People's expense, these gentlemen had been in the habit of using the government's seeds for electioneering purposes—for the purpose of bribing their constituents to retain them in office. Not unnaturally therefore they resented the innovation in the mode of distributing the largess, and last Thursday it was enacted that the distribution of at least two-thirds of the $80,000 worth of seeds and plants in the gift of the Department of Agriculture must be made through the members of both Houses of Congress, to each of whom a proportionate share was to be assigned. Although we doubt the morality of using these seeds for political purposes, still as our concern is much less with the morality of our legislators than with the interests of our farmers, we shall not be loud in our objections to the recent innovation, if the seeds are distributed in the most efficient manner—placed where they will do the most good, not to the politician, but to the agriculturist.

A telegram from London, of June 14, says that an effort was about to be made to induce the House of Commons to alter the existing regulations regarding the importation of foreign cattle into Great Britain. It will be contended that the condition of the trade neither justifies nor excuses the present restrictions upon it. Moreover, the trustworthiness of the veterinary examinations at the ports of debarkation will be impugned, and a recent case will be cited wherein pleuro-pneumonia was declared to exist among the cattle in Epping Forest, where nine beasts were destroyed, and in which the chief Government Inspector subsequently, after a minute examination of the carcasses, declared that he could find no trace of disease. We heartily wish well to this movement; but we can hardly hope for its success. While it is more than doubtful whether the present restrictions would have been placed upon importations of cattle, under a Liberal Administration, yet, under the circumstances it is hardly likely that the present Liberal Administration will, in this matter, undo the work of its Conservative predecessor. The British farmer is still too much straitened to endure the pressure of competition with unrestricted importations of foreign cattle—or he thinks he is, and the existence among us, here and there in the Atlantic States, of a few scattered cases of pleuro-pneumonia affords him a plausible pretext for exaggerating the risks of contagion to his own herds from free importations of cattle from this side of the Atlantic. For the present, at least, the government is pretty certain to turn a favorable ear to his complaints, and the surest and speediest means by which we can insure unrestricted cattle trade with our trans-Atlantic friends is to extirpate the last traces of pleuro-pneumonia from among our own herds.

Literary Miscellany.

WAITING FOR THE COWS TO COME.

THE farm-house wears a modest mien,
The dormer windows quaint and brown;
And through a tangled web of green
The spring-house roof goes sloping down,
A fragrance on the air sweeps by,
Of new-mown hay, all wet with dew;
And on the barn-roof, thatched with rye,
The pigeons softly light and coo.

The lambs upon the upland play,
The sunset spreads its rose-red glare;
The mountain ranges stretch away
Through dreamy paths of purple air.
Beside the bars, beyond the wood,
Within the mellow twilight gloam,
How oft, a bare-foot boy, I stood,
To wait until the cows came home!

The battle of my life I fought,
Far from the scenes of boyhood's time—
Yet even in my sleep I sought
To clasp a stronger hand than mine!
I heard again the thresher's flail,
And well-remembered sounds of home,
And watched the evening sunlight pale
While waiting for the cows to come.

HOW CLAY WHITTLE'S MANHOOD WAS CROWNED.

M. L. STONE.

ETHEL BRUCE, sat on a low rocker in the recess of the bay windows, apparently in deep thought. A very pretty picture she made, so her brother Hal thought as he passed along the street in company with Clay Whittle. Ivies were creeping above and around her head reaching after the sunlight, while lillies, geraniums, and hyacinths were blooming at her feet.

The gen leman passed on, as also did the hands of the clock, but still Ethel sat in evident study. The room was furnished with cultured taste, and skillful hands kept it looking very luvlling to the family, and their friends. It was library, and sitting room combined. Ethel's parents had always striven to have their home attractive, even if other expenses had to be curtailed very closely.

The mother was an invalid and had been for several weeks, and the willing hands and thoughful heart of mother were sadly missed by the daughter. The rest of the family said "that Ethel took mother's place to them all so well, that for the time they were not great losers," and the mother confined to her room for lack of strength to be elsewhere, rather than from actual pain said "that she was having a rest in mind and body, for Ethel did not neglect anything" and she kept the little mother fresh and dainty, and the room so bright and cheery, that all the family would gather around her in social glee.

Ethel would first notice mother's tired look if they stayed too long, and pleasantly chiding them would drive them off to the sitting room. Clay Whittle used often to come in with Hal to the mother's room, and these little visits were seasons of delight to him. His mother had passed the portals over into the other side. How he missed her room and her counsel, and the time spent over at the Bruces, were choice minutes and great helps to him.

His father was a leading politician, his sister a fashionable woman, while he himself was a law student.

The evening before Clay and Ethel had attended an entertainment together and on passing out from it, she stopped a moment to speak to a friend and Clay was joined by his sister

Clay she asked "why did'nt you bring Eva Drayton this evening."

"I prefer the company I have," he answered.

"Company good enough I dare say, but I like to see a girl with some style in dress. Everything *she* wears is a year old."

"Which of itself is a crime of the first degree in the fashionable world" he answered; joined Ethel and passed on.

So on this the following morning, Ethel was trying to study out some plans for new clothes. Of course she was indignant over the remark, but it was true that all she had, was a year old, but she had felt that they were good enough, until now. She knew too, that all they had to live upon was her father's salary, which might have seemed large to many, but their expenses were correspondingly large, and with mother's sickness and Tom's college bills, or a part of them, somebody had to economize and really deny themselves, and she had felt willing, and even anxious to do her share; but after overhearing the remark of the night before, denying herself had not been so sweet.

She examined the closets to see if there was anything available to be made over, but returned to her low rocker disheartened. Her father came in, and seeing something amiss, asked, "What are your thoughts like, daughter, and what are your wishes? Speak, and if half of the kingdom is desired, it shall be yours!"

"I thought I was queen of the realm, and mistress of all I survey. I desire no more than the home kingdom, with a robe of royal purple."

"Or some other fashionable shade," he said. "Frankly, Ethel, what were you thinking about?"

"I was wondering if there was any surplus money in the family treasury, that I could use for myself," she said.

"I think about forty dollars. Would it help you?"

"Yes, indeed. Just the sum I want."

The father seemed to hesitate. Ethel spoke quickly, "I do not want it, if it is needed elsewhere."

"I'll let you know at tea-time," he said. "Will balance account for the month, and rest assured, you shall have it daughter, if father can spare it," and seated on one knee with her arm twined around his neck, she stroked his manly beard, caressingly.

"We are not rich, Ethel," he said, "but this home is ours, and is a very pleasant, and an attractive one, and I have a family of whom I am both proud and thankful. There is one thing upon which I congratulate myself every week of my life, and it is this—that there are no *unexpected* bills coming in for payment contracted by my family. I know that they never buy without my advice and counsel, *and then order bill sent home.* At the end of the month I come out even, at least. Here is an incident which struck me forcibly, but is only one among the many of my experience. As I passed through the store one day, I saw Mrs Drayton and Eva buying goods. The bill was brought to my desk, copied and 'please remit' added, as is our custom, and placed in an envelope to be handed to parties or mailed. Opportunity for giving it to Mr. Drayton occurred on my way to dinner. He opened it, glanced at the total, and looked very much disturbed."

"Was it large?" asked Ethel.

"Something over an hundred dollars."

"Inside of thirty days will answer?" he asked.

"Yes," I answered and passed on. "The time has expired and no payment yet."

"He is very able to pay it!" exclaimed Ethel.

"Perhaps no more so than your father, Ethel; and several such bills coming in unexpectedly soon seriously embarrass a man who cannot always spare such sums from his business without injury."

At tea-time Mr. Bruce said: "There is just one thing to keep that money from you, and it is Tom's letter just received. He says:

"Father, I have to have ten dollars worth more of books than I have money to cover, and I can not look scarcely decent without a new overcoat. If you remember mine you will agree with me, especially when I tell you it has worn threadbare wondrous fast. Thirty dollars will get one to suit me. Hoping mother is better, and that Ethel and Clay are as friendly as ever, I am as of old, POOR TOM."

"The money is his, father," said Ethel; "and now for mother's tea." As she passed the window she caught a glimpse of Clay and Eva Drayton riding together, and he was driving his sister's span of grays.

"What beauties those horses are," exclaimed Hal; "and now stylish Eva looks. But why are they riding together? Is he taking his sister's advice as soon as this?"

"What do you know about his advisors?" asked Ethel.

"'Little pitchers have big ears,' and the Bruce ears are far too quick for their own good. I stood by the door and heard what she said, and I knew that you heard by the lines around your mouth."

"Well, I cannot have any better to wear, and I am almost glad I cannot, for what I have is good enough," and Ethel entered her mother's room humming a tune.

"I wish I *could* do something," Hal thought; "but my money goes to Tom," and he must not feel that we are sacrificing particulary for him, for he is very sensitive. Mother must not be troubled and father does his best for us all; but Ethel deserves more than she gets, but she looks well in what she has. Confound that Mrs. Stratton anyway!"

"What about the money, Ethel? I'll send Tom enough for his books and you may take the balance," said Mr. Bruce later.

"No, indeed, father! He is away from home and needs it more than I."

"What will you do?" he asked.

"I'll wait until I write my novel," she said, laughing. "Truly, father," she added earnestly, "if I could earn money for my own wants and make it easier for you it would give me great joy."

Hal and his father walked down town that evening and met Eva and Clay. Hal never could keep a secret very well, and he told his father what Mrs. Stratton had said to her brother the evening before.

"I wish I had the money for her," said Mr. Bruce, "but I cannot get it without breaking a rule of ours to which we have always strictly adhered." She says "she will wait until she writes her novel.

"Perhaps it is written," said Hal.

"What do you mean?" asked his father.

"Ethel has a drawer pretty well filled with manuscripts, many of them nicely copied all ready for the press—short stories and longer ones, and bits of poetry, etc."

"Drawer locked?" the father asked.

"No, it is the left hand blind one."

Late that night Mr. Bruce sat up reading his daughter's literary work.

On entering his office next morning the senior member of the firm entrusted him with some important business to go to the city to transact, saying, "It will probably detain you several days." That night he started on his journey and in one side of his valise were a number of Ethel's manuscripts. Her work struck him as remarkably good, but "I am not an unbiased judge," he said of him self.

When his business for the house was well under way, he visited some editorial friends and told his errand.

"Has she ever had anything published?" was asked.

"Not to my knowledge. She was very quiet over her work and told her brother that she feared she never could offer any of her pet pieces for publication, for she felt as if she could not bear a refusal. I am not sure that I am treating her fairly, for she does not dream of these being in my possession."

"I think your daughter has considerable talent In fact some of her pieces are very fine while others we will cut up unmercifully, which will be hard on her feelings, but as good for her as medicine," said the editor after an examination of the manuscript.

He was still to be in the city, and was requested to come in again, which he did, when a check for $100 was handed to him "asking if it would be satisfactory," and also requesting more from the same source.

Business detained Mr. Bruce in the city longer than was anticipated, while the home ones anxiously awaited his return. Mrs. Bruce slowly but surely grew worse and Ethel hovered over her forgetting everything in her anxiety about her.

Clay Whittle made his morning call in the sick room regularly, and just as regularly would ride out with Miss Eva Drayton.

The days came when Mrs Bruce was alarmingly worse, and telegram after telegram was sent to the husband without avail. Hal, Ethel and Clay watched and waited, joined by Tom in their unceasing vigils.

"If only my husband would come!" Mrs. Bruce would say, while the hearts of the others echoed the wish with great earnestness.

Night came on, and Clay said, "If Mr. Bruce is not here at nine o'clock, I will start after him at ten. The wires are cut at a certain point and communication is not to be depended upon," and kneeling at Mrs. Bruce's bedside he said, "I may never see you again my friend on earth: can I not have your blessings ere I go, and consent to my asking Ethel to be my wife. She need not answer now unless she wishes but if she can love me, will you bless us?"

"I know not Ethel's heart, settle it between yourselves my children," and after waiting for Ethel to join them if she would, although she did not, the mother with her hands on the bowed head, pronounced a silent blessing upon him, and an audible amen.

He arose and turned to go, and found Mr. Bruce standing in the doorway.

Days passed and the mother gained strength very slowly. Mr. Bruce gave his daughter the money saying "it was all her own, but nothing more. One evening some company gathered in, and among them Clay and his sister, and they fell to discussing some articles in one of the late monthly periodicals. "I read one" said, Mrs. Stratton, that struck me forcibly. There was so much principle, and heart in it. I'm sure the writer must have a beautiful soul as well as a sensible body. It reminded me very much of my dear mother's ideas of right."

"Was it written by a lady?" asked someone.

"I think so," she answered.

"About such an one as you would choose for me for life's pilgrimage?" asked Clay.

"My ideal for you is not a common one but my dear ambitious brother, I fancy this one is entirely too high for you in your present state."

"Eva is all furs and feathers this winter" said Prof. French. Do not imagine for a moment that while you are illustrious in your profession that she will be a star of greater magnitude in the literary world.

"How about the tableaux you are practicing for, daily? I hear you want them to come off before Lent. There is talk too of Mr. Drayton failing—better hasten them or Eva will not look very angelic or feel so either; I believe she is to personate some such a scene. Some say that much of her father's pecuniary trouble lies in her own and her mother's extravagance."

"Why Prof. French," exclaimed one. "How dare you talk so. Mr. Whittle and Miss Drayton are very intimate, and ride together every day lately.

It takes a long time to prepare for tableaux especially when Mrs. Stratton is commander in chief, but she makes it pleasant, for the grays and coachman are ever ready to serve the young ladies."

"But Eva is afraid of the coachman, and would rather walk than ride with him," said Jennie Miller.

"And the snow is too deep for pedestrians this winter," remarked the professor.

"You are sadly degenerating, Professor French," said Mrs. Stratton. "I'll cease to recommend you as an instructor on the ground of your being a gossip."

"I have often thought that ladies and bachelors are good gossipers—married men never are; but, Clay, I want to congratulate you on being a good horseman. May you hold the reins of law and state as firmly and truly in the future. I understand all about this tableau affair, else I would not have spoken as I have. I have read that article, Mrs. Stratton, and I think it good. It gave me a high opinion of the author. Am sure it never emanated from the brains of a butterfly."

"Read it for us, Professor," said Clay, "if it is not too long."

"Have you read it, Ethel?" asked Professor French.

"No," she answered; "I have not had time or inclination to look at the last number. Mother has taken every moment and absorbed every thought until within a few days, and since then I have slept when I could. Would enjoy hearing you read it," she said.

"You told me once, I believe, that you are not fond of reading, Ethel," said Mrs. Stratton.

She looked up puzzled.

"I think you must have misunderstood Ethel," said Professor French. "She reads a good deal, but not *everything*. She was one of my pupils that adopted a course of reading—"

"And still adheres to it," she answered quietly.

The Professor and Ethel had long been warm friends, and Clay was really afraid sometimes it might prove to be something more. He blessed him in his heart to-night for speaking of the tableaux. He felt that in some way Ethel did not favor him altogether, and it flashed through his mind that perhaps she knew nothing about them as she had been confined closely at home and nothing had been said of them in her presence or of the absence of his brother-in-law, which made it necessary for him to stay at his sister's house, and thus he was subject in many ways to her orders.

Her will was a strong one, and it was often easier to acquiese than to oppose her. He felt sometimes that she had planned the tableaux on purpose to bring him in Eva's company. She was wary enough not to pretend to do so.

But for the reading, Professor French's voice was a wondrous clear one, and words dropping from his lips always sounded musically. A better one could not have been chosen to do an article justice.

Ethel drew an ottoman up to her father's side and sat down. He held one of her hands firmly in his, while the reading progressed. She never dreamed of hearing her own production. When she sat down, the father felt her tremble and saw the lips pale while she listened breathlessly to every word.

Just as it was finished Hal rising said "Please excuse sister. Mother sent me after her sometime ago," and slipping her arm through his, bore her away but not far before she sank fainting at his side. He carried her to her own room and when she revived a little he said, "Praise enough to turn your head, and no one but father and your brother knows you deserve it! Shall I tell them?"

"No indeed not for the world."

"Shall I ask them to excuse you for the rest of the evening. It is most over, and father can attend to them."

"Yes you dear thoughtful brother, I need rest, she answered. She did go down to the parlor again however and heard Prof. French say "that he accused one of his pupils for writing the article whereupon the rest laughed at his conceit.

Clay noticed him watching Ethel, and promised himself that not another day should pass without knowing if Ethel loved him. If she did not, he felt the future would be a weary waste—that his would be a crippled manhood and a one sided life. Ethel was the one thing he needed to make his life a perfect unit and develop his character into what God created him to be.

His morning call was on Ethel and he told her of his whole heart's love, and asked her if she could be his wife.

"Some things are now explained which I did not before understand. Your sister does not like me, but I hope she will when she knows me better, and I am sure my heart's love is yours."

"Thank God" he said kissing her, "My manhood is crowned with the purest and best of His gifts—love, and I can go into life ready for its battle, knowing there is a true heart by the side of mine to strengthen me."

Mr. Bruce joined them and said "Clay do you think wifely duties and literary work will assimilate well enough to make you happy?"

"I am sure that she will do me good and not evil all the days of her life, and that the heart of her husband shall safely trust in her. Was it true that one of Prof French's pupils was the author of that excellent article?"

"Be warned in time" said Mr. Bruce "and with this I bid you God speed and good morning,'" and we will do the same.

ACCORDING to George Francis Train, the late Baron Rothschild had the following maxims framed on his bank walls:

Attend carefully to details of your business!
Be prompt in all things!
Consider well, then decide positively!
Dare to do right! Fear to do wrong!
Endure trials patiently!
Fight life's battle bravely, manfully!
Get not into the society of the vicious!
Hold integrity sacred!
Injure not another's reputation or business!
Join hands only with the virtuous!
Keep your mind from evil thoughts!
Lie not for any consideration!
Make few acquaintances!
Never try to appear what you are not!
Observe good manners!
Pay your debts promptly!
Question not the veracity of a friend!
Respect the counsel of your parents!
Sacrifice money rather than principle!
Use your leisure time for improvement!
Venture not upon the threshold of a wrong!
Watch carefully over your passions!
'X'nd to every one a kindly salutation!
Yield not to discouragement!
Zealously labor for the right!
And success is certain!

THE HUMAN FIGURE.—The proportions of the human figure are six times the length of the feet, whether the form is slender or plump, the rule holds good, any deviation from it is a department from the highest beauty in proportion.

The Greeks make all their statues according to this rule. The face, from the highest point of the forehead, where the hair begins, to the chin is one tenth of the whole stature. The hand, from the wrist to the middle finger is the same. From the top of the chest to the highest point of the forehead, is a seventh. If the face, from the roots of the chin, be divided into three equal parts, the first division determines the place where the eyebrows meet, and the second the nostrils. The hight, from the feet to the top of the head, is the distance from the extremity of the fingers when the arms are extended.

THE VESUVIUS RAILWAY.—Tourists are now able to visit the crater of Vesuvius without the labor of climbing, the railway being complete. The depot is situated at a hight of 810 meters above the Observatory. A restaurant and cafe capable of accommodating 100 people is atached to the depot The angle of inclination of this railroad attains at various points 40°, 50° and 63°. There are two passenger cars, the Vesuvius an Ætna, accommodating 12 perso[illegible]. The tem adopted in the construction of the railway of American invention, and [illegible] prismatic system."

BRIC-A-BRAC.

A GOOD COOK.

Although, dear maid, thy beauty rare
Would tempt a stoic soul to woo thee,
'Tis not alone that thou art fair
That warms my loyal heart unto thee.

The brightness of thine azure eye,
The honeyed sweetness of thy kisses,
At time's command, alas! will fly,
Mute in the sight of other blisses.

But when thy dear eyes dim have grown,
Thy golden locks with silver sprinkled,
When age hath dulled thy voice's tone,
And care that snowy brow hath wrinkled.

Still love for thee my heart shall fill;
The rose smells not less sweet for crumpling,
And age shall find thee able still
To make me steak and kidney dumplings.

INNOCENT SIMPLICITY.

One of the assistants of the Postoffice happened to be standing at one of the delivery windows, when a buxom damsel of about 18 summers, hailing from Berrytown, stepped up and asked if stamps were sold there. Upon being told that they were, she said she wanted to buy $1 worth.

One dollar's worth," repeated the smiling assistant; "of what denomination?"

The damsel showed symptoms of embarrassment, and hesitated to reply. She twirled her shawl fringe nervously, cast her eyes about to see if any one was near, moved a little closer to the window, and finally asked him in a timorous voice:

"Do you hef to write it down?"

"By no means," answered the courteous assistant; "that is not necessary; but I presume you have some preference as to the denomination?"

"Ah—well—yes," replied the stranger, her face turning scarlet, "I hev some. I generally go to the 'Piscopal Methodist myself; but the feller I'm buying the stamps for, he's a Universal Orthodox.—Ithaca Journal.

THE BAKER'S DAUGHTER.

"She walks in beauty like the night
Of cloudless climes and starry skies,"
And lovely though she is to sight,
She is not lovelier than her pies.

The roses of Damascus blow
Their scents to far Arabian sands,
But sweeter is the kneaded dough
That steals the odor of her hands.

Nor sated Turk, nor gouty lord,
Nor pampered prince did e'er partake
Of dainty dish that could afford
Such rapture as her simple cake.

I crave not fame, nor wealth, nor power;
I only wish that I could be
A pound or two of some prime flour,
And she were gently kneading me.
—Andrews' Bazar.

A CORPULENT old lady was at the London Bridge station going down to Sussex. She had a big bag and a small one, and was bustling through the gate to reach the train, when the ticket collector called out, "Ticket, ma'am! Can't pass here till I see your ticket." "I hain't time," she replied. "Can't pass, can't pass!" "I will pass." "Can't ma'am; the rules are very strict." "You will make me lose the train," she shouted. "Plenty of time, ma'am. Train does not go for fifteen minutes yet." She backed down, put down her bags, hustled the contents in a confused mass in search of the ticket without success, and when ten minutes had slipped by she said, "What ticket do you want?" "Your railway ticket, of course," he replied. "Then why didn't you say railway ticket, sir. I had that in my hand. Don't you know there are a hundred different kinds of tickets, sir?"

"Come, wife," said Will, "I pray you devote
Just half a minute to mend this coat,
Which a nail has chanced to rend."
"'Tis ten o'clock," said his drowsy mate:
"I know," said Will, "It is rather late,
But it's never too late too mend."

AN innocent-looking little tot, with a big bundle addressed in a full, round hand to a respectable resident of Tenth Street, San Francisco, plucked a flashy man by the coat-tail a few days ago and asked: "Hi, sir, can you tell me where I can find this man?" The bundle was marked, "Collect bal. on mdse., $1." The flashy man, after surveying the bundle and making a mental estimate of its value, replied: "Why, certainly, that's me; that's my name, sonny. It's meant for me. I live right over there." "But there's a dollar to collect." "To be sure. Here are two halves. Now run back." The flashy man turned the corner, jumped on a car, got out in a secluded quarter and opened the package. It contained a faded old sheep's wool door-mat, wrapped carefully around some hay inclosed in grain sacking, the whole done up with business-like precision in fresh wrapping paper, and tied with the precision of a dry-goods clerk.

A GOOD STORY OF JACKSON.—General Jackson was once visiting a Kentucky town where, among the gentlemen presented to him, was Major Lewis who desired to impress Jackson and his admirers with his own independence. Taking a dignified attitude, he said, "Well, General, I have all my life been voting against you." Jackson courteously bowed to him and said, good humoredly, "Well, Major Lewis, I have all my life been fighting the battles of my country in order that you might enjoy that privilege."

A DULL-LOOKING young man, unaccustomed to traveling, entered the cabin of one of our best steamers, and mistaking a tall mirror for a doorway, thus addressed the reflection, thinking it was a stranger: "Say, mister, when does this boat start?" Not receiving any answer, although he repeated his inquiry two or three times, he yelled out, "Go to thunder, you flat-nosed, shock-headed ool! You don't know anything, anyhow!"

For Women.

CONDUCTED BY MISS RAY CLARK.

PLEASANT WORDS.

NO MATTER how the world may go,
How dark its shadows be,
Or whether June's sweet roses blow
To gladden you and me,
There always is a time of day
Our voices may be heard,
When we can pause beside the way
To say a pleasant word.

The little barefoot girl we meet
The maid whose love was vain,
The legless boy upon the street,
The blind man with his cane.
When they receive the humble mite,
Will feel their bosoms stirred,
If, with the coin of value light,
We pass a pleasant word.

And hearts that now with sorrow ache
Beneath some heavy blow,
Will from the shadows rise and break
The spell of all their woe.
And feel that life hath sunshine new,
And songs as sweet as birds',
If we but be humane and true,
And give them pleasant words.

BYE-LO-LAND.

BABY is going to Bye-lo-land,
Going to see the sights so grand;
Out of the sky the wee stars peep,
Watching to see her fast asleep.
Swing so,
Bye-lo!
Over the hills to Bye-lo-land.

Oh, the bright dreams in Bye-lo-land,
All by the loving angels planned!
Soft little lashes downward close,
Just like the petals of a rose.
Swing so,
Bye-lo!
Prettiest eyes in Bye-lo-land!

Sweet is the way to Bye-lo-land,
Guided by mother's gentle hand.
Little lambs now in the fold,
Little birds nestle from the cold.
Swing so,
Bye-lo!
Baby is safe in Bye-lo-land!

GENTLEMEN FRIENDS.

BY MARGARET B. HARVEY.

AS REGARDS this subject, we find two distinct schools of opinion. Carried to an extreme, one teaches that the desire of gaining the admiration of gentlemen should be the one end and aim of a young lady's existence. The other lifts its hands in holy horror at any but the most casual acquaintance with the opposite sex, and declares that friendship between man and woman is, in the nature of things, impossible.

Extremes, as we have been told over and over again, are to be avoided. But if I were compelled to choose between the two pointed out above, I unhesitatingly aver that I would prefer the first. There is more sense in it, for it recognizes the existence of that holy God-given instinct, which leads to beauty and love and happiness. No matter if it be recognized only in a blind, ignorant way—the recognition is the great fact. The other is a compound of prudery, self-conceit and unutterable coarseness; cavilling at the way our Creator made us. No matter if it be veiled under the semblance of virtue—the evil lurks in it, nevertheless. The former says that men and women were intended to live together as members in one great family, the latter that men and women are bent on each other's destruction, and cannot be trusted together.

Emphatically I say it; I do believe in gentlemen friends. Not lovers, precisely, though I believe in them, too—a friend may develope into a lover. Perhaps the good, old-fashioned, much-abused word *beaux* will do. I believe, then, in beaux, gentlemen with whom a girl can associate as freely as she would with her brothers, but who, being of no kin to her, strange to say, would more readily do her a favor, and who have not the vanity to suppose she is pining away for them.

Any girl who has missed companionship such as this, has missed one of the sweetest pleasures of youth. As well might a bud not blossom, a bird not sing.

Would nine girls out of ten take half the pains and pride that they do now, in their manners, dress, and accomplishments, if they thought no man would ever see them? I trow not. I wouldn't myself.

I know what one class of social reformers will say to all this. They will talk a great deal about "safety," and so forth, in which respect they are scarce one whit ahead of old conservatists, whose cry is "propriety"—and their little advance is in the wrong direction, for it is evident that their thoughts on the subject are not quite so pure. As to "safety," "propriety," and the whole category, I assert just this. Young women of ordinary respectability, who associate with young men of about the same standing, are very much more likely to be pure in mind and heart than those who associate with young women alone. Girls, when they get together, at times, talk of things of which they would never dream, if in the society of gentlemen—and 'tis the same with men.

The conversation of man and women, when together, must necessarily be of matters of interest to both—and so they are gradually led away from thinking of themselves, and of petty, idle, doubtful concerns. Nothing, I believe, like this so effectually puts a restraint upon the tongues of both.

"Flirting." Well, that depends upon what you mean by the word. If you mean conscious seeking for admiration, pretended love making, attracting the notice of strangers in the street, in short, a heartless desire for the mere gratification of vanity: I say, flirting is highly reprehensible. But if you mean an earnest desire to give pleasure a little innocent railing and harmless chatter, a graceful, charming courtesy, flirting is as proper and as healthful as laughing. Let the heart be right, and the outward conduct will, sooner or later, regulate itself.

The world moves. Women do to-day in all guilelessness, what they couldn't have done fifty years ago without laying themselves open to severe criticisms. We may gain just an inkling of the ancient state of affairs, by reading a little book of essays, written by a lady of the old school. In speaking of Mrs. Emma Willard and her physiological researches, the writer states most *naively* that Mrs. Willard hesitated to make her discovery (Circulation by Respiration) public, for fear she could not do so, *without the violation of feminine propriety!* What must be thought of a state of society in which such a sentence could be written? Or rather, in which such a consideration could ever have had weight?

If we believe our grandmothers and old aunts, the time really was when women did think in just the above strain, as a consequence of the false training that they received. In those days it was not considered proper for a lady to go into a gentleman's office, or to write him a letter even on business. Woman's competing with man in the everyday affairs of life has arranged all that, and women are as good as ever they were. In fact, people are beginning to remember that slips from virtue were more common in other days than they are now; and to learn that hedging in women, so far from protecting them, is, in fact, insulting all men by implying that they are scoundrels.

Of this be sure—whatever is not wrong is right. Furthermore, "Evil be to him that evil thinks." A young man and a young woman, who are good and pure in heart and life, can safely be trusted with perfect liberty; a young man and a young woman who are not so, can defy all hindrances.

There are, however, restraints to be respected, in the association of young gentlemen and ladies. But they should not be like prison walls, frowning and horribly suggestive; rather should they be like the light wire fence in the park, invisible until touched.

Keep every man at a certain distance,—not in any manner of aggression, but rather by a negative influence. Your own delicacy ought to be the best guide here; and no one can teach you. Only, be sure that you are sincere, that there is no pretension about you, and it is safe to say that you will get as much respect as you deserve.

Let no man touch you, except when you shake hands. A real gentleman may fasten your cloak in such a way that you will scarcely know it. He may admire an article of dress without examining it. If he wishes to look at a piece of jewelry, take it off and hand it to him. Put on your overshoes yourself. If any young man should forget himself once, say nothing, but draw yourself quietly away, he won't do so the second time. If he does, still say nothing, but leave the room.

In fact, notice nothing annoying. Your very absence of remark will express your displeasure far more effectually than any words. There's always a way of retreat; the door. You won't be troubled very often,—if you are, you will most likely bring it on yourself.

We hear various cautions expressed regarding kissing, embracing, and the like. I can scarce understand why we should. It passes my comprehension how, under ordinary circumstances, and concerning parties who are not lovers, any such counsel should be necessary. If you are fully protected by your own self-respect, no true gentleman will ever advance far enough to think of kissing you.

I have used the term "true gentleman." This brings me to consider who your friends ought to be. Certainly, not anybody and everybody; not any chance acquaintances, picked up here and there. No man ought to have the privilege of visiting at your house, who is not known to be respectable, and who has not been introduced to you in a proper manner by some one in whom you have confidence. If you exercise care in forming acquaintances, you won't have to be very anxious about their behavior afterwards.

Yes, a better day is coming, a day of simplicity, truth and purity, a day held up as one of the ideals towards which the Christian Church is to advance, in which men and women shall dwell together as "brethren and sisters." To those who are worthy, the day has already dawned.

NEW WORK FOR WOMEN.

THE Cincinnati Commercial publishes an interesting interview with a lady dentist of that city, showing the attractions the art of tooth plugging has for the ladies. It says:

For some weeks the passers-by on Seventh Street have observed on the block opposite Shilluto's a sign that reads, "Adelia Riley, Dentist." Drifting in to see Miss Riley one finds a pleasant, graceful young lady, with a story to tell you about the way she became a dentist. Miss Riley is from Hamilton, Ohio, where she first studied her profession under Dr. Howells. After finishing a school course Miss Riley went to her home in Hamilton, and, like Clara Vere de Vere, felt time hang heavy on her hands. There was absolutely nothing for her that was worth doing.

"I think it is the worst thing in the world for a girl to have nothing to do," remarked Miss Riley, "and I began to grow very uneasy over it. The most that I attempted to do was to read novels." And entertaining as this may be the young lady found she could hardly make it a business for life.

One day her father asked her if she would not like to study dentistry. She caught at the idea eagerly.

"I went into it with all manner of enthusiasm," said Miss Riley, "and I think it is beautiful work."

One could not but think of the horrible clamps and instruments of torture, but evidently these had no part in the young ladies visions.

After studying at Hamilton under Dr. Howard, she came to the Ohio Dental College, on College street, and took the course, setting up herself as a professional dentist only last month. The pleasant parlor, with its bay window, its book-case, writing table and easy chairs, is more suggestive of a lady's room than of an office, save for the great dental chair that tells its own story.

"Do you find that you have strength to pull teeth?"

"Yes, if necessary," she replied, "but really it is very seldom that it is necessary. Dental science has discovered so many ways that are better, and we restore the imperfect tooth rather than extract it."

Miss Riley spoke with appreciation of the kindness of experienced dentists who are located in that vicinity to her, and that in any case of indecision or of unusual intricacy she could turn to them for any counsel and aid. Next year Miss Riley intends to enter upon a thorough course; not with a view of relinquishing dentistry as a profession, but of perfecting it. She believes the general state of the system so closely affects all dental operations that an understanding of it is essential to the best success in her chosen profession in which she is an enthusiast.

SAD MEMORIES.

MARGUERITE'S chapter of experience awakened many sad recollections. Her kindness to one she thought so thriftless is a gentle reminder of the words of our great exemplar, "In as much as ye have done it unto one of the least of these, ye have done it unto me." Doubtless the little one will remember it through all coming years, when necessitated to take an active part in life's labor. Perhaps when weary with the burden, sweet memories of childhood will be presented to her, reminding her of this one kind Christian friend who was ever willing and ready to minister to the wants which even her mother's love could not supply, because she was not able to sufficiently comprehend her needs. Bodily wants are not all that is needed in childhood. Many little ones who never knew a tender mother's loving care hunger and long for "only a kind word now and then." They are seemingly starving for kindness. Marguerite was fortunate in having reliable help to leave in charge of her family, many mothers requiring rest are deprived of it from this one cause.

Mothers and children often need a word of encouragement and a helping hand. Is it not best for us to improve every opportunity to relieve?

CONTRIBUTOR.

FASHION NOTES.

SURAH is only a soft twilled silk.

Puffs in the arm holes will be revived.

Jet is more fashionable than ever this season.

All fashionable coiffures are worn low or half low.

All spotted and polka dotted goods will be much worn.

Shoulder kerchiefs of large size will be very fashionable.

A glint of red appears on almost every toilet that is not mourning.

Little elbow capes of lace, chenille and jet make the most stylish summer mantles.

No matter how short the sleeves are, the gloves must be long enough to cover the arm.

Low shoes will be worn a great deal this summer to show the colors and embroideries on stockings.

The puffs on the tight sleeves are said to be more comfortable in warm weather. There ought to be some compensation for their ugliness.

Hooks and eyes, in plain and colored steel have been introduced as substitutes for buttons.

The loops of ribbon used to trim grenadine gowns are of double-faced and watered and satin ribbon, and are sewed perfectly flat on the dress.

The Princess sacque, with a Spanish flounce at the bottom, continues to be the favorite form of dress for little girls.

Gold lace and colored lace is used for millinery purposes, for trimming parasols, fans and rich brocade and velvet dresses.

The Claudent scarf, of the popular shape that is rounded at the throat, is made up this season in the twilled Surah silk in checks or in plain colors.

Instead of woolen breakfast shawls there are now large quantities of India foulard, in bright colors and gay patterns, edged with Languedoc and Raguss laces, put on slightly fulled, not plaited.

Purple and yellow flowers are in vogue. The favorite purple ones are the heliotrope, lilacs, asters and large pansies: while the marigolds, artemisias and soft roses without foliage are the popular yellow ones.

Mantles made of lengthwise plaitings are among the new devices for keeping one warm in July. They are lined and weighted by gimp and jet ornaments, which keep the plaits in place.

Painted wall-flowers, mingled with artificial crape flowers, with garnet beads in place of pistils, and painted aquatic plants and insects, are among the dress decorations seen by Don Juan of the Parisian.

Large hats with irregular, turned-up brims are elaborately trimmed with ostrich plumes, flowers, gold braids and gold ornaments, and used for carriage drives, archery, garden and lawn parties, or on all occasions when dressy toilets are admissible. A pretty idea for a garden hat is to cover a large frame with puffed tulle and trimmed with a wreath of yellow mustard or cowslips. Country hats are of broad beaded leghorn, trimmed with a scarf of tulle, or of coarse straw finished with a wreath of daisies and a bow of black velvet, the brim faced with black velvet. These are useful but heavy.

HINTS.

The latest fashion of engraving initials on a spoon-handle is to half cover it with flowers.

To Clean Straw Hats.—Rub the soiled straw with a cut lemon, and wash off the juice with water. Stiffen with gum water.

To Clean Black Cashmere.—Wash in hot suds with a little borax in the water; rinse in bluing water—very blue—and iron while damp. It will look equal to new.

Sick-headache can often be greatly relieved, and sometimes entirely cured, by the application of a mustard plaster at the base of the neck. The plaster should not be kept on more than a quarter of an hour.

A celebrated physician says: "Babies of six months may have beef tea or mutton broth once a day; at ten or twelve months old, they may have a piece of bread or of rare beefsteak to suck. This with bread and milk, oatmeal porridge, or boiled rice and milk, is the best diet for a baby under two years old."

Industrial Societies.

QUEEN'S COUNTY (L. I.) FAIR.

The Mineola L. I. Fair, to which we paid a flying visit last Thursday (first day), is always well conducted. Object as we may to the consideration which is always given to the speed ring, the course is always in fine condition and the accommodations ample for man and beast. We were glad to see many of our farmers carefully examining the agricultural implements which were displayed by some of our first implement firms. The Spring exhibition of this society, however, makes flowers and fruits its chief attractions. The flowers were tastefully arranged and displayed in pleasing variety. The rage for new Coleus was well shown in the many remarkable seedling strains presented. While we admired them all, the thought occurred as we looked at a fine specimen of Verschateltii that that was at least the peer of any, though hundreds of the oddest markings and colors were shown in the new sorts. The heat and drought of the season cut short the strawberry display, which is usually at this fair a prominent feature. But visitors were all the better enabled to learn what they could not in more favorable springs; viz., which kinds of berries will best withstand both heat and drought. Of over 100 varieties we noticed that Golden Defiance was large and fine; Champion, fair; Sharpless, excellent; Seneca Queen, fair; Miner's Prolific, very good, retaining its bright color; Pioneer, fair; Glossy Cone, fine; Black Defiance, very good; Cumberland Triumph, excellent; Charles Downing, fair only.

But there were four baskets of a bright red, large, handsome berry that all admired more than any other. It was marked "Parry." As the name was new to us we inquired as to its origin of the exhibitor. "I gave the name myself," he replied. "A friend who gave me a few plants five years ago said that they came from Mr. Parry, and so I gave them that name. I have found them the most profitable of any berry I can raise on account of their extreme lateness and their general excellence."

Now, these berries were examined by several experienced and well-known small-fruit growers, and all agreed that they were distinct from any variety they had ever seen. The four baskets easily took the first premium, though among 125 competitors. Mr. Geo. W. Callow, of Jamaica, L. I., is the gentleman who exhibited them. We do not know that he has plants for sale, or that he would sell them if he had. We make these notes in the hopes that the variety will be traced to its origin and its value ascertained for different soils and places. We shall, at least, test it at the Rural Grounds—Mr. Callow having promised to send us a few plants.

We desire to make one other note respecting the Mineola Fair, as a suggestion to fair managers in general. It is that the popularity of the fairs of this association are due not only to good management in general, but in particular to the ample provisions made to supply refreshments in the way of ice-cream, cakes, fruits, ice-water, lemonade, coffee, etc., all served in the tidiest manner, of first-rate quality and at the same, or even a less price than such things are furnished at respectable restaurants.

Domestic Economy.

CONDUCTED BY EMILY MAPLE.

PEN THOUGHTS FROM "EVERY-DAY HOUSE."

ANNIE L. JACK.

The hot weather came suddenly upon us, and the thermometer has been up among the nineties. There was no Spring this season, unless it may be a *spring* from Winter into Summer, for we no sooner saw the violets come and go, than the roses were budded. The bright dandelion that generally stays by us for a week, dotting the meadows with its cheery, homely beauty, seemed to suddenly go to seed, and we felt in sympathy with our three-year-old baby who would not be convinced that his yellow pets had passed away, as he threw down the puffy seed balls his wiser sister was industriously blowing, and exclaimed impatiently: "They a'in't dandelions I tell you," and could not understand the change from flower to fruition, thus exemplified. How strange and perversely observant children are with now a trait of character from one parent, then some characteristic of the other, and how often some individuality untraceable to either. So little three-year-old persists in calling all the black or brown chickens "birds," while allowing that the white ones, that resemble their mother in color, are "chickens," and he seems to think they have no right to the same amount of food and respect, till I have sometimes thought he could not be a better judge of color if he had been educated at West Point.

I hope all the Rural readers who are land culturists have a bed of asparagus. It is such a treat after the winter vegetables. There are many ways of cooking it; but even if boiled, just like potatoes, and a little butter added, it is very palatable—if there is not time for more elaborate methods. It is supposed to possess many curative qualities; but physicians assert its chief virtue is in the albumen it contains, and say that even the drunkard's impoverished system may be recruited if the alcohol is withdrawn and raw eggs and asparagus substituted as articles of diet. I think I have remarked before that I do not consider that, as country people, we sufficiently value eggs for table use when we know that, pound for pound, they are more nutritious than beef. A dozen may be considered equivalent to two pounds of beef, as the shell is less in proportion than the bone of beef, while the percentage of water is about the same in each—75 per cent. The white of an egg, weighing 600 grains, is chiefly albumen, and in its chemical properties resembles the fibrine of beef or gluten of grain. The yelk weighs 300 grains, and is composed of one-third albumen and two-thirds oil, resembling meat as food in having fat mixed in with its albumen or fibrine. Simple boiled eggs are the very best diet for children, after milk, and when as cheap as they are at this season of the year, they form quite an important item of domestic economy.

DISH WASHING—INSECTS.

After reading "Marguerite's" letter on the science of dish-washing, the subject started a train of thought to my mind, and still holding the Rural, idly in my lap, I thought, can it be possible that dish washing can be elevated to one of the fine arts; that all the disagreeableness of this task lies in our own imagination? I was just reveling in a delightful dream on the beauties of this cleanly art, when a cry from babyland startled me, and down I came from those airy visions with a dull "thud" to the realities of earth once more, where I found a pair of bright, black eyes looking at me from the crib, as swimming in tears they seemed to reproach me for daring to forget, even for a moment, that I was not of the "earth's, earthy." As soon as peace was restored, I took my pen to give some of the Rural sisters, who may be situated like myself, a sketch of this dish-washing art, under many difficulties. After breakfast, I put away all eatables, and pile up the dishes and then take the young "lord of the manor," and try to persuade him into the land of dreams. About the time I have succeeded and laid him away very gently in his crib, some miserable dog will come by the fence barking for dear life, or some other noise awakes the baby, and after trying in vain to get him asleep again, I feel so chagrined and tired that I could cry.

By this time the dish-water is cold the fire gone out and baby just trying himself to help the work along. By dint of giving him all the tinware to pound and singing to him at the top of my voice, I at last get the dishes washed, but I cannot say that I admire the art followed under such difficulties. I have neither a well nor cistern, and as I have to carry water from my neighbor's—about a furlong from my house—I am as sparing of it as I consistently can be. I never use soap on dishes, as I cannot bear the slippery feeling it gives them.

To free a room of bed-bugs, touch all you can with a feather duster dipped in carbolic acid, remove all clothing and then fumigate the room and bedding with brimstone, which can be done, by putting some hot coals on a pan and throwing on the brimstone. Close up the room tightly and in 24 hours the bugs will have vanished. If you are troubled with ants in the pantry, place fresh tansy leaves around, here and there.

Catarrh Snuff.

Goldenseal, 10 grains; gum myrrh, 6 grains; sulphate zinc 10 grains; blue stone 6 grains. Powder fine and snuff in the nostrils three or four times daily, according to severity of attack. Mrs. W. J. Galpin.

Knitting Yarn, Convenient Boxes and Cake Chests.

I think the New York Mills' knitting cotton would suit Mrs. Mary Wager-Fisher. I have used the unbleached and the white for several years, and have always found it soft, very smooth and as durable as home-prepared. Our merchants now offer it of various colors. I cannot speak of the durability of the colored; but it looks nice. It comes in half-pound bunches, costing 35 cents each, at retail.

When our farm-house was built it was not customary to provide many closets or cupboards, and ours, though roomy, had only one of each. Being bothered for places to keep patterns, I one day thought I might utilize some of the cheese-boxes in the wood-house chamber; and to improve the looks of the first I cut a piece of old ticking three inches deeper than the box, and long enough to go around it, and joining the ends drew a cord through the edges; then, placing it round the box, I tied one under it, the other on the inside. This was merely to protect the cover, which I made in the same way of some firm, smooth cloth. In fact an old camlet cloak furnished that. I then placed a quantity of corn husks on top of the cover with some cotton from an old quilt over them, and a piece of the brown cloth over all, letting it extend to the inside.

By using small tacks I succeeded in securing it, although the wood was thin. For a finish to the edge I cut a strip as deep as the rim, notched the edges, laid it in box plaits and sewed it fast, and, lo! I had a much needed receptacle and a convenient low seat for my chamber. Another I painted of the color of the wood-work of another room, and cushioned the top, covering it with cloth to correspond. I like the last the better, as the cloth on the edge wears out too soon.

A Cake Chest.

I had long used jars, but found them inconvenient because crumbs from one loaf would adhere to another, and if frosted it would surely be crumbled off on the edges. I could find only small chests in the tin shops, and I wanted one large enough to contain a batch of cookies and several loaves of cake; so I took an old boiler to my tinner and had him make a tray with a strong handle at each end. This is placed far enough from the top to admit cakes as thick as I ever bake, and leaves the lower portion just right for two heaping pans of cookies or fried cakes. He added hinges to the cover. I painted it outside and inside except the tray. It cost only eighty cents and is entirely satisfactory.

Oswego Co., N. Y. Faith Ford.

DOMESTIC RECIPES.

Beef-steak Cakes.

One and one-half cup of sugar, one cup of butter, one cup of sweet milk, three eggs, two teaspoonfuls of cream-of-tartar, one teaspoonful of soda, three and one-fourth cups of flour. Divide equally: To one-half add one-half cup of chopped raisins, cinnamon and cloves to taste. This makes four round tins. Put together in alternate layers of dark and light. One egg for icing to put between layers.

Dried Apple Cake.

Soak two cups of dried apples over-night. Chop fine and boil in two cups of molasses until soft. Drain off the molasses, add to it, one cup of butter, two eggs, one cup of sour milk, two teaspoons of saleratus, four cups of flour, spices of all kinds. Add the apples last.

Economical Jelly Cake.

One egg, one cup of sugar, one tablespoon melted butter, one-fourth cup of sweet milk, one teaspoon cream-of-tartar, one teaspoon of saleratus, one and one-half cup of flour.

Surprise Cake.

One egg, one cup of sugar, (rounded), one-half cup of butter, one cup of sweet milk, one teaspoon saleratus, two teaspoons cream-of-tartar, two and a half cups of flour, two teaspoons lemon extract.

Molasses Cake.

Two eggs, one cup of sugar, one cup of molasses, one-half cup of butter, two teaspoons of saleratus, dissolved in one cup of boiling water, spice, three cups flour. Rose Bud.

Flies on Gilt Frames.

After house cleaning this spring I applied onion water to all of my picture frames. This is, I believe, a sure preventive against flies injuring them. Boil three onions in a pint of water; strain and use when cold. It in no way harms the gilding. Mrs. G. L. A.

To Keep Eggs.

I have kept eggs from June to Christmas by greasing each with a little melted lard and packing, small end down, in a barrel of wheat bran. A. L.

Wind Mills.

Halladay Standard.

VICTORIOUS AT
Phila., 1876—Paris, 1878
25 Years in Use.
GUARANTEED SUPERIOR
To any other Windmill Made.
17 SIZES—1 MAN TO 45 HORSE POWE
Adopted by the leading R. R. Co.'s and by the U. S. Govt. at Forts and Garrisons.

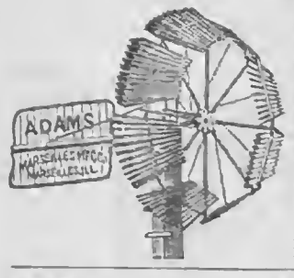
I. X. L. WIND MILL.

For Simplicity, Durability and Power *this mill has no equal.* It runs equally well in light or heavy winds. Ice and sleet do not effect it. Works well under all circumstances; never gets out of order. We warrant all our mills. Circulars and descriptive catalogues sent free on application to the Phelps & Bigelow Wind Mill Co., Kalamazoo, Mich.



Adams Wind Mill.
Works in a lighter breeze than any other. Governs itself perfectly. Its operation can not be interfered with by ice or sleet storms. Well made, Strong, Durable. Illustrated circulars of all our goods sent free. Address MARSEILLES MFG. CO., Marseilles, La Salle Co., Ill. Send for Catalogue "C."

Ne Plus Ultra
AUTOMATIC
Wind Mill.
New ten-foot diameter of wheel. One-horse power; elegant and durable; made expressly for raising water for farm and house uses. Price $50.00. Any person can set them up.
KEWANEE MF'G CO.
35 Broadway, N. Y.

The request often made by publishers that readers will mention their journals when answering advertisements, seems to us a very reasonable one. Such mention is a helpful and friendly act to the journal mentioned and enables the advertiser to determine which journals are the best advertising mediums. Reference to our advertising columns will show there is not one advertisement of an exceptional or ambiguous character admitted. In so far as this is possible we hold ourselves responsible for their high-standing and trustworthiness.

News of the Week.

MISCELLANEOUS.

Monday, June 21.

In 1874 the Commissioners of Emigration gave the various trunk lines of railroads permission to employ agents in the rotunda at Castle Garden to sell tickets to immigrants. The companies then employed agents in foreign ports to sell tickets to emigrants for their respective lines, and they also sold orders for tickets on the agents at Castle Garden. Under this system the immigrants are taken, to a large extent, out of the hands of the commissioners here, and there have been numerous complaints of overcharging on the part of the foreign agents Another evil is the fact that a large number of the employes at Castle Garden have been detected in receiving commissions from railroad companies, boarding-housekeepers, etc., for such business as the employes could throw in their way. The commissioners have notified all employes that any one caught receiving commissions in the future would be at once discharged. ....A white woman named Stevens, living a mile from Pine Bluff, Ark., was outraged and afterward murdered the 16th inst. The circumstances led to the arrest of John Crier and one Jackson (negroes) and G. A. Dalton and Robert Connolly (whites). Connolly and Mrs Stevens have been living together .....Samuel J. Tilden has sent a formal letter of withdrawal as a possible Democratic nominee for the Presidency to the New York delegation at Cincinnati. The convention will open to-morrow, Tuesday, the 22d, instead of a week ago, as was erroneously announced in our last.....Gen. Buell reports from Fort Wingate that on the 17th he had a council with the head chiefs and many sub chiefs and old men of the Navajo tribe. They acknowledged that some of their young men had been behaving badly, but denied having had a council with the Utes recently. No Indian depredations have been reported from Southern New Mexico lately. Victoria's band is recuperating in Chihuahua.....The President contemplates taking a trip to California and Oregon in September.....Jacob Vogus, one of the wealthiest farmers of Kokowo, Indiana, was shot by his son James on last Friday and died from the effects of the wound Sunday evening. The shooting took place in a saloon, and those who witnessed the affair pronounce it the most deliberate case of murder imaginable. The trouble arose from a family difficulty. The parricide is the youngest of a large family of boys, and is unmarried. Threats of lynching are freely made..... The Czar of Russia has tendered to Mr. Wharton Barker of Philadelphia, the sole right to develop the great iron and coal fields in Southern Russia, bordering on the sea of Azof. American capital is to be used in the project, and a number of capitalists agree to subscribe $8,000,000 to start the undertaking ...Ex-Senator James A. Bayard died on the 16th inst., aged 81 years. He represented Delaware in the Senate of the United States from 1851 to 1864, and resigned in spite of a re-election to a third term...Extensive oil fires and losses are again reported from Penn.....A report from White Ranch, Texas, says that four men were lynched recently at that place for crookedness with cattle.... An eight-year old boy, son of a farmer in Kearney, N. J., had a miraculous escape from death recently. He was drawing water from a well when the rope broke and the bucket fell to the bottom, and he losing his balance followed it. The well is 80 feet deep, had eight feet of water, and is only three feet in diameter at the bottom. Two iron bound buckets were floating in the water and yet the boy did not strike either. Luckily he was seen to fall and as he was none the worse for the bath, he was told to step into a bucket and hold fast to the rope, which he did and was thus drawn up....Another crash in the fog took place 200 miles off Sandy Hook a week ago, the steamer Queen of the National Line, running into the steamer Anchoria. Luckily no lives were lost. The passengers were transferred to the Queen and brought back to New York, which port they had left only a few hours before....A public meeting was recently held at Camden, S. C., to inaugurate means to put a stop to duels, which are becoming so frequent. An anti-dueling association was formed, with Judge Kershew as President. The association propose to prosecute all violations of the law regarding dueling. On the heel of this session, a duel over a political disagreement is expected between Capt. De Pas and Col. Cash. They were arrested for being about to engage in a duel, and gave bonds. Both left town, and it was ascertained that the field was changed to a point near Chesterfield Court-House, in North Carolina, and a meeting will soon take place.

Martial law is enforced in Leadville, Colorado. We have heretofore noticed that the miners in that place were on a strike. This resulted in disorder and crime, and the Governor was obliged to declare martial law with Gen. D. G. Cook in command. The excitement is intense.

AGRICULTURAL NEWS.

DURING the session of Congress that has just ended, the appropriations made for the Department of Agriculture amounted to $253,300. The chief laws passed relating to matters agricultural, were: (1) An act for the relief of settlers on public lands, allowing their rights to relate back to the date of their settlement, the same as if they had settled under the pre-emption laws. (2). An act relating to timber tresspasses committed prior to March 1, 1879, relieving the tresspassers from prosecution upon payment of the price of the timber. (3). An act to amend certain sections of the Revised Statutes concerning mineral lands, allowing agents of non-residents to make the affidavits necessary to obtain patents. (4). An act to provide for the repayment of fees, purchase money and commissions paid on void entries of public lands....A pamphlet entitled "Agriculture in the United States and Russia," just issued in St. Petersburg, concludes that unless all the modern appliances of the grain trade and the improved American methods of agriculture are introduced in Russia, Russian prosperity will be seriously endangered.... A meeting of the N. Y. State Dairymen's Association and Board of Trade was held June 14, at Bagg's hotel, Utica. X. A. Willard was appointed manager of the Association rooms, and authorized to receive the funds from the estate of J. W. Cronkhite, deceased, belonging to the Association. On motion of Mr. Willard, the secretary was empowered to publish 500 copies of a circular containing constitution and Board of Trade rules ...The Roumanian Administration has begun setting out forests of young trees in the Dobrudja, her acquisition from Turkey at the close of the late war. Near Mejidie, 14,000 trees have already been planted....The Duke of Portland has just intimated his intention of returning ten per cent. at the next audit to his agricultural tenantry in Notts and Derbyshire. The Duke has returned twenty per cent. on his Bothal estate in Northumberland, the remission extending over three quarters. The Duke of Bedford's remissions to his tenantry during the last 18 months amount to over $500 000.... During the past 52 years the highest price wool was worth in the New York market was in the years 1866, 1872 and 1873. In these years it reached the high figure of 75 cents per pound. In the same period the lowest point reached was 19 cents.... By a return of agrarian outrages in Ireland down to Jan. 31, the total was 977, of which Connaught claims 544 and Mayo and Galway alone contribute 400. The other provinces average 140. Of the 977, conviction could only be secured in 69, while in the majority of eight hundred and odd cases the offenders were not even made amenable. The convictions in Connaught were less than five per cent.....The imports of live stock into France during the first four months of the present year, though less than those of 1878, are much in excess of the numbers received last year during the same period. They comprise 40,050 cattle, 331,648 sheep, and 35,035 pigs. The imports of horses continually increase; they were for the four months—4,854 in 1878, 7,413 in 1879, and 7,820 this year ... England paid Germany £3,000,000 for potatoes last year.... At the joint sales of Jersey cows and heifers and Short-horns at Nashville, Tenn., seven Jerseys brought from $110 to $180, aggregating $1,020, two Short-horn cows $45 and $80 respectively, and eight bulls a total of $598....Our esteemed contributor, Mr. M. B. Bateham, the eminent horticulturist, has been very ill with congestion of the lungs. At one time his life was despaired of, but he is now convalescent with strong prospects of entire recovery....The comparative exports of cereals from the five principal Atlantic seaports for the last three years have been:

	1877. Bushels.	1878. Bushels.	1879. Bushels.
New York	62,418,317	107 819 041	124,350,982
Philadelphia	14,415,965	29,876,527	32,310,473
Baltimore	25,641,450	39,724,954	55,329,391
Boston	5,874,621	13,941,359	15,774,076
Montreal	16,873,763	22,138,647	21,817,673
Total bushels	124,582,116	212,497,231	249,943,748
Total except New York	62,163,799	104 678,187	125,591,816

It is estimated that the Texas cattle drive for 1880 will reach nearly 300,000 head, against 265,000 last year. Of the former number, some 125,000 will not be marketed, but driven to the Powder and Yellowstone districts to winter....The number of cattle killed per year in the United States is 11,825,000, the meats from which amount to 4,088,300,000 pounds, and their total value when killed for food is $608,200,000.. A company has been organized in New Orleans to establish a jute factory. A good deal of seed will be planted in Louisiana this year....The exports of domestic produce from New York during the past week have been the heaviest on record, amounting to $10,802 000...A dispatch from Indianapolis on the 18th inst. says that the first car-load of new wheat of this season was inspected that day, and sold for $1.05 per bushel. It was shipped from Vincennes.....The Mark Lane Express of the 15th says: Both wheat and barley, especially the latter, have improved greatly during the past fortnight. Warmer weather, however, is still wanted. Deliveries of English wheat at the principal towns continue about half of those of the corresponding time last year. Offerings at Mark Lane are also quite unimportant, and trade quiet. Holders, however, despite the improvement in the appearance of the home crop, have not pressed sales. Millers have taken what few lots were suitable for grinding at former prices, but there was no inferior samples. Imports of foreign into London have been moderate. This circumstance, combined with the Continental demand, which has now extended to grain in London warehouses, neutralized the tendency usual at this period of the year to discount the effects of the weather.....A whole afternoon of the recent convention at Lansing of the Michigan Sheep-breeders' and Wool-Growers' association was given up to a debate on the question of washing sheep, and the result was an almost unanimous verdict to the effect that the practice is not only useless and barbarous but unprofitable, taking into account the often fatal effect on fine animals this shocked by being forced into water.....Within a few days we have seen reports of injury to cereals by the Army-worm come from various places in Rhode Island, Conn., N. Y., Pa., West Va., Ohio, Illinois, and Iowa. Probably the pest has put in its hateful appearance elsewhere, also....Here is the latest forecast by Mr. Vennor, the weather prophet under date of Montreal, June 13: "The last six days of June (25th to 30th) will likely be remarkable for intense and oppressive heat, with frequent and severe storms of thunder and lightning. This heated term will probably extend through the first half of July. There will be some cool weather after the 20th. Severe frosts in the neighborhood of the 24th, 25th, and 26th—possibly with flurries of snow in the mountains."....The State of Wisconsin, on the 14th inst., sold at auction some 880 acres of about 25,000 acres of indemnity school lands, secured from the General Government last year, at prices ranging from $1.25 to $1.75 per acre. Many bids are already in for purchase of unsold lands in this category at private sale and it is expected that within the next few weeks a large quantity will be thus disposed of....

Proclamation by the President.

Fault-finding is so seldom indulged in by those who use the medicines manufactured by the World's Dispensary Medical Association, that the President of that corporation, the Hon. R. V. Pierce, M. D., has issued a special request or proclamation to any and all persons, if there be any such, who may have taken or shall hereafter use any of the family medicines now made and sold by the said Association, in all countries of the world, and who have not derived full benefit from said medicines, that if they will write the said Association a description of their maladies, the Faculty of the Dispensary will advise them with respect to the successful treatment of their diseases. Dr. Pierce's Golden Medical Discovery is guaranteed to cure, all humors from the common blotch, pimple or eruption, to the worst scrofula or king's evil, and those virulent poisons that lurk in the system as a sequel or secondary affection resulting from badly-treated or neglected primary diseases. It also cures bronchial, throat and lung diseases. Extract of Smart-Weed cures bowel affections, colds, and all painful, rheumatic and neuralgic affections. Dr. Pierce's Pellets (little sugar-coated pills), are the little giant cathartic. Address, World's Dispensary Medical Association, Buffalo, N. Y., or Great Russell Street Buildings, London, Eng,

A Protective Duty.

The person subject to derangement of the kidneys or liver has a protective duty to perform in purchasing a package of Kidney Wort. It imparts new vitality to the sick body and cures by eliminating obstructive matter.

Burnett's Cologne received the highest award at the Centennial Exhibition. It is filled in elegant bottles, and is for sale by all first-class Grocers and Druggists.

Women that have been bedridden for years have been entirely cured of female weakness by the use of LYDIA E. PINKHAM'S VEGETABLE COMPOUND. Send to Mrs. Lydia E. Pinkham, 233 Western Avenue, Lynn, Mass., for pamphlets.

The Markets.

SPECIALS FROM ALL CENTERS.
Until Saturday, June 12.

Butter, Cheese and Eggs.

Boston.—BUTTER.—There has been this week quite a number of orders for shipment, and the sales of Vermont and Western butter for export have stiffened up prices, and quotations have advanced from one to two cents a pound. How long this export demand will last no one can tell, but prices abroad are likely to drop any day, and they are at best very uncertain. Northern choice creamery 22@23c. per lb; choice New York dairy; 20@21c; choice Vermont 21@23c; fair to good 16@18c; common 14@15c, Western choice creameries 22@23c; fair to good 19@20c; choice dairy packed 19@20c; choice ladle packed 16@17c; common, 14@16c; CHEESE.—Receipts for the week, 4705 boxes. The receipts are more liberal prices lower. There is very fine cheese sold above 11c, although now and then a fancy lot will bring 11½c. New whole milk 11@12c; new half skims 8@9c; new skims 5@6c; EGGS.—Receipts, 1936 boxes, 101 bbls. The market is firm, and there is a very good demand for fresh stock.

Cincinnati.—BUTTER—There has been a better trade in this line during the week ending to-day, for although the local consumptive demand is mainly supplied from suburban sources there is only enough fine Dairy and Creamery arriving to fill the wants of retailers who have a trade for the best that can be obtained. Packers have bought more freely and have taken some of the better qualities and paid a little better prices, but most of their purchasers are at 10@12c. Fancy Creamery and Dairy have advanced 1c, but the medium grades have not changed much. The average quality is good and there is very little butter arriving, which will not bring as much as 11c Fancy Creamery sells at 21@22c, and fair at 19@18c, choice Western Reserve and Dairy at 14@16c; prime Central Ohio 12@13c medium do. 10@11c, and inferior 6@8c per lb. CHEESE.—The receipts are about equal to the current demand and the market is steady and firm for prime to choice factory at 9@10c per lb. Partly skimmed sell at 8@8½. EGGS the demand is comparatively light, and with an ample supply the market is easy at 9½@10c per dozen for fresh.

Chicago.—BUTTER.—There was during the week a firm market for fine grades, and prices of common and medium qualities also were very well sustained, there being a good demand for nearly all descriptions. Receipts are liberal, but as yet, there is no large accumulation of stock at this point: Creamery, 17@19½c; good to choice dairy, 14@16c; packing stock, 10½@11½c; grease 5@8c CHEESE—In response to lower prices at New York and Liverpool this market was depressed. Buyers continue very conservative, and holders find it difficult to move large lots except at a concession from quoted prices. Full cream, new, 10@10½c; part skim, new, 8@9c; full skim, new, 5@6½c. low grades, 4@5c EGGS—Were steady at 9½@10c per doz., the outside for cases.

Philadelphia.—BUTTER—During the week there was a continued good demand for fine qualities for home use, and arrivals of this description were closely sold up. Medium grades were dull and weak, as shippers were holding off for lower prices, and the quality of the offerings, as a general thing, was not sufficiently attractive for the home trade. We quote creamery extras at 22c.; do. good to choice, 19@21c.; imitation creamery, 12@17c., as to quality; Bradford tubs, extras, 19@20c; York State tubs, extras, 19@21c.; fair to choice, 15@17c.; Western dairy, fancy, 16@17c., little of this kind here; do. fair to good at 11@14c.; factory packed, 11@15c, as to quality—shippers not willing to pay over 12½c. for good; common grades, 8@9c Rolls—Fancy, 14@15c, none here; do fair to prime, 9@12c. Prints—Fancy at 22@25c; do. first at 17@20c. do seconds at 10@15c. CHEESE continued weak and unsettled, under a pressure to sell and advices of a decline in other markets. Extremes were hard to reach. We quote New York factory full cream at 11@11½c; do. fair to good, 9½@10½c.; do half skims, 8@8½c; full skims, 4@7c., as to quality. Ohio flats, choice, 9@9½c.; do. fair to good, 8@8½c. EGGS—The market was depressed by freer offerings, particularly of inferior Western, and the general demand lacked snap, but strictly fine fresh stock in good order was in comparatively fair demand, and the best marks of near-by stock held steady at former rates. We quote inferior Western at 12@12½c; fair fresh do at 13c; fine do. do. at 12½c, in a wholesale way, with jobbing sales at 14c. and Pennsylvania, New Jersey, Delaware and other near-by stock at 14½@15c.

Wool.

Boston.—The Commercial List gives voice to the state of the trade, not in New England only, but throughout the country. It says: Prices are gradually settling down and each week for some weeks past has led to a lower basis both here and in the interior. What is considered as a comparatively low price at the close may be looked upon as a high price before another week has passed, as this has been but a repetition of the market for the past ten weeks The most surprising feature of the trade is the continued indifference of buyers, and as long as this indifference is as decided as it is at present we cannot look for any other state of things than an unsettled market and declining prices Some of our dealers are carrying large supplies of foreign wool, and they are anxious to see an outlet for that before stocking up with the new clip. Manufacturers still have sufficient wool on hand to keep their machinery running, some of them for some months ahead, and they hesitate to purchase the new clip before their old stocks become more reduced, especially as at present there is no indication of an active fall trade in goods. Speculators are demoralized, as early purchases in the interior have proved quite unprofitable. As soon as buyers can purchase the new clip, and turn it over at even a small profit, they will not hesitate to do so, but this looks to a lower range of prices than even now prevails A week or two may bring about a different state of things, but there is no indication of such a change at present, as neither manufacturers, dealers, or speculators appear to have any confidence in present values.

In previous years, when the new clip was ready for market, it has been customary for manufacturers, dealers and speculators to compete for it in the interior, and this has been sure to force up prices where they could not be maintained. This year the reverse has been the case, and lower prices from week to week have failed to bring about sufficient confidence for a general movement at all points. In Michigan very little has been done as yet, and 35c. appears to be about as high as buyers are willing to pay. In Ohio and Pennsylvania no movement, and 40c is considered an outside figure for good average lots. In California there is a good demand for Northern Wools at 27@30c, but good Southern Wool is now dull at 20@22½c, and in some instances below 20c ₮ lb has been taken. In Kentucky the clip opened at 43c, and settled down to 31@32c. and now held at 32c and above for desirable lots. The bulk of this clip has already been sold, but this year it has been taken by the combing and delaine mills, while last year it was largely used for clothing purposes There has also been considerable of the clip of Missouri bought up, recent prices ranging from 31@32½c, and in Georgia the sales have been to some extent, principally at 33@35c per lb. In Maine, unwashed Wools have settled down to 30c per lb.

Chicago—Wool was in moderate demand demand. Buyers are still holding back, or taking small lots as they come on the market. The wool market has not changed materially since our last report, and most manufacturers are still inclined to hold off, especially as the slow movement in woolen goods relieves them from any immediate pressure for new supplies There is very little disposition in any direction to force prices lower than they are at present, but operations will continue to be restricted until the tone of the market becomes more settled Quotations; good medium tub, 43@46c; coarse or dingy tub, 40@42c; fine unwashed fleece, 26@28c; coarse unwashed fleece, 20@24c.; medium unwashed fleece, 25@28c.

PRODUCE AND PROVISIONS.

NEW YORK, Saturday, June 19 1880.

BEANS AND PEAS. The movement for export styles of beans is light; no new important business. Medium extremely quiet. There is now an easy tone to prices as a good many parcels of weather softened stock are being pushed upon the market. No white kidneys in stock; an arrival would bring quotations. Red kidneys steady though nominally low.

Green peas quiet at $1.50@1.60 for Wis. bbls.; and Southern, B. E peas are lower; quoted $1 70@1 80 ₮ 2 bush. bag. Marrow beans, prime, $1.40.; other, $1 50@1.60, medium, prime $1.32½@1.37; other, $1.20 @1.30; pea, $1 45@1.60 white kidney, $1.40@1.55, red kidney prime $1.45@1.50; other, $1.30@1.40; black, $2.20. Lima, 86.

Receipts of beans for week 2,635 bush.; exports, 2,500 pkgs.

BEESWAX.—Small sales have been at 23½@24c. for Western and Southern.

BROOM CORN—Offerings are small and prices steady Brush and short broom choice, per lb, 7@8.; do., do. common to good, 5@6½c.; hurl, good to choice, 7@8c; do common to fair, 5½@6½c.; red and crooked at 3@4c.

BUTTER.—The past fortnight has been a most encouraging one, and has tended to the realization of the most glowing prophecies of New York ability to handle large supplies of good State butter Exporters have again dealt heavily and a steady home call has kept prices about up to last week's rates Some extra creamery of settled mark still quoted 22c., but the shaded rates annexed represent new wholesale business. Western stock does not come forward freely, but there is no so much as full easy quoted State that they lack of discriminations.

Creamery, fancy, 21@23c.; good to prime 20@20½c.; fair to good, 19@20c.; sweet cream, fine, 20@21c.; sweet cream fair to prime, 19@20c; firkins, choice yellow, 20c. fair to prime, 18@19c; pails and hf. tubs, choice, 19@20c.; good to prime, 18@19; fair to good, 17@18; poor, 14@16c.; Welsh tubs, prime, 18@19c. fair to good, 17@18c.; poor, 14@16c. Western imitation creamery, 14@16c; dairy, fresh, extra, 16½@17c; good to prime, 15@16c. fair to good, 11@15c.; poor to fair, 10@14c.; factory, full grass, fine, 9½c.; good to prime, 14@15c.; fair to good, 13½@14½c.; poor to fair, 12@13½c.

CHEESE—The market has had a bad break this week, and closed somewhat unsettled. The decline has been steady from day to day as the indications were of steadily increasing receipts and at the close 10½c, stands as the general sales on choice factories. The reduced prices have sent the stock out freely and the exports reach 100,400 boxes.

Quotations at the close are 10¾ for choice; 9¾@10¼c. for good and fine; 9 9¼c for fair Ohio factory at 8¾@9¼c for good to prime; 8¼ 9¼c. for fair and good lots; 3@6c. for skimmed.

Receipts for week 111,750 boxes.

Exports for week, 98,900 boxes, Liverpool cable 63s.; steam to Liverpool, 65@68

COTTON.—Export trade has been brisk and speculative dealings full, with prices firm, closing at for June, 11.75@11 75c. July, 11.66c. August, 11.82c., September, 11.20@11.21c.; October, 10.81c.; November, 10 65c.; December, 10 6 c.; January, 10.53@10.71.

Quotations for spot cotton are based on American standard of classification, and of cotton of a shade running in quality not more than half a grade above or below the grade quoted.

DRIED FRUITS.—Trade continues slow and prices unsettled and nominal.

Latest prices are for N. C apples, fair to good, at 7@8½c. choice, at 9@9¼c.; New York State quarters sliced at 7¼@7¾c.; patent evaporated in cases, choice at 14@15c., good and prime 13½@14c.; evaporated, sliced at 12@13c. Evaporated peeled peaches, good to choice, at 20@22c.; North Carolina peeled choice, 16@17c.; Georgia prime at 15@16c.; fair to good at 13@14c. common at 10@12c.; unpeeled halves at 7@8c.; do. quarters at 6@6½c. Pitted cherries at 17@18c. Blackberries nominal. Raspberries at 28@30c. Plums at 17@17½c.

EGGS. Receipts for week, 12,400 bbls.; do, last week, 11,500 do. The market has lost much of its firmness; the strong prices of last week drove away buyers, and during the past few days sellers have been trying to coax back trade by shading prices.

Near Points, 15@16c.; State and Penn., 13½@14½c.; Western, fresh, 12½@13c.; Canadian, 12½@13c.; poor or ice-house lots, 12@12½c.

FLOUR.—Prices have been easy on large supplies and a more active trade result.

Latest prices are as follows: \$3.25@4.25 for inferior to very fancy superfine State and Western; \$3.75@4.00 for poor to good extra State, bulk lots and lines; \$4.00@4.25 for good to choice do.; \$3.75@4.00 for inferior to good shipping extra Western, and \$4.00@4.25 for good to choice shipping extra do. (very choice to fancy, lots held higher); inferior to very good white wheat extra, \$4.50@5.25, very good to fancy do. at \$5.25@6.50; red and amber wheat inferior to choice trade and family, at \$4.40@6.00; Minnesota patents, \$4.00@4.50; and trade and family brands of do. at \$4.60@6.00; St. Louis at \$4.40@5.35 for inferior to good extra; \$5.35@6.50 for good to fancy; Minnesota clear, very inferior to fancy, at \$3.75@5.75; Minnesota "straights," very poor to very fancy, at \$5.10@7.25, and patent inferior to fancy at \$5.50@8.25; unsound stock at from \$2.25@5.00; city mills extra at \$5.60@5.90 for good to choice West Indian; do. for Maryland, \$3.85@4.00 for good to fancy spring wheat, and \$3.10@3.60 for winter wheat product; do. trade and family extras \$4.00@6.75; do. for South American, \$5.90@6.35; No. 1 at \$2.25@3.25 for poor to very choice.

Receipts for week: flour, 93,100 bbls.; corn meal, 1,750 bbls. wheat, 1,818,600 bush.; corn, 1,859,650 bush.; oats, 387,100 bush; rye, 9,000; malt, 131,800; rice, 1,396 pkgs.

Exports: Flour, 73,200 bbls.; corn meal, 4,600 bbls.; wheat, 2,163,800 bush.; corn, 1,342,601 bush.; oats, 4,002 bush.; peas, 5,891 bush.; rice, 2,975 pkgs.

CORN MEAL.—Sales at \$2.50@2.75 for yellow Western, and \$3.15 for Brandywine.

FRESH FRUITS.—Strawberries are scarce but the enlarged list of other good fruit makes them go round, and keeps prices from advancing. Western N. Y. is sending the best offering of the moment. Early apples in good demand. Melons slow yet. Blackberries and whortleberries are wet; these two items go to make much more largely than in former years. Cherries plenty; they are tender this hot weather as the best have to follow.

No. 1 green apples per bbl. \$1.50@2.50; per ½ bbl. cr. 75@\$1.25 cherries sweet, choice per lb 5@7c, common 2@4c. sour 4@5c. Strawberries Oswego per qt. 10@14c; Oneida per qt. 8 10c up-river good to prime per qt. 9@10, tart per qt 7@8c.; good to prime per 10 qt. cups 2@2½c.; blackberries, hulled, per 100 bask. \$2@2.50; L. I. per qt. 6@7c.; eastern per qt 6@8c. Raspberries native up-river per 3 to qt. cups 6@7c Jy. per pint 7@9c; Brandywine, Md. and Del. 6@7c. Buckeup. Jersey 6@7c, Md. & Del. per qt. 8@10c. Blackberries Wilson, Md. & Del. per qt 15@17c Whortleberries Jersey per ½ bu box \$2; Md. & Del. 8@10c. Gooseberries Md. per bush. \$1.75@2 Currants each qty. per qt. 8@10c; small per lb 5@6. Watermelons ... good to prime per 100 \$20@45 Fla. prime, no. \$25@40. Peaches, Ga., Beatrice per peck \$1@1.25, Grapes, Blk. Hamburgh per lb 3. Peanuts flat and weaks. Huckleberry nuts steady. Peanuts, Va hand picked, per lb. 5@6c.; extra prime, 5c., good to prime 4@4½c; smaller, 3@3½c., hickory shelled 5@5½c.; hickory shellbark, per bush \$1.

GRAIN.—Wheat has been active, and fully 2,000,000 bush. have been exported this week, with prices fluctuating and closing easy, latest sales ar of No. 1 white at \$1.21½@1.22c., do., June, at \$1.21½@1.22c., ungraded white at \$1.15@1.21, No. 2 red at \$1.25½@1.26, do., June, at \$1.15@1.22½; do., July, at \$1.15@1.16½; do., August, at \$1.16½@1.17; No. 3 red at \$1.18, ungraded red at \$1.18@1.24; mixed winter at \$1.2@1.2½, choice spring at \$1.16@17; No 2 Milwaukee spring at \$1.15@1.17. Rye quoted at 96@97c. for State. Corn is active on export account and closed for New York No. 2 at 52@52c., do., June, at 52½@52½c. do., July, at 50½@51c.; New York steamer mixed at 50@51c., ungraded mixed Western at 47@53c., No. 3 at 50c., New York yellow at 53½c., No. white at 59c., No. 2 white at 57c.; low mixed at 54½c.; round yellow at 60c. Oats are lbs. at demand and closed firm at for No. 1 white at 41c.; No. 2 white at 39@39½c., No. white at 37@37½c. New York No. 1 at 39c., New York No. 2 at 38½@38½c.; do., June, quoted at 38½c bid; do., July, at 35@36c.; No. 3 at 37½c., ungraded white Western at 38@44c., ungraded mixed Western at 37@40c.; white State at 41@43c.; mixed State at 39c., No. 2 Chicago at 38½@39c.

HAY AND STRAW.—There continues a liberal demand and the market is strong.

Shipping hay quoted at 75@80c., retail lots at 80@85c. for medium, and 95@\$1.10 for prime and fancy qualities; clover, 60@70. Straw at \$1.15@1.20 for long rye; 60@70c. for short rye, and 55@65c. for oat.

Exports for week, 3,100 bales.

HOPS.—The market shows decided strength but prices not changed, with a steady call for supplies from brewers. Quotations are for:

	Cents per lb.
New York, fancy	Nominal
New York, new crop, good and choice	33@36
New York, new crop, medium	31@33
New York, new crop, low to fair	27@29
Eastern, new crop	27@35
Wisconsin, new crop	27@35
Yearlings	7@18
Olds, all growths	4@10
Pacific Coast, new	30@35
Pacific Coast olds (nominal)	5@10

OIL CAKE.—Western is quoted at \$33.50 per ton.

POULTRY AND GAME.—Chickens continue abundant and with easy prices sell freely. Fowls scarce and fancy sellers. Coarse turkeys not wanted. Prime specially raised are in good demand for their regular call, steamers and hotels. Spring ducks in good supply.

Turkeys, choice small, on ice, 10@12c.; fair to good, 8@9c. frozen, 6@7c.; Phila., do., 10@12c.; chickens, spring, Phila., large, per lb., 20@22c.; small, 18@20c.; scalded 15@18c., fowls, Phila., yearling, 15@17c.; dry-picked, 14@16c., Jersey, good to prime, 12@13c.; State, good to prime, 11½@12½c.; Western, good to prime, 11@12c., poor to fair, 5@10c.; ducks, spring, large, per lb., 17@18c., small 15@16c.; Phila., dry-picked, 12@15c squabs, white, per doz., \$2.00; dark, \$1.00@1.25.

Chickens by coops arrive from all points and prices are low and weak; demand fair. Fowls active and firm with light supplies of dressed. Spring ducks and geese in good demand. Old neglected.

Chickens, spring, large, per lb., 18c, small, 15@16c.; fowls, Jersey, 11@12c., Western, 11c. Southern, 10½c.; roosters, old and young, 4½@5c., turkeys, mixed, 9@10c; Southern, 7@9c.; ducks, Jersey, N. Y. & Pa., per pair, 5@60c.; Western, 40@50c. Southern, 35@45c; geese, Jersey, \$1.50@1.62, N. Y. & Pa., \$1.25@1.37; Western, mixed, \$1@1.12; Southern, 75c.@\$1; pigeons, 20@30c

Flight pigeons are in fair demand at quotations when in good order; lots out of condition have sold very low. Stall-fed pigeons light supply and good demand.

English snipe, frozen, per doz, \$2.50, wild pigeons, stall-fed, per doz. \$1.00@1.75; flight, 75c.

PROVISIONS.—Have been tending higher on increased demands, mess pork closed at \$11.75; \$12 for spot lots; \$11.85@11.90 for June and July, 11.90@12 for August, and \$12@12.10 for September. Bacon at 7 1-16c for long clear and 7½c. for short clear. Lard—Western steam at \$7.20 for spot lots, 7.20@7.22½c. for June and July; \$7.37½@7.30 for August. Stearine at 9½c. for choice. Tallow at 6½@6 3-16c. for prime.

Receipts for week, beef, pkgs., 625; pork, bbls., 3,175; cutmeats pkgs., 22 55; lard pkgs., 13,950.

Exports, beef, pkgs., 2,350, pork bbls., 6,975; cutmeats, lbs., 1,412 600; lard lbs., 5,068,350.

SEED.—Clover is moderately active and prices steady; quoted at 6½@6¾c for Western up to 7½c. for extra choice. Timothy is quiet and nominal.

VEGETABLES.—New Southern potatoes have declined; supplies large and market dull. Norfolk usually breaks the market. Old potatoes hold good prices, but have lost some of their late advance.

Bermuda, new, per bbl \$6; Maryland, \$1.50@2.75; Norfolk, new, \$1.75@2.75 Chas. & Sav., \$2@3.50 culls. \$1; Early Rose, Maine, per 6-bush. bbl., \$1.75; State, \$1.12@1.37; Prolific, Maine, \$1.50; Jackson, \$1.37@1.50 peachblow, State, \$1.50@1.75; Snowflake, \$1.50@1.75; Pearless, \$1.25@1.37. Southern green stuff runs poor and quotations are only for prime, attractive fresh. Tomatoes, Cha's and Sav., per cr., \$1@2; Fla., per bu. cr., \$1@2.25; cucumbers, Norf., per bu. box, \$1.75@2.25; Chas. and Savannah, per cr., 70c.@\$1.25; eggplant Fla., per cr., \$3@4; string beans, L. I. per bag, \$3.50; wax beans, Norf., per ½ bbl. crate \$1@1.50; string beans Norf., round, per ½ bbl., \$1.50@1.75; Norf. flat, per ½ bbl., \$1.25@1.50; green peas L. I., per bag, \$2@2.50 asparagus, Oyster Bay, per doz. bch., \$2@2.25 N. J and L. I. per doz 75c.@\$1.25; turnips, Jersey, per 100 bunches \$2.50@4; beets, Jersey, per 100 bunches, \$1@2.50 radishes, per 100 bunches, 75c@\$1; lettuce, per bbl., 75c.@\$1; cabbage, Jersey per 100, \$6@8; Norfolk, per bbl. 5@\$1.75; squash Norf. per cr., 75@75c.; L. I., per basket, \$1@1.25; rhubarb, L. I. & Jersey per 100 bunches, \$1@1.50; onions Bermuda, new, per crate, \$2; Maryland yellow, per bbl., \$3.50@4.

TOBACCO.—The export movement has been slack and the home trade moderate, with prices generally unchanged.

WOOL.—Trade has been very moderate again this week, manufacturers waiting for the effect of larger supplies of Ohio fleeces. Prices are nominally as last week.

Latest sales are of XX Ohio at 32c.; unwashed State at 27@30c.; new lake at 36c.; spring Tex s at 21@32c., spring California at 23 30c; slightly burry fall do.; Oregon at 29c domestic carpet noils at 4c; scoured Territory and Texas at 70@73c., East India at 40c.; Cape at 32½@34½c., Montevideo at 37@38c.; unwashed Med. at 18@19c.

LIVE STOCK MARKETS

NEW YORK, Saturday June 19, 1880.

BEEVES.—Receipts for week, 14,375 head; do, last week 12,925 do. The market has been quite upset by irregular supplies which by the close turned out heavy, and then the quarters of beef that were in the disabled steamer Anchoria were thrown upon the dressed meat market and helped depress trade. The supply for the past four days has run up to 10,000 head, against 7,125 head for the same time last week. Just how much prices declined to-day is difficult to arrive at, but it is safe to say 1c. off from the closing rates on Wednesday; some sales were more and some less. The decline is much more noticeable in common and medium cattle than in the best grades. Some round steers and light steers were sold as low as 8@8½c. to dress 55@56 lb. but most sales were at 9@9½c., to dress 56lb, with a few carloads of choice and extra steers at 10@10½c., to dress 56@57 lb.

COWS AND CALVES.—The market is very tame and could almost get along without receipts; the nominal range for such stock as arrives is \$25@55; an extra milker would exceed \$55, but such stock is wanted at home.

VEAL CALVES.—It has been a slow week and with full summer receipts the market has decidedly favored buyers. Medium but fat calves are most wanted. Heavy Mt. Holleys neglected.

Live calves, Jersey and Bucks Co., choice, 5½c.; prime, 5 5½c.; State, choice, 5@5½c.; do. prime, 4½@5c; fair to good, 3½@4½c. poor, 3@3½c.; Mt. Holly, good to choice, 5@5½c.; butterm'k, 3c.

SHEEP AND LAMBS.—Receipts for the week, 31,870 head; do, last week, 32,372 do. Sheep as a rule were dull and weak, but particularly heavy shipping grades which have no demand except at extremely low prices. Lambs were also dull, but yesterday's prices were pretty well maintained. The reported transactions were at 4@5c. for common to prime sheep; about 601 head of fine Ohio wethers were sold for export, five on private terms; judging from the condition of the market the selling price could not have been far from 5½c. Virginia and Kentucky lambs were sold at 5½@6c., and Jersey at 7@8c.

SWINE.—Receipts for week, 25,050 head do. last week, 26,735 do. No public sale; nominal rate for good corn fed 4½c.; city dressed 5½@6c.

TALK ON BOTANY.—NO. 3.

Aerial Roots.

In the RURAL of May 29th we had a lesson on roots. You then learned the principal forms and classifications of these organs, how they grow and how they absorb the nourishment for the plant. I shall now briefly call your attention to another class of roots which, from their nature and because they are not as common as those already described, are of but little importance in gardening and agriculture, though no less interesting to botanists; I refer to the *aerial roots*. These roots are so named because they develop in the air, and not in the ground like other roots. They spring from the stem or branches, and may either descend into the ground or remain entirely in the air. Aerial roots are emitted by the stems of the English Ivy, the Poison Ivy, and the Trumpet Creeper, but in these cases the roots serve only as supports to the plants, as they climb up the trunks of other trees. The roots fasten themselves to the bark or to the walls near which the plants may happen to grow, but they absorb no nourishment whatever. Another class of aerial roots is seen in the common field corn. They spring from the stem near the lower joint, and growing obliquely downward, sometimes a distance of five or six inches, they finally enter the ground and do service to the plant like an ordinary root.

In very warm climates, as in Central and South America and East India, this kind of roots are found on a great many plants. One of the most remarkable cases of the kind is found in the Banyan tree, a species of fig tree which grows in the East Indies. The branches of this tree send down long aerial roots, which when they reach the ground grow in thickness like the trunk itself. Being thus supported the branches spread out still farther, other aerial roots are sent down which in turn become new trunks, and it thus continues to spread itself till a single tree has covered more than thirteen acres. A class of plants called *epiphytes*, or *air plants*, also send out aerial roots, but these simply serve to help the plants to cling to the trees. Still another class of roots, is found on parasitic plants. A parasitic plant is one which lives wholly or in part at the expense of some other plant. The Mistletoe, which was illustrated in the RURAL of June 5th, is such a parasite. Its roots penetrate the bark of some other tree, and unite with the wood as firmly as a natural branch. It then absorbs the sap of its victim, and flourishes as though its roots were established in the ground.

With these few remarks we will, for the present, close the discussion of the descending axis of the plant. In the next lesson we will take up the stem, or ascending axis, and study some of the very interesting features of its development.

UNCLE MARK.

REMINISCENCES OF A LITTLE GIRL.

MRS. M. J. GALPIN.

CHAPTER X.

FAREWELL TO ERIN.

Who that has ever taken a farewell of his native heath does not realize with what mingled emotions the "land of his home receedeth from his view." Hope for the future, regret for the past, and sorrow for the parting all commingle together till the mind is one chaos of sorrow and doubt. How many an exile that lands on the shores of America to-day has wept bitter tears as his native land faded in the distance. With a shiver he feels himself strangely alone, as tossed on the mighty waves of the broad Atlantic he speeds away to a foreign shore, there to find among strangers a home and a fireside. There is something grand and sublime in sailing "o'er the waters of the deep, blue sea." Nothing to be seen but the sky and the water day after day; the azure arch above mirrored in the deep below, while the foamy billows chase each other like a band of happy children in their youthful play. It was the lot of Uncle Tom, as it has been of thousands before, to experience these emotions. Bidding a tearful farewell to the friends of their adversity, he and family took the cars (there they are called coaches) and in due time they reached Dublin. Here they were to embark on a ship bound for the United States. They spent a few days in seeing the city and in preparing clothing to last them through the long voyage.

The day of departure came at length, and with saddened, quivering hearts they went on board. The ship on which they took passage was the barque Ashley, a small sailing vessel, which was originally built for Lord Ashley, but was then being used as an emigrant ship. It was the first year of the Irish famine. The United States then, as now, had stretched out a helping hand, and many a poor, homeless, starving wanderer was saved from death by American charity. About two hours after embarkation the signal was given to leave, anchors were taken up, sails unfurled, and the bark stood out to sea with her freight of human lives. All stood on deck to get a last glimpse of the land they might never more behold; all were weeping, for each left some loved one behind whom they never again expected to meet on earth. Twilight at last shrouded the fading shores with its somber mantle and many were forced to go below, as they felt the coming on of seasickness. Nearly all were steerage passengers, as they were too poor to afford pay for any other kind of accommodation. Uncle Tom and family, however and a few others, were cabin passengers.

Perhaps you do not know what a steerage passage is. Well, the cabin was on the first deck, and about the centre of this deck was a large opening that looked like a cellar door-way. This is called the "hatchway." Steps lead down to the second deck, and here were the steerage passengers from one end of the ship to the other. There was a broad alley-way in the middle of the ship, and on each side the beds were fastened, tier after tier, against the sides of the ship, like the shelves in your pantry. In this place they slept, and as a lullaby they listened to the roar and swash of the waves as they beat against the ship. The bottom of the ship contained ballast, baggage, ropes, etc. I hardly think this description will suit the elegant ships that now glide over the ocean almost with the swiftness of the sea-gull, but this is the way the barque Ashley was arranged. She was commanded by Capt. Gray, and nearly all her sailors were from foreign ports. There was a man among the crew from the Philippine Isles, the most useful one on board, as he seemed to be handy at everything and also had remarkable presence of mind.

The Irish are naturally of a buoyant, hopeful disposition, and after their home was hid from view they commenced to make the best of the situation. There were several good singers on board, so with fun and song they whiled away a good many hours. Uncle Tom and wife had splendid voices, and just "as the last glimpse of Erin they saw," they started that dear old song, "The land of my home is flitting, flitting from my view." Another singer treated them to a "Life on the ocean wave," a "Wet sheet and a flowing sea," while one of the fun lovers sang a comic song called, "The Chinaman with his Roman nose."

For three or four days there was smooth sailing. Naught could be seen save the ripples of the billowy tide as they foamed and tossed and sparkled round the sides of the sturdy barque. Nearly all were well of seasickness, so that sociability, fun and enjoyment were the order of the passing days. Our little Therese was soon a favorite with all on board, especially the sailors. They taught her the names of the masts and ropes, and steadied her slipping feet till she could accomplish the feat of walking over the rocking deck.

She explored every nook and corner on board. Though but six years old she could read and write quite well, and would read or sing for the sailors by the hour. Music seemed to be an inborn talent with this little wanderer who had never yet enjoyed the advantages of musical culture. Have you ever noticed that the rougher the occupation of men, and the more their employment takes them away from society, the more they love the presence of little children? Our Therese was queen on that barque. There was always a sailor to watch her, or see her safely o'er some dangerous spot. The captain had a bachelor brother on board, who was taking a sea voyage for his health, and with him Therese was a great favorite. Many a delicacy did she receive that others never shared. The captain showed her the hour glass and explained to her satisfaction all about the sand running out so swiftly. He adjusted his "spy-glass" so she could look out to sea, and in fact she had things brightened with sunshine wherever she went.

When not many days out, they were overtaken by a fearful storm. The evening previous the sun had set in angry-looking, copper-colored clouds, and the sailors predicted a storm, as they had seen "Mother Carey's chickens," and they were sure that a storm would come. About midnight it came, sure enough. The first that Therese realized of it, was her being thrown forcibly from her bed to the floor. The ship creaked and groaned, the sails flapped and tore at their fastenings, the voices of the captain and mate shouting orders could be heard amid the noise of the tempest. The frightened passengers below could be heard saying their prayers, and some bewailed the day they ever left their native soil. At last some of the men made a rush for the upper deck, but the captain gave peremptory orders to fasten down the hatchway and they had to remain below. The storm raged with unabated fury till daylight, then it calmed down, and the ship was once more put to rights, but a sorry thing she looked. Her sails were torn to rags; the "mizzen mast" was gone; the main mast had been struck by lightning and split down about ten feet, and there was a leak in the bottom of the boat.

When the wind subsided, all hands were called to the pumps, and for five hours they never ceased. The passengers had to take hold and help when the sailors were exhausted. The leak was at last stopped, however, the ship was again rigged, and all looked hopefully forward to better days.

During the storm Therese was on the eve of coming to grief. When tumbled out of bed she became frightened and ran out of the cabin. The captain fortunately espied her and had just time to seize her and set her inside the door, when an enormous wave broke over the deck, throwing down the men, and making much damage. You may be assured the emigrants below presented a sorry sight. Knives and forks, boxes, beds, babies, and in fact everything, were swept first one side and then the other. Poets may talk sentimentally on being "rocked in the cradle of the deep," but when it comes to such rough rocking as that, there's no fun in it.

This chapter is already so long that I shall be obliged to close. Another week I shall tell you about a fire at sea. Crossing the ocean now, is not attended with such risks as in those days, but at that time it meant a long and tedious voyage, with all the attendant risks of storm, fire, and perhaps death ere they reached their destination.

HERE is something to scratch your head over. A very curious number is 142,857, which multiplied by 1, 2, 3, 4, 5, or 6 gives the figures in the same order, beginning at a different point, but if multiplied by 7 gives all nines:—

142,857x1=142,857
142,857x2=285,714
142,857x3=428,571
142,857x4=571,428
142,857x5=714,285
142,857x6=857,142
142,857x7=999,999

Multiply 142,857 by 8 and you have 1,142,856. Then add the first figure to the last, and you have 142,857, the original number, with figures exactly the same as at the start.

LETTERS FROM THE COUSINS.

UNCLE MARK:—I have been a reader of the RURAL for two years and have often thought I would like to join the Horticultural Club but have neglected writing for fear there would not be room for me among so many. I take great pleasure in reading the cousins' letters and although I am seventeen, I hope I am not too old to be one of them. I live on a farm and we have a great many fruit trees and strawberries. The strawberry vines are in full bloom and the promise of a large crop of berries is good, so if any of the cousins will come and see me when they are ripe they can have the pleasure of eating all they want. The frost killed a good many of my flowers, so I will not have a great many this year. Why don't more of the cousins write? Peaceable Bob, where are you? Do you think those who write the least are the most peaceable? Maple Leaves write again. I take a great interest in your letters as my brother used to live in Crawfordsville. I am afraid Uncle Mark will say "here is another letter for the waste basket." So I will stop. PANSEY.

Factoryville, Pa.

[I am sure the cousins are glad to receive Pansy as a member of our family.—U. M.]

DEAR UNCLE MARK:—I am ten years old. I went to school almost every day last winter, I have to go two miles and a quarter and go a alone. I am studying spelling, reading, writing, arithmetic and geography. I have to work in the garden evenings after I come from school. Last summer I had to pick strawberries, it was so warm I used to get tired. We had over three bushels from a little patch. My papa raises the Jucunda. The ground is almost rich enough without manure so you see it is not very much work to raise them; we are going to set out a new patch this season. My mamma and I are going to set them after papa prepares the ground. My papa takes the RURAL, and I like to read the letters from the boys and girls and aunts. Will you take me for a nephew? I want to tell the cousins about my cat. He will climb up to the door latch, and put one leg through the handle, then take his other paw, and lift the latch and open the door—how is that for a cat story? This is the first letter I ever composed, myself. Yours, ETHAN E. SABIN.

Benton Co., Iowa.

DEAR UNCLE MARK:—I take quite an interest in reading the letters from the cousins, and would like to join your Horticultural Club. I have a number of different kinds of plants; twenty geraniums in nine different varieties, monthly roses petunias, calceolarias and others. I have some verbenas and salvias in boxes. I like to get them started early for they blossom so long. Grandpapa did not commence to take your paper till this year, so I did not know of your seed distribution in time for it, but I would like to be remembered in the next. One of the cousins was inquiring about pets, I have a pair of twin calves, some kittens, rabbits and a grey squirrel, uncle found in the woods when it was little. We fed it bread and milk, and it was not long before it would turn its wheel nicely; it is very gentle, and will, when out of the cage, get up on my shoulder, and eat out of my hand. I think this will be enough for the present. With love to all the cousins, I remain your niece, BIRDIE.

Greenwich, Conn.

DEAR UNCLE MARK:—I have long thought I would write to you, but have been afraid you would throw my letter in the waste basket. I go to school and study arithmetic, grammar, geography, reading and writing. I would like to join the club with the rest of the cousins. I have some nice house plants; my geraniums look very nice this season. Papa has given me a patch in the garden; he says if I will take care of the seeds from the RURAL, he will get me some more from D. M. Ferry & Co. Papa has taken the RURAL a good many years and I like it ever so much. I guess I will close my letter for it is getting too long. Good-bye. MINNIE LOVE.

Trumbull Co., O.

DEAR UNCLE MARK:—I am a little boy 11 years old and I would like very much to join your Horticultural Club. We take the RURAL and like it very much. When we get it from the office we all try to see who will get it first. I have two calves a year old, and I have a little yoke for them so they draw me on my wagon. We could not have much of a garden last summer, it was so dry that the seeds we got from the RURAL did not do very well, but we will try and do better this summer. I guess I won't write any more or you will be tired of it. I would like to see this printed if you have room. HENRY J. CLARK.

Waushara Co., Wis.

DEAR UNCLE MARK:—I wrote to the RURAL a few years ago, but never saw my letter in print so I will try again. I go to school winter and summer. I study practical and intellectual arithmetic, reading, grammar, history, spelling and writing. We had a very nice teacher this winter. We gave her a surprise party when her school closed, and had a splendid time. We made her a present of of a copy of Tennyson's poems. I would like to join the Horticultural Club. Yours truly,

Wayne Co., N. Y. MARY F. GAGE.

DEAR UNCLE MARK:—I am always interested in the cousins' letters, and have often thought I would write, and join the Horticultural Club. I would like to be enrolled as a member if you will accept me. We have taken the RURAL for a number of years, and it is always a welcome visitor. I am a lover of flowers, of which we have quite a large variety, some from the RURAL. If this is published I will write again.

Truly thine, DELL.

Various.

BRIEFLETS.

ACCORDING to the Western Rural, Heikes's Nurseries, of Dayton, Ohio, are close upon a fraud and we think the Western Rural well-informed in the matter, from inquiries and complaints which we ourselves have received. . . . . Sharpen up the hoes and keep them sharp. . . . . Mr. E. P. Roe says in his new book that the Cuthbert raspberry "has literally made its own way on its own merits." We should think that the RURAL NEW-YORKER has had *something* to do with it. . . . . Bear in mind that reports from Europe generally show that crops, as a rule, are in a highly promising condition. . . . . In talking about "cattle poisoning," it should be borne in mind that it is with animals as with people—what is poisonous to one may not be to another. . . . . Wagener, Keswick Codlin, Maiden's Blush, Early Harvest, Duchess of Oldenburg and Jonathan are mentioned by the Mich. Hort. Society as among the earliest to come into bearing. Wagener heads the list. . . . . Most kinds of strawberries are much weakened by permitting the runners to grow. Unless the old bed is to be given up, cut off (not pull) the runners as soon as they appear. . . . . "The farmer has largely the balance of political power." Christian Union. . . . . It is not yet too late for this latitude to set out Sweet potato plants. Make ridges 18 inches high and set the plants 18 inches apart. Nansemond is the best variety. . . . . Mr. Roe, speaking of the White Grub, compares the perfect insect, the May beetle or the June bug, to the awkward village loafer, quiet by day but active in the evening. "It dislikes honest sunshine, but is attracted by artificial light, at which time it precipitates itself with the same lack of sense and reason that marks the loafer's gravitation towards the lighted groggery." . . . . Scatter the coal ashes over the garden. You will find them beneficial.—Fruit Recorder. . . . . If you would have green corn until frost, continue to plant until July. . . . . We may now sow turnips, buckwheat or cucumbers where the early peas have been gathered. . . . . Pinch back the raspberry and blackberry shoots. . . . . Plow a single furrow and set dwarf celery in this. Bank up in the fall. Tall sorts may be grown in this way with less trouble and with the same results as if set in deep trenches. But at this time, dwarf kinds are more salable in the market and they are generally sweeter and more tender. . . . . Brine is better for washing butter than pure water, says Prof. Arnold. . . . . The latest rage among young ladies is to possess an old-fashioned spinning wheel for a parlor ornament. The desire to possess an old-fashioned wash-board and tub as a kitchen ornament doesn't rage much among young ladies. They are about as handsome as the spinning wheel, but they are not fashionable. —Norristown Herald. . . . . .

When a flea doth bite an elephant
It hurts somewhat, may be,
But the elephant's still the elephant,
And the flea is only flea.
—Steubenville Herald

. . . . . A friend writes us: "Why do you dub me Doctor? Although I did graduate and get a medical diploma, I would as soon be called Col. as Dr. or Prof. It is too cheap a title." Yes, but it is not the application of such titles to good men that makes them cheap. . . . . How would you like to get your bread and butter from a farm this season? What a lucky fellow I was to rent mine! What can be done on a poor farm when you have no rain? Yet by constant cultivation my crops of potatoes, corn, melons and small fruits look as well as ever, while some places I have purposely left untouched are as dead as a door nail. Don't say that stirring the soil in hot, dry weather is useless. [How does the writer dare to imply that we ever said it was! Eds.] It saves the crop, that is sure. What is the use of going to the Rural Farm; it would hurt my feelings too deeply. So don't look for me at present, ... Specimens of wheat from Long Island, showing the ravages of the Army worm, were exhibited on the Produce Exchange yesterday. The stalks were stripped clean of leaves, and of the pods nothing remained but husks.—N. Y. Times. This is the first we ever heard of wheat bearing *pods*. . . . . What many would like to know: Why lawyers, as a body, are so profoundly ignorant of everything except law. And occasionally of law. Why so few lawyers are sent to State Prison. If it isn't a foolish practice to pour spirits down to keep one's spirits up.

CATALOGUES, ETC., RECEIVED.

TWENTY-FIRST ANNUAL REPORT of the Trustees of the Cooper Union for the Advancement of Science and Art. This is an interesting pamphlet of nearly fifty pages, describing briefly the work and progress of the many free schools in the institutions.

PERSONAL ITEMS.

It was ten years ago when Mrs. Nesbet, of Guilford, Ont., was struck by lightning and thrown from the buggy in which she was riding, but she survived to be killed by another stroke during a storm on the 19th.

Two horses attached to a buggy in which were J. E. Haslam, wife, infant and nurse, of Perry Ga., were thrown to the ground by a stroke of lightning on Tuesday, June 8th, but horses and inmates escaped any positive injury.

In Geneva, N. Y., lightning struck a horse in the mouth and passed through his body, killing him instantly. The groom, Edward Burke, who was sitting near by, was made perfectly insane, and ran about crying, "Catch him, catch him."

A drunkard of Nashville, Tenn., while wild with delirium, lately dug a grave and lay down in it and died. His wife, who was frantic at the sight, called loudly upon Heaven to take her also. On her way home she was struck dead by a lightning bolt.

When lightning struck the house of Frank B. Highbee of South Bend, Ind., although no one was injured, it made a total wreck of everything in the building. The stoves were broken, the pipes were burst and battered out of all shape, the bed on which Mrs. Hughs, a cousin, was sleeping, badly splintered, a castor knocked from a table, a cupboard filled with canned fruit burst open and the lids of the cans knocked off, the carpet torn up and shreds of it scattered everywhere; in short, almost everything in the house suffered damage, while the chimney was knocked down, and a big hole knocked in the ceiling of one of the rooms. The sashes of the north windows were broken and fragments found several rods away. Every piece of metal in the house, even to the steel ribs in Mrs. Highbee's corset, was so heavily charged as to be converted into a magnet.

New Publications.

THE
WELCOME CHORUS!
A NEW SONG BOOK FOR
High Schools, Academies and Seminaries.
BY W. S. TILDEN.

PRICE $1.00, OR $9.00 PER DOZ.

THE FERGUSON BUREAU CREAMERY.

Surpasses all others in quantity and quality of butter made. It secures matured and ripened cream, which makes butter of the best texture, flavor, and of unequaled keeping quality. It excludes flies, dust and odors; is constantly at the correct temperature (58° to 60°); has room for the cream and butter, and saves three-fourths the labor. It can be used with either ice or water, and both summer and winter.
THE FERGUSON CONCUSSION CHURN is the best. It combines scientific principles with the best labor saving devices. No floats or paddles. Brings the butter in granular form, and secures the largest yield. Before buying any other **Churn or Creamer;** or any pans, or cans, send for large illustrated circular to **THE FERGUSON M'F'G CO., Burlington, Vt.** Reliable Agents Wanted.

Humorous.

THE only things that can blow for themselves and be admired the more, the more they blow, are flowers.

AN Irishman who had a pig in his possession was observed to adopt the constant practice of filling it to repletion one day and starving it the next. On being asked his reason for doing so, he replied:—Och, sure, and isn't it that I like to have bacon with a strake o' fat and a strake o' lane aqually, one after t'other."

A TEACHER asked a bright little girl: "What country is opposite us on the globe?" "Don't know, sir," was the answer. "Well, now," pursued the teacher. "if I were to bore a hole through the earth, and you were to go in at this end, where would you come out?" "Out of the hole, sir," replied the pupil, with an air of triumph.

HOUSEKEEPER to milkman: "My friend, you put water in your milk." "Oh, no, I don't ma'am." "But I am sure you do." "Oh, no, ma'am." "Now will you say solemnly that you do not put water in your milk?" "Well, ma'am, well, I must say that sometimes I put some water in the can, and put the milk in that, but I never put water in the milk."

Give an Impetus to the Liver,

When it works lazily, with Hostetter's Stomach Bitters, which rouses it and corrects its faults. Next in importance to doing this, cease torturing it, if you have been so foolish hitherto, with horrid pills and draughts that gripe, purge, and weaken both bowels and stomach. Third, avoid eating or drinking anything which you have found increasing the bilious trouble. It is astonishing and certainly most agreeable to find how soon after commencing a course of the Bitters, the symptoms of liver complaint disappear. The bowels are greatly relieved, digestion improves, the sallow hue disappears from the skin, morning nausea, right shoulder blade and side pains cease, the tongue puts off its furry coat and the breath resumes its purity. Surely these are desiderata worth trying for. They are attainable by the use of this sterling medicine.

Fit all drill boots, run level, cut to bottom furrows, cover with *mellow* soil and instead of *crowding the seed* into narrow rows put *one inch in width* scatter it 3½, 4, and 5 inches; the plants thus standing *wider* apart, have more ROOM TO STOOL, derive more nourishment from the soil, become more vigorous, and produce better developed average heads.

Chambers's Encyclopædia.

15 Vols. Over 13,000 Pages. Price During June, $6.

Among the wonderful things which have been accomplished for lovers of good books by the "Literary Revolution," perhaps the most wonderful is the reproduction of this great Encyclopædia at a merely nominal cost.

It is a verbatim reprint of the last English edition, in 15 beautiful volumes, clear nonpareil type, handsomely bound in cloth, for **$7.50**; the same printed on finer, heavier paper, wide margins, and bound in half Russia, gilt top, price **$15.00**. The first nine volumes are ready for delivery. Vol. 10 will be ready June 20. The remaining volumes will be completed by October next.

$6. An Amazing Offer. $6.

The more widely and rapidly these volumes are scattered, the greater is their influence in inducing other purchasers of this and our many standard publications. Accordingly we give special terms to early subscribers.

To all whose orders and money are received during the month of June, we will supply the 15 volumes, in cloth, for **$6.00**, and in half Russia, gilt top, for **$12.00**. To any one sending from any place, where we have no special agent (usually the leading bookseller of the town), a club of five orders, we will allow a commission of 10 per cent. The volumes issued will be sent at once by express, and the remaining volumes when completed.

A specimen volume in cloth will be sent, post-paid, for **50 cents**, or in half Russia, gilt top, for **$1.00**, and may be returned at once, if not satisfactory.

The "CHAMBERS'S ENCYCLOPÆDIA" comprises the first 15 volumes of our "Library of Universal Knowledge," and the remaining volumes, complete in themselves, will be sold separately when published.

Standard Books.

Library of Universal Knowledge, 21 vols., **$10.50.**

'THOMAS' PORTABLE ENGINE.

This is the lightest, most durable and economical Farm Engine made. It is from 1000 to 1500 lbs. lighter than other engines of the same power. It is warranted in every respect, and on account of improved method of utilizing steam is more economical in fuel and water. It is made especially to meet the wants long felt by Threshermen Farmers, &c., for an engine that would combine lightness with absolute strength and durability. Made in three sizes. Circulars giving full description sent on application to J. H. THOMAS & SONS, Manufacturers Springfield, O.

Be sure and mention this paper.

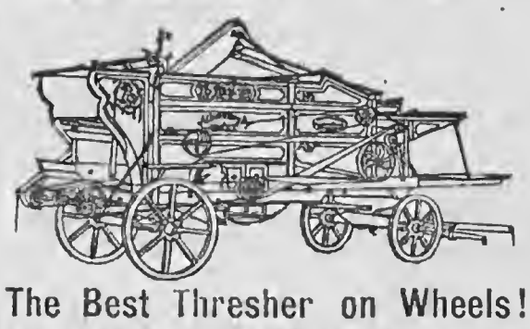
MINNESOTA CHIEF!



The Best Thresher on Wheels!

It is not a vibrator, neither is it an apron machine, but the best points of both are combined, with new and original features of its own. It is wonderfully simple in its arrangement. It is admirably perfect in its threshing and separating qualities. It saves all the grain, and cleans it ready for market. It runs easily, is constructed durably, is finished beautifully, is the most economical, least expensive, and altogether the most satisfactory machine in the market.

It will handle wet grain as well as dry. In threshing Flax and Timothy it has no equal, threshing and cleaning both as well, and nearly as rapidly, as wheat, and requires no change except the sieves. It has more square feet of separating and cleaning surface than any other machine made, and cannot be overloaded. It is both over and under blast at the same time.

Our clover hulling attachment is a new and very desirable feature. It does the business more rapidly and better than an exclusively clover hulling machine.

Separators of the various sizes fitted for Steam or Horse-Power, as desired.

An Improved Pitts Power, an Improved Woodbury Power, and the Elward Equalizing Power, all mounted on four wheels, are manufactured by us, and are not surpassed by any in the market.

Field Crops.

FORAGE GRASSES.

PROFESSOR W. J. BEAL.

Indian or Wood Grass—Sorghum nutans. These common names are not very satisfactory or in very general use. This is a tall native grass distributed over much of the country east of the Rocky Mountains. The illustration gives a clearer idea of the plant than any description, unless it be for a botanist. The report from which the cut is taken says: "It grows rather sparsely, and forms a thin bed of grass. The stalks are three to four feet (often six or more) high, smooth, hollow, straight, and having at the top a narrow panicle of handsome straw-colored or brownish flowers, which are rather drooping in fruit." According to one report, it constitutes about 16 per cent. of the grasses in dry prairie regions. It forms good feed when young and tender, but becomes dry and woody as it gets older. It flowers in August and September. The late Prof. J. Stanton Gould, of Cornell University, said it was "of no known agricultural use."

In the South there are two other species of Sorghum which are much like the one above-mentioned.

So far in these articles we have noticed three leading grasses of the arid and sandy plains of the United States. These are said to constitute not far from 59 per cent. of the bulk of the feed in these regions. As they are estimated in the East, where we raise grasses which are so much better, they are of little value, but where they are abundant and probably about as good as any of the native grasses, they answer a good purpose.

Crab-grass, Finger-grass—Panicum sanguinale. This is an annual, one to two feet high, bearing four to fifteen spreading, tender spikes to each stalk. It has been introduced from Europe. The plants are spreading and freely take root at the lower joints, making it a plant hard to pull up. In the North it is a common and troublesome weed. In the South it is a valuable grass for hay or pasture which is of excellent quality. It appears on lawns where the soil becomes poor. See cut fig. 223.

THE OUTSIDE AND INSIDE.

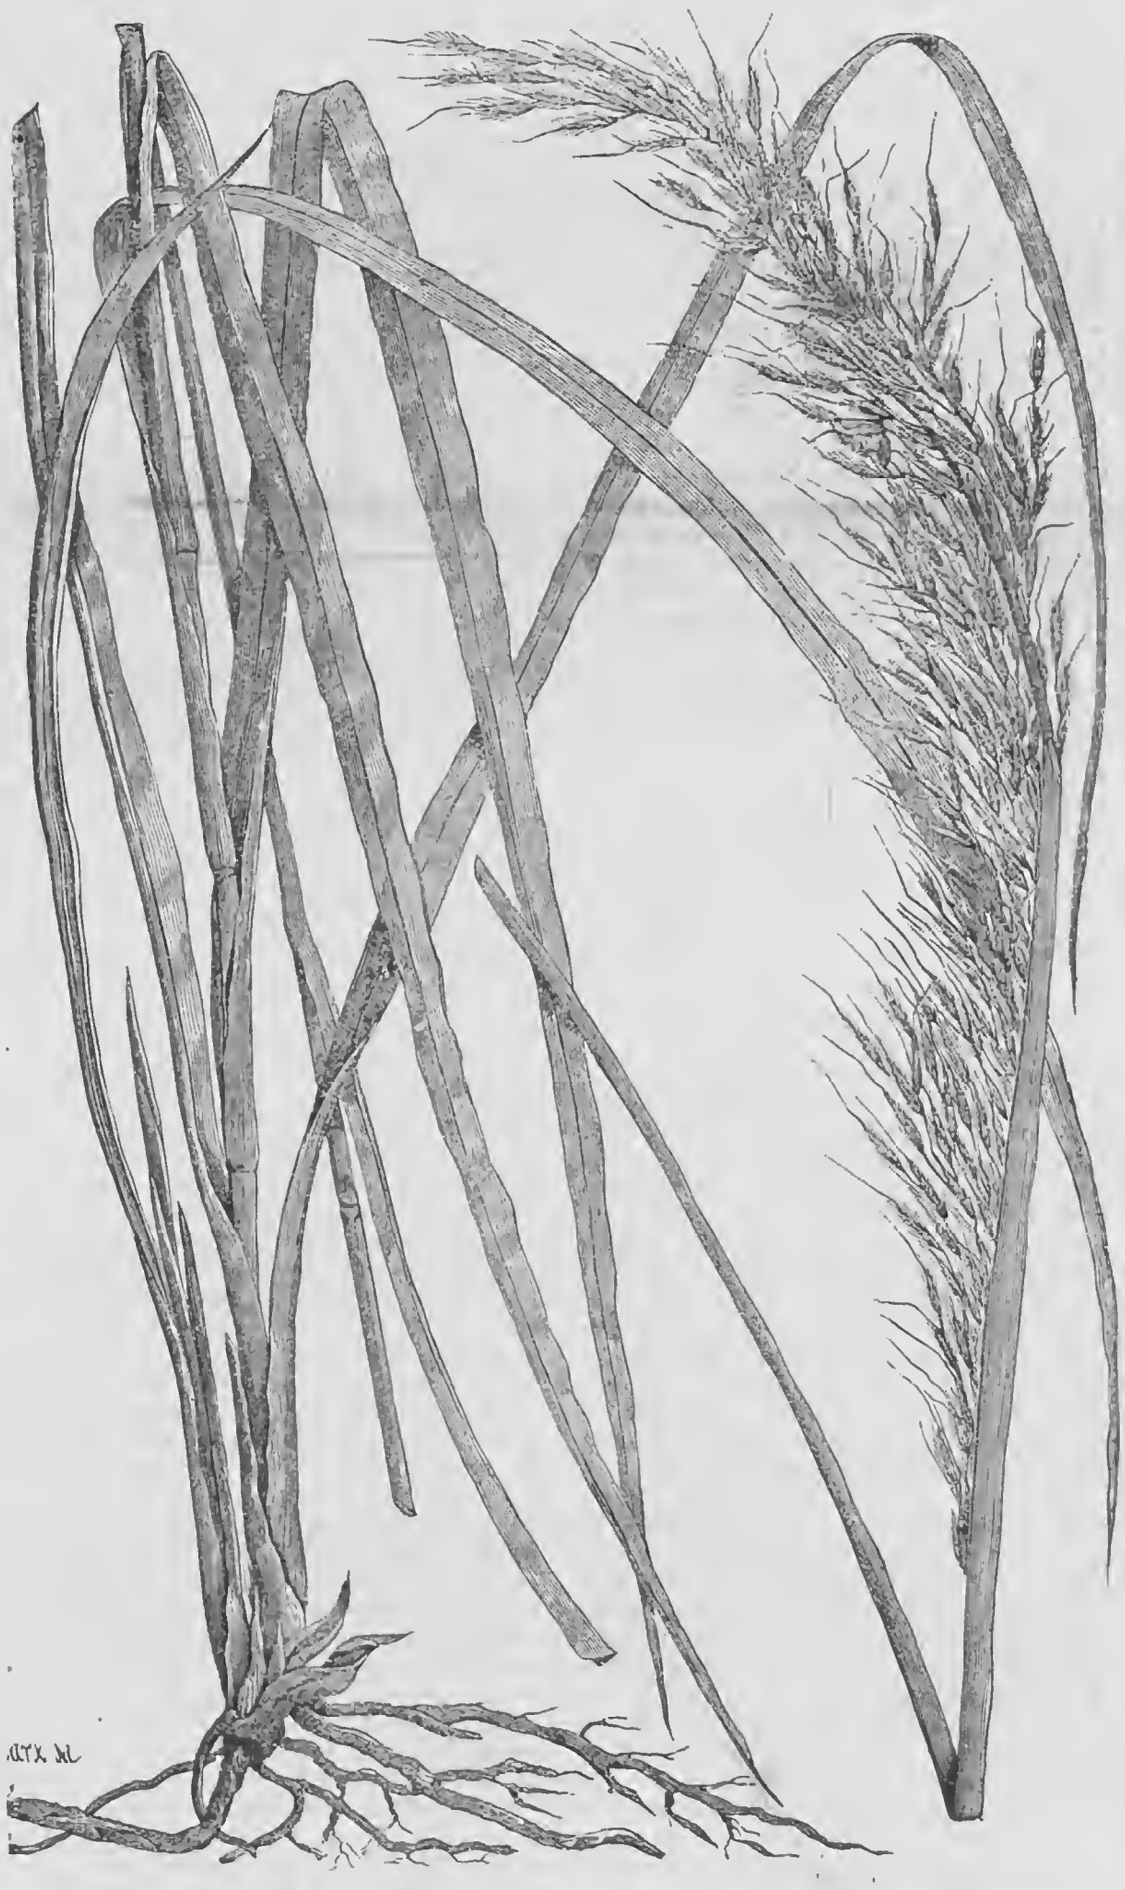
The Illinois Winter Wheat Crop.

No contemporary record of the great agricultural events of the present year would be complete, which did not contain a more or less full account of the winter wheat crop of Illinois for 1880. It is one of the many surprising agricultural phenomena of this age and time, and is a striking example of the very sudden changes which may steal insensibly upon us without one being able more than partially to understand or explain them.

But a brief review of the progress of wheat cultivation for the last few years in Illinois may be necessary in order to more clearly understand the present situation, which is one of quite unusual promise as relates to nearly all the crops, and of extraordinary activity and excitement in respect to the very surprising outcome of the winter wheat crop.

Roughly and generally speaking, Illinois has three distinct and different kinds of soils, consisting of the black prairie soils of the north and center; the yellow and white clays of the south, and the brown soils of the regions intermediate between the two. Except where there are small or large bodies of timber, the brown soils and the yellow and white clays lie south of the parallel of 39° 30′ to 40°, and in this portion of the State it is that by far the largest and best wheat crops are grown. The present crop is now in the course of being harvested. Prior to 1854 it was not known or believed that the post-oak flats and the white and yellow clays of the southern portion of the State were admirable wheat lands, and consequently what little wheat was raised previous to that time, was obtained from cleared timber lands, as in the non-prairie States. But the fact once made known, the prairies were rapidly sold, settled and cultivated, and under the general description of the "winter wheat belt," this portion of the State has enjoyed a great wheat-growing reputation for 25 years.

On the first settlement of the black and brown soils, or so much of them as lies south of the 40°, about 1835, and thereafter to the second great increase of population which followed the construction of the Illinois Central railroad, from 1851 to 1858, and even to 1860, the winter wheat crop on the virgin soils of the prairie was a tolerably sure one, and the acreage of those times came something near to that of Indian corn. After 1860 the winter wheat crop began to fail, and was so gradually and generally abandoned that from 20 to 0 counties in the south central portions of the State went abroad for their bread. But about 1876 another change took place; wheat cultivation became successful in the hands of a few who tried it; there was improvement in 1877, and farther advance in the same direction in 1878, and when the harvest of 1879 came, half the country went more than half crazy over a crop, which on the black and brown soils averaged fully 25 bushels per acre, and more often went above 40 than it fell below 18.



INDIAN OR WOOD GRASS—Sorghum Nutans.—Fig. 222.

The first consequence was an enormously increased acreage in wheat sown in the fall of 1879, some counties within the brown soil limit, Coles, for instance, having enlarged the crop acreage three or four times, and nearly all counties south of the 40° doubling it. But the second and surprising consequence is that under conditions almost wholly different from those of the season of '78–'79, which were thought to be extremely favorable, the crop of '79–'80 approaches in yield and quality that of last year. But there is this fact to be borne in mind and this discrimination to be made—the brown soils have a better crop than the black soils, and there is only a small area of good wheat north of 40°, winter having killed most, and the midge having taken a good portion of the crop north of that line.

Considering that all of Southern Illinois, south of about the 40th parallel of north latitude, is little less than one great wheat field; that the acreage of the crop has been doubled and in some cases increased three, four and five-fold within one year; that the crop is nearly universally good, and in some places very heavy, at least so far as straw is concerned, and considering that the harvest time has burst suddenly upon them in twenty counties and without much regard to latitude; that the mines of Colorado and the delights of Kansas and Nebraska have drawn most of the surplus population away out of the country; that the railroads cannot spare their laborers, for they, too, are getting ready to move the crops; and that the fruit crop absorbs the labor of the women and boys in the towns, one can understand the difficulty the farmers have in getting harvest hands, even though $3.50 to $3, and even $3 50 to $4 are offered for a day's harvest work. The truth is that high wages may induce idlers to work, but can create neither idlers nor workers.

But the self-binders would supply this want if there were self-binders to be had, but they, too, have been taken to the last one, and the manufacturers have two orders on hand for every machine they can possibly deliver. When the self-binders and the Marsh harvesters could not be had, anything and everything capable of doing harvest work has been bought and put to work, and to the extent that throughout the length and breadth of Southern Illinois there are not 25 idle reaping machines capable of doing harvest work. And the work is not confined to the hours between sunrise and sunset, but goes on all night long under the light of the moon and stars, and when these are not sufficient, lanterns and guides with lights supply their place. Nor is Sunday a day of rest, and even the circus sets up its empty tents in deserted towns; the usual group of bronzed-faced idlers is not seen about the railroad stations, and the passenger trains come and go with quarter-filled coaches; for the farmers and their families are at home and in the fields. So far, for the winter wheat belt the weather has been favorable for harvest work and should it continue up to the 4th of July, the great task of securing the wheat crop will have been achieved, though nobody but those who have been witnesses to the noble spectacle, can have an adequate idea of the enormous amount of physical and machine force expended and the wear and tear of mind gone through with.

After the stacking of the wheat will come the thrashing, though most of the grain will be hauled from the shock and thrashed. Then will come the work of sale and delivery; then the warehouses will fill and the freight trains begin to move; then the boom in business from the enormous wheat crop will begin, and all Central and Southern Illinois will fall upon times of business activity and excitement, which will recall the flush times of the war.

Of the causes which have operated to make such a sudden and vast increase in the wheat acreage; of the unseen forces which have produced a wheat crop nearly equally good under conditions so widely different; of the results of so much increased production on the social and economic situation, which will follow; of the rehabilitation of the country already manifested and of many other things not manifested, there is no time to write now—but there may be at some future time.

B. F. J.

Champaign, Ill.

CULTIVATING CORN.

THE culture of corn is a simple process, yet it seems to me there is room for some improvement, or at least for suggestions of improvement, in the method usually followed by our farmers. The work of cultivating corn comes in a busy season, when farm hands are scarce, and various kinds of farm work are urgent; hence there is need of expediting the work as much as practicable. It is, at best, a poor crop to grow for profit on our rich Eastern farms, where land is high, and unless we can produce it cheaply there is an absolute loss. In our grandfathers' time it was customary to employ much hand work in the culture of corn. The work of "hilling" which was then considered absolutely necessary, was all done with the hoe, which made the cultivation of a field of corn very laborious and costly.

Thanks to our inventors, we now have improved implements for cultivating, which make it possible to perform most of the hoeing by horse power. One horse, with a skillful man, will now hoe as much corn in a day as ten men in former years by the use of hand hoes. There is need, however, of exercising considerable care and patience in cultivating corn or potatoes as they should be.

However good the cultivator or horse-hoe may be, it will not do good work unless it is kept in good order. The teeth, or diggers, should be kept sharp and well polished, so that the earth will slip readily. If the teeth are blunt and rusty so that the earth adheres to them, the work cannot be well done, and, besides, it is much more laborious for the horse. Let cultivator teeth be put on the grindstone occasionally and sharpened or polished if need be, and when the cultivator is not in use, let it be protected from the weather, to keep the teeth from becoming rusty.

Considerable skill is required to horse-hoe corn properly and with little labor. It is necessary to run as close to the rows as possible without uprooting the hills, which will leave but little hard work to be done. It will pay farmers to spend a few moments with their laborers in order to teach them how to manage the cultivator so as to do the work effectually. A careless, unskillful workman will sometimes let the cultivator slip along haphazard without accomplishing the desired effect.

G. A. GOFF, JR.

Pomological.

CONVENTION OF AMERICAN ASSOCIATION OF NURSERYMEN, Etc.

[Rural Special Report.]

THE fifth annual meeting of the American Association of nurserymen, seedsmen, florists and kindred interests, was held in Chicago, June 16th, and lasted three days.

The morning of the first day was consumed in routine business, consisting of the address of welcome by Edgar Saunders, an address by the President, T. S. Hubbard, of Fredonia, N. Y.; the report of the Treasurer, and the appointment of the Committee on Business.

The afternoon session, after hearing the report of the Committees on Business and the appointment of the Committees upon Nomination of Officers and that upon Exhibits, by the President, took up the regular order of business, the first of which was a paper from Peter Henderson, of New York, upon

"Humbugs in Horticulture."

He said that experience with other swindles is no safeguard against swindles of this sort, as the horticultural swindlers often find their best customers among the intelligent lawyers and merchants of our large cities, and the speaker gave as an example the Blue Rose swindlers who sold large quantities of the humbug at high prices in New York City, until having received too much free advertising, they were obliged to leave. Many pretended to have the secrets of success, which they offer at a price to the confiding public. There are no secrets in horticulture, and those who vend such should be let severely alone.

This was followed by a paper from Professor Husmann, of Missouri, upon

Tree Peddlers.

He said that most buyers are ignorant of what they buy, and in many cases of what they want, and take our goods on trust; that on account of the difficulty in detecting frauds, the temptation to deceive is great. Of tree peddlers he formed two classes:—first, the reliable and trustworthy ones, who, he regretted to say, formed the smaller class. They sell only reliable sorts and represent reliable firms. Very much of the progress of horticulture among farmers is due to their labors. The other class are unscrupulous, using fancy pictures, and telling big stories, such as those about a Canadian peach which is perfectly hardy, and which grows in the shape of a poplar; marvelous seedless grapes, tree strawberries, etc. To counteract the influence of these is of first importance, and to this end he urged the diffusing of sound horticultural knowledge among the public. He would employ no agents except reliable men and give certificates to no others, and would use only faithful representations of fruits.

Mr. Manning, of Massachusetts, said that for years he had printed a notice in his catalogues warning all to beware of any one representing his establishment, who could not show an open letter dated within 20 days and written under a printed heading. Mr. Foster, of Iowa, had exposed tree swindlers for a long time, but could not see that any headway was being accomplished. The farmers need enlightenment and education, and he knew of no better way than to publish pertinent matter through the local papers. Mr. Albaugh, of Ohio, had fought this thing for several years. He thought there was no one particular way to reach the case. Swindling is not confined to the nursery business; neither are rusties the easiest victims. They have been "chipped," and to use a popular expression, "are looking a little out." Buyers only trust the man—they don't care for the authority—a good talker is all that is really necessary to persuade them. Each buyer must learn to read character. You can't open their heads and *give* them brains. No association can do any good in this connection in any other way than by enlightening the public. He thought some progress had been made, as more honesty and authority are needed now in traveling agents than ten years ago. He did not think we should condemn all substitution. Sometimes our agents sell sorts that we know will fail in a given locality. In such cases nurserymen do their customers a kindness in giving them some other sort of the same general character, but which will succeed there.

Mr. Moody, of New York, thought we should not forget that we have honest dealers in our ranks. He also thought that nurserymen ought not grow those sorts that are nearly worthless, although there may be a lively demand for them. He denounced the Wild Goose plum as being worthless in New York. Mr. Scott, of Illinois, had eaten the Wild Goose plum and liked it. It is profitable in the West and South. Mr. Bush, of Missouri, advocated that nursery products should be sold more largely through local agents who have a reputation. Mr. Husmann said that in his State local agents were of no account. They seldom devote their whole time to the business and are not the proper instruments to employ in reaching the people. Mr. Plumb, of Wis., offered the following resolution, which was carried:

RESOLVED, That this Association recommends general dissemination of horticultural knowledge as the most important factor in mitigating and remedying the evils complained of in regard to the dissemination of nursery products.

In the evening the society first discussed the subject of rates on railroad freights, from which it seemed that some railroads, especially those west of the Missouri River, would not accept trees or plants for transportation unless the freight were paid in advance, being unwilling to accept guarantees even from thoroughly responsible parties. It was the sense of the meeting that nothing could be done.

Next was read a paper by W. C. Strong upon the subject of

"The Effect of Various Stocks on the Cion and the Future Tree."

The speaker said that there are two methods of propagating, the one by seed, the other by division. From the seed we get variation, and, as many plants are not propagated easily in that way, we bud. The bud preserves its individuality and is affected by the root. The stock imparts constitution to the bud. The Chinese Saud Pear is of luxuriant growth, and it's seedlings ought to be valuable as stocks. The root is also affected by the cion or bud. Plums budded on peach roots are more liable to disease than upon their own roots; but peaches on plum roots are good. The Yellows—which is a fungus growth on the root (?)—does not attack the plum root, and so we escape it.

Mr. Henderson, of N. Y., thought that we had "Graft Hybrids," or amalgamation of stock and graft, and instanced the Abutilon variegata. If it is grafted on the top of a plant, the variegation appears below the graft. Variegation is disease and we inoculate disease. Mr. Powell, of N. Y., said that the stock is affected by the graft, and referred to the crab as a well-known illustration. Mr. Moody thought with Mr. Powell, but did not believe that the fruit was affected by the stock. He had budded the Duchess of Oldenburg on crab seedlings. They commenced to bear the second season and never made good trees. It dwarfed them.

Mr. Albangh, of Ohio, said that peach on plum may be good at the East, but it was not so in the West and Southwest. The peach root with them was not short-lived; it was longer-lived than the plum root. Plum on peach is not undesirable in the Miami Valley. We have no yellows or other trouble with our peaches, except the borer. Mr. Powell said they used nothing but the Canadian wild stock for the peach. It never dies, and peach on that stock stands our climate better, and is not troubled by the borer.

Mr. Waters, of Wis., thought the best stock for peach and plum to be the Miner plum. He knew of trees of this sort in his State that would measure four feet in circumference. It is not hurt by anything, and is propagated by root cuttings. Mr. Weir, of Illinois, had experimented with the seedlings of the Chinese Sand Pear. They grew like the French stocks and were of no more value than they. Mr. Moody would take soft wood plum, and not American seedlings, to grow the peach on, as the seedlings are hard and must dwarf the peach very much. Mr. Weir had found the European plum root to be much more tender than the peach root. Mr. Stark, of Missouri, had tried peach on plum, using the common red plum. He found that early sorts did well, but late ones would not produce well. His largest fruit was grown on trees double-worked. Mr. Stickney, of Wisconsin, thought that dwarfing the peach on plum is just what we want. It matures early, bears early and is hardy.

The subject of careful handling and packing was then taken up. Mr. Budd of Iowa, stated that the European method of packing was better than ours. He had had trees from Northern Europe that were three and four months on the way, and they reached him in perfect condition; whereas frequently he had trees even from Rochester reach him in very poor condition. He thought our nurserymen should be more careful.

The association then discussed

Insects Injurious to Nursery Stock,

and the best methods of destroying them. Mr. Budd had used carbolic acid soap as a wash for trees. It kept off the rabbits, and also the borers from apple trees. Mr. Albaugh had used diluted tobacco water for keeping off and destroying the Black Cherry louse. Peach buds in his section were seriously injured by a bug that eats off the terminal bud when the tree is only 12 or 18 inches high. It is more prevalent on alluvial than any other land. He asked for a remedy. For the black Span-worm which is often troublesome, he knew of no better remedy than hand-picking. Mr. Henderson stated that the English sparrows will eat the last-named pest, and they had cleaned his premises of the Rose-slug. Mr. Manning found the Canker-worm difficult to manage; but by the use of poisons, such as Paris-green, London-purple and arsenic diluted with water, he had finally succeeded. Mr. Foster, of Iowa, had used all three of the above poisons; but preferred London-purple. Mr. Zimmerman, of New York, stated that the way to manage the Canker-worm was to prevent the female —which is wingless—from going up the tree, which she does to lay her eggs. This can be done by bands. He also recommended the use of air-slaked lime for slugs on cherry and pear trees. Mr. Woodward, of New York, reported that Paris-green is the thing for the Codling-moth. The cost is about one cent per tree, and it is effectual. Mr. Manning stated that an ice storm in the spring freed them of the Tent-caterpillar. Mr. Woodward, being called upon to state how Paris-green is used for the Codling-moth, said he threw it by means of a small force pump over and through the tree. He used a tablespoonful to a barrel of water, and applied it before the apples began to droop, while they were erect upon their peduncles.

The second day's session opened with the reports upon

Quantity and Quality of Stock.

Mr. Augustine, of Illinois, reported that old stock looked thin; but of younger trees there was a better supply. Of sour cherries there was a good supply; but of sweet sorts and pear and plum trees and apple seedlings, the stock was light. Stock had all made a fine growth and was in capital condition. Mr. Spaulding, of Illinois, thought there would be but little young stock put on the market this fall; but what there was would be of very fine quality. If anything, stock had made too much growth. Mr. Hill, of Illinois, reported that of small evergreens there seemed to be a short stock. The spring planting was coming along well, but for a year or two the lighter grades would be scarce. Mr. Graves, of Illinois, reported the spring planting of apple seed to have resulted in a partial failure; other stock is doing well; apple trees are especially fine. Mr. Douglas, of Illinois, being absent, Mr. Stickney reported for him, as he had been through the former's grounds recently. Mr. Douglas has a good and large stock on hand. He is making a specialty of the new Rocky Mountain evergreens, many of which promise to be decided acquisitions to our present list.

Mr. Van Lindley, of North Carolina, reported for his State an increased quantity of apples and peaches, of which there would be a surplus. Stock was doing nicely.

Mr. Peters, of Ohio, reported there was in his section a fair supply of apples and a good stock of peaches; of cherries a fair stock, and a large one of apple seedlings and Mahaleb stocks. The old stock of apples has been used up. Mr. Hoover, reported for Dayton, Ohio, the usual supply of apples, there being enough for th demand and a little to spare. Of dwarf and standard pears there was a small stock; but not enough. The supply of peaches is large, but of cherries not so great as heretofore. Small fruits are in abundance. We need grapes, pears and evergreens—we have a good stock of Wild Goose and Weaver plums, and a fair stock of other sorts. The season's growth is excellent. Mr. Weltz, of Ohio, reported the stock of apples to be very good and of cherries sufficient. Of pears there is not enough. Peaches are plentiful and of good quality. Grapes and evergreens are needed, especially Irish Junipers.

Mr. Underwood, of Minnesota, stated there was no great stock in Minnesota. There had been no heavy plantings, and fruit trees had been seriously injured by the past winter. They were obliged to grow iron-clads, and nothing else. The Duchess, Wealthy and Tetofsky were the only apples that stood the winter well. The common crabs they did not care about, the newer sorts being much better. In the nursery all varieties of apple and crab were injured; but in the orchards the same varieties were hardier. The Wealthy is the very best apple they have, and will come into bearing three years after being planted. Next in order of value are the Duchess and Tetofsky. Four-fifths of the Haas were killed to the ground or badly injured. The Walbridge, Pewaukee, Fameuse, Golden Russett, Price's Sweet and Saxton all fared better than the Haas, but all were injured. Of the crabs they found the Orange to be a good one. Whitney's No. 20 is also hardy; but Bethel is not. The Hesper does well.

At this point Mr. Budd, of Iowa, moved that the wives and daughters of members present be made members, without fee, which was unanimously carried. The new President, Mr. Albaugh, of Ohio, was then conducted to the chair, and he expressed his thanks in fitting words for the high honor thrust upon him, which had come unsought by him. He congratulated the association upon its flourishing condition, and predicted for it a glorious future. The reports were then continued upon the

Condition of Stock.

Mr. Stickney, of Wisconsin, stated that for the current year there were sufficient apples, but not quite enough cherries or plums. Of small evergreens there is no surplus. Mr. Plumb, of Wisconsin, said that there were but few nurserymen left in the State. The planting for three years had been light, and stock is becoming scarce.

Mr. Moody, of New York, reported the quality of stock to be fine. That grown by farmers is used up, and apples are all in the hands of the nurserymen. Of cherries, plums, and pears there is a good supply. Mr. Powell, of New York, agreed with Mr. Moody. The surplus stock has all been used up. We have nothing left but clean, thrifty, well-grown stock. Small fruits are in abundance, and the demand for them is great. Mr. Sweet, of New York, reported a fair supply of apples in Dansville; but not so many as last year. Standard pears are abundant, except younger trees. Dwarf pears are not so plentiful as last year. Cherries and plums are about as usual. Mr. Richardson reported for Geneva, N. Y., that the poor stock is all gone, a large acreage having been cleaned off last Spring. Young stock looks fine, but is not in great supply. Standard pears are in fair supply. Cherries are short, and plums in good supply. Mr. Hubbard, of New York, reported the stock of grape-vines to be about as usual, and doing well. Mr. Jones, of New York, reported for his section (Rochester) that there was no surplus. The old stock of apples which was in the hands of farmers is used up, and what there is left is in the hands of nurserymen. Of cherries there is a light stock; of other things only about enough for the usual trade.

Mr. Teas, of Indiana, stated that the nursery business was about run out of his State, but little being grown except small fruits. They did not have enough apples or pears, but they had enough cherries and peaches.

Mr. Waters, of Iowa, reported that they had no pears at all, and but few sweet plums. Old apples are out of the market, and evergreens in light stock. They would have to buy cherries, pears, and plums. Apple seedlings are short this year, a heavy wind-storm having scattered the seed all over the country after being planted. Osage Oranges are in limited supply, and this is in the hands of a few growers.

Mr. Manning reported for Massachusetts a general scarcity of stock, except in ornamentals, which are abundant.

Mr. Wilson, of Michigan, reported a large and fine stock, especially of peaches, which is the largest he had ever known.

Mr. Bush, of Missouri, reported that the small nurserymen had gone out of the business, and the larger ones had curtailed their plantings. Vineyards are looking fine.

Mr. Webber, of Tennessee, reported stock in good condition. A neighbor of his would

have a stock of about a million of apple seedlings. Other stock about as usual.

Dr. J. A. Warder of North Bend, Ohio read an excellent paper on "Propagation as Dependent on the Similar Functions of Seeds and Buds." This was followed by a paper from Isidor Bush, of Bushberg, Mo., upon "The Influence of Phylloxera on American Grape-vines." He stated that the phylloxera had been known for centuries east of the Rocky Mountains, and we have finally developed species of the vine which successfully resist its attacks. The others had been obliged to succumb, and we had the "survival of the fittest." It may aggravate, but it does not produce disease. European investigation proves this. For years the French objected to the introduction of American vines for stocks upon which to graft their varieties, and it is the only hope of their vineyardists, as a European vine once attacked, never recovers; whereas the American vine is totally exempt from the ravages of the pest.

Mr. C. D. Zimmerman of Buffalo, New York, then read a paper upon "Protection of Trees from Sun." He thought this a very important subject as trees were more liable to be injured by the sun than by frost. He thought in trimming our trees we should copy nature which keeps the branches on the trunk of the tree till the top is of sufficient size to afford some shade. This is especially true of the apple if we want long-lived trees. In the discussion that followed Dr. Warder instanced one occasion when a thermometer moved from the shade, where it indicated a temperature below zero, to the sunlight, showed a temperature of 30 deg: such extremes must be followed by bad results. Mr. Galusha, of Ill, had made extensive trips through the orchards of the State and found no healthy apple trees, except those with low heads. Considerable discussion followed, all corroborating the soundness of Mr. Zimmerman's views.

Mr. Stickney related the case of a consignment of trees which were shipped to Switzerland the past season; but which that government refused to admit within its boundaries, fearing by so doing the dreaded phylloxera would be imported. He was asked to present the case to this Association and procure its aid in enabling the purchaser to get his plants admitted by the Swiss government; accordingly he presented the following resolution which after some discussion was passed:—

RESOLVED, that nursery stock of all species, including grape cuttings but excluding rooted vines of the grape, may be imported or exported without any possible danger of transporting phylloxera therewith.

Dr Warder then read a paper upon the Ash, which he regarded as one of our most valuable shade trees. The White Ash is *the* tree; but the Grecu Ash, which resembles it very closely, is very desirable as a street tree, not being of so great a growth. The foliage is handsome and the tree free from disease.

The evening of the last day was devoted to

New Fruits.

Mr. Woodward, of N. Y. stated that the Niagara would probably be introduced in the fall of '81 or the Spring of '82. He was satisfied it was *the* vineyard white grape. All the stock is in vineyards except what is growing this year. If possible there will be no humbuggery. By a simple process every vine will be sent out under seal. It is being tested in Mich. Canada, Vine Valley N. Y., and Mass. Mr. Peffer said the De Soto plum did well in the Northwest, being hardy, prolific and an early bearer. Mr. Moody spoke highly of the Mann apple which was grown largely in Niagara Co., N. Y. and was now being tested in various parts of the country.

After hearing the report of the Committee on Final Resolutions, the meeting then adjourned to meet next year at Dayton, Ohio.

H. T. J.

Farm Topics.

WESTERN FARMING.—VIII.

W. I. CHAMBERLAIN.

Stark County, Ohio.

I THINK I have mentioned this county in these columns as one of the best in the State. Its soil and climate are admirable, and its farmers are shrewd and diligent agriculturists and horticulturists. It lies south of Summit, my own county, south of the lower line of the Western Reserve, and south, therefore, of the droughty region mentioned in my last. It almost always has abundant rains, sometimes almost too abundant just before and during harvest. Just now, for instance, a heavy, sweeping storm would lodge thousands of acres of wheat already so heavy that it can hardly stand up even under a light shower. I said the farmers were shrewd and diligent. Under the first adjective I intended to class agricultural intelligence, research, reading, testing new seeds, varieties, methods and fertilizers. The farmers are chiefly of Dutch or German descent and naturally conservative, but that does not prevent their being thoroughly wide-awake to discover whatever is likely to be of advantage to them as farmers. Of course, they are not all so; I simply mean they are as a body. I was more than ever convinced of this while in attendance last week, by invita-

PANICUM SANGUINALE.—FIG. 223.

tion, at the monthly meeting of the county horticultural society. It was evident from the fine display of fruits of the season, in the clear and prompt reports on the future outlook, and in the essays and speeches.

My ride and drive, too, through the county, going by one route and returning by another, impressed me more than ever with the general excellence of the farmers and farming. I know it is a remarkable wheat year, the fourth in succession, but such wheat I think I never saw—so large an acreage and so immense a stand. I had my eyes open for fifty miles or so through the country, on cars and in carriages, and do not recall a single field that was poor; not one, I think, that would not probably yield twenty bushels per acre. If there are such fields they lie back from the roads and railroads. On the splendid carriage road from Massillon to Canton, a distance of eight miles, I should judge the average yield of all the fields in plain sight would be 30 bushels per acre. That was the opinion of other good judges also. Other crops, too, look fine, though the grass is a little below the average. The fertility of the soil is kept up by the free use of lime, plaster, clover and barnyard manure. Hence the area under the plow can be and is large. The fields, too, are large—not large for Dakota or Arkansas, but for Ohio. They are often purposely divided to facilitate rotation and the pasturage of clover. Still they are large enough to turn a self-binder in.

Take, for example, the fine farm of Hon. Arvine C. Wales, of Massillon, with whom I spent the night and of whose farm I can therefore speak more clearly. In front of his house lies a wheat field of 60 acres in one "chunk," and he has two more, making 130 in all for this year. Next year he will put out considerably more. The sixty-acre field has highway on three sides and a lane on the fourth, and we drove entirely around it behind his thoroughbred mares. The stand of wheat was so magnificent—yes, that is the word—that I could not resist the temptation to get out of the carriage several times and go into the field a few feet to see if it really stood as thick as it seemed to do. It is of the Fultz variety, which seems to yield best on the gravelly loam of Stark county. I could judge better of the yield of Clawson, but should find it at 35 bushels per acre, and Mr. Wales estimated it at the same. I asked him how he got such a stand over the whole field. "Why, I manured the whole field." "How many loads in all?" "Fourteen hundred, the year's make, well rotted, and drawn in August and September." I asked one of his men if manure drawing didn't get to be a trifle monotonous, and he said *it did*. Four weeks' steady pull! It comes chiefly from 2,000 sheep, about 50 hogs, 30 or 40 head of cattle, and 14 horses, and "consumes in its manufacture" the straw and chaff of over 200 acres of wheat, oats, barley, etc., and 50 acres of fodder corn, besides hay and grain, *all of which are saved*.

In winter the sheep are housed in several large, cheap, well-ventilated sheds, and are thoroughly bedded with straw and fed, as are the cattle, almost exclusively on fodder corn. This is sowed with a wheat drill with all the tubes running, cultivated only with the smoothing-harrow, cut with the reaper, cured thoroughly in small, upright shocks, and, after three weeks or so, bound in bundles and put in shocks of thirty or forty bundles, and drawn from the field to the feed cutter as needed in winter. This cutter is run by steam and has an elevator attached, like the "stacker" of a thrashing machine, that carries the chaffed feed and dumps it into either of two immense, tall, steaming tanks or casks. As it passes along this elevator, it is uniformly mixed with meal or middlings sifted on to it from a wedge-shaped bin above, that holds a day's feed and just empties itself in the time it takes to cut the day's feed of fodder corn. One tank is filled and steamed while the other is fed out. Wagons are driven beneath the tanks and filled with almost no labor, and the feed is drawn to the several sheep sheds and cattle stables and fed in racks and mangers adapted to this kind of feed. Mr. Wales believes the fodder thus cured is quite as good as and far cheaper than ensilage put up in silos. It brings the labor of drawing, cutting, etc., at a season when there is little other farm labor, and saves the immense expense of silos for such large quantities. He says the fodder keeps perfectly in the field, and the only drawback is a "soft winter" when the teaming is, of course, heavy. When there is frost or snow there is no trouble.

As I looked over this farm of some 300 or 400 acres, with its grain, fodder corn, sheep, hogs, dairy, city milk trade, and immense annual product of the richest manure made under cover, with all the urine saved by free use of straw and chaff, it struck me that Stark county farming might possibly "pay." I asked Mr. Wales if it did, and he admitted that possibly it might if it were not for five drawbacks:—rats and mice, dogs, repairs, taxes, and hired help! The cutting and steaming of fodder are not very expensive, steam being made with coal-slack at fifty cents per ton, from nearby; for Stark county is rich in mineral (coal) as well as agricultural resources. I asked Mr. Wales if sheep husbandry pays. He said it did, or would only for the dogs. His sworn bill of damages before the county dog commissioners this year was $1,200, and the "dog money" will only pay a small percentage. This dog nuisance is an utter abomination here in Ohio, and is ruining one of our best industries. Dogs seem on the increase, and our laws are defective and insufficient. One fault is obvious:—Some counties keep almost no sheep; but the surplus money from the dollar dog-tax *does not go into a general State fund* to be drawn on by counties where the local fund is entirely insufficient to pay the immense damages to sheep.

It is a serious thing for some men to be driven out of sheep husbandry. During the war, for example, Mr. Wales's hired men were in the army except two who were too old and infirm, and he had little land under cultivation. But his clip one year from over 2,000 sheep brought him over $10,000, and he sold $2,000 worth of sheep, mostly "increase." This is a neat little item of farm receipts! But now his flock is reduced to 1,100 by dogs and other causes, and he has had to fight dogs all Summer. The coal-miners have been on a strike and their half-starved dogs make fearful ravages on the neigboring folds. Mr. Wales has kept a man with a gun in the field with the sheep all night every night for many weeks. But the dogs are starved, and bold, and numerous, and you can't hit them in the dark or scare them off. I don't wonder sheep owners are angry and full of indignation at the damage—yes, almost destruction—of a great industry by the worthless curs of worthless masters. Sheep husbandry is well adapted to supplement extensive grain-raising. It works in much of the straw as feed, and more as bedding. It requires little labor in the busy season, and it furnishes large quantities of the best manure, so much needed for wheat. Indeed, on a farm like the one I am speaking of, the sheep and horses will utilize nearly all the straw, for the latter are fed in winter entirely on oat straw and grain, with no hay till heavy spring work begins.

I returned from my short visit more than ever impressed with two conclusions:—First the Stark county farming is, on the whole, excellent; the tillage being wise, fences good, general appearance tidy and barns immense. Second, dogs are the greatest drawback and the dog problem is a very difficult and serious one.

Farm Economy.

THE TRUTH ABOUT IT.

[THE object of articles under this heading is not so much to deal with "humbugs" as with the many unconscious errors that creep into the methods of daily country routine life.—EDS.]

DRILLING FERTILIZERS WITH THE SEED.

PERHAPS there is no other question that more often comes up for discussion or consideration than that relating to the use of fertilizers. There are differences of opinion on this question, which I believe occur from a habit of looking at it from different points of view. Now, I think it is a fact that the testimony that may be gathered from those who have practiced artificial fertilizing and the use of manures in the hill or drill, will be in favor of the practice in a very large majority of instances, if not universally; and that, if a difference of opinion exists on the point, the adverse opinion will be held by those who have not carefully considered the points I wish here to present. The truth is that in fertilizing we are simply feeding—that in using artificial fertilizers or manure in the drill or hill, we feed the young and tender plant; and in broadcast manuring we are feeding the growing and vigorous plant; that a young plant, as a young animal, requires the most easily digested food (such as artificial fertilizers), while a vigorously growing one is able to consume and digest coarser matter, as barnyard manure; that a young plant is weak and cannot forage for itself and needs the food to be placed within its reach, otherwise it may perish of starvation because the nutriment which may be plentiful enough a little way off, may be just beyond its reach at the time when it is most required; that a strong, vigorous infancy and youth will supply a constitution which will resist much later hardships, under which a weak plant (or animal) would quickly succumb.

Now, after this explanation, let us follow a seeding placed in a drill with some active fertilizer and another drilled in upon land that has been manured broadcast. In the former case the seeds sprout and the young rootlets—let us suppose them to be potatoes, wheat, corn, or any other crop; it is the same for all—at the instant they emerge from the seed seek food from the soil, and find precisely what they want, which is phosphoric acid chiefly, at this stage; but be this so or otherwise, they have a perfect food within reach, soluble and ready for instant and perfect absorption, digestion and assimilation, because it is in precisely the form required, that is, mineralized and soluble. The roots spread in all directions among the particles

of food, finding the materials from which the substance of the young plant is formed; and this being supplied freely, the plant grows vigorously, and its aerial growth is paralleled by its root growth in the soil. Here is every condition for vigorous and healthy vegetation.

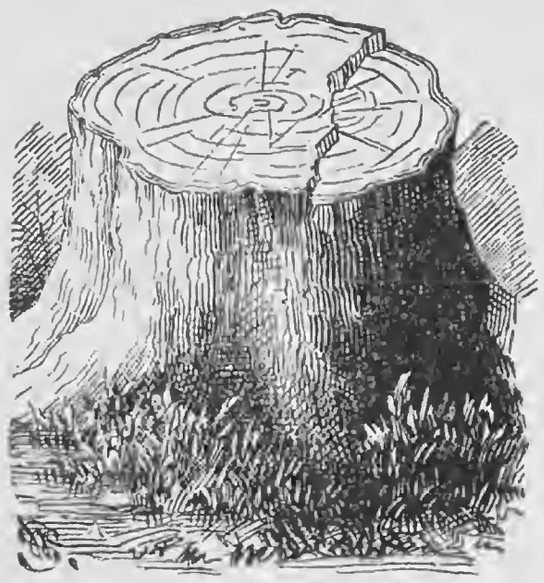
The plant is able to procure its supply to a larger extent than otherwise, even from soil particles, should manure not be present, because the roots have explored the soil in every direction, and for a long distance and are very strong and active. But if manure is in the soil, these roots find it and the rapidity of growth goes on uninterruptedly to the expected end—the harvest, because food is abundant and the plant is strong and able to gather it in abundantly. In the latter case, the manure may have been liberally supplied, let us say, 30 tons per acre. This will give nearly one pound of manure to each square foot of land. But what farmer can put 20 tons of manure on his land so that every foot shall get its equal pound. Not one. Only a few days ago I assisted at the planting of an acre of Hubbard squash on ground that received 40 loads of manure spread broadcast and plowed in, and there were many hills made about which no manure could be seen within several inches. In such a case as this, without fertilizer or manure in the hill the young plant receives no food during its infancy when it needs the most careful feeding; and many plants of a crop will starve and perish before they can reach the food that is beyond their grasp at the moment when it is most required. This seems to be the truth of this matter.

Successful growers of roots, corn, and market vegetables, universally practice drill or hill fertilizing in addition to broadcast manuring, and if one is questioned as to why he does this, he will tell you that he cannot raise profitable crops in any other way. If such exacting crops as these thrive by such a system of feeding, why should not wheat and small grains require the same management? I am sure they do, and would never drill grain of any kind without using a fertilizer attachment to drop some active stimulant to provide food for the first demands of the young plants.

H. S.

GIANT POWDER AND ITS USE ON THE FARM.

The large number of inquiries we have received concerning this blasting material and its

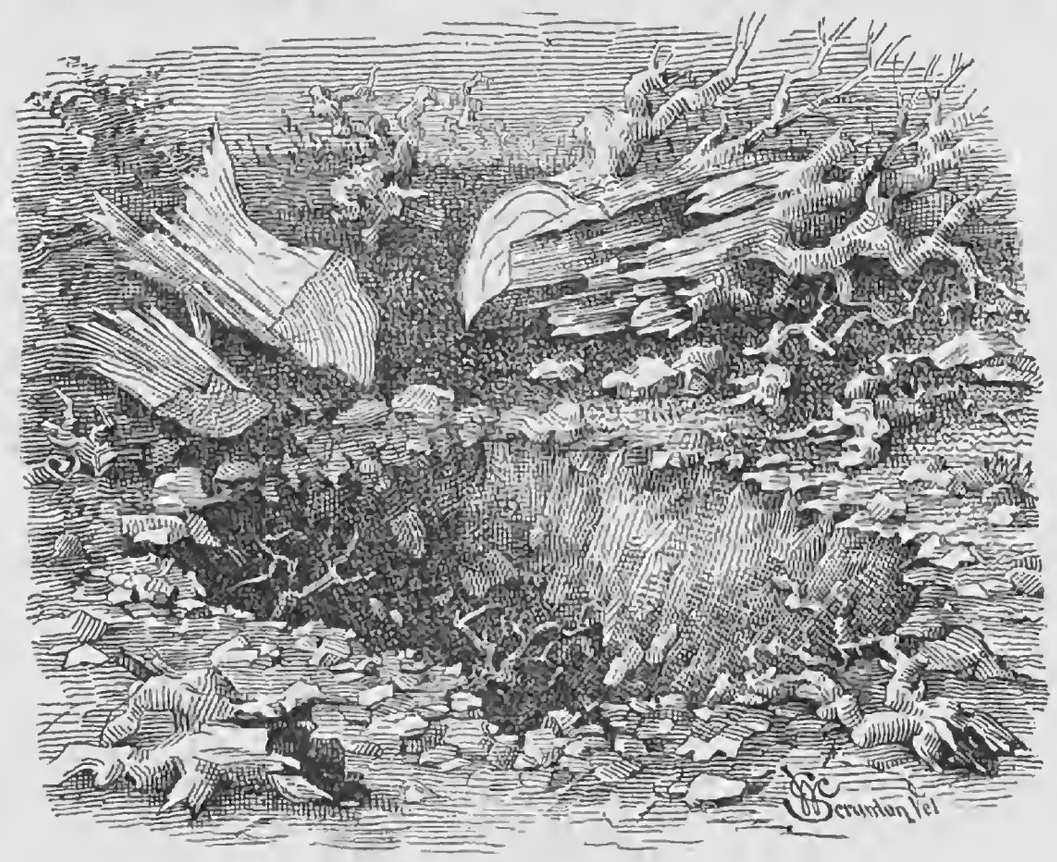


STUMP BEFORE BLASTING.—FIG. 224.

usefulness as an agent on the farm, indicates that its employment is a question of very general interest, and it is the object of this article to throw some light upon the subject and to answer inquiries in a general way, that have already been propounded, and to anticipate those that may be forthcoming.

Giant powder and dynamite are synonymous terms, the former being the name most frequently used in the United States, and the latter in Europe. It consists of a kind of silicious earth saturated with about three times its weight of nitro-glycerine, and in appearance is not unlike damp Graham flour. It is generally recognized as the safest of all violent explosives; but, nevertheless, great care should be exercised in its use, and no person should undertake to blast with it before he is familiar with its properties and knows how to handle it. Being an explosive, it cannot be forwarded by mail or express, and land-owners who may be desirous to clear away stumps and rocks by the use of giant powder, should apply for information to some neighboring agent for the material, or to the manufacturers. There are two kinds of powder in the market, designated as No. 1 and No. 2. No. 1 is employed for heavy work, being the most powerful, and costs $1.00 a pound. No. 2 is less powerful, but quite efficient for the blasting of stumps, etc., and sells for fifty cents per pound. It is put up in cartridges eight inches in length and of any diameter the work may require. The cartridges are exploded by caps made for the purpose, and the cap is ignited by means of a fuse.

The accompanying figures are true illustrations of the power of the explosive and the effectiveness of its work. Figure 224 represents an oak stump, about three feet in diameter, before the blast is inserted, and figure 225 shows its appearance after the explosion. Large bowlders or rocks are also effectively so broken up that the fragments can be removed with ease. An example of this sort of work is shown in figures 226 and 227.



STUMP AFTER BLASTING.—FIG. 225.

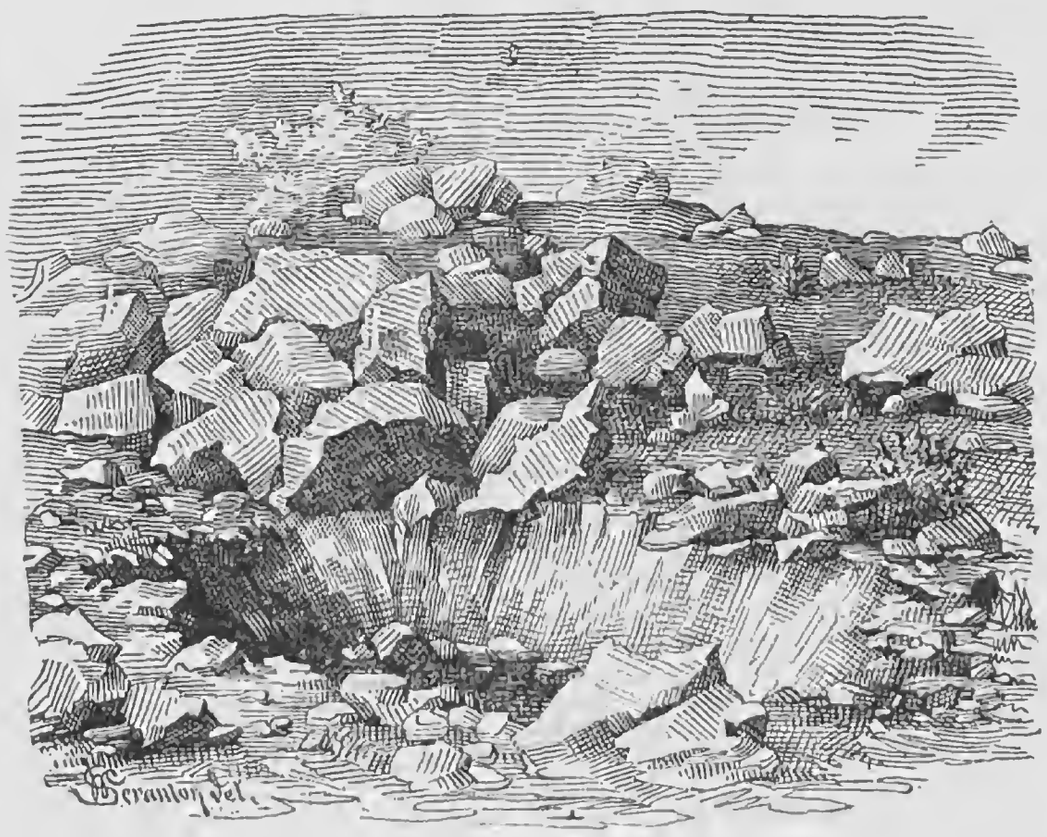
Some years ago we became familiar with a case of this kind in Europe. A farmer owned a field thickly set with large bowlders. The land was valuable but the rocks interfered seriously with its cultivation. The owner decided to blast them and we happened to witness the operation. Holes varying from eight to sixteen inches in depth, according to the size and character of the rocks, were bored, and in each was placed the whole or a part of a dynamite cartridge into which the cap and fuse had been inserted; the holes were then carefully tamped with wet clay, and when a number were thus prepared the operator ignited all the fuses, beginning at one end of the series, so that he was constantly running away from those first fired. The blasting proved a perfect success, and the field was cleared at a nominal cost.

When a stump is to be removed by blasting, it is often most expedient to punch a hole with a crow-bar under it, especially if the soil is firm, and place the charge so that it will take effect near the center of the stump. The prevalent idea that giant powder always strikes downward has no foundation in fact; it strikes in all directions with equal force. In adjusting the charge, whether it be in a stump or a bowlder, take care that the cartridge reaches the bottom of the bore and that it is packed solidly. One end of the fuse is thrust into the cap, and the cap is then inserted in the cartridge.

When cartridge, cap and fuse are thus united and placed in the bore, tamp the charge carefully. Wet clay, brick dust, sand, or even water, are good materials for tamping. Do not use a metallic rammer in packing the tamp, and take the greatest care that the cap is not exploded. The fuse should be long enough to allow the operator to remove to a safe distance before it is burned up. The nitro-glycerine contained in the powder solidifies or freezes at a temperature of about 48° F., and when thus frozen it is unfit for blasting; it should therefore always be kept at a temperature of not less than 50° F. This brings us to mention some necessary precautions

If dynamite should happen to freeze, do not attempt to melt it by heating it in a vessel or by baking it before the fire; when suddenly heated an explosion is almost certain to take place. Place it in a warm room and let it there remain till it becomes pliable. One may put fire to it with a match with impunity and it will burn slowly without exploding, but it is not safe to heat it suddenly when not in direct contact with the fire. Always keep the caps away from the powder when not used; an accidentally exploded cap may prove fatally destructive. Handle the powder carefully; it is exploded by percussion, and a portion thrown or falling against a hard substance is likely to "go off."

Where considerable blasting is to be done in the same neighborhood, it will, no doubt, be expedient for the owners to unite in hiring an expert for the purpose. There is a saving both in time and money when the work is properly conducted.



BOWLDER AFTER BLASTING.—FIG. 227.

THE SO-CALLED PROCESS OF ENSILAGE.

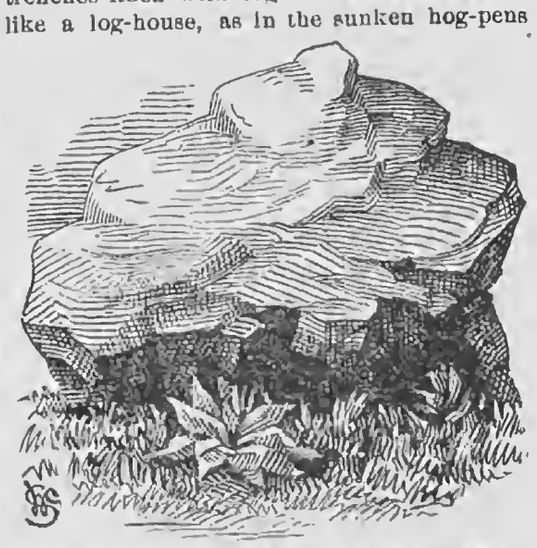
PROFESSOR F. H. STORER.

I would like to add a few words in support of the very sensible protest of Mr. Henry Stewart, in the RURAL of June 19, against a movement now current tending to an undue refinement of the well-known process of souring green crops, which, since its importation from Europe a few years ago, has commonly been called "ensilage" in the American newspapers.

This process of fermentation is extremely valuable in that it enables the farmer to preserve, at small cost, green or wet forage which cannot be cheaply dried. It cannot be too strongly insisted that the chief merit of the process consists in permitting us to save with economy and certainty such fodders as cannot be dried except at the cost of much time and trouble. Naturally enough, the method has been most highly esteemed in countries less favored than our own in respect to climate. Wherever, for example, the weather is habitually so bad that the farmer cannot readily make hay by drying his grass it is a great privilege to be able to preserve the grass by another method. But, in spite of the abundant sunshine of this country, there can be little question that it will be a great gain for American agriculture when the process of souring, as applied to corn fodder, pea vines, Lucerne, clover (on occasion), brewers' grains, apple pomace, sorghum refuse, and the like, comes to be everywhere clearly comprehended and practiced among us. Meanwhile, however, it is of the first importance that the essential simplicity of the process shall be kept clearly in view, and that no man shall be misled by the statements of enthusiasts—much less by buncombe.

It is manifest on the face of the matter that the generality of American farmers cannot encumber themselves with costly appliances in this regard; and that there is no need of their doing so has been abundantly proved. The conditions essential to success in souring green fodder are merely that air and water shall be excluded. The trench must be dug in a place where water cannot soak into it; the fodder must be packed firmly and carefully in the trench, and be kept closely covered with a thick layer of earth. Green fodder thus buried out of contact from the air undergoes a peculiar fermentation, one result of which is the production of a small quantity of compounds of lactic acid and of butyric acid. The product of this fermentation is, in fact, akin to the fermented cabbage called sauer-kraut. But when once the fermentation has run its course, the fodder suffers, practically speaking, no further change, and may be kept for a very long time without hurt if the air be completely excluded.

No doubt the capitalist or large-way farmer may find it convenient to methodize matters, and to make his souring trenches permanent constructions, roofed and cemented in due form according to European patterns; but it should be borne in mind by every one that these expensive luxuries are unnecessary, and that perfectly good results can be obtained by very simple methods. For some parts of the country it will be of interest to determine by trial whether, even for the capitalist, trenches lined with wood may not serve instead of those built in masonry. It is not improbable that trenches lined with logs notched and laid up like a log-house, as in the sunken hog-pens



BOWLDER BEFORE BLASTING.—FIG. 226.

common in some localities, may be found useful and convenient. It would perhaps be well in this case, when packing in the fodder, to ram some earth between the fodder and the logs, and to set posts in the corners, as dead wood, to insure the thorough exclusion of air. It is conceivable that trenches thus lined might, after a while, when the wood has somewhat decayed, harbor molds and other fungi detrimental to the proper souring of the fodder, but this point can only be determined by actual experience, and it could be met, if need were; by ramming a tolerably thick layer of earth between the fodder and the logs.

In view of the fermentation above mentioned, the Germans have applied the name "sauer" fodder to the whole class of substances thus preserved. We Americans would probably have done better to have followed the German usage in this particular rather than that of the French, for the German term conveys a tolerably precise meaning, while the French is indefinite. The French word *silo* really means a pit or trench in which grain or roots are stored, and the word *ensilage* usually means nothing more than the storing of grain or roots in pits, instead of in cellars, as is usual with us. I have before me a book of 340 octavo pages, published in Paris in 1862, which treats exclusively of the "preservation of grain by ensilage" I remember to have seen, myself, some thirty-odd years ago, in the fields of a New Hampshire farmer, "silos" for storing potatoes in this sense, such as he had seen in use by the French in Canada when he visited that country some years earlier. Such "silos" were used for keeping Rutabagas on Long Island in the year 1818. The purpose of the *silo* proper is merely to shield the roots or grain from frost, heat, wet, insects, and the fungi which cause decay; and no extraor-

dinary precautions need to he taken to insure success; whereas in pitting green fodder the arrangements must be such that a peculiar fermentation (and no other) shall occur. The results sought for in the two cases are so unlike that one and the same name cannot properly be applied to both.

It would seem to be more proper for us, anyway, to use the English word pit or trench in place of the French word *silo*, and to speak of the souring of green fodder rather than of its ensilage.

Dairy Husbandry.

A NEW NOMENCLATURE IN BUTTER-MAKING.

RICHARD GOODMAN JR.

In the days when we knew nothing more of cream-raising than was furnished by the small shallow open tin pan of the New England milk-room and the small shallow open crock of the Virginia spring-house, the words "setting" or "raising" were sufficiently comprehensive and accurate. But in these modern days, with their many and varied and fast-increasing methods of obtaining the cream of the milk, it would seem desirable to adopt some expressions more exact and at the same time more general in their application; some expression would seem to be needed, for example, which would apply as well to the obtaining of cream in the old shallow, open pan as by the modern centrifugal separator.

In the same way the word "churning," while it applies to all methods of obtaining the butter by paddle, dash and box churns, does not fairly include the old French fashion, now being revived, of burying cream in canvas bags in the earth and allowing Nature's chemistry to extract the butter. No more does it properly apply to the artificial chemical processes of removing the envelop of the butter globule, which may at no distant day supersede all mechanical methods of obtaining the free butter.

Again, "working butter" was a sufficiently expressive term when the butter-milk was removed by squeezing with the bare hand, or by the application of damp cloths or sponges, or by the spaddle, or the straight bar in the lever butter-worker, or the grooved ridged roller of the crank machines, or even by the direct pressure of the Blanchard power machines, but this expression will hardly cover conveniently the application of centrifugal force to to the removal of the butter-milk—and the "centrifugal drier" is now regularly manufactured for the market.

For these varied, delicate and important processes some simple and exact but comprehensive and elastic expressions are needed. The methods now known and approved have already grown beyond the words we have to describe them in general conversation or scientific discussion; and there is every reason to believe that we have by no means yet reached the limit of investigation and improvement in these fields.

The object, then, is to find some expressions which will closely fit to-day, and which will yet grow with our knowledge of the subject and be accurate and convenient at all times. If we bear in mind now that every process in butter-making deals more or less directly with the *butter-globule*, and has for its ends the aggregation of these globules in as pure and free a state as may be, we shall have a distinct point from which to begin our new nomenclature, and a guide to prevent our wandering from the right path.

The first process in handling milk for butter-making, called "setting," was for the purpose of gathering or collecting these butter-globules into as compact a mass as might be, in order that the churning might be as rapid and the churn as small and light as possible. The next process, "churning," was nothing more than the breaking of the enveloping membranes of the butter-globules, which done, they adhered to each other, or "gathered," of their own accord; and the third process, the "working" was simply the removal of these broken envelopes and what moisture may have accompanied them. In all of these processes the free, pure butter-globule is what we are striving for; and any expressions, to be definite and intelligible and capable of growing with the growth of our knowledge of butter-making, must keep these globules distinctly in view and refer wholly to them. Such expressions as "collecting" for the first process, "liberating" for the second, and "drying," for the third would perhaps answer the purpose.

In the first process the butter-globules are *collected*, or brought together, as much by deep as by shallow, as much by open as by covered setting, as much by heating as by cooling, and this expression would apply with equal exactness to the work of the centrifugal separating machine in all of its forms. In the second process the expression, *liberating*, would apply, not only to the freeing of the globule from its envelop by the mechanical operation of the paddle and box churns in all of their forms, but to the natural and artificial methods of eating off the envelop by acids.

Would not a few simple and exact expressions like the foregoing aid somewhat in the discussion of the varied and important subject of butter-making?

Yokun Farm, Lenox, Mass.

The Herdsman.

NOTES FROM MY BARNYARD.

E. P. POWELL.

My neighbor, Seth, says "There is no place for studying human nature like a barnyard." I suppose he means, if you want to know what kind of a man a farmer is, you should get acquainted with his cattle and sheep and hens. I guess he is right: for these creatures generally behave a good deal like their owners. A sensible man can make every animal talk and reason, and have considerable moral character. If he is impatient or ugly, go to his barnyard to find it out.

The other day I saw a boy of about 16 riding a great bull to water. He came up the street as if he were on a fat pony. It scared me at first, for fear the old fellow would make a lunge at my horse. But the boy and I stopped and had a long talk. The bull looked up into my buggy, and his eye was as "clever" as that of an ox. The boy had not abused him, but taught him by quiet firmness to obey, and the result was a nice pet (?) instead of a dangerous rascal.

Coming home to my farm on a vacation after nearly a year's absence, my "man" said to me, "you will have to sell that pet Ayrshire heifer. She is a terrible creature; we can do nothing with her." At milking time I found they had her with a rope around her horns in between close bars, and then stout pins before and behind her hind legs. One switched off flies while another milked. She made it lively, however, in spite of bars, pins, pegs, ropes and men. It looked like a bad case. Her eyes were full of mischief. The next day I had her led out on the lawn of nice grass for a good meal. The next day she was let loose in the yard, when I took a rope to the gate, held it up and called her to come and let me put it on, promising her a good time on the lawn. It was at least a half hour's work of quiet, persistent waiting and talking. But she was slowly coming to the point of yielding At last she held her head quietly down close in front of me, and not till then did I yield one inch to her. She must submit before she could have the coveted grass. Then I led her out at once and gave her a good time. The result was that in three weeks she could be milked anywhere on the lawn without the least danger.

"As I was saying," says Seth, "a Quaker barnyard is better than preaching." He means that to see the peace and happiness and neatness of a Quaker barnyard convinces him that religion is a good thing—at least for animals. There is no swearing or rough language. The animals know they are sympathized with, and they return the love.

Billy is my Leicester ram, about one year old; a splendid fellow with a handsome, clever face and a great deal of intelligence in his eye. I hired another Billy last fall to do the chores. Billy No. 2 had not been in charge a week before Billy No. 1 met me, as I went into the yard, with a round whack that sent me head over heels among the hens that I was feeding. The rogue caught me on the stoop and spread me out. Watching, I found that Billy No. 2 had been teaching him some of his human accomplishments, and had nearly spoiled him for a pet before I found it out. I have succeeded in curing the sheep and discharging the man.

"Like master like man," may be true says Seth; "but like man like beast must be true." A few years ago I had a quiet, demure chap called George to work for me. He was a little fellow, but he was so good to the animals that I could spare some muscle. I discovered in the course of his first year that he was making a very funny place of my barnyard. It was a sort of school where everything learned to show what it was capable of doing. Hens were up to all sorts of pranks, especially one little black top-knot. This creature would almost talk. Her pride was astonishing. She immediately took her station by my side and walked with me all about the yards, never allowing another hen to approach. One day coming home from a long absence, I could not find Blackie, although she would generally rush to me with a shout. "You'll find her under the old mow," said George, "under the old cutter that lies there, but you cannot get her to come out. She has been there for two weeks, and I feed her there. She lost her feathers and is too proud to show herself." Sure enough, there she was, scolding and fretting "like anybody," and she staid there till her feathers grew. George went quietly around chuckling and laughing with the animals more than talking, and they let him do just as he liked.

"Legs are well enough and so is fat." says Seth, "but it don't stand to reason that they are better than brains." I suppose he means that if we should pay as much attention to developing animal reason as we do to producing flesh and securing speed, we should be quite as successful. Most farmers would hardly care to breed for brains, however. Several years ago, my good old mother had borrowed a little hen to sit on Brahma eggs, as her Brahmas did not seem inclined to sit. Visiting her as usual during the summer, I saw the little black hen training her yellow chicks and evidently bent upon doing her duty. One day I heard her at the back door making a peculiar loud noise, calling us apparently. She was stepping back and forth, to and from the door, her neck stretched and making a speech of a most vigorous sort. This lasted for two or three minutes. Supposing she might be hungry, we fed her, but she ate rapidly and then started at once for her home, about two hundred rods away. She had left her little Brahmas under the pie plant leaves in the garden, and then come to bid us a fair good-bye and hand in her resignation. It certainly was the most eloquent speech I had ever heard

The Swine-Herd.

CARE OF PIGS.

COL. F. D. CURTIS.

Making Cheap and Healthy Pork.

The common practice of confining pigs in close pens during the Summer is unhealthy and unprofitable. It is natural for a pig to be on the ground. Nature designed that a pig should root for its living, and hence it is provided with an organ adapted to this work. Breeding stock should never be confined in close quarters, if a healthy and productive condition is desired. Exercise is essential, and a variety of food, especially for a female with young, is highly beneficial. Pigs for fattening may be closely confined for a limited period; but if kept so for any length of time there will be a loss of appetite or a feverish condition which unfits them for food. Exercise and healthy digestion naturally go together. Every part of the body was made for a purpose, and there should be an opportunity for its development if a perfect condition is expected. With no employment of the muscles, tendons and organs for locomotion, the free use of which would give full exercise to the lungs and produce a healthy circulation of the blood—with all stomach work—how can it be expected that growing animals and those bearing young should be healthy and well developed? When pigs are confined in pens they are usually fed stimulating food, and this helps to make it worse for them. It is the most expensive way of rearing pigs.

We always have the best success with breeding sows when they are allowed to feed on grass. This is the only food they require until the young pigs are a week or two old, when milk, or meal of some sort, may be given to them to increase the flow of milk if they require it. Sows thus managed are never ugly and never destroy their pigs. Why? Because they are in a natural and healthy condition. The grass also increases the flow of milk and is, quite often, sufficient food for a sow while rearing her young. Young pigs soon learn to eat the grass, which is alike natural and healthful for them. We never had a case of scours or thumps among young pigs when running in pasture. The grass serves to counteract the effects of corn, and many pigs on grass can be fed heavily with this food without the injury which it would do them if confined and deprived of grass.

Our experience has convinced us that no farm is complete without a pig pasture. Clover is the best of all the grasses for this purpose, and next to it we prefer Orchard grass, for the reason that it starts up promptly after being eaten off, is the earliest in the Spring and is relished by the pigs. It is not necessary to have a special field for the pig pasture, but they may be allowed to run in any lot if properly inclosed. There should be water in the field and plenty of grass. A patch of sweet corn sowed in drills will be found convenient to supplement a shortened pasture in the late Summer. There should also be another patch of turnips or other roots into which the pigs may be turned for fall feeding. With the three auxiliaries of pasture, sweet corn stalks, and a root patch, the cost of rearing and feeding pigs may be reduced to less than one-half of their expense when they are confined and fed in pens, to say nothing about their better condition for food.

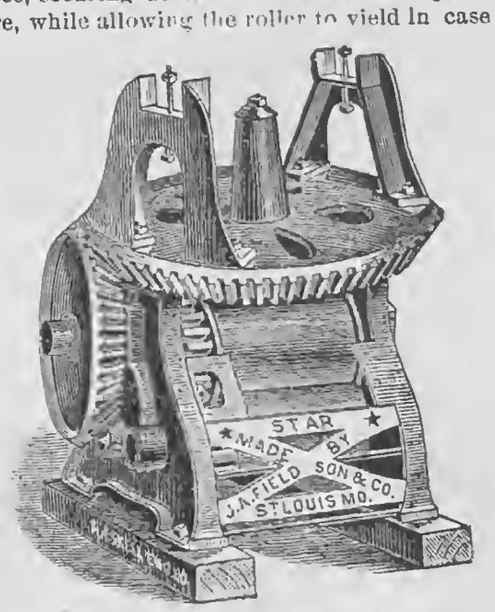
There is a great deal of complaint now-a-days about pork being too fat, and many people who used to eat old-fashioned pork, and relish it, will not eat the modern, improved sort. The main reason for this is because pigs are overfed while young and kept so closely confined that there it no proportionate growth and development of muscle (lean meat) with the fat (oil). My system of growing pigs, while it is more successful in the breeding, does at the same time make a growth of muscle and fat more nearly balanced. To make a perfect pig the feeding and the treatment should be such that the muscles and frame should be produced first, and the fat added on, whereas the practice of confinement and exclusive grass feeding makes the fat first, with scarcely any muscle or bone to support it. Pigs should be kept in a thrifty, growing condition until within a month of the time when they are wanted for slaughter, when they may be fed stronger, but not for a longer time. A big weight is not so good as a healthy pig. Old hogs may be stimulated for a longer time and be made fatter, but these make better food if fattened on such natural feed as clover and roots and topped off with corn.

A strong copper wire in a pig's nose will keep it from digging up the sod. An orchard is a suitable range for pigs, as they will eat all the fallen fruit and thus destroy myriads of worms which would otherwise develop for future damage. If it is impossible for a farmer to let his pigs run out, he ought, for health's sake—and it is good food, too—to give them feedings of grass in the pens. We have kept hogs in this way all Summer on grass alone.

Industrial Implements

THE STAR CANE MILLS.

These excellent mills are made by J. A. Field, Son & Co., St. Louis, Mo., and are winning a wide popularity wherever they have been introduced. They are built unusually strong, and extra-heavy, weighing, it is claimed, about double as much as any other mills of the same capacity. The boxings for the bearings are put in from the outside so that when worn out they can be replaced without taking the mill apart. The bearings of the feed-roller shaft are self adjusting, yet firmly held to their place, securing at all times the utmost pressure, while allowing the roller to yield in case



of over-feeding or the accidental feeding of some uncrushable substance, thus avoiding accidents and accurately adjusting the pressure to the work to be done. Owing to this self-adjustment, in heavy feeding clogging is avoided, and in light feeding, the rollers, closing up tighter, press the cane thoroughly; while in both cases the mill runs easily and steadily. The delivery roller, too, can be adjusted to give any desired pressure, by simply turning a nut, so that the last of the juice can be pressed out of the cane. There are several other excellent features connected with these mills, all of which will be fully explained by circulars which will be promptly furnished on application to the manufacturers.

Russell & Co's large works, at Massillon Ohio, were in great danger of being entirely destroyed by fire, on June 20. Happily, however, by great efforts the fire was confined to the upper stories, inflicting a loss of only about $25.000. As none of the wood and iron working machinery was burnt up, there will be no delay in filling all orders for their well-known portable and traction farm engines, thrashing machines, horse powers, etc.

Veterinary.

DENTISTRY EXTRAORDINARY.

In the agricultural department of a New York weekly paper, of a late issue, under the heading Veterinary Advice, a correspondent, whose steer "chews the cud and then drops it," is advised to examine the animal's teeth, and among other recommendations is the following:—"Diseased cavities in teeth should be cleaned and washed out, scraped, and filled with gutta-percha, previously softened in hot water."

This is the third time within a few years that

the same advice has been given in the Tribune. Prof. Law was the acknowledged author in the former cases, and I presume this last emanated from him. I am amazed that a man so well informed in veterinary practice should blunder as he has done in these cases. He surely has not written from experience. A filling of crude gutta-percha in the grinding surface of a molar tooth of horse or steer, would wear away in a few days, so that it would be of no practical benefit whatever. The material is too soft to be of service in such cases. Being a practicing dentist of many years' experience, I feel justified in speaking quite positively regarding the durability of materials that are used for filling teeth.

There are different forms or preparations of gutta-percha used for filling human teeth; and I have never made use of one that would not withstand the wear of mastication much better than the crude article. But even in this improved form, dentists never make use of it with the expectation that it will serve more than a temporary purpose, except in places where it will be exempt from the attrition of chewing.

In a tooth of the horse or ox or other beast that chews hay and grain, a filling would be subjected to an incomparably more severe service than in a human tooth; and yet in the latter case, the purified and hardened gutta-percha will last but a brief time. Now we can see the absurdity of the advice to fill the tooth of a beast with crude gutta-percha.

Before closing, I will say that dentists constantly make use of a filling material that, I think, would endure for a long time the severe test we are considering. It is amalgam. It is plastic when prepared for introduction into a tooth, and would be as easily put in as gutta-percha. It soon becomes very hard, and in human teeth it never fails on account of its wearing away. If the filling of animals' teeth is practicable, it can only be so by using this material.

Miscellaneous.

KILL OFF THE DOGS.

Every week the papers bring us accounts of valuable cattle lost from madness caused by the bites of rabid dogs. Every year the enormous loss to the sheep industry from worrying dogs startles us by its size, and yet we go on year after year risking life and property and suffering discomforts, if not death, from the fangs and diseases of these hordes of worthless dogs.

They do not protect us from burglars once in a hundred times. If a burglar is determined to enter a dwelling and bolts and bars do not stop him, surely a dog will not. A faithless dog is enticed away; a resolute dog is quickly quieted by a bit of poisoned meat. Nor are they desirable companions for our children; they teach them nothing good and they make them overbearing and cruel. Nor do they protect our farms and buildings to any great extent from vermin; a good steel trap will free a barn from rats and a field from wood-chucks more satisfactorily than a dozen dogs. A "boom" has lately been started in favor of the dog, on the ground that he will thus free the farmer from these indoor and outdoor pests; after long trials and much bitter experience, I say one steel trap against a score of dogs. If dogs are used to drive cattle serious injury may be done to the cows and certain injury will be done to the butter made from the milk of a "dogged" beast.

A dog in his life-time will frighten or bite one's friends or one's children a hundred times for once that he will protect from a determined burglar. A dog by jumping over a roadside fence or barking at a horse on the highway may subject his owner to greater loss of time and money than the good done by all the dogs of a county would amount to. Dogs kept as house dogs on a farm or in a village, are a relic and evidence of barbarism, of a wild and savage state of existence not yet passed away. Where dogs are kept birds are scarce; and birds are now recognized as among the farmers' and villagers' most valuable friends. Without the birds, the worms and bugs and all the insects injurious to vegetation and distressing to human beings would exist in countless swarms, and the toad in gardens is as busy and useful as the bird in the tree or meadow. And against all, toad, bird, sheep, cows, children, friends, does this our wage unceasing warfare. When he is not biting he is barking. And day and night, year in and year out, the useless dog is more or less of a wild beast in our midst; and not seldom he is a source of the deadliest danger. Madness in the dog, and the communication of this terrible disease to human beings, are facts—and terrible facts. Hardly a month passes in this country in which we do not see accounts of the death of a human being in one of its most terrible forms, and where death does not follow the bite of a dog which is rabid, or supposed to be, the agony of apprehension darkens the life of many a happy home.

Now, if we put on one side the loss of our most valuable property, as well as the frequent cases of human death, suffering and sorrow; and on the other side, the few benefits which these semi-wild beasts confer upon the community, shall we hesitate long in deciding on which side the balance lies? R. G., Jr.

Lenox, Mass.

WHAT OTHERS SAY.

Progress has the following: "We have, in America, so firm an opinion that they do everything ever so much better abroad, that the following little incident must be read with surprise. In a Leicester County (England) police court a dairyman was charged with a breach of an Order in Council by allowing persons suffering from scarlet fever to take part in the management of his dairy, which supplied sixty gallons of milk per day to people in Leicester. The inspector found five persons in the defendant's house suffering from the disease. The defendant was fined sixpence (twelve cents), with costs. According to section sixty of the act under which the Order in Council referred to was issued, any person guilty of an offence against the act or the Orders in Council made under it, is liable to a penalty not exceeding twenty pounds (one hundred dollars). The British Medical Journal, referring to this matter, thinks it would be instructive to learn the reasons which induced the magistrates to regard the imposition of a fine of sixpence as a sufficient penalty for so monstrous a disregard of human life and of the most ordinary sanitary precautions."

The Knife and the Yellows.—Judge Lawton asked what precaution should be taken in pruning peach trees so as not to disseminate the yellows.

Prof. Beal thought this a very important matter, inasmuch as a tree might have the yellows enough to impart the disease and still not exhibit any signs of it distinguishable to the eye. He thought an alcohol lamp could be taken along by the pruner, and the blade of the implement be passed through the flame after finishing each tree.

Mr. Tracy said he had used crude carbolic acid for similar purposes with good effect. The liquid could be purchased very cheaply, and a can or pail of it could be carried about the orchard in case of pruning, and between trees the implement could be dipped in the acid.

Mr. Bitely.—Would there be any doubt about this material being effectual in killing any germs of the disease that might adhere to the knife?

Prof. Beal.—I think none at all; and this would be a better choice than the lamp.

Mr. Tracy.—I employed the liquid in a single case of pear blight that was found in my orchard. I cut the diseased limb below the blighted part, and then applied the carbolic acid. I think perhaps it may have had the effect of saving a further dissemination of the disease in the tree. One thing is certain, the odor of that acid was discernible a year afterward, exhibiting the fact that it is not quickly lost.

A question.—Do you consider carbolic acid a remedy for pear blight?

Mr. Tracy.—No; I have no such idea; I have no theory in the matter. The fact is, I used it in this case and the blight did not reappear; it might not have reappeared anyway. Still, if I had another case I should try a similar expedient. The above we take from the Proceedings of the Mich. Pomological Society.

Some Corn.—We find the following in Truth a N. Y. daily paper: "If he who causes two blades of grass to grow where one grew before is a public benefactor, what shall we say of a man who invents a new kind of corn that flourishes like a green bay tree and multiplies itself five-thousand-fold? "Blount's White Prolific" is the name of this wonderful cereal. The seed was all bought up by the Rural New-Yorker last spring and sent out to its subscribers in small packages containing about 100 kernels each, and a prize of $100 in gold was offered for the best yield. The lucky prize winner was a certain Mr. Chamberlin, M. D., hailing from Skaneateles or Medina or some such place up in the Western part of the State. The following extracts from his report may prove interesting to your readers. Says the doctor: "I planted my corn, 100 kernels, May 20th. It was so cold and wet it did not come up till June 10th." This reads queerly to a regularly ordained farmer. Now, up our way corn generally rots if it lies in the ground during two or three weeks of wet weather. We suppose, however, that Chamberlin, M. D., gave each hill a dose of quinine or something of that kind, which preserved the corn through the wet spell and caused it to sprout after twenty-one days. That is the only way we can explain it. The agricultural doctor, in describing the growth of his wonderful corn, says: "It grew beyond anything I ever saw or heard of in the corn line. Day and night it kept growing." Well, we don't see anything strange in that. Corn usually grows night and day when it once gets started. Some people may have imagined it commenced growing at seven in the morning, took an hour's nooning and then knocked off work at six p. m. the same as a day laborer; but this is a mistake. Corn grows twenty-four hours in the day, and the particular kind our friend (the doctor) raised must have grown forty-eight hours a day, at least, to make the wonderful showing it did at harvest time. He says: "I harvested it on October 1, and to tie the stalks I used a step-ladder seven feet high, and then could not reach the top of the stalks within several feet." This sounds rather tall, but then the corn may have been planted on a sidehill, and the doctor may have set his step-ladder at the foot of the hill. That is the only way we can account for his failing to reach the top of the corn while standing on his seven-foot step-ladder. Finally, the doctor reports that from the 100 kernels planted he raised 295 pounds of shelled corn, or at the rate of nearly 200 bushels of shelled corn to the acre. This is something unparalleled in the annals of corn-raising. No wonder the doctor took the prize! A. B.

[A. B. need throw no doubs upon the *hight* of Mr. Chamberlin's corn. Quite a number of those who competed for our premium reported its hight at from 12 to 15 feet. For the rest, the report was duly sworn to.—Eds.]

Emigration.—The London Agricultural Gazette has the following: An American Shorthorn buyer, now in England in order to make purchases, reports that—owing to the demand on space for emigrants on vessels returning to the States—few, if any, cattle can be shipped at reasonable rates. He proposes now to wait until the Autumn when emigration slackens. It is undoubtedly an encouraging fact for English farmers that American breeders should be coming here to buy; yet it is a curious impediment to have to report that these cannot carry away their purchases because English population—*i. e.*, the best customers to English farmers—are also leaving the country wholesale. Beef and beef eaters would alike seem to be bent on crossing the Atlantic.

Fertilizing Value of Sea-weed.—The N. Y. Times says: Sea-weed is of considerable value as a fertilizer, probably more from its indirect action on the soil during its decomposition than from its direct contribution of fertilizing matter. Yet it does add some valuable matter to the soil when plowed in or spread upon grass lands as a top-dressing. Three hundred or 400 loads per acre are often plowed in or spread on grass lands. It contains some nitrogen, and an unusually large proportion of ash, amounting to 16 per cent., consisting of six and one-half per cent. of gypsum, three and one-half per cent. of carbonate of lime, three per cent. of soda salts, and three per cent. of phosphates and silica, with some iodine in combination with the soda. It is considered as worth two-fifths the value of yard manure.

Best Six Roses.—A correspondent of the London Garden says that out of the hundreds of first-class roses in cultivation, it would be a difficult task to name the best six. A good six for garden decoration as standards would be—Victor Verdier, Souvenir de la Malmaison, Aimée Vibert, Cheshunt Hybrid, Gloire de Dijon, and Belle Lyonnaise. For garden decoration as bushes—General Jacqueminot, Anna Alexieff, Glory of Cheshunt, Glory of Waltham, Perfection de Blanches, and Madame Devert. A good six fine show roses, which have been out some years without being superseded by newer introductions are: Jules Margottin, Alfred Colcomb, Charles Lefebvre, John Hopper, Senator Waise, and Maurice Bernardin. A very high-class six exhibition roses—Captain Christy, Marie Baumann, Duke of Edinburgh, Prince Camille de Rohan, Madame Victor Verdier and La France.

"The truth is," remarks the Country Gentleman, "while every farmer knows that clean culture is absolutely essential to success in his common farm crops, many fail to apply the same knowledge to their more expensive orchards."

"Layering of many things, shrubs, half shrubby perennials, etc., should be done before the young wood becomes too hard, if good plants are required the first year," says the Gardeners' Monthly. "Most plants root more quickly by having a notch cut in the layered shoot. Good, rich soil, put just about the layers, is very important. Good soil favors an abundance of roots. One of the greatest mistakes in gardening is the prevalent notion that plants in a poor soil have a greater proportion of roots than in a rich one." They certainly *need* more roots.

Fashion in Flowers.—Mr. Vick writes the following in his magazine for June: "There is fashion in flowers, as in all other things. The wild daisies of our fields are now favorites of fashion, and, when in season, the ladies search for them in the fields about as eagerly as they seek the beautiful trailing arbutus in the early spring, while no flower more frequently decorates the hat and dress. We are glad the lovers of flowers are looking once more to the beautiful flowers of the fields, and hope next Autumn our elegant native asters will not be forgotten. A few years since almost any single flower was discarded, even though the double varieties were far less beautiful. All tubular flowers, like the campanulas and daturas, are really deformities when they become double; and cup-shaped flowers, depending for their beauty upon broad masses of color or delicate markings, are seldom improved. We do not hope to see the pansy or the gladiolus double, for in this form they would lose much of their beauty. The beautiful little cineraria is now to be obtained in a double form, but it is a good flower spoiled, having lost its chaste markings and delicate coloring. A change, however, has taken place in public sentiment, and soon we may rush heedlessly to the other extreme. The cry is now for single hollyhocks and poppies, paonies, and even dahlias, and we know not how long ere the florists will find a demand for single asters and stocks and roses."

Everywhere.

RURAL SPECIAL REPORTS.

Canada, Ilderton, Ont., June 26.—We commenced cutting grass (Orchard) June 8th—is it not remarkably early for this latitude? We had two large loads per acre—and, by the way, this is the sixth year of cutting and the 10th crop; that is, it has been cut twice each season since seeding except one year. I never saw our country look as well, or crops more promising. Cattle are doing well. R. G.

Ill., Virden, Macoupin Co., June 20.—We commenced harvest on the 15th. Wheat is a good average; corn and oats are good. New wheat is engaged at 85c. a bushel. H. G. B.

New Jersey, Camden, Camden Co., June 21.—The Army worm has made its dreaded appearance in this county in great numbers. It has already done a great deal of damage and is sure to do more. Some of the farmers who harvested their hay earlier than usual and stored it away in their barns have been forced to empty them on account of the sickening smell of the worm, as it was found that a large quantity of dead worms were in the hay. It is reported that other crops have suffered serious injury by the worm. W. A. L.

N. C., Tryon Valley, Lynn Co., June 20.—Years ago a very distinguished divine of New York City, having journeyed to the land mentioned in Sacred History, wrote a very interesting book entitled "The Land of the Vine." In Syria the vine holds great prominence in the work of the husbandman. The wonderful adaptation of the soil and climate to the growth of the vine of that country, is an old story.

The mountains of this region are nearly, if not exactly, in the latitude of Mount Lebanon and Damascus and the soil and climate are both in a more remarkable degree fitted for the culture of grapes. The atmosphere in and upon the "belt" is a "dry atmosphere," so much so that in summer there is hardly ever much sign of dew and, of course, where there is little or no dew there will be little or no frost. It will be seen in the agricultural reports of the United States for 1879, that the object in cultivating grapes under glass is to get clear of the moisture in the atmosphere (?). Here Nature has constructed her own hothouse, which answers this purpose without the aid of glass, and the vines that in other lands need a glass covering can here be grown in the open air. All our fruits are progressing well. We have ripe apples in abundance. It is called the May apple and can always be used for eating and cooking by the last of May. Strawberries are not quite done, for some reason their season is prolonged beyond the usual time. Huckleberries and cherries of numerous kinds, and blackberries and raspberries are all ripe and are in luxuriant abundance. The early peaches are coloring very rapidly and we expect them to be fit for use in 10 days. The crop is very abundant only on and around the "Thermal Belt."

Grapes are expected in just 30 days to be fully ripe. Our vineyard is quite full. Here grapes do not fail. They are cultivated somewhat upon the California plan, by cutting back the vines every year. L. R. M'C.

Texas, Waco, Mc Lennan Co., June 12.—The wheat and oats harvest is pretty well over with us, and the yield will be entirely satisfactory, as we had rains in time to make the grain. The corn is considered made, and is the finest crop in this country in many years; in fact, there will be an immense crop of corn raised. The cotton is all that could be wished of it to the present time, and the only hindrance to a a large crop will be worms, of which there is

no sign yet. Cotton is blooming in many fields, and some has many balls already as large as a hulled walnut. There has not been a better season for many years, and farmers have smiling faces and buoyant hearts from the prospects before them. Potatoes and vegetables generally are abundant, the former selling now for 60 cents a bushel. Our people are luxuriating on green corn, and that and potatoes go far towards supplying the places of bread and meat. My Blount's corn is ripe for the table and has made from two to five ears to the stalk, and is nearly as sweet as the sugar corn. This corn matures here as soon as any of the ordinary field corn varieties. Mine was planted on March 17, the same time as most of the other corn, and it is as far advanced as any. This surprises me, from the fact that many of your Northern correspondents objected to it because it was so late, and often would not mature before frost came in the fall. I left two to three stalks to the hill, which proved to be one too many. My Ennobled oats are just coming into head and are three feet high; but as they have tillered so much more than I expected, I think I have sown them too thick and fear the heads will not be so large. They grew so rank that instead of pasturing them with cattle I used a pair of shears and clipped the superabundance of leaves, which had a marked effect. Unfortunately I nearly destroyed my Telephone peas by giving them liquid manure too strong. The leaves have become wrinkled and the stalks withered, and, in fact, I think they are having a struggle between life and death. I saved two or three dozen mangels from destruction by the worms and bugs, and among them I have some fine ones, and I will race your Minnesota correspondent sharply for the premium. I have them now measuring 18 inches in circumference, and they were planted only on April 3. I received a package of seed from the Agricultural Dept. at Washington, labeled Egyptian corn. I planted and cultivated it like sorghum. I left some three or four stalks to the hill with rows three and one-half feet apart, the hills two feet apart in the rows, and some I thinned to two stalks. It is heading now and I am sure the two stalks will make more seed than the others, having much larger heads. It did not sucker at all. The heads turn down; the stalks are so hard and woody that my horses will not eat them even now while green.

A. S. S.

The Querist.

ANSWERS TO CORRESPONDENTS.

[Every query must be accompanied by the name and address of the writer to insure attention.]

Caked Bag in a Cow.

B. A., South Lowell, Ala., has a cow with its second calf. Before calving she strayed off and wasn't found until the calf was a week or more old. The little thing had used only the two forward teats, and when the cow was found the two others were so badly caked that no milk could be drawn from them. There seems to be an obstruction above the teats and a soreness accompanied by fever, although the animal didn't flinch when the teats were probed with a knitting-needle, and our friend asks the proper treatment and whether the obstruction can be removed by such an instrument as that described in "Querist" in our issue of May 3, '79.

ANS.—This seems a case of mammitis, a disease caused by blows, bruises, lying down on the distended gland and *neglect* in milking newly-calved cows. The whole gland is seldom affected. When the patient is seen early a small cathartic will relieve the constitutional symptons, and warm fomentation in mild cases is generally sufficient. But when the udder is swollen, relieve the animal of the weight by a broad bandage made so as to envelop the whole gland, and fastened over the back, holes being cut in the bandage so that the teats may be got at without removing it. The milk should be drawn frequently either by hand or the milk syphon, and continued friction should be applied over the hardened part; also smear extract of belladonna and apply a hot poultice, renewing frequently. Should suppuration occur, the abscesses should be opened and the pus allowed to escape, dressing the wound with a weak solution of carbolic acid, chloride of zinc or hyposulphate of soda. In some instances the secreting properties of the bag may return after the next calving; but, on the whole, it is better to prepare her for the butcher than keep an unprofitable cow, If the obstruction were lower down, it might be removed by using the instrument referred to—which consists of a small, round tube inclosing either a double-edged knife or four blades at right angles to each other. The tube is pushed up the opening of the teat until it reaches the knot, when the blades are pushed out of the sheath, cutting through the obstacle and re-establishing a connection between the parts, for the passage of the milk. The instrument is sold by Whitman & Burrell, Little Falls, N. Y., or the Dairy Supply Co., this city.

"Grub-in-the-Head" in Sheep.

E. S. A., Great Bend, N. Y., having lately lost some yearling sheep, cut open the heads and found six grubs about an inch long and as thick as a pipe stem in the fore part of the skull, and he asks whether the death of the sheep is due to these insects, and whether there is any remedy for them.

ANS.—This is the so-called "grub-in-the-head," a disease as common among sheep as "bots" in horses; but it is as seldom fatal. Nearly every horse has more or less "bots" in his stomach; almost every ox and cow has them in its back, and nearly every sheep has "bots" in its nasal sinuses. For these grubs are the larvæ of the sheep bot, or gad-fly—œstrus ovis; while the horse bot is œstrus equi, and the cattle bot which produces warbles, or small tumors in the flesh of the back, is the œstrus bovis. It is only when these grubs are present in large numbers that they are troublesome or fatal. In the present instance, it is probable that the deaths were due to some other cause; perhaps to poisonous plants, as the small-leaved laurel, possibly, which is fatal at this season; for six grubs would hardly be sufficient to cause death. The writer has seen them much more numerous and the only effect was to cause a running at the nose. These grubs are produced from eggs laid on the sheep's nostrils by active, buzzing flies similar to horse bot flies—slender, bee-like insects. These pester sheep in August and September, and cause them to hold their noses to the earth and stamp with their feet, or gallop violently about the fields. The only cure is prevention. This is to plow a few furrows in the pasture and the sheep instinctively thrust their noses into the soil, which seems to prevent the young grubs, deposited on the nose, from crawling up the nostrils, for they cannot adhere to the dust, and fall to the ground. It is also well to smear the sheep's noses with common tar mixed with a little glycerine or molasses to keep it soft and sticky, at the proper season, and this either deters the flies or destroys the eggs, which are, like the eggs of flesh flies, deposited in a living state.

Blue Grass.

J. S., Kendallville, Ind., sends some dried specimens of grass and asks whether it is Blue grass, and how does that grass compare with other grasses in nutritive qualities.

ANS.—We think that this *is* Blue grass, but would not be positive from the dried specimen without flowers. It is one of the very best of pasture grasses. We are speaking of Poa pratensis. Poa compressa is the Northern Blue grass. It has a flattened stem and is of a darker-green color. In a suitable soil and climate no grass surpasses Blue grass, especially for pasturage. The following analyses will show its merits as compared with some of the other most common of our grasses:

1ST.—DRIED AT A TEMPERATURE OF 212 DEG.

100 PARTS OF	Flesh-forming principles.	Fatty matters.	Heat-producing principles.	Woody fiber.	Ash.
Blue grass give	10.35	2.63	43.06	38.02	5.94
Timothy	11.36	3.55	53.35	26.46	5.28

Epizootic Ophthalmia in Cattle.

M. M. S. Ellsworth, Wis., and F. N. B. Bucklin, Mo.—The first of these inquirers has a two-year-old steer that is gradually becoming blind. The eye first "ran" water, and then a white film grew over it. A heifer of the same age is becoming similarly affected. The second of our friends says that the cattle—mostly milch cows—in that neighborhood are becoming blind. At first the eye becomes watery, and there is a gathering of matter in the corners, which seem painful. After a time the water ceases to flow, or nearly so; the eye looks hollow; a "bunch," the size of a pea, of a reddish or greenish color, gradually forms directly over the pupil, and total blindness follows, and a remedy is asked for in both cases.

ANS.—The trouble in both cases is due to epizootic ophthalmia, which often attacks the herds of a locality, without any apparent cause, except exposure to changeable weather. Place the sick beast in a darkened building and give it a strong cathartic—1 to 1½ pound of Epsom salts, followed by an ounce of nitrate of potassa daily after the purgation. Take of sulphate af atropa eight grains, and distilled water two ounces, and with a small syringe inject a few drops mornings and evenings. The film that spreads over the eye, when the animal becomes convalescent will gradually disappear by absorption, to hasten which a few drops of the following solution may be applied mornings and evenings: Nitrate of silver and sulphate of morphia, each four grains, in two ounces of distilled water.

Cotswold Merino or Merino-Cotswold?

W. P. M., Richland Station, Tenn., asks which makes the best sheep for all purposes—to cross a Merino ram on a Cotswold ewe, or a Cotswold ram on a Merino ewe.

ANS.—One can scarcely say that there is a *best* sheep for all purposes. All the excellencies are rarely, if ever, found combined in any one thing, and in sheep it is very certain that there is no best kind that would be found satisfactory everywhere. Each one of the many kinds has its place, and to find the kind for each place requires not only a general knowledge of the different kinds, but an intimate acquaintance with the place and its peculiarities. Moreover, the purposes for which the flock is designed are to be considered before a judgment could be safely concluded. But if our inquirer means, which makes *the better* sheep of these two, the cross of the Cotswold ram on the Merino or grade Merino ewe is better than the reverse; and for this reason, the design is to improve the smaller Merino, and it is a rule in breeding that the improvement should come from the male, the "top cross" as it is technically designated. The Cotswold is a superior race and the cross is intended to give size, weight, early maturity, and weight and length of fleece to a race that is inferior in these points. Therefore the "Cotswold-Merino," and not the Merino-Cotswold, is the better sheep for general purposes, if not in every case.

Giant Powder Cartridges.

J. W. W., Loose Creek, Mo., and a dozen or two more, ask where they can procure Giant Powder cartridges, how to use them in clearing ground of stumps and bowlders, and their price.

ANS.—An article published elsewhere in this issue is written purposely to answer most of these inquiries. These cartridges are made only by one company in this country, so far as we know—the Atlantic Giant Powder Co., Varney & Doe, Agents, 59 Park Place, N. Y. City. The agents do not supply private parties with the cartridges, mainly on account of the objections to transport the article to a distance in small quantities. They tell us, however, that they will send to each applicant the name of the agent living nearest to him, from whom the cartridges can be obtained. The powder is furnished either loose or in cartridges, in boxes of 25 or 50 pounds each. Cartridges are eight inches long, and any diameter required. Purchasers should designate the kind of powder—whether No. 1 or No. 2, the number of pounds, diameter of cartridges, number of caps, and feet of fuse they may need. The following are the prices of requisites: Powder, No. 1, $1, and No. 2, 50 cents per pound; caps (per box of 100), $2; single-taped water fuse (per 100 feet), 75 cents; nippers, 50 cents. Full instructions as to the methods of using the cartridges are furnished to applicants, in the form of a pamphlet.

Foul-in-the-Foot.

D. C. D., Viola, Ia., asks for a remedy for a disease in his cattle like foot-rot in sheep. Its first symptom was lameness in the hind feet, which, after running a few days, emitted a very disagreeable odor. The hoof soon cracked all round to the cleft which became sore throughout and discharged a watery substance.

ANS.—This is a case of foul-in-the-foot, a disease of horned cattle, consisting of inflammation and suppuration of the interdigital substance, or that between the claws, arising from overgrowth of the hoof causing a strain on the internal structures, or due to the irritation of dirt between the claws or digets, and sometimes from a tuberculous diathesis or unhealthy condition of the parts. As treatment carefully remove all loose horn and thoroughly cleanse by soaking in warm water and hot poultices; then dress daily with pledgets of oakum or tow steeped in a solution of carbolic acid and oil (sweet)—one to forty; or, take chloride of zinc and water—one to thirty. Keep the oakum in place by a bandage. If the disease extends to the joints above, prepare the animal as soon as possible for the butcher. Give laxative food and one-ounce doses of nitrate of potassa daily while under treatment.

Doura.

G. R. P., Somerset Center, Mass., asks whether we have for sale any seed of the Doura which the RURAL has been highly recommending.

ANS.—Yes, we highly recommend a certain kind of Sorghum vulgare, which, so far as we can learn, needs a variety name. We are having several acres of it grown in South Carolina for the RURAL'S next Plant and Seed Distribution. Many of our readers have bought what has been advertised as Doura, supposing it to be the same as that tested at the RURAL FARM. But they are not the same. That to which we have often referred produces an average of seven or eight stalks from a seed. It grows from seven to ten feet high and bears an upright panicle of grain. It may be cut twice in this climate. Cattle are exceedingly fond of it. It takes so firm a hold of the soil that we have never known a plant or stalk to be blown down. We sell absolutely nothing except the RURAL NEW-YORKER.

Spavin.

A Subscriber, Uniontown, Pa., has a valuable horse that is severely crippled in the hind leg, arising, it is supposed, from a blood spavin. He was injured about a year ago, and flinches very much when he trots, and our friend asks whether there is any remedy.

ANS.—From the meager description we are unable to say whether this case is curable or not. If of long standing, treatment would be of no use. If the lameness is recent, try a strong blister on the inside of the hock, and allow a rest of two months at pasture; or, if a veterinary surgeon is within reach, have the leg fired and blistered, and good results may ensue. As the horse is valuable, the services of a competent surgeon should be secured at once.

What is a Quart of Milk?

S. W., River Falls, Wis., asks what is a standard quart of milk—some there claim that it must weigh two and one-half pounds.

ANS.—A quart is a fourth part of a gallon. There are three different gallons in use:—the old standard wine gallon of 231 cubic inches; the imperial gallon of 277¼ cubic inches; and the ale or beer gallon of 282 inches. The first is that by which milk and other liquids are sold. A gallon of pure water at a temperature of 60° weighs 8.338 pounds. Milk has a specific gravity of 1.034 or 34 pounds to the 1,000 more than water. This will give pure milk the weight of 8.675 pounds per gallon, or 2.16 pounds per quart. In general use a quart of milk is taken as weighing 2.21 or 2 1-5 pounds.

Miscellaneous.

S. F., Skohegan, Me., asks why cannot sugar beets be ground with a small, portable mill on the farm, the juice to be then pressed out of the pulp, and evaporated to the consistency of sirup containing all the sugar of the beets together with a considerable amount of foreign matter which it would be the business of the sugar refinery to eliminate in the process of crystalization. If the sirup alone had to be taken to the factory, the cost of transportation wouldn't be one-twentieth of that for transporting the whole beets, while the pulp would be left where it is most wanted—on the farm. Our friend remarks that if such an arrangement were possible, hundreds who never raised a sugar beet would go largely into the business.

ANS.—Beet sugar cannot be made in the rough-and-ready manner described. It requires a careful chemical process to rid the juice of such imparities as would prevent crystalization; and once the sirup should be made and become glucose, it could not be brought back to the condition in which it would form solid cane sugar. It seems a necessity of the business that the beets should be grown near the factory where they are manufactured into the sugar.

N. J. A., Grand Rapids, Mich., sends a specimen of marl and inquires as to its quality.

ANS.—The marl is of good quality, having a large percentage of lime. The exact amount of lime cannot be determined short of an analysis, and we cannot undertake to institute analyses of substances unless the charges for the same are remitted—from two to five dollars according to the nature of the substances.

G. E. N., Afton, N. Y., asks how to get rid of toad flax, which has become a very troublesome weed on his farm.

ANS.—The only way to extirpate it is to keep it down with the cultivator wherever this implement can be used, and to prevent it from going to seed by using the scythe or mower where the cultivator cannot come.

J. O. S., Frenchtown, N. J., sends two specimens of rock and inquires what they are.

ANS.—No. 1 is a specimen of common trap-rock, and No. 2 is a shale. Neither is of any value as a mineral.

THE
RURAL NEW-YORKER.
PUBLISHED EVERY SATURDAY.

CONDUCTED BY
ELBERT S. CARMAN.

Address THE RURAL NEW-YORKER,
No. 34 Park Row, New York.

SATURDAY, JULY 3, 1880.

SUBSCRIBERS of the RURAL NEW-YORKER will greatly oblige us if they will promptly notify us of any irregularity in the receipt of their papers. The many changes rendered necessary by our removal and an unusually large number of complaints make us desirous of rectifying any further derangements at present unknown to us as speedily as possible.

JUMPING AT CONCLUSIONS.—How easy it is to arrive at wrong conclusions. There are two fields of corn near us, both upon sod. Upon one a tablespoonful of bone-phosphate was used in the hill. Upon the other, farm manure. The first is far ahead of the other, and the farmer concludes that the difference is owing to the superiority of the phosphate over the manure. In this season of drought we have had no rain to penetrate three inches below the surface. No doubt the farm manure, which remains in heated masses in the hills, has exerted an injurious effect upon the growing corn, while the tablespoonful of phosphate has exerted no effect of any kind. Had a tablespoonful of plaster or sand been placed in the hill, probably the effect would have been precisely the same. But the farmer has determined to use a tablespoonful of phosphate in the hill for his corn crop hereafter.

A NORTH CAROLINA BONANZA.

AN extraordinary change has occurred in one phase of the agriculture of North Carolina, by which the rejected lands are preferred, and prices have risen from a dollar per acre to thirty and even fifty. The extension of the culture of bright yellow tobacco has been the cause, and the regions affected are the northern counties adjoining the Danville district, in Virginia, and also the Piedmont region farther south and west, including the counties of Alexander, Caldwell, Catawba, Lincoln and Cleveland. The light, gray, sandy soils are peculiarly adapted to this crop. A moderate quantity of phosphates and guano is used to get a quick growth, which the dry weather of the late Summer terminates, and the porous quality of the soil supplies from below sufficient moisture to make the ripening very gradual to a clear lemon color, and the curing without spot or blemish. This tobacco is used for plug wrappers, commands a very high price, and often brings to the grower $500 per acre. It is enriching multitudes, building houses and stimulating unaccustomed improvements and making handsome bank accounts throughout the favored district. It is a rural bonanza for many an industrious poor man, whether white or black, and still yields a golden harvest.

AND DRINK, TOO.

So great are the ravages of the phylloxera in France, that unless some means can be soon devised for arresting the progress of the evil, wine-making there, which has long been one of the chief industries, must necessarily come to an end. Whether this country will be able to supply the deficiency in the wine supply thus created, remains yet to be proved. If any attempt to do so shall be made, we shall not only have to pay even more attention than heretofore to the improvement of our varieties of grapes, but we shall also have to greatly enlarge the area of our vineyards. In ordinary times the vintage of France amounts to between 1,500,000,000 and 2,000,000,000 gallons, worth about $350,000,000.

Since the first appearance of the phylloxera in France, in 1865, it has spread through 14 Departments, entirely ruining the vineyards, and despite the study and experiments of the best scientists, and liberal rewards offered by the government, no remedy has yet been discovered. Already the supply of wine from Madeira, which used annually to export an average of 460,000 gallons, has been cut off by the destruction of the vines by the vine mildew—Oidium Tuckeri—while the same cause has been equally fatal to the vines in the Canary Islands, which every year used to send abroad 6,000,000 of Canary wine, very much like Madeira. In Spain, too, the region which supplies sherry, and in Portugal, that which supplies port, are, it is reported, both suffering from the phylloxera and vine diseases, so that a wine famine seems imminent in the near future. No time should be lost by us in trying earnestly to prepare for such a contingency. Already we are able to supply the population of the Old World with bread and meat; and there is now a fair prospect that we shall soon have an excellent opportunity of supplying them with drink, too.

SMALL FRUIT IN NEW YORK MARKET.

THE strawberry season is gone; only a very few small consignments from the extreme northern counties of New York State will arrive the present week. The average price per quart of this fruit for the past three weeks may be put at about 11 cents, though we are acquainted with growers who realized from 15 to 25 cents per quart, and we even know of a case in which the grower has sold his berries on contract at a dollar a quart. But fancy prices of this character are not often reached, and they can only be obtained for really excellent fruit raised by growers who have gained a good reputation in this specialty. Next to good, fresh berries, the main secret in commanding the highest market price consists in the selection and grading of the fruit. A few small, decayed or otherwise defective berries in a quart of first-class fruit will affect the price disastrously. Growers who exercise care in this particular will soon get the patronage of the best hotels and restaurants where the price is of less consequence than good, attractive fruit.

The raspberry season for this market will be at its hight in a few days. Immense quantities of native or wild berries are expected to arrive this week. A good late berry that can be put upon the market when the glut is over, is likely to prove most profitable.

Cherries have been abundant here the past two weeks, and still more will arrive during the coming week. Good cherries sell quite readily for 10 cents per pound at retail and the price is likely to be a trifle in excess of what the same quality has commanded during the past week. Currants are abundant and cheap, and it is not probable that the price will rise. Upwards of fifty tons of cherry-currants were sold to manufacturers of jellies during the past week, at from three to four cents a pound. A few peaches have arrived here from Delaware but they are sorry-looking specimens of the fruit they purport to be. They are mostly picked from dying trees and are consequently prematurely ripened.

A NEEDED CHANGE IN THE HOMESTEAD LAW.

THE labors of our pioneers in colonization have done a great deal towards reclaiming for agriculture much of the eastern part of what was once known as the Great American Desert. There still remains, however, stretching eastward from the Rocky Mountains, a vast area so destitute of rainfall as to be entirely unfit for farming purposes. On much of the land there is a fair growth of buffalo and other prairie grasses, which fit it to be the great grazing region of the United States, and myriads of cattle and sheep pick up a fair livelihood in Spring and Summer, a poor one in Fall, and a still poorer one in Winter on its boundless acres. Railroads and land agents have so industriously puffed up this region as admirably fit for farming purposes, that a great many immigrants, generally homesteaders, have settled on parts of it, but so severe has been the drought this year and last, that most of these have been reduced to the brink of starvation, over which many of them must have passed had they not been relieved by private and public charity, while hundreds of others have been forced to abandon their homesteads and seek employment farther to the east.

If ever the whole of the American Desert is brought under tillage, it must be at the cost of the livelong labors of at least the first generation of these pioneers. Hardships, of the most grievous kind must be their lot while preparing the way to competence and abundance for their successors. While engaged in this arduous task special encouragement should be afforded them by the Government; but, instead of such consideration, the provisions of the Homestead Law press grievously on many of those who have taken up land under it. If, after having expended upon their claims all their little hoards and some years of anxious labor, a season of drought blasts their crops and hopes and the approach of starvation forces them to seek a temporary livelihood elsewhere, they risk the loss of the land on which have been expended their savings and their toil. In a country so vast as this, no general law can be the best for all sections, and special modifications should be made in the Homestead Law to meet the exceptional conditions of this region.

SEXES IN ASPARAGUS.

The New England Farmer tells how a successful grower of aspargus for market has much improved his plantation. He has rid out the female plants by a gradual process, that of pulling up all stalks that show berries—that is, all females. In this way he gains a double advantage: he retains only male plants, which are the most vigorous, not being exhausted by seed-bearing, and he has no trouble with that commonest and worst weed in an asparagus bed—the volunteer seedling. His theory that the pulling up of the stalks showing berries would change the root they grow from, so that it would cease to yield female blossoms, is, of course, illusive. "The plants that are male are wholly male, and *vice versa*. Some male plants are more vigorous than others, and no doubt the *beau ideal* of a bed would be formed by subdividing the roots of a choice sort, just as we propagate choice varieties of potatoes or rhubarb. But old asparagus roots do not bear such division well. With a start made, and annual division, until a sufficient stock is obtained, this very desirable improvement might be attained."

During the present season we have paid some attention to the sexes of asparagus, and our conclusions are somewhat at variance with one of the above statements. Upon the RURAL FARM, asparagus grows wild, and may be seen in almost every hedge and meadow. As soon as the plants began to bloom we marked upwards of 100, those we supposed to be males with a white tape, the others with black. The males are distinctly males, and are easily determined, even in the bud, by the large anthers and by the fact that the flowers have neither styles nor stigmas, the pistil consisting of an ovary only. But there is no female plant. All plants that are not males are bisexual or hermaphrodite. The flowers of these are very much smaller than those of the males, and the stamens are small and apparently impotent, though only apparently so, for, so far as we could determine, they alone were of service in pollenation and fertilization. In proof of this we may mention two of several observations:—

A single bisexual plant was found in a grass meadow, and there were no males within 200 feet. Almost every flower bore fruit. We also found a bisexual plant near the middle of an oat field of five acres, the only plant in the field. This too fruited abundantly. It appears also that the fruit is set before the flower fairly opens. If our observations are trustworthy, the male asparagus plant has no part in the seminal perpetuation of its kind.

BREVITIES.

THE Army-worm hath disappeared from our neighborhood.

MR G. W. HOFFMAN stated before the Elmira Club that he planted a few seeds of Bermuda grass. Would he kindly inform us where he procured the seed?

THERE are few grasses which are prettier in bloom than Holcus lanatus (Velvet grass), now blooming in meadows. It is a pity it is not as valuable for lawns or for cattle as it is beautiful and tenacious of life.

WE have spoken of the difficulty the Army worm experiences in climbing ascents, if the soil is dry and sandy. Millions of the worms in crossing the sandy roads of Long Island would accumulate in the wheel ruts so that, as we have said, the tires of wheels would often become muddy from adhering masses of their crushed bodies.

A SUBSCRIBER complains that in consequence of an advertisement in the RURAL, he sent some time ago to Goddard & Co., of this city, for the "Revealer," but since then he has neither heard nor received anything from them in return for his money.

The advertisement alluded to was inserted once, for the reason that those who attend to the advertising department were absent the day of going to press. It was then rejected; not that we knew anything against Goddard & Co., but because the advertisement "upon its face" was objectionable. We very much regretted its appearance in our columns.

SOUTH DEVON CATTLE.—Till recently, these have generally been so much coarser and more leggy than the North Devon—which is the true breed—that they have found no favor with purchasers outside of their own district. But latterly the South Devon breeders have resorted to the North Devons to cross on their stock, and this step, together with careful selections, has enabled them to so greatly improve the race, that the best specimens are now considered little, if any, inferior in shorter legs and fine points to the North Devons. They are usually larger in size than the latter, which is an advantage to them as beef producers.

THERE seems to be a prospect of a speedy panic in cheese in this market, and doubtless the depression will soon extend to other points also. From last Tuesday to Saturday prices fell 2¼ cents per pound, and the bottom has not yet been reached. The high prices that ruled early in the season induced makers to overstock the market, and now the hot weather and a rapid decline in the English market have intensified the customary annual depression and brought it on five or six weeks earlier than usual. It would be well for producers to lessen their make for the present, and to hold back their goods until the market becomes steadier and stiffer, otherwise they will inevitably cause a panic by which all will suffer pretty heavily.

SEWAGE OF TOWNS—ITS VALUE.—Professor Church, in a recent lecture before the Farmers' Club at Rochester, England, asserts that this is worth from 15 cents to three dollars per annum for each town inhabitant, its value depending upon the cheapness and facility of applying it to crops, and the value of such crops when harvested. Even at the very low estimate of 15 cents per individual of the United Kingdom, it would amount to about $7,000,000 per annum. If these human excreta could be applied to wheat, the Professor calculates they would grow enough extra over present crops to come to the value, in round numbers, of twenty to eighty millions. An enormous sum this even at the lowest estimate, to annually lose; and yet this waste is still greater in the United States of America than in the United Kingdom of Great Britain and Ireland.

DECREASE OF CATTLE.—It seems to be the opinion of those who have examined this matter pretty thoroughly, that a considerable decrease will be found in the stock of the United States and Territories, after the shipments of this year are over. We are of the opinion that this may be the case in regard to such as are sufficiently well-bred for shipment to foreign markets; but as to inferior stock, we question whether much, if any, deficiency will be found. Yet, in any event, there will unquestionably be a considerable advance in the price of cattle another year, as well as in that of sheep and swine. There are two reasons why this may be so,—the first of which is the greatly increased tide of immigrants to our country this season, who will be consumers instead of producers for a twelvemonth to come; and the second season is, so numerous are the losses sustained in Great Britain and Ireland during the past eighteen months in domestic animals, that their wants for this year, will, doubtless, be larger than the past have been.

LARGE CROPS OF CORN FODDER.—Several correspondents in a late issue of the Country Gentleman, seem to have given from actual weight on small patches of their fields, pretty reliable estimates of the amounts which were grown per acre, previous to the curing of the corn. They state these weights at 28,35,36, and 45 tons, respectively, per acre. The latter was sowed in drills three feet apart, using three bushels of seed per acre, and the season was perfect in every respect for its growth. They do not state what the weather was when the corn was cut, or the time of day it was done. To be fair in such a trial, the weather ought to be sunny two days before, and the stalks not cut till all the morning dew was dried off. Dr. Bailey, of Massachusetts, asserts, that he can grow 75 tons of corn-stalks per acre. If he does, we think he will have to resort to the Cuzco sort, of Peru, which grows there 25 feet high or more, and is three inches in diameter, or so, at the butt. This would be about as eatable and digestible as *cord wood*, unless his method of ensilage can transform it to palatable fodder. He is now cultivating a mammoth ensilage corn, of which he thinks highly. We hope when his crop of this has been gathered and fed to his animals, he will give us not only its yield per acre, but the value of its fodder to his stock in comparison with the smaller sweet corn.

A VIGOROUS effort is now being made by Australia to flood this country with her cheap wools to the ruin of our own sheep husbandry. The Colonial Chambers of Commerce are appealing to the Chambers of Commerce in our chief cities urging them to use their influence for the abolition or at least the reduction of our import duties on foreign wools. The Chambers of Commerce of this city and Boston have already promised their aid and appointed committees to bring the matter before Congress. It is urged that the free admission of this product of the Australian colonies into this country, would largely increase our trade in manufactured goods with them. We indignantly protest against the ruin such a measure would be sure to bring upon one of the most beneficial industries of this country, for the benefit of a class that is already receiving too much national support at the cost of the agricultural community. If a reduction is made in the tariff on wools, it must apply to Buenos Ayres and the rest of the world as well as to the Australian colonies, and in a few years so great would be the impetus given to sheep raising abroad by the large market offered for wool in this country, that our home markets would be overstocked with the product at prices which would defy the competition of our home raised wool. In Buenos Ayres, Banda Oriental and Australia sheep are raised in enormous numbers for their wool alone, and it would be as impossible for our farmers to produce wool as cheaply as it is raised there, as it would be for our iron manufacturers to compete with those of England or Belgium. Our manufacturers, however, are carefully "protected" from such ruinous competion by almost prohibitory duties on foreign iron goods, and why should not our farmers receive a similar "protection?" It is about time that our legislators should be made to realize that this is pre eminently a farming country, one whose prosperity is mainly dependent on agriculture, and whose population is mainly made up of agriculturists, while manufacturers form but a comparative handful, and must be content with a back seat—an honorable one, 'tis true, but a back one.

Literary Miscellany.

THE OTHER SIDE.

"The words are good," I said; "I cannot doubt,"
I took my scissors then to cut them out.
My darling seized my hand. "Take care!" she cried;
"There is a picture on the other side?"

I fell to musing. We are too intent
On gaining that to which our minds are bent:
We choose, then fling the fragments far and wide,
But spoil the picture on the other side.

A prize is offered. Others seek it too;
But on we press, with only self in view.
We gain our point and pause well satisfied:
But, ah! the picture on the other side!

On this, a sound of revelry we hear;
On that, a wail of mourning strikes the ear.
On this, a carriage stands, with groom and bride;
A hearse is waiting on the other side.

We call it trash—we tread it roughly down,
The thing which others might have deemed a crown;
An infant's eye, anointed, sees the gold
Where we, world-blinded, only brass behold.

We pluck a weed and fling it to the breeze;
A flower of fairest hue another sees.
We strike a chord with careless smile and jest,
And break a heart-string in another's breast.

Tread soft and softer still as on you go,
With eyes washed clear in Love's anointing glow;
Life's page well finished, turn it, satisfied,
And lo! heaven's picture on the other side.

RESULT FROM MISTAKE.

CHAPTER I.

It was the eve of St. Valentine, and Kate Seton, the eldest daughter of the great David Seton, was kneeling on the hearthrug in the dining-room in front of a brightly blazing fire.

The winter's day was nearly at an end, and the richly-furnished room was full of flickering shadows. The upleaping flames displayed to great advantage the rounded outlines of her dainty figure, and shining on her chestnut hair, tinted it with a richer gold.

One hand was raised to shield her from the heat; the other held the *carte-de-visite* portrait of a young man, whose face was full of that dark beauty which is girlhood's charm.

"How handsome he is!" she murmured, softly, as her eyes rested fondly on the photograph—"how noble!"

Then, after a pause, she added:

"Does he love me? Does he even care for me? Have I placed a higher value upon his attentions than they justified or he intended? I fear it must be so; for though his glances have seemed eloquent, his tongue has been mute. He has never said a word of love, not one! Yet what a kind expression! Surely he does not look like one who with ardent glances and flattering words, would strive to win a young girl's love only for sport, for wantonness! No—no; I will not think so meanly of him."

She could no longer disguise from herself the fact that, whether for weal or woe, she had bestowed her young affections upon the original of the photograph—Frank Drayton—bestowed them, too, unasked.

Her head sank lower—her heart grew sadder—the firelight lost its brilliance. But Kate remained unconscious of all around her, until a loud double knock at the outer door caused her to spring suddenly to her feet.

"Only the postman!" she exclaimed. "But how he made me start!"

The door opened and a servant entered with a letter.

"For you, miss," he said. "Shall I light the gas?"

"Not at present, thank you; I will ring."

And down on the rug she sank again, and examined the superscription.

"It is from Frank!" she whispered. Her color came and went, and her hand trembled. "How strange that a letter should come from him, and at such a moment! If—? No—no; I am foolish indeed! It is most likely only about the books he promised to lend me."

But when the note lay open before her, she found it no such commonplace communication as she had schooled herself to expect.

The contents ran thus:

"My own dear Kate.

"Pardon me for commencing thus, but any other way seemed too cold, too formal, for my purposes. Although I have never told you so in words, I cannot help thinking that my attentions have been sufficiently marked to lead you to infer that I love you; while, on my part, I have indulged in the hope that you would listen favorably to a declaration of my attachment. More than once I have been on the point of asking you to be my wife, but on each occasion the reflection that my life-long happiness depended upon your reply has kept me silent. I do not hesitate to confess that your rejection of my suit would be a sharp and bitter pang to me, and it is for this reason I now make my proposal to you by letter instead of in person. I feel that I could bear the pain of a refusal better if it came from you in writing than if I heard it from your own lips.

"You perhaps can imagine my suspense; let me ask you, then, to favor me with an early answer. If your reply should be in accordance with my desires, believe me, my constant effort shall be to ensure your happiness, and my highest ambition to become worthy of such a wife as you will be.

"Yours faithfully,

"Frank Drayton."

It would be impossible, in any reasonable space, to give even an idea of the effect which this letter produced in Kate's mind; she could only press his letter to her lips in mute thankfulness and joy.

"I was right," she said, at last. "My heart told me truly. He loves me—he loves me!"

How long she remained in that blissful reverie she never knew. All at once she was brought back to a recollection of where she was by hearing her mother's voice.

"Why, Kate, my child, what are you thinking about? Here all alone in the dark, and not dressed yet! Run up stairs at once, or you will never be in time!"

"Oh! mamma!" she exclaimed, rising and kissing her mother's cheek, "I am so very—very happy."

And by way of manifesting her joy she burst into a flood of tears.

"Kate! Kate!" exclaimed Mrs. Seton, "I don't understand this at all! What does it mean?"

"This letter," answered Kate, who was now smiling through her tears; "Frank Drayton has asked me to become his wife."

"Frank Drayton?"

"Yes—yes, mother! Read for yourself!"

"My own dear Kate," she said, reading the commencement of the letter, "well, really that strikes me as rather a remarkable commencement. I had no idea you were already upon such very friendly terms."

Kate's cheeks became a deeper crimson under her mother's steady gaze.

"Please read the letter," she answered, "you will understand better then."

"I must admit that at the present time there is no accounting for what young people may say or do."

And having thus expressed herself, Mrs. Seton read the letter,

"I suppose," said Kate, presently, "I must write to him, mamma?"

"Of course you must, child! What a question! And it is easy enough to see, as far as you are concerned, that Frank Drayton has no reason to fear the mortification of a refusal."

"And you, mamma?"

"I have no objection to your returning him a favorable reply. Frank Drayton bears an excellent character. He is good-looking, generous, and well connected. It is true he has yet his way to make in the world, and, to use a common expression, you might have looked higher."

"But I love him!" said Kate.

"There is your father?"

"Ah! yes—yes. As you say, my father!"

It was with a little shiver of doubt and dread that Kate pronounced these words; for Mr. Seton was known as a hard, shrewd man of business, one who had no touch of sensibility or sentiment in his composition.

"Don't tremble so, dear child," said Mrs. Seton stroking Kate's hair caressingly. "I do not say your father will withhold his sanction. At the same time you must not forget you will be the sole inheritor of the vast wealth which it has been his life-long occupation to amass, and he may have formed ambitious views regarding his only daughter's future."

"But surely," pleaded Kate, "he would not be so cruel as to sacrifice my happiness!"

"I hope not; but do not distress yourself by anticipating evil. Write to-night to Frank Drayton, and tell him that when he has obtained your father's sanction you will be ready to become his wife."

"Oh! mother, how kind, how good you are!"

"Yet," added Mrs. Seton, after a pause, "I cannot help feeling a good deal surprised at the abruptness of this proposal. I have noticed, of course, that Frank has paid you many little attentions, though it never struck me that they meant more than ordinary civilities—I certainly saw no manifestation of love in any one of them; and above all, I never knew that you were on sufficiently intimate terms to justify him in addressing you in so familiar a manner. It seems very strange indeed to me."

"But not to me, for I love him—and he loves me too, or he would not have written this letter."

"Well, well, darling; do not let any doubts of mine dull the brightness of your joy. Go now to your own room and write your answer or you will be too late for post."

CHAPTER II.

"Mrs. Thursby.—Mrs. Thursby. Confound that old woman, I do believe she grows deafer and deafer every day! Ringing, knocking, and shouting appear to be equally useless. Mrs. Thursby, I say! It's uncommonly convenient to have a deaf landlady on certain occasions, but as a regular thing it's an intolerable nuisance. Mrs. Thursby! how much longer do you intend to keep me waiting for my breakfast? Calling is of no use, that's perfectly clear—so here goes for the bell again!"

And the speaker, marching up to the chimney-piece, began tugging at the bell-pull in a manner that was enough to alarm the whole neighborhood.

"I see you a-ringing, sir," said a shrill voice at this moment, and a thin little old woman appeared on the threshold, carrying in front of her, on a tray, the long-awaited breakfast.

"See me a-ringing, as you call it, and heard me too, I should think."

"No—no, Mr. Drayton; I couldn't hear you. But I see the bell a-shaking, and so I says to myself, 'there's Mr. Drayton in a hurry for his breakfast, and what am I to do? There ain't no one in the house to answer him, and if I leave the fire myself his chop will be spoilt, so' "——

"There—there, Mrs. Thursby, that will do," answered Mark, who was considerably mollified by the tempting appearance of his morning meal and the appetizing odor that pervaded the apartment as soon as the cover was raised. "It's a great pity you are so awfully deaf, for I would back you against anybody as a cook. But where are the letters?"

"Cook fit for your betters!" exclaimed Mrs. Thursby, with a simpering grin. "Lor', no, sir. I'm glad to please you, and——"

"No—no!" screamed Frank, frantically. "I didn't say anything about my betters! I asked for my letters."

"Beg pardon, sir. None come yet. Valentine's Day, you know, sir. Letters is always late on Valentine's Day. The postman he says——"

"Never mind what the postman said. Go down to the door and wait for him, and bring the letters to me the moment they arrive."

"Yes, to be sure, sir. I'll go at once."

"Now, I wonder whether she understood me?" speculated Frank. "I don't believe she can hear a sound, but just watches the movement of my lips, and just guesses at what I say, and that is why she makes such ridiculous mistakes!"

He listened continually for the well-known sound of the postman's knock—paced restlessly to and fro from the window to the fire—and exhibited all those peculiarities displayed by a person who is in a state of great suspense.

"She is sure to write!" he muttered. "What hard luck that this is Valentine's Day! She is sure to write: but what will her answer be? I am afraid, after all, that Kate is nothing but a coquette, and I have more than once suspected that, when she has shown such a decided preference for me, she has only been playing me off against that conceited little jackanapes, Horace Brown. If I thought that was the case, by Jove! Id——"

Frank Drayton did not express his intentions in words, but snatched up the poker, and commenced a vigorous onslaught on the fire.

He was thus engaged when Mrs. Thursby entered with her apron full of letters.

"Lor' a mussy, sir!" she ejaculated, as she poured the missives upon the table, "no wonder at the postman a-grumbling! Did you ever see such a lot? Shall I take away the breakfast things, sir?"

"No—no, not now. You can go."

And he accompanied his words with such a significant and unmistakable gesture, that Mrs. Thursby left the room without uttering another word.

Frank glanced hurriedly over the pile of letters, and quickly discovered the one he sought.

"That is Kate's handwriting!" he exclaimed. "Now for my fate!"

He sank back in his chair as he spoke, and despite the evident effort he made to maintain his composure, his hand trembled as he tore open the envelope.

But no sooner did the first words meet his eye than he started and changed color; while, as he continued to read on, his features assumed an expression of incredulous amazement.

The contents ran thus:

"Dear Old Frank,

"Very many thanks for the books. I do not remember that you promised to lend them to me; but I am much obliged to you all the same, for I was awfully in want of something to read.

"And now for a real bit of news! Prepare your congratulations! Horace has come to the point at last. He proposed to me in due form last night, and of course I have accepted him. I feel very much indebted to you for the assistance you have rendered me in the matter. Indeed, if I had not flirted with you in the barefaced manner I did, there is no knowing how long my diffident lover would have been before he found strength of mind enough to pop the question! But all is well at last. I knew you were love-proof, and that you wouldn't mind it a bit. I hope you will call soon, and then you can offer your congratulations in person.

"Your grateful and affectionate cousin.

"Kate Barton."

"Good Heavens!" he ejaculated, not only are my fears about my cousin's behavior towards me fully confirmed, but by some extraordinary mistake she has received the note I wrote to Kate Seton. And can it be possible that—no, no! it would indeed be to make me the sport of fortune."

He was deathly pale as he made another hasty search among his letters, for the supposition which had now taken possession of his mind affected him deeply.

"Yes, this must be it!" he exclaimed, holding up a letter on the seal of which appeared the initials K. S., "yes, this is it, no doubt. I feared to open the other envelope, but I shrink in dread from opening this, yet it must be done! Better know the worst at once!"

He read as follows:

"Dear Frank:—I have received your letter and it has made me very—very happy. I hope my candor will not displease you, but I write as my heart dictates. My mother knows all, and favors your suit. If you can obtain my father's consent, I am yours.

Kate Seton."

No sooner did Frank finish the perusal of this note, than he sank into his chair with a groan.

"What on earth is to be done?" he asked himself, 'was ever anyone in so perplexing a predicament before! How can such an unfortunate mistake have occurred. Stop!—Let me think! Mrs. Thursby! Yes, that is it! Confound the old woman! it is all her fault! I remember now perfectly! She interrupted me by saying I should be too late for post. Both letters were open before me, and in my haste I must have put them into the wrong envelopes. Even now, however, with the proof staring me in the face, I can scarcely conceive the possibility of my having done such a thing. But being done, how can I act? What course can I take? It is quite clear that Kate Seton has fallen into the mistake that the slight attentions I have paid her were prompted by affection on my part. It is enough to make a fellow vow never to do or say a civil thing to a girl again as long as he lives. And then, she is not at all the style of a girl who would suit me for a wife. No, no; let the matter end how it may, I can never marry Kate Seton! Never, never!"

"And yet, what a sweet, tender letter it is," he continued, after having perused it a second time. "Poor Kate, I pity her! It is very awkward and unfortunate for her of course! Would that she were Cousin Kate! But no, no! I will not think of her again! She is not worthy of another thought! Yet stay! In all this miserable business is there not some small amount of consolation for me? Yes; for so far as regards my declaration to her, I can congratulate myself that it did not reach her hands! That humiliation at least is spared me!

This consideration seemed to bring Frank some little satisfaction, for he smiled grimly.

"As for Kate Seton," he added, a few minutes afterwards, "it is quite clear there is only one mode of action possible. I must write and tell her that the letter she received from me was intended for another. It will be very mortifying for her, poor thing! But how can I help it? I can only express my regret that my carelessness should have produced such unpleasant consequences. Only let me have the good luck to get safely out of this scrape, and I abjure the sex for ever! But now I think of it, there is still another difficulty. If I confess my mistake, the question will naturally arise—for whom was my offer intended? Come what may, Cousin Kate must not know that I have been the slave of her fascinations. I would marry Kate Seton first. And now I come to think of it, why should I not? It would be an easy way out of the whole difficulty. I know her to be amiable, beautiful, and the only child of wealthy parents. She would make a good wife no doubt. Above all, she loves me! That is a fact admitting of no dispute, for I hold the acknowledgement of it in my hand."

As he made this reflection he started up and began to walk rapidly up and down his room. The difficulties of his position grew greater and greater as he dwelt upon them. Yet he was surprised to find how often he recurred to the idea of making Kate Seton his wife. And the more he dwelt upon the project, the less averse did he feel towards it.

"My mind is made up!" he said at length, in a resolute tone, as he paused before the window. "I will go at once to Mr. Seton and ask him to sanction my engagement to his daughter. He may at once refuse to give his consent. If so, why then all is well. I should tell Kate that, without her father's consent, I could not in honor prosecute my suit and I should be free."

It was inconsistent, certainly, and yet Frank was perfectly conscious that this termination of the affair would be by no means agreeable. His pride and self-love would suffer severely in the event of a denial from Mr. Seton.

"But should he return a favorable reply," he continued, "one of two things will happen; I shall either find that I care sufficiently for Miss Seton to marry her; or I shall do something to break off the match.—To be continued.

THE FIEND AND HIS LAWN-MOWER.

"Whirr-r-r-r-r!"
Blast him!
"R-z-z-z-z-z!"
Blast him again!
"Rr-rr-rr-rr-rr!"

Turn over in bed and vow that you will shoot his hens, poison his dog, and leave fish-bones where his cat will find them and choke to death.

Who?

Why, the triple-plated, bomb-proof, iron-coated, and hard-hearted next-door man, who went to bed at sundown for no other purpose than to get up at five o'clock A. M. and gallop his old lawn-mower around.

"Rattle! Whirr! Bang! R-r-r-r!"

Oh! he's there! He simply stopped for a moment to spit on his hands and get ready for a new twist. Just five by the bells, and some fool of a doctor has told him that the morning air is good for him! He knows that he is disturbing every man, woman and child within a block of him, but what does he care?

"Clickety-te-click-click-click-click!"

There he goes! He's got his coat off, his pants in his boot-legs, and he's thinking how nice it must be to live in the country and canter around over the dew-wet sward. Country be hanged! Lawn-mowers and next-door neighbors be hanged! The man who sold him that lawn-mower warranted it to be noiseless. Just remember that when you get to shooting! Noiseless, oh, yes!

"M-m-m-m! Bur-r-r-r-r! Z-z-z-ze!"

The baby wakes up with a howl. Why shouldn't he! Can a baby stand more than a horse? Everybody wakes up. If you think people can sleep on and dream of the gates of heaven while a man is pounding sheet iron with a hammer you have lived in vain.

"G-u-r-r——!"

Good. His old machine has struck a stone. Hope the contact has wrenched off every wheel, twisted every spring out of place, and flung the villian head over heels against the fence! Nobody but a villian would have a lawn to mow in the first place, and nobody but a mutton-head would go sloshing around on an empty stomach in this malarious climate. His health? What is his health compared to the peace of his neighbors? Who cares whether he gets fat and lives on, or if he grows lean and dies! He ought——"

"Clickety-te-click-click-click-click!"

"There he goes, the old machine making more noise than ever! Hit him with a brick! No, don't do it. Such a man as that couldn't appreciate a decent clip on the ear with a missile made by human hands. Draw a bead on him with a shot-gun? Never! Keep your ammunition for owls. Owls have sense enough to stick by the roost until seven o'clock. Argue with him? Not much! You couldn't convince such a man that he ought to be run over by a drove of Texas steers any more than you could make a Turk believe that he ought to pay one hundred cents on the dollar."

"Gurg-g-g-g-g! z-z-z-z! Bang! Rattle-r-r-r-rip!"

Let him alone! There is a Providence, and that Providence sometimes gives a villian rope to play with, just to see him squirm when he is brought up with a sharp turn. That mower may explode it not, the morning air will bring on sore throat, toothache, neuralgia, and chills. May he have them all jump on him at once, and stand by him

like an Indian's memory, and may every neighbor whom he has disturbed by his villianous noise grow fat, and sicek, and rich, and live to beat him for the only office he ever cared for!—Detroit Free Press.

BRIC-A-BRAC.

THE PUZZLED CENSUS TAKER.

"Got any boys?" the Marshal said
To a lady from over the Rhine!
And the lady shook her flaxen head
And civilly answered, "Nein!"

"Got any girls?" the Marshal said
To the lady from over the Rhine;
And again the lady shook her head
And civilly answered, "Nein!"

"But some are dead!" the Marshal said
To the lady from over the Rhine;
And again the lady shook her head
And civilly answered "Nein!"

"Husband of course!" the Marshal said
To the lady from over the Rhine;
And again she shook her flaxen head
And civilly answered, "Nein!"

"The d—l you have!" the Marshal said
To the lady from over the Rhine;
And again she shook her flaxen head
And civilly answered, "Nein!"

"Now what do you mean by shaking your head
And always answering 'Nine?'"
"Ich kann kein Englisch!" civilly said
The lady from over the Rhine.

—JOHN G. SAXE.

YOUNG man, a diamond pin looks real nice and glistens brightly, but when $4 a week supports a man and pin both, one or the other is not genuine.

If you love a girl and want to marry 'er
And lack of pluck is the only barrier,
We would make this mild suggestion:
Shoot yourself or pop the question.
—Keokuk Constitution.

HER mother said the little creature lived on love; but one month after marriage, when the grocery bill came in, he saw that he had made the greatest oversight of his life by not ascertaining what that particular love was for.

WHAT surprised Noah more than aught else was that he received no application for free passes. And what astonished the public after the flood was, that the veteran navigator never tried to get up a complimentary benefit for himself.

A UNIVERSAL BIOGRAPHY.

At ten, a child: at twenty, wild;
At thirty, strong, if ever;
At forty, wise; at fifty, rich;
At sixty, good, or never.—Buffalo Courier.

A COUNTRY school-master began one morning the duties of the day with prayer, as usual, but after prayer he went up and asked a little boy why he hadn't shut his eyes during prayer, when the little boy responded, "We are instructed in the Bible to watch as well as pray."

A QUAKER gentleman riding in a carriage, with a fashionable lady decked with a profusion of jewelry, heard her complain of a cold. Shivering in her lace bonnet and shawl as light as a cobweb, she exclaimed:—"what shall I do to get warm?" "I really don't know," replied the Quaker, solemnly, "unless thee put on another breastpin!"

WHEN clams are cheap and beef am dear,
I lives on clams all frew de year;
Sometimes I gets a big fat coon,
I eats him up afore its noon.
When 'taters rot an' turnips fail,
I'm fo'ced to live on toast an' quail;
When corn goes up an' meal am high,
To live on pastry flour I try.—Detroit Free Press.

A YOUNG man with an extremely powerful voice was in doubt which branch of the art to adopt. He went to Cherubini for advice. "Suppose you sing me a few bars," said the master. The young fellow sang so loud that the walls fairly shook. "Now," said he, "what do you think I am best fitted for?" "Auctioneer," dryly replied Cherubini.—French.

HE came into the sanctum with a large roll of manuscript under his arm, and said very politely: "I have a trifle here about the beautiful sunset yesterday, which was dashed off by a friend of mine, which I would like inserted if you have room." "Plenty of room. Just insert it yourself,' replied the editor, gently pushing the waste-basket toward him.—Galveston News.

ACT one, they meet as in a pleasant dream;
Act two, he 'll treat to soda and ice-cream;
Act three, his cash, alas! is nearly played;
Act four, his girl grows cold, sedate and staid;
Act five, just as his love is ripe and yellow,
His girl is sporting with another fellow.

THE JAPS.

YOUNG Japanese children scarcely ever cry, because great care is taken to keep out of their way every possible cause of irritation. It is probably in consequence of this that the Japs are, as a race, almost exasperatingly good-humored, so that a servant severely scolded will often merely reply by a beaming smile.

MR. TENNYSON once found himself surrounded by a throng of ladies who were more than usually gushing. He availed himself of an opportune pause to remark that he looked upon women as the flowers of the human race. "What a sweetly pretty idea! How poetical!" exclaimed a chorus of silvery voices. "Yes, ladies," continued the laureate, "and the reason I think so is because they never shut up except when they sleep." Poets are now at a discount in that circle of culture.

For Women.

CONDUCTED BY MISS RAY CLARK.

"THEY SAY."

EVA EDGERTON.

Of all the friends in human guise,
That e'er was known to mortal eyes,
That e'er was felt by anguished hearts,
Which quivered 'neath its venomed darts,
None can exceed the cruel sway
Of this monster, with the name, "They Say."

What gender? I really cannot tell,
It answers either sex as well.
Man (not a gentleman, Ah! no)
Woman (no lady stoops so low),
Children, repeating elders gammon;
Therefore I think we'll call it common.

What is its work? look here, look there,
See troubled lives and face of care,
Hours all fraught with bitterness,
Devoid of any loved caress,
See heads bowed low, and lips that pray,—
The fiendish work of that "They Say."

It ferrets out each blotted line,
That all lives trace in course of time,
Exulting that the world may see
Each page in life's hard history;
But passing by with careless tone
The virtues we so strive to own.

The girl with heart as light as air,
Not long can hold her name so fair,
For resting not, till bowed in grief,
She wishes that her life be brief;
Then satisfied, turns but away
To seek another trembling prey.

The hopeful youth and earnest man,
Striving to stand the active van
Of the din of life, how long before
His perjured name is floating o'er
The town, village, public at large,
Cruising round in dishonesty's barge.

"They Say," has many a ruined home,
Many a heartache, many a moan,
Heartless, relentless, it goes its way,
This demon with cruel tongue, "They Say."
But its reign will cease, when the spirit 's free,
"They Say" cannot dwell in the yet to be.

FRIENDLY WORDS.

FROM A. S. W. of Seneca Co., Ohio, "my wife says your paper grows better and better. I suppose you might as well put me down as a life subscriber."

C. C. A., one of our agents, writes that he is in receipt of a Mitchell wagon which we have awarded him as a premium on subscriptions, and it is fully what it is advertised to be.

L. L. C., another of our agents writes in references to the Peerless Wringer received for premium; "we are well pleased with it, (the wringer) and think it is just what we want in the family. Please accept my thanks."

OTHER commendatory letters referring to John Ascott's Daughter, to premiums received and the manner of conducting the various departments, show the appreciation of our readers.

AN OLD SONG.

I HAVE just read, in this month's Scribner, an article entitled, "Life in France," and it is gratifying to know that there is one place under the sun where housekeeping is made easy, and where the frail wife and mother does not keep up a perpetual moan over the aggravating incompetency of servants. Truly, the American housekeeper of moderate means and poor health is an object of pity! If she has the least ambition to make her home and table inviting, she must keep her eyes open, her nerves strung to their highest tension and her mind incessantly busy in order that things may "come up all right."

In this sketch of Florence the writer remarks: "the extent of your housekeeping is to look over the cook's accounts once a week and pay him. You are never obliged to order your dinner, or, in fact, to give it any thought. The utmost labor you will undergo is the eating of it when cooked." How like magic this appears to our wearied senses.

How delightful to pay a reasonable price for a cook who will buy the food and then transform it into a good meal without the superintendence of the mistress. How smoothly the wheels run, for if there is "a screw loose" in the kitchen, the whole domestic machinery becomes a whirling mass of confusion.

No fear, in Florence, of an overworked mother being awakened from her refreshing morning nap by cook's voice, exclaiming: "The eggs is all give out, ma'am," but there in that blest abode of reliable cooks, the housekeeper rests on her oars and glides over such small (?) difficulties with light heart and unruffled temper.

Do not think I am a chronic grumbler, indeed. I've but lately joined the ranks against the present "help system." I am a Southern woman and cannot, of course, understand the system of help in the North, but of this I am sure, it cannot be worse than with us. I have seen white servants in Canada whom I considered treasures.

I have often wished that girls who are without homes and who are willing to work in families would come South; but then, I presume, there is sufficient demand for them at home.

We have become desperate in this part of the country. As the summer advances the colored folks become indolent and "feel like taking a rest," as they express it, and when once this feeling takes possession of them they cannot be hired for love or money.

Now when one is strong and can, in the language of Josiah Allen's wife, put one's "shoulder blades to the wheel," these trials can be easily overcome, but for a feeble housekeeper the prospect is anything but cheerful.

The idea of cooking schools, which is in successful operation North, is one which should win the best wishes of every woman, and if the South would follow this worthy example she would confer a great benefit on her many tired wives and daughters.

Right here, let me remark, that I think there are more homes in the United States made miserable by our inferior system of help than by any loss sustained at the ballot-box, and while I watch with curiosity the movements of the Woman's Suffrage Committee, I say God speed such women as Julia Corson. M. P.

Bradley Co., Tenn.

WORLDLY MATTERS FOR GIRLS.

I AM conscious that in writing these articles I am opposing all the deep-seated prejudices of our grandmothers, but "girls will be girls," and a love of admiration is part of the girl.

Probably there is no beauty so much admired in a young lady as a delicate complexion; therefore her complexion is either her pride or her sorrow, and to those to whom it is a sorrow, I would like to give some hints.

If you use powder (and most young ladies do now) a very slight application of glycerine first will cause the powder to adhere better and prevent injury to the skin, provided it is washed off before retiring; for a more lasting improvement a quilted cotton mask wet in soft water and worn at night, will be found beneficial; this recipe was found in a magazine and I made one for myself, and, after a trial, found that it really prevented the effects of sunburn, besides eradicating those little pests familiarly known as "blackheads;" the mask is not so uncomfortable as one would suppose, after you get used to it.

Never, if it can be prevented, use hard water in washing, it makes the skin hard and rough. I would also recommend the disuse of soap on the face and neck; a copious use of soft water is quite as cleansing and does not cause the face to shine.

Nothing is so distorting to the mouth as fever blisters and although I know of nothing to prevent them, I have found that spirits of camphor will allay the swelling and cause them to heal quickly; it should be applied as soon as the blister appears, and kept wet until the swelling ceases.

As to pimples, a good, healthy diet and plenty of exercise is about all that can be recommended.

Young ladies who work in the garden know what a bother it is to pull on and off a pair of gloves, and they get so soiled in a short time as to be unfit for use. Much more serviceable will be found a pair of old stockings with the feet cut off and a place partitioned off for the thumb; they will protect the arms as well as the hands, and can be washed when dirty. In the next article I will give some practical suggestions about the hair. Miss M. D.

Michigan.

NEEDLEWORK.

I DO declare! how the old fashions all come round again! Now here is the beautiful Kensington stitch, that everybody is admiring—just as true as I am alive, it is just the very satin stitch, that my grandmother learned to work when she was a little girl, and lived in England. She had a great piece of satin embroidery, framed in a gilt frame, and it hung in mother's parlor, ever so many years ago.

It was Pharoh's daughter finding Moses in the bulrushes. She was a year embroidering it, and it was a wonderful piece of work. Now, this Kensington stitch, as the new name for it is called, is just the same thing that we all learned when we were little girls. I worked the bottom of the skirt to a white dress in crewels, in just that stitch; and we made handsome window curtains, and table spreads.

I am real glad it is fashionable again, for one can do so many nice things with it; I do believe I should like to work a white bed spread to give to my grand-daughters, as a keepsake for remembrance in years to come.

I like the idea of working things to make one's home look pleasant and bright; it is ever so much better than to spend one's time wholly upon dress and gewgaws to adorn the person. As like as not, the time may come when people will think more of things that are useful, than those that are entirely for show and ornament.

Needlework is a nice accomplishment, and every girl ought to understand it, in all its forms. If the good old fashions come round again, and people will follow them, hard times will be easier, and there will not be so many failures in business, and losses of property, and discouraged men, and suffering families.

Idleness and extravagance will ruin any nation; while industry and economy will keep up prosperity and peace.

Yes, I believe I will work a bed spread, and leave it as an heirloom in my family, so that my posterity can see their ancestor's skill and industry. GRANDMOTHER.

Among the ancient Poles the bride walked three times round a fire, then sat down and washed her feet. The custom of washing the bridegroom's feet is more frequently referred to. The daughter of a Brahmin is dressed by her father in a festive dress, and washes the bridegroom's feet, the bride's mother pouring out the water for that purpose. In Malabar the bridegroom's feet are washed with milk by a young relation. In some parts of Java the bride, as a sign of her subjection, kneels and washes the feet of the bridegroom when he enters the house.

Husbands, who by their own voluntary acts deprive their wives of every social bond except that of motherhood, need not hold up their hands in holy horror against the consequences that result from their own conduct. If a woman occasionally seeks occupation in the frivolities of fashion from the hideous solitude of her own deserted home, where she is left to drag out a torpid existence amid stewpans and scrubbing-brushes, should she be justly placed in the pillory of public criticism? In justice, all cases have at least two sides.

One of the strategic hits of the Empress Eugenie is thus reported: Having a Spanish relative hanging upon the matrimonial market, the Empress stationed the girl one day in the garden of St. Cloud with a rose in her hand. As the Marshal, afterwards Duke de Malakoff, strolled by, the maiden, according to her instructions, presented the rose to the hero, saying: "Monsieur le Marechal, I would offer you laurels, but you have plucked them all. Will you be content with this rose?" The gratified soldier took the flower, gallantly kissed the hand that offered it, and shortly after surrendered to the lady's charms, and she became his wife.

AGRICULTURE FOR GIRLS.—France has agricultural schools for girls. One of the chief is near Rouen, which is said to have begun with a capital of one franc by a sister of charity and two little discharged prisoner girls, and to be now worth $1.0,000. This establishment has 300 girls from eight to 18. The farm, entirely cultivated by them, is over 400 acres in extent. The staff of teachers consists of 25 sisters. More than one medal of the French Agricultural Society has been awarded to this establishment at Darnetel. and the pupils are in great demand all over Normandy on account of their skill. They go out as stewards, gardeners, farm managers, dairy women and laundresses. Each girl has, on leaving, an outfit and a small sum of money, earned in spare hours. If they want a home they can always return to Darnetel.

HINTS.

ENERGY will do anything that can be done in the world; and no talents, no circumstances, no opportunities, will make a man without it.

Tea leaves used for keeping down the dust when sweeping carpets are apt to stain light colors; salt is the best in the winter and new mown hay in summer.

Straw matting may be cleaned with a large coarse cloth dipped in salt and water and then wiped dry. The salt prevents the straw from turning yellow.

LIFE being short, and the quiet hours of it few we ought to waste none of them in reading valueless books; and valuable books should in a civilized country be within the reach of every one.—*Ruskin.*

For soft corns dip a piece of linen cloth in turpentine and wrap it around the toe on which the corn is situated night and morning. The relief will be immediate and after a few days the corn will disappear.

THE aim of education should be to teach us how to think, rather than what to think; rather to improve our minds, so as to enable us to think for ourselves, than to load the memory with the thoughts of other men.

Lip salves. One gill sweet-oil, one ounce white wax, three-quarters of an ounce spermaceti. Dissolve them over the fire and stir till cool. Another: Oil of sweet almonds, eight ounces; white wax three ounces; spermaceti, three ounces; rhodium, fifty drops, and white sugar candy form an excellent lip salve.

A BOOK.—Except a living man, there is nothing more wonderful than a book; a message to us from the dead—from human souls we never saw, who lived, perhaps, thousands of miles away. And yet these, in those little sheets of paper, speak to us, arouse us, terrify us, teach us, open their hearts to us as brothers.

"IS IT RIGHT"—So long as any person seriously asks this question of himself, in regard to all his acts, the danger of any great departure from the path of rectitude must be small; and we wish that a system of education might make it as common and controlling among our people in after years as now appears to be in youth.

White furs or ermine may be cleaned as follows. Lay the furs on a table and rub them well with bran made moist with warm water; rub until quite dry and afterwards with dry bran. The wet bran should be put on with flannel and the dry with a piece of book muslin. The light furs in addition to the above, should be well rubbed with magnesia or a piece of book muslin after the bran process. Dry flour may be used instead of wet bran. They should be rubbed against the way of the fur.

Washing Colored House Linen. To wash towels with colored borders let them soak in a pailful of cold water containing one teaspoonful of sugar of lead; let them remain ten minutes before washing; to make the colors look clear and bright, use pulverized borax in wash water, very little soap and no soda. To wash red table linen, use tepid water, with a little powdered borax, which serves to set the color; wash the linen separately and quickly, using very little soap; rinse in tepid water, containing a little boiled starch; hang to dry in the shade, and iron when almost dry.

INTRODUCTIONS.—In a few respects, perhaps, is good-breeding more manifest than in the matter of introducing persons to one another, having regard more especially to the method of making, and the time chosen for the introduction; nor is there a point of etiquette of greater importance. Not only is an unstudied ease of manner requisite, but also the exercise of a considerable degree of tact and discretion; for whether the introduction is personal or by letter, ceremonious or offhand, a certain amount of responsibility rests upon the introducer, and this responsibility should not be incurred without some consideration.

Under no circumstances, then, should introductions be made indiscriminately. Indeed, some books have laid down the rule that one should always ascertain beforehand whether it would

be agreeable for persons to be introduced to each other or not; but there are so many cases in which this inquiry is impossible, that such a rule would be more often infringed than followed, hence the necessity of care and judgment—for an undesired introduction, if made, would oblige the one person to whom the introduction was the more unwelcome either to treat the other with disregard, or else to continue a distasteful acquaintance.

If, therefore, the slightest doubt is felt whether a meditated introduction would be agreeable, it is best not to incur the responsibility of making it, but to seek an opportunity of ascertaining from both parties whether an acquaintance is desired.

We are speaking now of ceremonious introductions, which supposes that the persons introduced should recognize each other when meeting else where. But there are formal introductions of a different character, and which must be carefully distinguished.

For instance, persons meeting at a house, when making a morning call, are frequently introduced to each other by the hostess in an off-hand fashion, for the purpose of facilitating conversation, with the understanding that the introduction lasts only for that occasion; and persons having thus accidentally met, are under no obligation to bow or recognize each other when meeting again.

If, when walking in the street with one friend, you meet another, it would be optional either not to introduce them at all or only in a formal manner. But if, in such a case, you meet a lady, and she evinces a desire to stop with you, you may introduce him formally; but this would not entitle him to consider himself one of the lady's acquaintances.

Naturally, when one person has expressed a desire to be introduced to another, you have only the wishes of that other to consult.

It is not, however, usual to ascertain a gentleman's wishes as to whether he desires to be introduced to a lady or not, for in general, society gentleman are supposed to be gallant enough to seek rather than to avoid a lady's acquaintance.

Should a gentleman desire to be introduced to a lady he must seek out some mutual acquaintance, and ask the favor; and the rule is that the introduction should be made, as such a request would lead to the inference that he had some particular object in view.

Near relations may, without any ceremony or hesitation, be introduced to friends casually encountered.

Personal introductions at evening parties are not now in vogue, except in certain houses where a point is made of keeping up old-fashioned customs, instead of conforming to usages of modern times. The rule now is, that on entering the drawing-room, your name is simply announced by the servant, and you greet the host and hostess, and any of your intimate friends. The circumstance of having been invited should be considered a sufficient passport, without a personal introduction, for joining in conversation with others who are present. Of course arguments can be adduced in favor of the old custom of introducing each new comer to every one of the assembled guests; but we never knew any late arrivals who did not feel that the custom would be more agreeable "in the breach than in the observance."

ABOUT WOMEN.

THE first painted costume seen in Paris was made for Sara Bernhardt. It cost $600.

Citizens of Warren, N. C., have erected a monument to Annie Custis Lee, the daughter of General Robert E. Lee, who died while her father was fighting McClellan during the Peninsular campaign.

The women of 1812, owing to the interruption of importations from England during the war, were obliged to pay a dollar a paper for pins, and they were difficult to get at that price.

One of the highest and best-deserved compliments ever paid to our country is embodied in a remark recently made by Jenny Lind. After expressing great thankfulness for the enthusiastic reception she had received here, she added: "Your nation takes the rabble or all other countries and gives them a chance."

Frontier life so often has a more marked effect in developing aggressive and heroic qualities than in making the gentle virtues, that it is not surprising that a hand-to-hand fight, recently occurred between a teacher and her landlady in one of the new mining camps of Colorado, and that the landlady pasted near the door and window which had been battered by her antagonist, the following inscription: "This is the work of hineryet swarts the skule marm."

A Parisian lady is earning a large income in Boston by keeping in good order the fingers and nails of the members of fashionable families. She claims that through her ministrations the hands are rendered soft and white, the fingers improved in shape, and the finger-nails trained and polished to a high degree of brilliancy. Mondays of each week, are reserved for appointments at houses, and Saturdays are devoted to gentlemen, introduced by lady patrons. On the intervening days she receives lady customers at her own residence.

According to report, a woman in Michigan has sued for divorce on the plea of a breach of business contract. The husband had, before marriage, promised to give her forty acres of land if she would marry him, and has since failed to redeem his promise. It is to be feared that the plea will be regarded as insufficient by the stronger sex, and scouted out of court as too dangerous an inroad upon prerogative to be recorded for a precedent, lest many an error, by the same example, might rush into the State.

An extraordinary marriage recently occurred in Odessa. The bridal party assembled in the church with due formality, but the priest unexpectedly refused to perform the service on the ground that the bride-groom was intoxicated. The father of the young man, furiously angry, seized his son, dragged him outside the church, and undertook to sober him by a good flogging. Meanwhile the father of the bride instantly proclaimed her engagement annulled, and invited any eligible candidate for the vacant place to offer himself. Two young suitors promptly presented themselves; the bride and her father, after a few minutes of decision, politely dismissed one while the other took his station before the altar and was married to the insulted bride.

A Canadian village possesses a curiosity in the form of an electrical girl. This damsel, once strong and fleshy, suddenly became strangely ill, lost her flesh, and was confined to bed. Having in health been of a silent disposition, she became in disease subject to occasional conditions of intellectual excitement, in which she talked with great eloquence and fluency, followed by absolute prostration. Without visible cause she recently began to rally, became strong and lively, moving vivaciously around the house, and marking the curious re-establishment of vigor by discharging from her person electric shocks, which can be transmitted to a circle of fifteen or twenty persons. Her hands possess the qualities of a magnet, and any person shaking hands with her is subjected to a violent shock.

Sabbath Reading.

"THE TIME IS SHORT."

BY AUTHOR OF "STEPS HEAVENWARD,"

I SOMETIMES feel the thread of life is slender,
And soon with me the labor will be wrought;
Then grows my heart to other hearts more tender.
The time is short.

A shepherd's tent of reeds and flowers decaying;
That night winds soon will crumble into naught;
So seems my life, for some rude blast decaying.
The time is short.

Up, up, my soul, the long-spent time redeeming:
Sow thou the seeds of better deed and thought:
Light other lamps, while yet thy light is beaming.
The time is short.

Think of the good thou might'st have done, when brightly
The sun to thee life's choicest seasons brought;
Hours lost to God in pleasure passing lightly.
The time is short.

The time is short. Then be thy heart a brother's
To every heart that needs thy help in aught;
Soon thou may'st need the sympathy of others.
The time is short.

If thou hast friends, give them thy best endeavor,
Thy warmest impulse and thy purest thought,
Keeping in mind, in word and action ever,
The time is short.

Where summer winds, aroma laden, hover,
Companions rest, their work for ever wrought;
Soon other graves the moss and fern will cover.
The time is short.

Up, up, my soul, ere yet the shadow falleth;
Some good return in latter seasons wrought:
Forget thyself, when duty angels calleth.
The time is short.

By all the lapses thou hast been forgiven,
By all the lessons prayer to thee hath taught,
To others teach the sympathies of Heaven.
The time is short.

THE wealth of heaven never perishes, never departs, never ceases, never brings with it care, or envy, or blame, destroys not the body, corrupts not the soul, is without ill-will, heaps not up malice; all which things attend on earthly wealth. That honor lifts not men into folly, doth not make them puffed up, never ceases nor is dimmed. Again, the rest and delight of heaven endureth continually; ever being immovable and immortal, one cannot find its end or limit. Nothing which comes to an end is much to be desired; whatever ceases, and to-day is and to-morrow is not, though it be very great, yet it seems little and contemptible. Then let us not cling to fleeting things which slip away and depart, but to those which are enduring and immovable.—*Chrysostom.*

YES, it is one thing to describe nature; that the atheist may do, and this with the precision of a micrometer; but even then he speaks but a little fragment of the truth. It is another and vastly larger thing to interpret nature; that no one can do who does not believe in a purposeful God—that is to say, a Providential Creator.—*George Dana Boardman.*

CHRISTIANITY is the true citizenship of the world; and universal peace, and the free exchange of all lands and tributes of their several peculiar goods and gifts, are possible only as all are grouped around, and united by the cross of a common Redeemer, and the hope of a common heaven.—*William R. Williams.*

REMEMBER you cannot be any better than God has made you, but you may be very much worse. You can always find more reasons for doing as you wish than doing as you ought. And it is this tendency that separates you from truth, purity and goodness.

MICROSCOPIC holiness is the perfection of excellence. If a life will bear examination in every hour of it, it is pure indeed. To live by the day and watch each step, is the true pilgrimage method.

As to being prepared for defeat, I certainly am not. Any man who is prepared for defeat, would be half defeated before he commenced. I hope for success, shall do all in my power to secure it, and trust to God for the rest.—*Admiral Farragut.*

WHEN you are reading a book in a dark room, and come to a difficult part, you take it to a window to get more light. So take you Bible to Christ.—*McCheyne.*

SEVERAL large and influential churches, in various sections of the country, have recently, taken strong action against all kinds of lotteries at church fairs.

"GODLY sorrow is the sorrow of God reproduced in a tender, beautiful soul, by which the creature is brought into closest sympathy with God."—*Anon.*

FROM each cross we are called to bear, if we take from it the cross-piece—which is our will—t' will no longer prove a cross.—*Independent.*

A HOME where Christ abides is a little *remnant of Eden.* The benediction of God falls vertically upon its "blessed inmates."

"No person can be said to pray sincerely, who does not employ all natural means to secure the object."—*Anon.*

As the pebbles are whitened by the beating of the waves, so are our souls purified by the flowing of the grace of God.

GOD never meant this life to be a desert, utterly barren of all that is good and beautiful and refreshing and glad.

"A GOOD Christian is not a grave to bury God's mercies, but a temple, to sing his praises."—*Thos. Watson,* 1657.

FLOWERS are the alphabet of angels whereby they write on hills and fields mysterious truths.

NEVER think that God's delays are God's denials Hold on; hold fast; hold out.

"As a man must be *born,* so he must be *taught* from above."—*Old Divine.*

Domestic Economy.

CONDUCTED BY EMILY MAPLE.

LOG-CABIN SKETCHES; OR JESSIE SEABRIGHT'S DIARY, NO. 12.

MAY MAPLE.

APRIL 10, 18.—Mrs. Blossom's little girl has just been in to borrow a "few spoonsful of Mrs. Winslow's Soothing Sirup," and when I told her that I never used the article, and therefore did not keep it, she seemed greatly disappointed, and then inquired how I managed to keep our little Alicia so good-natured. Their baby cried almost all the time, and her mother could not get a bit of rest unless she gave the baby its "rations" of Soothing Sirup; then it would sleep all the time. It fairly lived on this baby medicine; and she did not see why I didn't use it. After playing with our frolicsome pet for a few minutes, she started up with a sigh, saying, "Well, I must go back and take care of Ray, though I hate to do it when he cries so much."

Poor little girl! how sorry I felt for her, and how my heart ached for the baby boy; but I was glad that I had never practiced using the vile stuff. "Years and years and years ago," as a wee little six-years-old friend says, I saw in the school-room the evil effects of dosing infants with sleeping potions. Many a mother has herself to thank for her child's dull intellect. She either did not have the patience she needed or was desirous of using the time which baby's nature demanded; so a dose of "paregoric" or Soothing Sirup, containing a large percentage of laudanum, was resorted to, not only daily, but many times a day. A few drops were given at first, but the quantity was increased till a large spoonful was considered none too much.

The heavy eye and dull, thoughtless attitude and stupid blunders of at least one-fourth of the pupils of every district school will show any one the disastrous effects of using Soothing Sirup in its various forms and under its myriad names. Many children are verily robbed of their God-given talents by the injudicious use of opiates, and not a few are sent to untimely graves by the use of Mrs. Winslow's Soothing Sirup alone.

So long as the infant is quiet the mother can go on with her reading, sewing, or whatever takes up her attention until hours pass away unheeded. The child really needs attention in various ways, but it still sleeps until its vitality is nearly exhausted. Day by day the little one grows less active, and evidently weaker, till it cares not for food, and thus it actually pines away, or starves to death before its thoughtless mother's eyes; and then she mourns for the loss of her baby, and perhaps blames the All-Father for robbing her of her jewel.

It seems strange that a people who read so much should use their opportunities for knowledge to so little purpose. Not long ago I asked a young mother how she liked Mrs. R——'s articles on the care of infants. But she had never read them, although I knew her husband was taking the paper which published Mrs. R——'s excellent sketches. She read the stories and recipes every week, but the articles that would have taught her many good things about the care and culture of her little "olive plants" were entirely passed over. Only the light literature pleased her fancy. Not a single thought of how she could best develop the health and strength of her treasures was given the subject.

CAKE-MAKING HINTS.

CREAM the butter before adding the sugar.

Cover cake with a paper cap when *first* put in the oven.

A few drops of water in white of eggs will prevent their whipping to a stiff froth.

When soda and cream-of-tartar are used, sift with flour the same as yeast powder.

If more than two eggs are used beat separately.

To secure tenderness and delicacy, the flour measure should always be rather on the side of scantiness.

Beat fruit jelly to a paste before spreading between layers.

Lard is better to grease cake tins with than table butter. If lard is objectionable, keep on hand a small quantity of unsalted butter.

Hair-dye.

The best and most harmless hair-dye that I know of is made of litharge and lime in equal parts. Mix with water to make a thin paste. Care must be used in applying not to soil the skin, as it is almost indelible. When dry, rub the hair or beard to get out all the powder, and wash thoroughly. It will last for a long time. To make brown use more lime.

W. T. BUTTERFIELD.

DOMESTIC RECIPES.

Nice Fried Liver.

CUT into small strips, put on a platter, pour over boiling water and immediately pour it off. Place a frying-pan on the stove with some beef dripping in it, dredge the liver with cracker dust, season with pepper and salt and put into the pan. Cover and fry slowly until the pieces are well browned. A little chopped onion cooked with the liver is very nice for those who like the flavor.

Boiled Ham.

A small corned—not smoked—ham was boiled on Saturday for Sunday's dinner. When tender, I cut out the bone from one end, peeled off the skin, covered the outside with beaten egg and dusted thickly with fine cracker crumbs. It was put into the oven and there left until the grease from the ham had penetrated the crackers and the entire top was brown and crisp. When served, the platter was garnished with lettuce leaves. This way of preparing ham looks much more inviting than the common way of removing the skin alone without glazing with egg and cracker. E. M.

Egg Omelet.

The yelks must be beaten until thick and creamy, then the milk and seasoning added, and lastly the whites beaten to a stiff froth. Have heated in a skillet a tablespoonful of butter. Pour in the mixture which should at once bubble and flake. To keep from burning slip under a thin, broad knife and raise up the edges every few seconds. When the eggs begin to set, fold over, shake the skillet and turn on to a hot platter. When many eggs are used, divide and make several, sending each to table as soon as done. I. L.

QUESTIONS ANSWERED.

Wholesomeness of Rye Bread?

Is rye bread wholesome? Please give best method of making. SUBSCRIBER.

ANS.—The analysis of rye flour, as given by Prof. Johnson, is as follows: Water, 14.0, organic matter, 84.4; albuminoids, 10.5; carbo-hydrates, 72.5; crude fiber, 1.5; fat, etc., 1.6. That of wheat flour is: water, 12.6; organic matter, 86.7; albuminoids, 11.8; carbo-hydrates, 74.1; crude fiber, 0.7; fat, etc., 1.2 By these analyses it will be seen that wheat is richer in albuminoids and carbo-hydrates than rye, but, nevertheless, rye bread is considered very healthful.

To make: Take one quart of warm water, one teacupful of yeast, and thicken with rye flour. Put in a warm place to rise over-night. In the morning scald—well cook—one pint of Indian meal. When cool, add to the sponge, with salt, a little molasses, a pint of warm water and rye flour to knead *very soft.* Let rise, then put into pans. Again let rise, then bake. The dough should never be molded stiff for rye bread, and, if preferred, the flour may be wholly worked in with an iron spoon instead of the hands.

Raisin Delicate Cake.

Please give the above recipe. MRS. G. L.

ANS.—Two cups of granulated sugar, good half cup of butter, whites of six eggs beaten to a froth, three-fourths of a cup of sweet milk, three cups of flour, one cup of seeded raisins, cut fine, two teaspoonsful of yeast powder, and two teaspoonsful of lemon extract. Cream the butter, then the sugar and butter; stir in the milk, then part of the flour—one cupful should be reserved for the raisins—then the whites, and, lastly, fruit. After adding the flour, whisk in the whites and fruit as quickly as consistent with thorough mixing.

News of the Week.

MISCELLANEOUS NEWS.

Monday, June 28th, 1880.

Reports from the Mississippi state that the river rose very high last week and flooded the surrounding country. A special from McGregor, Iowa, says that the Mississippi River has risen over 20 feet. Travel on all roads is cut off, except west of St. Paul. Saw mills are stopped, and business is at a stand-still. Hundreds of thousands of tons of ice were carried off by the waters. The freshet comes from the Wisconsin River; above that point the river is falling. The stage is now 13 inches below the high-water mark of 1570. Wood dealers have lost 1,000 cords of wood, which tumbled into the water and floated away. Travel north is abandoned, and there are no trains either way....The Wesleyan Chapel, in City-road, London, founded by John Wesley, which was partially destroyed by fire in December last, has been restored, and was reopened the 20th ult....An epidemic of a peculiar character broke out in North Adams, Mass, a week ago. The town has 6,000 inhabitants and of these over 1,000 were suddenly taken sick one evening, all suffering in the same manner from severe pains in the stomach. Toward morning the majority got better and soon all recovered, no case proving fatal. Some relapses have since occurred. The cause of the disorder which was at first very puzzling is now laid to the water..

Two ministers of the Gospel, Rev. John S. Inkip and Rev. John A. Wood, started with their wives from New York on the 26th ult. on an evangelical tour around the world....According to an official statement of the chief civil authority in the District of Lauban, near Breslau, Prussia, recent torrential rains have killed 56 persons and destroyed 105 houses....Swiss papers state that the St. Gothard tunnel is in great danger of falling in. Land-slips continue to threaten the masonry, and the engineers think that the only way to avert the danger is to modify the line traced out for the tunnel....The commanding general of the military division of the Pacific has been ordered to prevent an invasion of Mexico by armed forces and the observance of the neutrality laws....The Government is having great success with the fish-hatching establishment in Washington. This season it has hatched out nearly twenty million shad. Of these nearly fifteen million have been turned into the Potomac....

The colored cadet, Whittaker, at West Point, who a few weeks ago figured so conspicuously in the press of the country while the outrage upon him was being investigated, was at the examination of his class found deficient in philosophy. It may be a consolation to his friends, however, as well as to himself, to know that the questions which he failed to answer satisfactorily were put by "Prof. Michie" and "Capt. Sears," two members of the Faculty who were strongly opposed to him throughout his recent ordeal, and who pronounced him guilty of outraging himself. The questions were: "What do you understand as to the surface of electricity?" and "What is a wave's surface?" Capt. Sears was not satisfied with his answers to these, and when told to explain the principles that govern the Gallilean telescope, on the board, Prof. Michie pronounced his figure wrong, and told him to take his seat. With this the curtain dropped on Cadet Whittaker, and his dreams of military glory were forever doomed to remain unrealized. ....The National Democratic Convention met at Cincinnati on the 22d ult. Judge Hoadley was chosen temporary chairman. Toward evening on the 23d the first ballot was taken, in which Gen. Hancock took the lead. When the Convention again met, on the forenoon of the 24th, the balloting was renewed, and Winfield Scott Hancock, of Pennsylvania, was nominated for President on the fourth ballot, and shortly after W. H. English, of Indiana, received the nomination for Vice-President.

AGRICULTURAL NEWS.

THAT first barrel of of flour from this season's growth, that was sold in this city, on May 7, for $15, for the benefit of the Episcopal church of Americus, Ga., and which was resold in London, England, for $25, to be devoted to the same object, at last came into the hands of the Queen's baker, who has presented a loaf of bread made of it to Her Majesty. At the same time he sent a small loaf thereof to some of his other distinguished customers, with the following circular: "We take the liberty of forwarding to you a small loaf made from flour of this year's crop. Such an early production in the month of May is an unheard of novelty, and almost incredible. Of the many wonders we who have the good fortune to live in the nineteenth century have been the witnesses, we venture to think that to eat bread which is the result of the 1880 harvest in May, 1880, is not one of the least marvelous." That puff is, most likely, the last of it, yet here's a little more:—the seed of the wheat of which it was made was sowed Nov. 24, '79, and the crop cut on April 10, '80, on the farm of John L. Lanemore, Lee Co., Ga., maturing in 4½ mos .....The Duke of Devonshire has obtained the gold medal from the Royal Agricultural Society (Ireland) for his tenants' cottages in the county of Cork, which, according to the judges, combine comfort, accommodation and economy in a remarkable manner, being not only the best but the cheapest in the competition. All the materials used in building them were obtained from the estate, and the cost has been found to be $456.56 each, without offices, or $484.54 with offices....The export of champagne to foreign countries, from France, has greatly increased of late. According to an official return, the champagne stored in the cellars of Rheims amounted on the 1st of last April to 63,540,669 bottles. From the 1st of April, 1879, to the 1st of April, 1880, 17,171,154 bottles were sent out, of which 16,000,000 were for foreign countries—1,750,617 more than in the corresponding period from 1878 to 1879....The unfavorable weather of last summer in Germany and France has, among other causes, contributed to stimulate very considerably the export wine trade of Italy. The consumption of Italian wines abroad, however, was even previously largely on the increase. Thus, while the quantity exported from the Peninsula during the first quarter of 1877 was only 97,095 hectolitres, it rose to 145,866 hectolitres in the same period in 1878, and increased to 201,663 hectoliters in the first three months of 1879. For the corresponding period of 1880 the quantity exported has shot up nearly 150 per cent. further, the returns showing that in that period no less than 491,311 hectolitres of Italian wines were sent abroad, The hectolitre contains 26½ gallons... Augustus Mongredien, a prominent political economist, estimates that the farmers of our great Central and Western States expend annually $1,400,000,000 in manufactured goods. He is writing in favor of Free Trade....Last year Indiana stood first in the yield of wheat per acre—20.3 bushels. The average of all the States was only 13 bushels.

.....Cows are going blind in the neighborhood of Jackson, Tennesee, and no cause can be assigned for so remarkable a disease....The Lexington (Ky.) Record, a trustworthy authority, has figured up that "last year there were 2,710 horse races, occupying in all 478 days. The value of the stakes amounted to $2,600,000. The winner of the Derby made $35,000. The races lasted from February to November. Noblemen were the greatest participants. The Record shows that the trotting time for a mile has been lowered from three minutes in 1820, to 2:12¼, Oct. 25, 1879—St. Julian at San Francisco."....A movement, originated by Sir Andrew Galt and a few enthusiasts, is on foot for a British emigration scheme on a gigantic scale. The idea is a combination of the leading classes to help out with aid from the State emigration to British colonies, for it is noted with alarm that those now seeking elbow room outside the strained and crowded limits of England go to swell the growth and greatness of the United States, instead of aiding to build up the colonies. In 15 years, out of 2,000,000 of people who left the United Kingdom for lands beyond the sea, only a quarter of a million went to Canada, seven out of every eight (1,750,000) going to the United States. ....A convention for the purpose of promoting immigration, especially into the northwest of the State, was held at Sheldon, Ia., on June 22. According to all reports that section is now highly prosperous in all material interests. In many counties large attention is being devoted to dairy products and stock-growing, while the statements, in regard to grain-growing and agricultural interests generally were of a very flattering character. It was shown that there are hundreds of thousands of acres of choice lands still open to settlement which may be had at $3 to $10 an acre, and that the immigration of thrifty settlers to northwestern Iowa was never so large as now....The Mark Lane Express of June 21, the last before we go to press, says: "Rains at the beginning of the week, and subsequent sunshine, materially improved the condition of cereals. Although the wheat plant in some places is reported thin, generally speaking, there are sanguine hopes of a fair average crop. The prospects of barley are also favorable. The supplies of English wheat in both Mark-lane and the Provinces have continued small, and the sales restricted. There has been an occasional decline of 1s. per quarter for inferior descriptions. The demand for the little fine white English wheat which was on offer has doubtless been interfered with the large arrivals of Australian. The imports of foreign into London consisted almost entirely of white from Australia, New Zealand and India. Trade has been less firm. The consumptive requirements of the country during the next two months should be quite sufficient to neutralize the tendency to discount the effects of a good home crop, while the Continent may be relied upon to relieve us of a fair proportion of the shipments from America. Purchases during the past week have been for present requirements. All descriptions of white wheat receded 1s. under the pressure of large supplies. Red has not shared the decline, as the stocks of American and Russian now remaining in London are sufficiently low to warrant holders in showing great firmness. It needs only a slight increase in demand to advance prices 1s. or 2s., as Russia is shipping hardly any, while red Winter American has been bought off the coast for the Continent, and large quantities have also been shipped thither direct. The markets will now, to a great extent, be influenced by the weather, but there does not seem to be much probability of the price of wheat varying greatly from that of the previous harvest. If, however, the present crop prospects upon both hemispheres are realized, the trade will have to deal with an unprecedented surplus of breadstuffs. Arrivals at ports of call have been limited, but prices are drooping. The coast is still bare of maize.... The visible supply of wheat in the United States on June 12 was nearly 18,000,000 bushels, or 4,000,000 more than at the same time last year ...The total value of breadstuffs exported duging eleven months ended May 31, 1880, was $247,595,101, against $183,974,661 last year....A Buffalo paper of last Saturday says: "In round numbers 3,000,000 bushels of grain were shipped to the east by canal during the week now ending, while the amount afloat on the canal is not far from 5,000,000 bushels. ....Fifteen years ago Chicago merchants obtained their supplies of cheese from the East, while now 100,000,000 pounds pass through that city annually for New York. One manufacturer in Western New Pork has over 40 factories, while others in different parts of the country have five to 30 each. ....The Army worm is leaving bare the fields of Stratford, Fairfield, Newton, and about Danbury, Bridgeport, New Haven and Hartford, Conn. One farmer counted 44 worms in the space covered by his hand, and 527 in a square foot, and in some places the ground seems a moving mass of life, muffling the sound of carriage wheels on the road. The worm has eaten bare 100 acres of the Cromwell meadows, a rich tract of land near Middletown....The production of honey is becoming an interest of some importance. It is estimated that there are about 2,000,000 bee-hives in the United States, each yielding on an average about 22 pounds of honey and a revenue of about $8,000,000, and, in addition the industrious bees supply us with 24,000,000 pounds of wax....Dispatches from Constantinople speak of the breaking out of the plague of locusts in Asiatic Turkey and throughout the region of the Caucasus. Intelligence from Kars states that 20,000 men are employed in efforts to destroy these pests, and that the damage already done in the districts from Kars to Astrachan, and from Astrachan to the Black Sea, is enormous. Vast swarms have invaded Southern Russia and the army there has been called out to aid the people in exterminating or checking them. The accounts of their vast numbers are almost incredible ...Owen Buck of Oceanic, Md had a vicious, kicking horse, which he was anxious to sell. While trying to make a bargain with a probable purchaser, he remarked: "That horse is so gentle that my little girl could go up behind him and twist his tail, and he wouldn't raise a roof." The girl overheard this lie, took it for the truth, tried the experiment being left alone with the horse and was killed by a kick.. The annual meeting of the Entomological Club of the American Association for the Advancement of Science, will be held at the Museum of the Boston Society of Natural History, corner of Berkeley and Boylston streets, Boston, commencing at 2 P. M. Tuesday, August 24, 1880. It is proposed to send to every member of the American Association, and to all others who may favor the undersigned with their address for that purpose, a circular announcing the special subjects which will be presented at this meeting of the Club; and therefore all entomologists who desire to read communications at that time are requested to notify one of the undersigned before August 1st. This will ensure a fuller discussion of the topics presented, and, it is hoped, a larger attendance.—Samuel H. Scudder, President, B. Pickmann, Mann, Secretary, both at Cambridge, Mass....In the Landes of the South of France, where pines are reared for turpentine, trees covering a space of 150,000 acres, have been destroyed by the late severe Winter, and representing a cash value of thirty-three million francs ($6,000,000.)

$500 Reward—Catarrh Cured.

Some people would rather be humbugged than to get "value received" for their money. Hence it is that such persons run after this and that pretended cure for catarrh, forgetting that Dr. Sage's Catarrh Remedy is so positive in its effects, that its former proprietor advertised it for years throughout the United States under a positive guarantee, offering $500 reward for an incurable case and was never called upon to pay this reward except in two cases. This remedy has acquired such a fame that a branch office has been established in London, England to supply the foreign demand for it. Sold by druggists at 50 cents.

UNABLE TO BREATHE THROUGH NOSE.

PORTLANDVILLE, Iowa, March 11th, 1879.

DR. R. V. PIERCE, Dear Sir:—Some time ago I bought a Douche, some of your Dr. Sages' Catarrh Remedy and Golden Medical Discovery and commenced to use them. The aches and pains as well as sore throat and catarrh from which I have been for so long a time a sufferer, have entirely left me with their use. I feel like a new man as well as look like one. For four years I was unable to breathe through my nose. From the use of the Catarrh Remedy I can now do so freely. Your medicines I know to be all that they are represented. Long live Dr. Pierce and the gentlemen connected with him. Gratefully yours,

WATSON SMITH.

No More Nitre or Buchu.

After the sufferer from a trouble of the kidneys has been drenched with buchu, nitre and all sorts of diuretics, he or she will find a certain cure in Kidney-Wort. The stomach recovers tone, and evacuations become regular.

Women that have been pronounced incurable by the best physicians in the country, have been completely cured of female weakness by the use of LYDIA E. PINKHAM'S VEGETABLE COMPOUND. Send to Mrs. Lydia E. Pinkham, 233 Western Avenue, Lynn, Mass., for pamphlets.

The Literary Revolution.

THE climax in cheap book-making has surely been reached in the twelve little books advertised elsewhere by the American Book Exchange, of New York. They are worth getting merely as curiosities, even if they were not each of them intrinsically valuable. A great point to be commended in the "Revolution" publications is that they are all books of high literary character and worthy of universal circulation.

The Premier Shot Gun.

WE wish to call special attention to the advertisement of the Premier Shot Gun. We have personally examined and own one of these guns. It is the handsomest and best single breech-loading shot gun in the market, equal in all particulars to high-priced double guns, and much better than a cheap double barrel. They are exactly as represented in the advertisement in every particular, and are well worth $18 to $20. No sportsman should neglect to purchase one, for at the advertised price they are a rare bargain. The advertisers are one of the best known and most reliable firms in the trade, and manufacture the Premier Gun themselves. They are offered at the wholesale price to reduce a very large stock during the Summer months.

Burnett's Cocoaine has been sold in every civilized country, and the public have rendered the verdict that it is the cheapest and best Hair Dressing in the world.

The Markets.

SPECIALS FROM ALL CENTERS.

Until Saturday, June 12.

Butter, Cheese and Eggs.

Boston.—BUTTER.—Trade has been quiet, and receivers have put more or less of their receipts into cool storage, believing that the stock will be wanted later on The St. Albans market is about a cent lower this week; general price from 19@20c. Northern—Choice creamery 21c. ₮ lb; choice New York dairy, 19@20c.; choice Vermont, 19@20c.; fair to good, 16@17c.; common, 13@15c. Western—Choice creameries, 21@22c; fair to good 19c.; choice dairy packed, 17@19c.; choice ladle-packed, 15@16c.; common, 13@16c. Cheese—There is a great decline in prices abroad, as well as at all the interior markets, and 9½c. is about all that it is safe to quote the best factories here, although now and then a fancy factory sells at something more. New whole milk, 9½c.; new half skims, 7@8c.; new skims, 4@6c. EGGS.—Receipts, 3,676 boxes, 67 bbls. There is a pretty firm feeling among holders, but the market is not quite so strong as a week ago. Eastern, 14c. ₮ doz: New York State, 13c.; Canadian, 13c.; P. E. Island, 13c.; Western, 11@12½c.; egg oats, 38@42c.

Chicago—BUTTER.—The market during the week was moderately active and unchanged. Buyers did not seem inclined to order much in advance of current needs, but sales about equaled the day's receipts, and previous prices were well supported. In quality the offerings average better than in former seasons. We quote: Creamery 18@20c; good to choice dairy 14@16c; packing stock 10@11½ grease 5@8c. CHEESE.—The continued decline in Liverpool and in New York keeps the market weak and unsettled, and we note a gradual shading off in favor of buyers. The Liverpool quotation is down to 59s—a decline of 5s within the past week. There were free sellers at the following figures: full cream 9@9½c; part skim 7½@8½c; full skim 5@6c; low grades 4@5. EGGS were steady at the late advance. Fresh are quoted at 11@12c per doz. The receipts are small, and sellers have to guarantee most of the stock.

Cincinnati.—BUTTER.—The receipts since our last weekly review have increased largely, but there has been an enlarged local consumption and prices of the better qualities are fully sustained, and have ruled firm, but at the close there is an easier feeling in view of the tendency to an accumulation of stock in the hands of receivers. Packers have bought liberally at 10@12c, but at the close they are not disposed to pay over 11c, unless it is for something fine. The average quality is better than usual. Fancy Creamery sells at 22c and fair at 20@21c, choice Western Reserve and Dairy at 15@16c; prime Central Ohio 12@13c, medium do. 10@11c and inferior 6@8c. CHEESE—The arrivals have been more liberal and although there is a good consumptive demand, the market is easier at 8½@9c ₮ lb for prime to choice factory. EGGS—With moderate receipts and a good demand for the first few days of the week prices advanced until 14c was touched, but this brought excessive supplies, and yesterday the market broke and today it was weak with free offerings at 11c ₮ dozen and little demand.

WOOL.—Continues quiet though there is more inquiry. Several buyers are here, but they are not quite ready to pay the prices asked. Small orders are filled as usual: Good medium tub 43@46c; coarse or dingy tub 40@42c; fine unwashed fleece 20@23c; medium unwashed fleece 25@28c; medium washed fleece 32@35c; fine and coarse washed fleece 30@33c.

PRODUCE AND PROVISIONS.

NEW YORK, Saturday, June 26, 1880.

BEANS AND PEAS.—The market for beans is dull; sales for export, the main stay of the summer trade, exhibit little new business. Receipts are large and arrive at a poor time. Any defect in curing is easily detected in such hot weather as prevails.

Green peas dull at $1.55@1.60 for Wis. bbls. Southern: B. E. quiet at the late decline; quoted $1.55@1.60. Marrow beans, prime, $1.55@1.62½; other, $1.45@1.52½; medium, prime $1.30@1.32; other, $1.20@1.25; pea, $1.45@1.65; white kidney, $1.50@1.55; red kidney, prime, $1.40@1.45; other, $1.30@1.35; black, $2.20@2.25; Lima, Col., $5.

Receipts for week, 6,563 bush.; exports, 1,569 pkgs.

BROOM CORN.—Trade is light and prices unchanged. Brush and short broom, choice, per lb., 7@8c.; do., do.; common to good, 5@6½c.; hurl, good to choice, 7@8c.; do., common to fair, 5½@6½c.; red and crooked at 3@4c.

BUTTER.—The demand is fair for home and export use, but with the bulkier supplies now coming forward especially of creamery, prices are made to favor buyers. Really choice grades are so plenty that under qualities are pushed aside. The weather is muce against handling stock and local buyers prefer to make frequent visits to the market while the supply is an assured one. It is expected that state will fall off in receipts as packing has begun in many sections, but as a rule the market is doing quite as well as at our last.

Creamery, finest, 20@21c.; good to prime, 19@19½c.; fair to good, 18@19c.; sweet cream, fine, 20c.; sweet cream, fair to prime, 18@19c.; firkins, choice yellow, 20@21c.; fair to prime, 15@20c.; pails and hf. tubs, choice, 19@20c.; good to prime, 18@19c.; fair to good, 17@18c.; poor, 14@16c.; Welsh tubs, prime, 18@19c; fair to good, 17@18c.; poor, 14@16c.; Western imitation creamery, 14@17c; dairy, fresh, extra, 15@17c; good to prime, 15@16c.; fair to good, 14@15c.; poor to fair, 13@14c.; factory, full grass, fine, 15c.; good to prime, 13½@14½c.; fair to good, 13@13½c.; poor to fair, 12@13c.

Receipts for week, 40,800 pkgs. Exports 18,000 do.

CHEESE.—This has been a very hard week for receivers. A rapid decline in prices has taken place, and yet to get stocks down to anything like a reasonable accumulation it has been necessary for owners to ship a large quantity. The reason for the indifference of buyers is chiefly found in the steady yielding of prices in Liverpool. At the close the market stands very irregular, and ranges from 8 to 8¾c. for the best stock, with the under grades without a fixed price.

Quotations are for State factory, strictly choice, 8@8½c.; do. good to prime, 7¾@7¾c.; do. fair to good, 6¾@7½c.; do. half skimmed, 5@6c.; Wisconsin factory, fine, 8@8½c.; do. good to prime, 7¼@7¾c.; do. fair to good, 7@7¼c.; Ohio factory, fine, 7¾@8c.; do. good to prime, 6¾@7¼c.; do. flat, fair to good, 6¾@7¼c.; do, poor to fair 5½@6½c.; skimmed, 2@4c.

Receipts for week, 113,725 boxes.

Exports for week, 8,500 boxes, Liverpool cable, 48@50s., which is a decline; steam to Liverpool, 40s.

COTTON.—There has been a moderate degree of activity only and prices barely steady at the close at for June, 11.16@11.57c.; July, 11.57c.; August, 11.60@11.61c.; September, 11.11@11.12c.; October, 10.71c.; November, 10.69@10.69c.; December, 10.59@10.60c.; January, 10.67@10.68.

Quotations for spot cotton bare used on American standard of classification and on cotton in store running in quality not more than half a grade above or below the grade quoted.

	Uplands.	*N. Orleans and Gulf.*	*Texas.*
Ordinary	8¾	8¾	8¾
Strict ordinary	9	9¼	9¼
Good ordinary	10	10¼	10¼
Strict good do	10¼	10¾	10¾
Low middling	11⅛	11⅜	11⅜
Strict low middling	11⅝	11¾	11¾

STAINED.

Good ordinary	8¾	Low middling	9¾
Strict good ordinary	9	Middling	10 11-16

DRIED FRUITS.—TApples have a moderate trade especially evaporated stock, for which prices are steady; other descriptions are wholly nominal.

Latest prices are for N. C.apples, fair to good, at 6½@7¼c.; choice, at 8@8¾c.; New York State quarters at 7¼@7¾c.; patent evaporated, in cases, choice at 14@14½c.; good and prime 13½@14c.; evaporated, sliced at ——c. Evaporated peeled peaches, good to choice, at 26@28c.; North Carolina peeled choice, 16@17c.; Georgia prime at 15@16c.; fair to good at 13@14c.; common at 10@12c.; unpeeled halves at ——c.; do. quarters at 6@6½c. Pitted cherries at 16@17c. Blackberries nominal. Raspberries at 28c. Plums at 17@17½c.

EGGS.—Receipts for week, 10,125 bbls.; do. last week, 12,375 do. There is scarcely any sale for other than strictly fresh eggs. Grades at all offin quality are neglected and very unsettled in price. Held stock is losing severely as the weather has been decidedly unfavorable. Eggs out of cold storage are losing badly and seldom exceed 11c; many have been returned to their cold quarters.

Near Points, doz. 15@16c.; State and Penn., 13@14c.; Western, fresh, 11¾@12c.; Canadian, 12c.; off grades 11@11¾c.

FLOUR.—Has declined in price in sympathy with wheat, and trade is without much animation.

Latest prices are at $3.15@4 00 for inferior to very fancy superfine State and Western; $3.70@4.00 for poor to very good extra State, odd lots and lines; $4 00 @4.25 for good to fancy do.; $3.75@4.00 for inferior to very good shipping extra Western, and $4@ 4.25 for good to choice shipping extra do, inferior to very good white wheat extras, $4.85@5.25; very good to fancy do. at $5.25@5.50; red and amber winter wheat, inferior to choice trade and family, at $4.40@5 75; round hoop Ohio, $3.90@4 40; and trade and family brands of do. at $4.50@5.75; St. Louis at $4.40@5.35 for inferior to good extra; $5 35@6.50 for good to very choice, and up to $6.90 for very fancy. Minnesota clear, very inferior to fancy, at $3.70@5.75; Minnesota "straight," very poor to very fancy, at $5.10@7.25, and patent inferior to fancy at $5.50@8.00; unsound stock at from $2.25@5 00; city mill extra at $5.40@5.75 for good to choice West Indies; do. for England, $8.75@6.35 for poor to fancy spring wheat, and $5 00@ 5.50 for winter wheat product; do. trade and family extras, $5 00@6.25; do. for South America, $5.75@6.15; No. 2 at $2.25@3.01 for poor to very choice.

Receipts for week: flour, 79,850 bbls.; corn meal, 3,330 bbls.; wheat, 2,085,250 bush.; corn, 2,016,700 bush.; oats, 237 200 bush.; rye, 1,994; malt 87,600; rice, 425 pkgs.

Exports: Flour, 68,550 bbls.; corn meal, 3.595 bbls. wheat, 1 569,500 bush.; corn, 1,7.7,300; oats, 45,250 bush peas, 3,598 bush.; rice, 1,4.0 pkgs.

FRESH FRUITS.—Peaches begin to make quite a display. The weather is severe on berries and dealers have to arrange prices for quick sales. The list is large and shows quick ripening but not generally prime quality. Poor apples cannot be handled.

Md. Astrachan, wine ball per cr 75c.@$1; green per bu. cr., 50@60c.; North green apples ₱ bbl. $1.00@ 2.00; per ½ bbl. cr. 50c.@$1 00; cherries, sweet, choice ₱ lb. 7@8c, harvest 3@5c., sour choice 5@6c.; common 3@5c. Strawberries Oswego ₱ qt. 9@13c. Oneida ₱ qt. 6@10c.; up-river good to prime ₱ qt. 9@11c.; poor to fair, ₱ qt. 6@8c.; good to prime ₱ 3 to qt. cups 2@3c.; Raspberries Red Antwerp up-river per 3-to-qt. cup 7@9c.; native up-river ₱ 3 to qt. cup 3@4c.; Jersey ₱ 3 to qt. cup 3@4c Brandywine, Md. and Del. ₱ pint 6@ 7c. Blackcap, Jersey ₱ pint 4@6c.; Md. & Del. ₱ qt, 8@10c Blackberries Wilson, Md. & Del. ₱ qt. 10@ 13c.; Dorchester, Md. & Del. ₱ qt. 8@10c. Md. wild ₱ qt. 4@5c. Whortleberries Mountain ₱ ½ bu. box $1 75c. Jersey ₱ ½ bu. box $1.50@1 62; Md. & Del. 9@10c, Gooseberries green, good to prime ₱ bush. $1.50. Currants cherry, ₱ qt. 4@6c.; small ₱ 3@5c. Watermelons Ga., good to prime ₱ 100 $20@25, Fla. prime, do. $20@30. Peaches, Md. & Del. choice per cr, $4@5; poor to good ₱ cr. $2@3; Norfolk ₱ cr. $1.50 @2.50; North Carolina prime ₱ bu. cr. $1.50@2; poor to good ₱ cr. $1.50@2.50; Ga., Beatrice ₱ peck 75c.@$1.25. Apricots Md. & Del., ₱ qt. 25@30c. Grapes, Blk. Hamburgh ₱ lb 8, Peanuts very dull and lower. Peanuts, Va. hand-picked, ₱ lb. 5¾@6¼c.; extra prime 4¾ @4¾c.; good to prime 4¼c.; shelled, 5¼@5¾c., hickory shellbark, ₱ bush $1@1.10

GRAIN.—Wheat is freely offered at lower prices through the reports from the West respecting the crops and the same English advices; latest sales are of No. 1 white at $1.14½@1.15¼; do., June, at $1.14¾@1.15c.; do., August, at $1.07½@1 09; ungraded white at $1.10@1.13; No. 2 red at $1.20@1 21½; do., June, at $1.19¾@1.20¼; do., July, at $ .11½@1,12½; do., August, at $1.07¾@1.08¼; do., September, at $1.07¼@1.08; No. 3 red at $1.12; ungraded red at $1.05 @1.15½; mixed winter at $1.14; No 2 Milwaukee spring at $1.03@1 10. Rye is quiet; quoted at 79@81c. Corn is favoring buyers with full offerings and trade fair; latest sales are of New York No. 2 at 50@51c.; do., June, at 49¾@50¼c.; do., July, at 49½@49¾c.; do., Aug., 50¾@50¾; New York steamer mixed at 48@49c.; ungraded mixed Western at 46½@51c.; low mixed at 50c.; No. 1 white at 57@59c.; No. 3 at 48@48c.¾. Oats at lower prices and trade fair; latest sales are of No. 1 white at 30@40c.; No. 2 white at 35@36c. do., July, at 36¼@36¾c.; No. 3 white at 34c.; New York No. 1 at 38c.; New York No. 2 at 35@36½c.; do., July, at 36@36¼c; No. 3 at 33½@34c.; ungraded white Western at 36@45c.; ungraded mixed Western at 35@38c.; white State at 40 @41½c.; mixed State at 36c.; No. 2 Chicago quoted at at 36c.

HAY AND STRAW.—The market rules strong under the moderate receipts and the prolonged drought.

Shipping hay quoted at 75@80c.; retail lots at 85@90c. for medium, and 95@$1,10 for prime and fancy qualities; clover, 65@70. Straw at $1.15@1,20 for long rye; 65@70c. for short rye, and 55@60c. for oat.

Exports for week, 427 bales.

HOPS.—Trade has been of a more moderate character this week, the feeling has not been as firm, although no decided change noted in prices. Quotations are for:

	Cents per lb.
New York, fancy	Nominal
New York, new crop, good and choice	33 @36
New York, new crop, medium	31 @33
New York, new crop, low to fair	27 @29
Eastern, new crop	27 @35
Wisconsin, new crop	27 @35
Yearlings	7 @18
Olds, all growths	4 @10
Pacific Coast, new	30 @35
Pacific Coast olds (nominal)	5 @10

POULTRY AND GAME.—With moderate supplies of dressed the demand is good and sellers do not seem disposed to mark up prices. Prime fresh fowls and chickens are doing a shade better.

Turkeys, choice small, on ice, 11@13c.; fair to good, 10@11c.; frozen, ——c.; Phila., d.-p., 13@15c.; chickens, spring, Phila., large, ₱ lb., 25@27c.; small, 21@23c.; scalded, 19@22c.; fowls, Phila., yearling, ice.; dry-picked, 14@15c.; Jersey, good to prime, 13@ 14c.; State, good to prime, 12½@13½c.; Western, good to prime, 12@13c.; poor to fair, 9@11c; ducks, spring, large, ₱ lb., 18@20c.; small, 15@17c.; Phila., old dry-picked, 10@12c.; squabs, white, ₱ doz., $2.25; dark, $1.25

Live poultry is in lighter supply, farm work to some degree keeping back shipments. Prices are generally stronger, but the will not handle very free supplies.

Chickens, spring, large, ₱ lb., 18@19c.; small, 16@17c.; fowls, Jersey, 12@12½c.; Western, 12c.; Southern, 11½ @12c.; roosters, old and young, 4½@5c.; turkeys, mixed, 11@12c.; do. Southern, 10@11c.; ducks, Jersey, N. Y. & Pa., ₱ pair, 50@55c.; Western, 45@55c. Southern, 40@ 45c.; geese, Jersey, $1.50@1.75; N. Y. & Pa., $1.25@1.50; Western, mixed, $1@1.25; Southern, 87c.@$1.12; pigeons, 20@40c

Supplies of game are small and not much wanted, as easy rated spring chickens call a good deal of fancy trade.

English snipe, ₱ doz., $2.50 wild pigeons, stall-fed, ₱ doz. $1.75@2.00; flight, 80c. for small kinds, $1 for fair sized in good order.

PROVISIONS—Hog products have ruled unsettled and trade active, closing at $12 for June delivery; $12@12.05 for July; 12.05@12.10 for August, and $12.10 @12.15 for September. Bacon at 7¾ for long clear and 7¾c. for short clear. Lard—Western steam at $7.14½@7 15 for spot, June and July; $7.17½ for August, $7.20 for September, and $7.31 for October. Stearine at 9¾@10c. Tallow at 6¾@6 3-16c.

Receipts for week, beef, pkgs., 800; pork, bbls. 5,900; cutmeats, pkgs., 30 18; lard pkgs., 25,100.

Exports, beef, pkgs., 4,500; pork, bbls., 4.052; cutmeats, lbs., 8,429,972; lard lbs., 6,783 600.

VEGETABLES.—Exports of potatoes since Jan. 1st, 78,800 bbls.; do., in 1879, 58,800 do. New potatoes declined during the week under very heavy supplies, but at the close show some recovery. Old have declined again, as late high prices brought in a large surplus

Bermuda, new, ₱ bbl. $5.50; Maryland, ₱ bbl., $2 00 @3.00; Norfolk, prime., ₱ bbl. $2.75@3.75; poor to good, per bbl., $1.75@2.50; culls, ₱ bbl., 75@$1; Early Rose, Maine, per d.-h. bbl., $1@1.25; State, 75c.@$1: Prolific, Maine, $1@1.12; Jackson, $1@1.12; peachblow, State, $1@1.25; Snowflake, $1@1.25; Peerless, 75c.@$1. Garden stuff has had a good sale and prices are steady for prime items. The dry weather has shortened our L. I. and N. J. crops. Tomatoes, Cha's. and Sav., ₱ cr., $1.50@2.25: Fla., ₱ bu. cr., $1.50@2.50; Norf., per cr., $1.50@2.50; cucumbers, Norf., ₱ bu. box, $2.50@3; eggs plant, Fla., per cr., $2@3; string beans, L. I. ₱ bag, $3; wax beans, Norf., ₱ ½ bbl. crate, $1.75@2; string beans, Norf., round, ₱ ½ bbl., $1.75 @2; flat, ₱ ½ bbl., $1.50@1.75; green peas, L. I., per bag, $1.50@1.75; asparagus, Oyster Bay, per doz. bch., $1.75@2, L. I. ₱ doz 75c.@$1.25; turnips, Jersey, ₱ 100 bunches $2.50@3.50; Russia, ₱ bbl., $1@1.25; beets, Jersey, per 100 bunches, $1@2; radishes, per 100 bch., 50c.; lettuce, per bbl., $1@1.75; cabbage, Jersey per 100, $6@8; squash, Nor'n, yellow, ₱ bbl., $1@1.25 squash, L. I., ₱ basket, 50@75c.; rhubarb, L. I. & Jersey, ₱ 100 bunches, $2.00; onions Bermuda, new, ₱ cr., $1.50 @2; Maryland, yellow, ₱ bbl., $3.50; cauliflower, ₱ bbl., $2@5.

TOBACCO.—The market is essentially as last week with trade very moderate.

KENTUCKY LEAF.

WOOL.—There continues indifference on the part of buyers and prices unsettled. Not much trade is expected until the new Ohio fleeces come in extensively.

LIVE STOCK MARKETS

NEW YORK, Saturday, June 26, 1880.

BEEVES.—Receipts for week, 12,053 head; do. last week 14,32[illegible] do. The offering has run small in numbers and the market closes strong with an advance of ½c. on Wednesday's figures. Export sales good. Light and medium cattle sold quickly at ½c. advance, and good to prime steers were generally rated $1 ₱ head higher. Light Cherokee and Texas cattle were sold at 8¼@8¾c., to dress 55 lbs.; rather coarse Colorados at 9¼c., to dress 55 lbs., and $1 each; the range for native corn-fed and distillery-fed steers was from 9c., to dress 56 lbs., to 10¼c. to dress 77 lbs.

COWS AND CALVES.—Short pasture will be apt to send a good many cows this season. Fortunately shipments are not heavy at the moment, for buyers would dictate prices, which are low enough for decent stock The range is $25@40 per head.

VEAL CALVES.—Market dull, few of any sort making outside figures.

Live calves, N. J. and Bucks Co., choice, 5¾@6c.; prime, 5@5¾c.; State, choice, 5¾@5¾c.; do. prime, 4¾@ 5¾c; fair to good, 3¾@4¾c.; poor, 3@3½c.; Mt. Holly, good to choice, 5@6c.; buttermilk, 2½@3c.

SHEEP AND LAMBS.—Receipts for the week, 31,208 head; do. last week, 38 870 do. Very few buyers at the market-place, and trade was very slow and prices rather easier. The reported transactions were at 4 @4¾c. for sheep, 4½@6¾ for poor to choice Southern and Western lambs, and 6¾@7c. for Jersey do.

SWINE.—Receipts for week, 24,708 head; do. last week, 25,069. Stock goes direct to packers; no public quotations for live city dressed; 6@6¾c, for Western; 6¾7c. for State

C. GILBERT'S STARCHES ARE ABSOLUTELY PURE.

$10. The Finest Single Breech-Loader in the World. $10.

THE PREMIER.

PRICE TEN DOLLARS. The PREMIER is the best single barrel breech-loading shot gun that has ever been made, possessing as it does all the extra and improvements of a first-class double gun. The Premier is the *only* single gun with all modern improvements in the market, *and is the only single gun that looks, handles, or is shaped like a double gun*, and in many respects it is preferable to a double gun, especially for glass-ball shooting. Choke bored in the best and most scientific manner.

All Improvements, TOP SNAP, LAMINATED TWIST BARRELS, REBOUNDING LOCK, BLOCK STRIKER, PISTOL GRIP, PATENT FORE-END CENTRE HAMMER, (*direct fire*), and *CHOKE BORED*. *75 Yards Range.*

We are, ourselves, the sole manufacturers of the Premier Gun, and have been making them constantly for the past six months, and we now have the largest stock of single guns in the U. S. In order to reduce our stock during the summer months, we shall retail the Premier Gun at the closest wholesale price, which is $10. The regular retail price being $15. No further reduction will be made, and none will be retailed at $10 after September 1st. This is a rare opportunity to get the finest shot gun of its kind in the world at the wholesale price. They can be readily sold at from $15 to $18 in any town in the United States. THE PREMIER is the only single breech-loader that *will satisfy a sportsman*; it is in every way up to the standard of a $50 double gun, and we use over $20,000.00 worth of special tools and machinery in its manufacture. The barrel is FINE LAMINATED TWIST, equal to those in $50 guns, and the stock is fine walnut, *hand checkered*, frames either nickled or case-hardened, trimmings case-hardened and blued. Every one is carefully choke bored, and an ATTESTED TARGET goes with each gun. 12 bore, 26 and 32 inch barrel, weight from 6¾ to 7¼ lbs. 2¾ to 3 inch drop. Use paper or brass shells *centre fire*. Remember, that the Premier, unlike all other single guns, has all the modern improvements or extras, and *we warrant it up to the standard of a Colt or Parker double gun*. SPECIAL PRICE UP TO SEPTEMBER 1st, $10, and when cash comes with order, we give, free, a hard wood compartment gun case, and a set of reloading tools. These are not given free when sent C. O. D. Will send C. O. D. on receipt of the Express Agent's guarantee that the gun will be returned free, if not taken. We ask no cash in advance on C. O. D. matter, as we have never yet had a Premier Gun returned. Every gun warranted or *money refunded*. Address G. W. Turner & Ross, *Mfrs. and Dealers in Firearms*, 103 & 17 Dock Sq., Boston, Mass., U.S.A.

Reading for the Young.

HOW ELEPHANTS ARE CAUGHT IN CEYLON.

NEARLY every one of the cousins has undoubtedly visited a circus and seen "the elephant" at some time or other, but they may not all know how these giants are caught and tamed, and they may therefore be interested in reading the following account, which is an extract from Chamber's Journal, and tells how elephants are caught in Ceylon.

The kraal was an inclosed place some 200 yards each way. The fence was composed of large trunks of trees sunk into the ground, and of about 16 feet in hight. At one end was the entrance, about 20 yards across. At each gate post were large trunks of trees, supported in an upright position by strong ropes attached to the surrounding trees. When the elephants enter these ropes are cut, and down come the huge trees across the passage, effectually barring all retreat. We encamped in one of a row of huts hastily run up on the leeward side of the kraal, and at some distance from it, as the power of scent is particularly keen in an elephant, and if once a panic is raised they would all rush madly away and be never seen again in that locality. In the immediate vicinity of the kraal, and commanding a good view of the whole proceedings were most extraordinary nests, constructed high up among the branches, and of sufficient dimensions to accommodate most of the party. They were thus made: A number of good stout poles were laid from the branches of one tree to another, some 60 feet from the ground, and carefully made fast; others were then placed across them, and side rallings four feet high were added for security. These last were interwoven with leafy branches, which effectually concealed the occupants; a ladder of long bamboos completed the thing; and thus were constructed veritable crows' nests, admirably adapted for a good view of the proceedings, combined with perfect security. The kraal was a government one, and about 2,000 natives had been employed more than a fortnight in driving the adjacent country; by day they had white wands, and at night torches. The elephant is a timid animal when not provoked or wounded, and the above simple means were amply sufficient to keep the animals from "barking back." On this occasion, by good management, a large body of elephants had been driven slowly into the neighborhood of the kraal. The excitement was getting intense. Every crash of a falling branch, or the chattering of a large monkey common to these woods, made one start and gaze expectantly in the direction of the elephants.

At last, when our patience was well nigh exhausted, a fine herd was seen in the distance, slowly approaching, under the guidance of three or four decoy elephants, who were employing every soothing art to induce the leaders to accompany them to the kraal. Strange to say, the elephant in its captive state seems to take absolute pleasure in decoying its wild congeners into the kraals, and in subsequently aiding in making them captives also. About 40 had entered, when the rear guard were seized with a panic and bolted through the line of beaters. The entrance was thereupon immediately barred, and those that were within made safe. Then came the fun of the thing. A decoy elephant cautiously approached the nearest wild one, its mahout (driver) walking on the off side and timing his movements so as to be always concealed by the fore legs of the animal. With admirable tact, after many attempts, the decoy persuaded the captive to raise one of its hind legs, which was mainly brought about by the former tickling the wild elephant with its trunk, and so causing it to lift its legs. A noose was immediately slipped around it by the adroit attendant, and the other end was made fast to a neighboring tree, after which the poor animal was left to its fate; and its insidious visitors proceeded to another, whom they served in the same manner; and so by degrees all the best animals were secured. The remainder were subsequently shot by the sportsmen who were there.

Almost the entire breaking in of the wild elephant is starvation. When once his spirit is broken he becomes almost as amenable to discipline as one that has been captive all his life. After some days of total abstinence from food and water they are led out to drink between two tame elephants, and if any sign of obstinacy is shown the unhappy beast is beaten most unmercifully by its conductors, who use their trunks in a most punishing manner. In a few days they are set to work, harnessed along side of a steady, tame elephant; and in an incredibly short time they fall into their routine of duty, and perform their work as well as their docile friends.

A SOUTH AMERICAN ANT-EATER

A PHILADELPHIA paper tells about an ant-eater which has recently been added to the zoological gardens of that city. It is one of those curious animals which are never to be found in these latitudes except in menageries. The cousins will learn something of interest about it in the following:

This ant-eater is black in color, and when full-grown measures about eight feet from the tip of the nose to the end of the tail. The head is about a foot long, the body four feet and the tail three feet more. The present one on exhibition is about half-grown, its head being about nine inches and body and tail twenty inches each in length. The body is covered with bushy hair, and its head is similar in many respects to the trunk of an elephant, only differing from it in color and shape, but having the bones of the nose and jaws elongated into a narrow tube, at the end of which is a little opening, given the name of mouth, but devoid of all teeth. The eyes are placed low down. All its legs are clumsy-looking; the fore feet are provided with long, sharp claws, turned in under the foot, so that when the animals walk all the weight is borne on the outer edge of the feet. In South America the ant-eater is found east of the Andes and as far south as Paraguay. When it wants to feed it tears down the ant hills with its long claws, and when the occupants pour out it captures them with the tongue, which is of great length, and is covered with a slimy spittle. Thousands of the insects are eaten at a time in this way. This species of the animal is of a different order from the great ant-eater. One of its habits is to climb trees, which the great ant-eater does not. It is impossible to feed the one at the zoological gardens on its natural food, and as a recourse they give this specimen soft-boiled eggs and beef tea, of which it partakes with evident relish.

FLIES.

MANY mournful pieces have been written about "dead leaves," "dead flowers" and "years gone by"; but I have never yet read one word about departed flies To be sure, flies are not an honored race; indeed, they are quite the contrary, for they come in the spring-time and nearly torment the life out of man and beast throughout the Summer.

It is like a tale of war this fighting with flies; we barricade our doors and windows until the house looks like a fortress, and we prepare feasts of deadly poison for the coming enemy. They come by hundreds and thousands, with troops of ugly drummers, called beetles, and millions of accomplished swordsmen, named mosquitoes. And these Lilliputian swordsmen are as cruel as any Hessian soldier that ever fought in the British army.

They are not content with rioting by sunlight; they must attack us by night also, and that is the worst of it; for fresh reinforcements are ever ready at night-fall to commence their attack. Then stealthily moving with doleful song the light-footed warriors creep through the crevices of a building to wreak their vengeance on its inmates.

It is rather humbling to think that after all our efforts to overcome the enemy, we should be tormented through all the loveliest weather of the season, and when the cheerless days of winter come again one breath of our fearless ally, Jack Frost, should kill them all.

I think that it must have been a literary fly that visited a lady at our house one day last Summer; she was writing a letter, and lighting upon the paper it placed its forefeet on the pen and danced along a whole line as she wrote. There are a few flies around me as I write; if they are literary flies perhaps they know what I have written. I hope they do. COUSIN FRANKIE M. BROOKS.

Madison, Wis.

NATURE'S WAYS.

[A Cousin from Bayonne City, N. J., sends the following poem on the seasons, which she says she is anxious to see in print. She is only thirteen years old, and for one so young the attempt is quite creditable.]

WHEN Spring puts on her mantle green,
Old Winter creeps away:
"The brooks," he says, "have burst their chains,
I can no longer stay."

Then laughs fair Spring a merry laugh,
And starts her fairy work;
Sprouting the seeds of wildwood flow'rs
Wherever they may lurk.

When she is done, bright Summer comes,
And brings her roses red,
And all around upon the air
Their fragrance rare is shed.

Then summer goes and Autumn's here,
Adorned with crimson leaves;
But soon she too must die away,
Bearing her fruits and sheaves.

Once more gray old Winter brings
His short and frosty days,
And thus the earth dies—lives again,
For such are Nature's Ways.

VIRGIE C. MITCHELL.

LETTERS FROM THE COUSINS.

DEAR UNCLE MARK:—I sit down to write a few lines to you, almost discouraged because my last letter did not appear with the cousins' letters; but I suppose it was laid aside on account of your removal. We have had plenty of rain so that plants of all kinds are doing well. My phlox, pinks, mignonette and portulacas are up and almost ready to send forth their beautiful flowers. One melon came up and our okras are doing well. I have lots of tomato plants ready to flower, I grow them on purpose to sell, and make lots of of money. I have lots of flowers, I could not name them all. I received some of my flower seeds from England. Does pineapple geraniums ever blossom and how shall I treat one to make it blossom? I am very thankful for the seeds you sent, and shall try to my best with them. Hoping this will not be thrown in the waste basket, I remain your nephew, HENRY WELFARE.

Ingham Co, Mich.

[Pineapple scented geraniums are flowering plants, but the flowers are not very showy. They ought to blossom with the care ordinarily given to house plants.—U. M.]

DEAR UNCLE MARK: I received the seeds you sent me all right. The okra, melons and pinks are up and doing finely. I am watering the plants the way you said in the Hints for the Club. My okra is about two inches high. When is the best time to set out strawberries? Which is to be cut off in pruning raspberries, the young shoots or the old ones? I suppose my last letter found its way to the waste basket for I did not see it in print; if I see this letter in print I may venture to write again. Your nephew,

ROVING DICK.

Besemers Depot, Tompkins Co., N. Y.

[Plant strawberries in August and September if you have good strong plants. They can also be planted in April and May. Pinch off the top of the young raspberry canes now. They will then become stocky and throw out more fruit branches. The old canes should be cut off in the fall; they are of no further use after the leaves have fallen.—U. M.]

The Puzzler.

HIDDEN STORMS.

1. In Donegal elopements are rare.
2. Next August.
3. Show erring Tom the way.
4. I've torn a dolman.
5. The stem pestered me.
6. I saw him whirl windows out.
7. Ashur I can eat.
8. Do have mercy, Cloney.
9. Mrs. Imoon married.
10. So common, so only thrice.
11. Don't pamper a tease.

BRIEFLETS.

THE Hour has the following: The female suffragists were in full force at the Chicago Convention, endeavoring to present some exceedingly ungrammatical and otherwise incomprehensible resolutions to the attention of the delegates. The resolutions wound up with a clause to the effect that woman should be allowed to vote for "laws to preserve her daughters from those dreadful dangers to which they are becoming more and more exposed through the unbridled and insatiable lust of men." . . . . . The best way for these ladies to "preserve their daughters" would be to stay at home and attend to the proper education of their children and to curb their own and their daughters' "unbridled and insatiable" love of pleasure and fine raiment, which is the main-spring of the danger they are so anxious to legislate about. . . . . We regret to see that Mr. Peter Henderson is again advertising Pearl Millet as "The Great Fodder Plant." . . . . . One farmer near the Rural Farm cut a five-acre field of Timothy and clover and burnt it to destroy the Army worm. Another who had been picking the worms off his corn tells us that he found as many as forty to some hills. . . . . Punch, who, of course, must illustrate English opinion, gives a very clever scrap of conversation in which a young gentleman of fashion asks an elderly lady of fashion for matrimonial advice. The question is of choice between worth and rank, and the lady very acceptably answers: "Beauty fades, and mere goodness is apt to pall, but a title lasts forever, and one never tires of having a duke for a brother-in-law." . . . . . A lady who has resided for years in China says that the misguided girls of that country may be seen occasionally tightening the bandages that cripple their poor, lamed feet, just as a silly American girl may occassionally draw tighter and tighter the laces of her corset. . . . . Mr. Pearsall, speaking of the importance of local fruit shows, says: "Many people can give their experience with an apple in hand or a plate of fruit to handle over, who could say nothing at all empty-handed. Very many of us are like the boy in the spelling class who missed the word because the button was off his coat, that he usually had hold of." . . . . . La Rochfoucauld says: "The greatest miracle of love is that it cures coquetry." . . . . . Again he says: "If one judges of love by the most of its results, it more resembles hate than friendship." . . . . . Balzac says: "Small-pox is the Waterloo of women. After it they really know who loves them." . . . . . Law, as at present practiced among us, is an honor neither to our intelligence nor to our civilization. It is a licensed system of needless and shameless extortion forced upon society and affecting it for evil in every relation of life. . . . . Speaking of the exclusion of Jews from hotels, Mr. Ingersoll thinks if *genuine* Christians were to be generally excluded, all the hotels in the country would still be as crowded as ever! . . . . . "Stockbridge Cow Manure"—Something new, Dr. Bailey? . . . . . Prof. Budd thinks that poles for Lima beans are a disadvantage. He nips off the tips of the vines so that after a while the plants become bushy and loaded with pods. . . . . Whatever opinions may exist in regard to the political course of President Hayes, it must be conceded that a more amiable and unpretending family never occupied the White House than that of the present incumbent of the Presidential chair.—The Hour. . . . . Mr. C. M. Merriman considers it a mistake in orchard planting to set each kind of fruit by itself. He advocates planting different sorts—for instance, first a peach, then a pear, and so on. . . . . Mme. De Stael says: "We understand death for the first time when he puts his hand upon one whom we love. . . . . Mr. Graham, of Grand Rapids, said he had by accident learned a fact concerning the curculio. Having left his coat in the crotch of a plum tree over-night, 300 curculios were taken from under it in the morning. . . . . In South Wales the rings of a tree known to have been 18 years old were 36 in number—or twice as many as the age of the tree. . . . . The London Farmer republishes Peter Henderson's popular article entitled. "The Use of the Feet in Sowing and and Planting." . . . . . A cable dispatch from London to New York in 25 seconds is rapid work. . . . . "Debtors," says Spurgeon, the great London preacher, "can hardly help being liars, for they promise to pay when they know they cannot, and when they have made up a lot of false excuses they promise again, and so they lie as fast as a horse can trot." . . . . A contemporary says that "too little exercise and too much tea ruin the nerves of many a woman." . . . . . We do not think that the average farmer's wife's nerves are ruined in that way. . . . . Easy housekeepers are often unjustly accused of laziness, when the very easiness so condemned springs from a kindly consideration for other people's comfort.

CATALOGUES, ETC., RECEIVED.

THIRTY-NINTH ANNUAL CATALOGUE and Circular of the Maplewood Institute, Pittsfield, Mass.

SUPPLEMENT of the American Standard of Excellence in Poultry. By G. E. Josselyn, Fredonia, N. Y.

TRANSACTIONS of the State Board of Agriculture of Nebraska from Sept., 1876, to Sept., 1879. Daniel H. Wheeler, Secretary, Plattsmouth, Neb.

THE COTTON WORM, by Professor C. V. Riley, Chief of the United States Entomological Commission. In this pamphlet is given a summary of its natural history, an account of its enemies, and the best method of controlling it, with numerous illustrations. Published by the Dep't of Interior, Washington, D. C.

SHEEP HUSBANDRY IN TENNESSEE. By J. B. Killebrew, A. M. Ph. D., Commissioner of Agriculture of Tennessee. This work of 294 pages, 8vo, although prepared avowedly for the farmers of Tennessee, is full of valuable information for sheep owners everywhere, containing, as it does, all the latest information on the subject of which it treats.

CATALOGUE OF ILLINOIS INDUSTRIAL UNIVERSITY FOR 1880.—This institution is situated at Urbana, Champaign Co., Ill. Its object is, as is indicated by its name, to teach the industrial sciences. There are four colleges in the institution: College of Agriculture, College of Engineering, College of Natural Science, College of Literature and Science, besides schools of Art and Military Science.

THE HESSIAN FLY, its ravages, habits, enemies, and means of preventing its increase, by A. S. Packard, Jr., member of the United States Entomological Commission. The ravages of this insect are the dread of the wheat grower, and the information here offered is well calculated to counteract its destructiveness. Published by the Dep't. of the Interior. Washington, D. C.

THE CHINCH-BUG, its history, character, and habits, and the means of destroying it or counteracting its injuries. By Professor Cyrus Thomas, of the United States Entomological Commission. Professor Thomas is one of our best entomologists, and the information he gives in this pamplet of 44 pages about this formidable pest, will be of great value to the farmers in wheat-growing districts. Published by the Dep't. of the Interior Washington, D. C

PERSONAL ITEMS.

General Grant expects to spend the summer in England, visiting his daughter, Mrs. Nellie Grant Sartoris.

General Benjamin F. Butler, having just visited the San Francisco coast, does not believe in the Isthmus canal scheme.

Miss Annie Arthur, a sister of the Vice Presidential nominee, is the teacher of a district school a few miles from Le Sueur, Minn.

President Hayes expects to leave Washington for California about the 1st of July. He will be accompanied by Secretary Thompson, and will make a general tour of the Pacific coast.

Cyrus H. McCormick, the man of reaper fame, recently finished one of the finest houses in Chicago for his private residence. His library was selected partly by Horace Greeley. Mr. McCormick is a very lively man, though 71 years of age, and gives the fondest paternal attention to his two young children, aged about four and six years.

During a heavy thunder shower at Mechanic Falls, Me., the other day, a boy was sitting at the foot of a Balm of Gilead tree which was struck by lightning. The tree was splintered, but the boy was apparently uninjured. Soon after the accident he was seized with nausea, and on a physician removing the little fellow's clothing, there was found upon his stomach and chest an imprint resembling the trunk of the tree, its branches and buds as perfect as could be drawn by the hands of a skilled artist.

"No Words in the English Language," writes a lady in Michigan, who is using the COMPOUND OXYGEN Treatment, "can express the gratitude I feel for the benefit I have received and the hope I have of possessing tolerable health again. It was ten years, January, 1880, since I was taken sick, and the mental agony alone has been indescribable. *I have two little girls who have never seen me walk.* * * I think I shall be able to walk alone after a time. I have been so hungry this summer that I have scarcely been able to wait for meals. * * * Every one remarks upon the improvement in my complexion, and I am putting on flesh rapidly. My bowels, which have been constipated all my life, and terribly so since my sickness, are now better than I have ever known them to be." Our Treatise on Compound Oxygen, its nature and action, and full information for use, sent free. DRS. STARKEY & PALEN, 1109 and 1111 Girard Street, Philadelphia, Pa.

C. H. Ditson & Co., 843 Broadway, New York. **J. E. Ditson & Co.** 1228 Chestnut St., Phila.

THE request often made by publishers that readers will mention their journals when answering advertisements, seems to us a very reasonable one. Such mention is a helpful and friendly act to the journal mentioned and enables the advertiser to determine which journals are the best advertising mediums. Reference to our advertising columns will show there is not one advertisement of an exceptional or ambiguous character admitted. In so far as this is possible we hold ourselves responsible for their high-standing and trustworthiness.

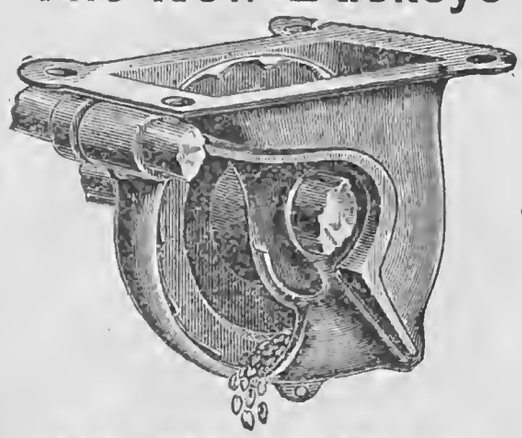
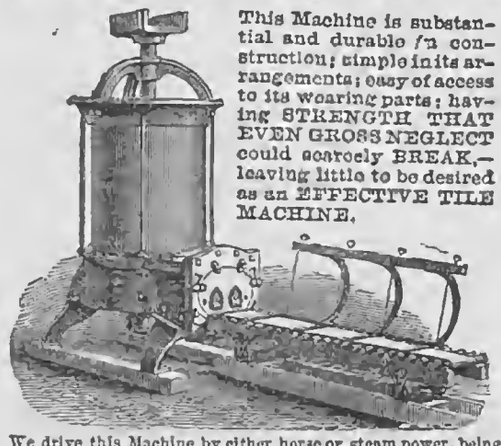
The New Buckeye



GRAIN DRILL,
ALSO
THE NEW BUCKEYE
Combined Grain and Fertilizer
DRILL,
AS IMPROVED FOR 1880.

Over 7,000 of these new Drills were sold and used in the United States last season, and were pronounced by all to be the *most perfect Seeding Machines* in the country. No Grain Drill ever made gave such *universal satisfaction*. It is the best force-feed in the market. Our Fertilizer Sower has a positive force-feed and has no equal in this country. Be sure and send for our new Illustrated circular, giving illustrations and descriptions of the improvements. Address
P. P. MAST & CO.,
Springfield, Ohio.

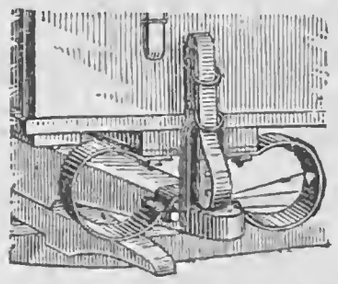
Eureka Drain Tile Machine



This Machine is substantial and durable in construction; simple in its arrangements; easy of access to its wearing parts; having STRENGTH THAT EVEN GROSS NEGLECT could scarcely BREAK,—leaving little to be desired as an EFFECTIVE TILE MACHINE.

We drive this Machine by either horse or steam power, being well suited to either. Our Tile dies range in size from 3 to 9 ins. in diameter; and in shape we vary them to suit the taste of customers. As a Brick Machine it is also a complete success. It is fully warranted as a Tile or Brick Machine. Send for circular.
CHANDLER & TAYLOR, Indianapolis, Ind.

SOMETHING NEW!
PULLIAM'S PATENT
BOLSTERS SPRINGS for FARM WAGONS.



This valuable device is suited to wagons of any size—made of the best steel and warranted—are attached by four bolts through the bed—can be put on by any person. They remain on the wagon for all uses and work equally well whether with empty or loaded wagon. There is no use for a spring seat—they make a comfortable spring wagon out of a farm wagon—and save largely in wear and tear. We want Agents every where. Send for description and prices, and mention this paper.
SEMPLE & BIRGE MFG. CO., St. Louis, Mo.

NOYES' HAYING TOOLS.

KIDNEY-WORT
The Only Medicine
That Acts at the Same Time on
The Liver, the Bowels and the Kidneys.

These great organs are the natural cleansers of the system. If they work well, health will be perfect; if they become clogged, dreadful diseases are sure to follow with

TERRIBLE SUFFERING.

Biliousness, Headache, Dyspepsia, Jaundice, Constipation and Piles, or Kidney Complaints, Gravel, Diabetes, or Rheumatic Pains and Aches,

are developed because the blood is poisoned with the humors that should have been expelled naturally.

KIDNEY-WORT

will restore the healthy action and all these destroying evils will be banished; neglect them and you will live but to suffer.
Thousands have been cured. Try it and you will add one more to the number. Take it and health will once more gladden your heart.

Why Suffer longer from the torment of an Aching back? Why bear such distress from Constipation and Piles?

KIDNEY-WORT will cure you. Try a package at once and be satisfied.

It is a dry vegetable compound and
One Package makes six quarts of Medicine.
Your Druggist has it, or will get it for you. Insist upon having it. Price, $1.00.
WELLS, RICHARDSON & CO., Proprietors,
10 (Will send post paid.) **Burlington, Vt.**

Humorous.

THE evil that men do lives after them. Cows likewise do not give oleomargarine until they are dead.

"I DESS," said a little sis, "if Dod was here now he'd make a lot o' folks. 'Tis awful dusty to-day."

IF a boy should catch hold of your ear, and ask if he had the wrong pig by the ear, would you answer yes or no?

"I AM very much afraid of lightning," said a pretty lady. "And well you may be," replied a despairing lover, "as your heart is made of steel."

"By George!" shouted a traveler, staring at the calendar card hanging up in the depot, "if they haven't got to playing the blamed puzzle on the walls."

"WHEN I was your age," said old Mr. Tret, "I rose with the lark." "I beat you clear out of sight, then," said Tom, wearily and triumphantly, "I've been up all night with him."

MAMMA.—"Look, Cissy, here is the dear doctor coming. What a favorite he is! See, even the little chickens run to meet him!" Cissy—"Yes, ma; and the little ducks cry, "Quack, quack!"

"I WISH I was worth a million of dollars," said a gentlemen. "What good would it do you, for you don't spend your present income?" inquired a friend. "Oh, I could be economical on a large scale."

ABSURD question.—A German lately applied for a situation as sailor on board a vessel lying in the North River. "Have you ever been to sea?" asked the captain. "Does you suppose I comed over from Germany in a balloon?"

"THERE is no rule without an exception, my son." "Oh, isn't there, pa? A man must always be present while he's being shaved." Pa to ma—"My dear, hadn't you better send this child to bed. He's getting too clever."

PEDESTRIAN, who has dropped half a crown in front of "the blind." "Why, you confounded humbug, you're not blind." Beggar—"Not I, sir! If the card says I am, they must have given me the wrong one. I'm deaf and dumb."

IT was a colored preacher who said to his flock: "We have a collection to make this morning, and, for de glory ob heaben, whichever of you stole Mr. Jones's turkeys, don't put anything on the plate." One who was there says, "Every blessed niggah in church came down with the rocks."

A YOUNG man and woman stopped at a country hotel. Their awkward appearance excited the curiosity of one of the family, who commenced a conversation with the female by inquiring how far she had traveled that day. "Traveled!" exclaimed the stranger, somewhat indignantly; "we didn't travel, we rid!"

BUTTER? You remember the story of the guest who was eating more butter than biscuit, while the landlady looked on and fidgeted and hinted until she fairly went into a nervous fit. Finally she said, "Do you know butter is up to sixty-five cents a pound?" The hungry guest reached out and took what there was left. "Well," he drawled, approvingly and reassuringly, "good butter is wuth it."—Hawkeye.

A BOY in the wild West, who for the first time in his life saw a military company out for a drill with fife and drum, gave his mother the following account of the business: "A little man blowed on his squealin' stick, and a big man that stood beside him hammered on his thunder-box; then the boss man pulled out a big, long knife, and shook it at the fellers what was standin' up in a long row, and they all walked off on two legs."

"Did you make the train?" "No," was the reply, "it was made in the car shops." "I mean, did you catch the train?" "Of course not; it's not infectious." "Well, you darned fool, did you arrive at the depot in time?" "No, you blamed idiot, I arrived in an omnibus." "Great Scott!" shrieked the interlocutor, "did you board the cars?" "Jumping Jerusalem!" howled the questioned man, "you know I don't keep a boarding-house."

If About to Travel or Emigrate,

The voyager cannot be provided with a safer remedy and protective medicine than Hostetter's Bitters. Abundant testimony exist to prove that it nullifies hurtful climatic influences and the effects of exposure, that it reconciles the stomach to unaccustomed food and prevents injurious results from impure water. Mariners, tourists, emigrants and miners have all contributed their quota of testimony in its behalf, and its protective influence has been most effectually demonstrated in regions and under conditions where, if not really effective, that fact would long since have been exposed. In no class of disorders have its remedial and preventive properties been more conspicuously shown than in cases of malarial fevers, maladies for which it is the most popular specific in existence, both here and in the tropics, where its reputation is scarcely second to that which it enjoys on this continent. It is, moreover, a most agreeable appetizer and nervine.

Chambers's Encyclopædia.

15 Vols. Over 13,000 Pages. Price During July, $6.25.

Among the wonderful things which have been accomplished for lovers of good books by the "Literary Revolution," perhaps the most wonderful is the reproduction of this great Encyclopædia at a merely nominal cost.

It is a verbatim reprint of the last English edition, in 15 beautiful volumes, clear nonpareil type, handsomely bound in cloth, for **$7.50**; the same printed on finer, heavier paper, wide margins, and bound in half Russia, gilt top, price **$15.00.** The first ten volumes are ready for delivery. Vol. 11 will be ready July 10. The remaining volumes will be completed by October next.

$6.25. An Amazing Offer. $6.25.

The more widely and rapidly these volumes are scattered, the greater is their influence in inducing other purchasers of this and our many standard publications. Accordingly we give special terms to early subscribers.

To all whose orders and money are received during the month of July, we will supply the 15 volumes, in cloth, for **$6.25,** and in half Russia, gilt top, for **$12.50.** To any one sending from any place, where we have no special agent (usually the leading bookseller of the town), a club of five orders, we will allow a commission of 10 per cent. The volumes issued will be sent at once by express, and the remaining volumes when completed.

A specimen volume in cloth will be sent, post-paid, for **50** cents, or in half Russia, gilt top, for **$1.00,** and may be returned at once, if not satisfactory.

The "CHAMBERS'S ENCYCLOPÆDIA" comprises the first 15 volumes of our "Library of Universal Knowledge," and the remaining volumes, complete in themselves, will be sold separately when published.

Standard Books.

Library of Universal Knowledge, 21 vols., **$10.50.**
Milman's Gibbon's Rome, 5 vols., **$2.50.**
Macaulay's History of England, 3 vols., **$1.50.**
Macaulay's Life and Letters, **50 cents.**
Macaulay's Essays and Poems, 3 vols., **$1.80.**
Chamber's Cyclopædia of Eng. Literature, 4 vols., **$2.**
Knight's History of England, 4 vols., **$3.**
Plutarch's Lives of Illustrious Men, 3 vols., **$1.50.**
Geikie's Life and Words of Christ, **50 cents.**
Young's Bible Concordance, 311,000 references (preparing).

THE RURAL NEW-YORKER

A JOURNAL FOR THE SUBURBAN AND COUNTRY HOME

VOL. XXXIX. No. 28. WHOLE No. 1589. | NEW YORK, JULY 10, 1880. | PRICE FIVE CENTS. $2.00 PER YEAR.

[Entered according to Act of Congress, in the year 1880, by the Rural New-Yorker, in the office of the Librarian of Congress at Washington.]

What the Harvest is and will be.

Reports from Every part of the Country up to July 6th.

1,000 Special Reports.

Wheat a Splendid Crop---The largest ever Produced.

Ohio, Indiana, Minnesota, Illinois, New York foremost.

Kansas Disappointed.

Corn an Immense Crop—the Heaviest ever Raised. The Stand-by of the People where Wheat has failed. Perhaps 1,500,000,000 bushels.

OATS—FINE CROP EVERYWHERE.

BARLEY PROBABLY 50,000,000 BUSHELS. RYE, GOOD EVERYWHERE.—PROBABLY 32,000,000 BUSHELS.

Potatoes, acreage not so large as last year, but the Yield promises to be Greater. A Profitable Crop.

Hay will be a very Poor Crop—especially in the Middle States. High Prices certain for Hay.

Flax—a Large Acreage and a Good Yield in the West.

COTTON—AN INCREASED ACREAGE AND A FINE STAND. LIKELY TO TRANSCEND ANY PREVIOUS CROP.

FRUITS.

Apples—A Fine Crop.

PEARS—A SMALL CROP.

Peaches—Only a Fair Crop.

Grapes—An Abundant Crop.

EASTERN STATES.

Maine.

HALLOWELL, Kennebec Co.—Crops of all kinds are looking well. Wheat is extra; oats and other small grains are looking fine. There are larger amounts of wheat and corn this year in Maine than ever before. Grass is looking fine and will make a heavy crop of hay. The weather has been quite dry, but we have had frequent showers. There are but few sugar beets planted here, but more mangels than usual. Fruit is a failure, except apples, of which there will be a good crop. I have a few hills of Amber sugar cane, but the dry weather has set it back. A. H. L.

PEMBROKE, Washington Co.—It is early yet to tell what the harvest will be here, for the drought of three weeks has injured crops considerably. There was much more wheat sown here than usual; it looks poorly; Lost Nation is the kind. About as much oats were planted as usual, and they look fair; Hogan is the kind. Very little corn is raised here. Southern is raised and cut green for the cows. Not as many potatoes were planted as usual. They look well but bugs are plentiful; the kinds are Early and Late Rose and Prolific. There is no rye and very little barley raised here. I think there was about one-fourth of a pound of sorghum planted. The prospect for apples is good. Cherries are a failure. Apples grow best here. Hay is injured and very short. There is considerable small stuff raised here which was nearly spoiled by the drought, but we have had several showers lately and things begin to revive. E. P.

SEARSPORT, Waldo Co.—Wheat, of which the variety chiefly grown is the Lost Nation, promises a good yield. Corn is not far enough advanced to estimate the crop, but it looks well. Oats and barley promise well. The Excelsior oats is the principal variety. There is one third increase in the acreage of wheat. Other crops are about the same as usual in area, except potatoes, the acreage under which was reduced one-third on account of the Colorado beetles, which are quite plentiful, but no worse than last year. Principal varieties of potatoes are the Early Rose, Prolific, and Jackson. No sorghum is raised in this part of the State. Small fruits are abundant. Apples promise a bountiful crop. A. N. K.

SKOWHEGAN, Somerset Co.—Our season thus far has been very changeable, with extremes of heat and cold. No rain has fallen for about four weeks. Hay will be very light. Wheat oats and barley promise well, but they need rain. The acreage is about as in former years. Corn is backward. Potatoes look well, but the bugs are very troublesome. Sugar cane is not raised in this vicinity. Fruit is promising; the leading varieties of apples are the Greening, Baldwin, Northern Spy and Russets. Pears are not much grown in this locality. Grapes are raised in small quantities. W. B. F.

Massachusetts.

CHELSEA, Suffolk Co.—There is very little grain of any kind raised in this vicinity, except Indian corn of which there was about as much planted as in former seasons, but the drought has hurt it badly, and it is very likely that the crop will be somewhat less than usual. Potatoes have been badly injured by bugs, and in some cases have been almost totally consumed, but where the insects have been removed, the vines are doing well and the crop will be about the same as last year. Sorghum is not cultivated at all here. Apples will be more plentiful than last season, but there will not be so many as in some other bearing years; pears are, or promise to be, rather scarce, although they are expected to do well here as it is so near salt water; peaches will be very small in quantity here as the crop is only a third or a quarter as much as last season; grapes bear considerably more than last year. C. A. B.

DORCHESTER, Suffolk Co.—The dry weather has been very injurious to our strawberry crop. The pear crop will be very small, occasioned by the overbearing of last year. The apple crop will be larger. In regard to the question what are the best varieties of fruit for this section, the following is the list agreed upon, some years since, by the Mass. Agricultural Club, and it is substantially correct at this time, so far as it relates to the pear:

For a collection of six: Bartlett, Seckel, Urbaniste, Merriam, Sheldon, Beurré d'Anjou. If 12 are wanted, add: Brandywine, Doyenné Boussock, Onondaga, Howell, Benrré Bose and Lawrence. If a collection of 18 is desired add: Belle Lucrative, Paradise d'Automne, Marie Louise, Beurré Clairgeau, Vicar of Winkfield. The above list was agreed on for standard trees by the most experienced cultivators without a dissentient vote, and is a good one for to-day. I would like to say, however, that the Duchesse d'Angouleme and Louise Bonne de Jersey on quince roots are very desirable, and that Clapp's Favorite as a standard early pear of large size has no superior in size, beauty or quality, and I may add, for the sake of history, that the Mass. Agricultural Club impressed at first with this idea, offered by their committee $1,200 to Mr. Clapp, if he would dedicate the tree to the name of the President of the Club and have it propagated for distribution. This Mr. Clapp declined; gave it his own name, and its portrait is engraved on his own tombstone in Forest Hill Cemetery—a decision which I most heartily approved of, and I sincerely hope that this beautiful fruit may endure as a blessing to the world until the marble shall have crumbled into dust. In regard to the Beurré d'Anjou I would remark that it gains popularity wherever it is known, succeeding throughout a wide expanse, and is undoubtedly the most valuable late pear of our country, and I may repeat, for the twentieth time, the remark that if I had done nothing else for the cause of pomology during the last 50 years but to introduce this pear, I would be content with the result of my labors in this line of duty. M. P. W.

THREE RIVERS, Hampden Co.—Little or no wheat is grown here. Oats will give an average crop. Corn, potatoes and rye are below the average. The acreage of each is about the same as last year. No sorghum is grown here. Fruit is not so promising as usual for the bearing year. For an early apple the Red Astrachan is much the best; next comes Porter. For Winter use the Baldwin is worth all the others in this section. S. R.

WESTFIELD, Hampden Co.—No wheat or barley is grown here. Corn, potatoes, oats and rye promise to be average crops. No sorghum is grown here yet. Tobacco is our principal crop. The prospect for fruit is fair. Apples, pears and grapes have proved the most successful. Peaches formerly did extremely well; but of late years they have been neglected. Now, however, we are disposed to try them again and a large number of trees were set out this Spring. Of small fruits strawberries take the precedence and this season we have an abundant supply. M. R. VAN D.

WEST NEWBURY, Essex Co.—No wheat is grown in this neighborhood. Corn is about an average both as to yield and amount planted. Potatoes look well where the beetles have been kept off; but they need rain. Hay will fall short one-half, I should think, on account of the drought. Apples, some kinds, look well; on others the blossoms are nearly all blighted; the crop, if nothing happens to it, will be larger than last year. Pears did not blossom this year at all. It is very dry, there have been only two or three light rains for two months or more. If it does not rain soon everything will dry up. H. M.

Rhode Island.

WOONSOCKET, Providence Co.—All farm crops are suffering terribly in this vicinity from drought. Apples set abundantly, but are falling badly; ditto for pears and plums; strawberries and cherries are light; grapes more promising. F. E. S.

Connecticut.

LITCHFIELD, Litchfield Co.—No wheat is raised in this locality. Other grains look promising. Early Canada corn is raised principally. Potatoes, Early Rose. The acreage of all crops is larger than last year. Sorghum is not raised much yet, but it is coming into favor. The prospect for fruit is now favorable. The best kinds of apples are the Roxbury Russet, R. I. Greening, Baldwin and Northern Spy. Of berries a big crop is expected, if the weather is not too dry. F. S. S.

MIDDLE STATES.

New York.

QUEENS Co., Long Island, N. Y.—Wheat is harvested. Our Clawson, from appearances, is among the heaviest yields we have ever had. The wheat crop all over the Island is better than last year. The drought continues. Fodder corn is in many places burnt beyond recovery. Field corn curls badly, but is not yet crippled. Pastures are nearly destroyed. All sorts of vegetables—except cabbages—are suffering. Potatoes will be a very short crop. The vines are wilting, and rain can scarcely prove of much assistance. We must have rain within a week or the corn crop will be seriously injured. Our Ennobled oats (Mold's) growing upon a lowland field are, from the accounts of those who have seen them within a few days, one of the finest oat crops ever raised hereabouts. Oats generally will fall short of half an average crop. RURAL FARM.

BLOOD'S DEPOT, Steuben Co.—There are good prospects of an excellent harvest of wheat and rye, and the prospects for oats and barley are extra good; corn has been injured some by cut worms; potatoes are raised extensively in this neighborhood, and they, too, look well; the beetles have not injured them. The grass crop is very light—not one-half crop. Cows are not doing as well as usual for lack of pasturage. D. W.

DUNDEE, Yates Co.—The acreage of wheat is about 10 per cent. over last year's, and the yield will apparently be 70 to 80 per cent. of a full crop. It is too early to judge of the potato crop. No ravages by the beetles yet. Oats are not headed out yet, but they look healthy. Very little rye is sown, but of barley the acreage is above an average, and the yield promises to be good. No sugar cane is grown here. The fruit prospects are fair. D. S.

ELMIRA, Chemung Co.—The prospect for a bountiful harvest of all grain crops in this locality is very flattering. Potatoes are being more injured by the beetle than last year, and the acreage is somewhat smaller, yet they will be an average crop I think. The acreage of grain crops is about as usual. Clawson wheat is grown most extensively, as it is the popular opinion that it is a heavy yielder. Sorghum is being cultivated on a small scale by many of our farmers. The County Agricultural Society has offered a premium for the best 100-lb. sample of sugar from it. The fruit crop will be abundant, especially apples, which are our principal fruit crop. G. A. G. JR.

HAMILTON, Madison Co.—Winter wheat is chiefly raised in our locality. The Clawson variety is deemed the hardiest, but it was discarded at the last sowing for Treadwell and other kinds which make better flour. The crop promises an average. Corn, potatoes, oats, and barley look well, but it is too early to speak with any assurance of the harvest. Of corn we raise mostly the eight-rowed yellow; of oats, the common white sort; of barley, the two-rowed. No rye is grown hereabouts. The acreage of all the crops is much the same as the usual. No sorghum has been raised except by Mr. R. A. Goodrich, who has planted about ten acres this present season. I judge that the prospect for fruit is rather slim. We had no frost at blossoming time to kill the fruit outright; but we did have a cold, and long-continued, piercing north wind which seemed to starve the life out of the young plums and cherries at setting time. The most successful kind of plum is the Bleeker's Gage; and of cherries, the Early Richmond and English Morello. We have raised some good pears, but we shall have none this year. We don't produce all the fruit we consume. Carloads are brought to Morrisville, Eaton and Hamilton from Orleans Co., N. Y. The black-knot used up the cherry trees of my boyhood, and the blight makes a sorry-looking sight of the pears which have been lately planted. Cherries have borne very well of late years on the few trees people ventured to plant. I believe the greatest hindrance to fruit culture is the *ignorance* and rascality of tree peddlers. E. B. W.

HIMROD'S, Yates Co.—Everything is suffering from want of rain in this section. Last year's clover is all dead, or nearly so. The young clover has dried up, and Timothy ha almost all gone. Barley and oats are heading out, though some is not over eight inches

high. Wheat is drying up and not filling well. Some of the corn looks well, while some is drying in the hill. Pasture fields looks red and burnt up. It rains all round us; but that doesn't do us much good. G. A. B.

HORNELLSVILLE, Steuben Co.—For the town of Hornellsville, and the five or six surrounding towns in Allegany, Steuben and Livingston counties, at the present time the prospects for Winter wheat is much above the average, and for Spring wheat rather below the average. Oats are good, and so are corn and potatoes. Timothy hay and that on old meadows, very light; clover short and ripening early, consequently a poor crop. Apples will probably prove a light crop. Cherries are abundant; pears, light; peaches, where grown, fair. Spring early; weather quite warm; some fine showers in May and June, but on the whole the weather has been rather dry. C. J. P.

ITHACA, Tompkins Co.—Wheat 10 per cent. below last year; 20 per cent. below 1878. Slight increase on acreage—90 per cent. Clawson, balance Fultz. Corn, prospect of an average crop or above, if rain comes soon; at least 10 per cent. increase in acreage. Eastern eight-rowed yellow, mostly. Potatoes, early ones, fine but need rain; later ones looking well; rain within a week will insure an abundant crop. Largely Early Rose, five per cent. increase in acreage. Oats equal to last year. If rain comes soon, will be in excess. Acreage five per cent. less. Variety, White State largely; few Scotch Gray. Quite a tendency to increase acreage of corn at expense of oats. Rye and barley, very little raised. No sorghum. Prospects for fruit good. Apples set abundantly, Codling moth and drought injuring them somewhat, but we shall have a full average crop—20 per cent. more than last year—variety, Tompkins Co. King. Pears, trees nearly all gone, owing to blight; this was formerly a great pear country. Peaches, prospect good. The tendency of Cayuga, our adjoining county on the north, is emphatically toward peaches. Great numbers of trees were set last year and the year before. This year peach-tree setting is pretty nearly a craze. Plums, none grown. Small fruits abundant and cheap. The Black Cap raspberry and Wilson strawberry take the lead. Hay, not much more than half a crop. Clover beetle and clover midge, dronght in May and another one upon us now, are the causes. I. P. R.

JOHNSON'S CREEK, Niagara Co.—Haying is commenced, and there will be two-thirds of the usual crop. Wheat is an extra crop, and will yield from 25 to 30 bushels per acre, Barley and oats are very fine, and bid fair for an average yield. Early potatoes are a full crop. Corn is small and late. Apples are dropping badly from the trees, and it is very uncertain what the crop will be. Peaches promise a heavy crop. Pears do not promise much of a yield. They are injured with blight. G. R.

KINGSTON, Ulster Co.—The Army-worm has made its appearance in myriads along the line of the Wallkill Valley Railroad, destroying every green thing that comes in its path. The farmers are all up in arms, using every method that they can devise to destroy the pest. In the districts in the lower towns through which it has passed the devastation is terrible. Most of the standing grain is, however, ready for the reaper, and that will escape. The vineyards in the lower part of the county, it is thought, will be entirely destroyed, as it leaves every other plant to attack the grape-vine, ranging itself upon the leaves with the regularity of a rank of soldiers, consuming not only the leaves, but the fruit, young wood, and tendrils. Various methods have been adopted by the farmers to stop the ravages of this pest. The commonest, and perhaps the easiest, is to plow a double furrow all around the field where the worm is feeding, fill the furrow with straw, and when they begin their onward march set fire to the straw, and keep it burning until they are all consumed. The other methods adopted to kill them are by crushing them by a heavy iron roller—this, however, will not work on rough ground—and poisoning them by sprinkling a decoction of vining sumac and London-purple, Paris-green, or arsenic over the plants, with a sprinkling pot. The berry crops have for the most part been harvested, and the farmers are turning all their energy toward saving their grapes and tree fruits. The loss among the Ulster vineyards and fruit farms, unless they are checked, will amount to hundreds of thousands of dollars. R. H.

MAMARONECK, Westchester Co.—In the lower part of Westchester county, from Portchester westward, the drought has been disastrous in its effects. Hay will, in many places, be less than half a crop, and poor at that. Grain is thin and light generally. Oats are very poor. Apples at one time promised to be an abundant crop; but the curculio, apple moth, and drought have caused much to drop. There is still, however, a fair proportion left, which a timely rain would convert into a good crop. Pears are not looking well, and the blight has been doing its work for several years. Potatoes look more or less bad, according to soil or treatment. It seems now as if they would ripen early, and average small in size. They look best on low ground. In some places corn looks well; in others, small and yellow. Rain would still do much for this crop. Garden truck has suffered much. Strawberries were generally small, and about half a crop. Raspberries and blackberries have set abundantly, but do not swell kindly, as a rule. Potato beetles about as usual, but more generally killed. Rose beetles very abundant. The Army worm did some mischief north of Rye. The larva of the cabbage or turnip fly has been very destructive in places. The drought has been felt less along the river lines than elsewhere. On the whole, the season is one that will be long remembered for its casualties to the farmer. We shall have something left, however, to be thankful for. P. B. M.

MORAVIA, Cayuga Co.—No rain in three or even four weeks to do any good. Hay not half a crop. Oats looking well for the chance given. Corn in some instances good. Wheat on lowlands remarkably good. Potatoes too forward to make a good crop, owing to the dry weather. Haying fairly commenced. Grass-hoppers are in great abundance. Apple trees in some parts of town are remarkably full; in others, scattering. Of pears a slim crop may be expected. In many parts the grass crumples under one's feet, it being so dry. The farmers are over-stocked with animals. The probabilities are that cattle will be very cheap this fall. G. W. S.

PITCHER, Chenango Co.—The weather here is quite dry, and there are no prospects of rain at present. The hay crop is destined to be light. Corn at present looks well—potatoes also: but the beetles are bound to bother. They have already commenced hatching. Grasshoppers are becoming very plentiful for this season of the year. Unless we have wet weather soon they will doubtless injure our crops very much. L. W. S.

PLATTSBURGH, Clinton Co.—The prospects for crops in this section never were better at this season. Grass is a fair crop, though not heavy, owing to the open Winter and dry Spring. But little wheat for market is grown here, oats, barley and buckwheat being our chief crops, with some rye, which is looking well and of which the usual amount was sown. The Michigan Club is the favorite wheat in this neighborhood. The cut-worm did great damage in the corn, rendering a second planting necessary in some places. It is looking well, however, and about the usual acreage was planted. The eight-rowed yellow and the Dutton twelve-rowed are the kinds chiefly grown. Potatoes are looking well; not so many are planted as last year. The bugs have kept off pretty well so far, although some potatoes here have been attacked. My own have hitherto escaped them altogether, while a few miles from here I have seen a multitude of them at work. No sorghum has been planted here this year—indeed, I have never seen any. Fruits of all kinds will be plentiful. Farmers raise a great many varieties with but little success as shown by profit. About 75 per cent. of the apple trees set out are Fameuse, which outbear and sell better than all others, besides being the hardiest here. Of pears, the Flemish Beauty is grown most, being very hardy and very prolific. Small fruits are grown pretty extensively. Of strawberries, the Charles Downing is the favorite, having taken the place of the Albany Seedling, which is less hardy, winter-killing to some extent. E. W. H.

ROCHESTER, Monroe Co.—The outlook for the wheat harvest is good, the acreage being larger than usual and the crop looking well. It is yet too early to tell how corn will turn out; but about the usual area has been sown to it, and it is coming on finely. The acreage under potatoes is less than last year, but they are making a good growth, and there are few bugs. The area under oats is considerably larger than usual and there is a heavy stand. The space given to barley is proportionately less, and it has not yet headed out. Fruit generally will be full crops except strawberries, which will be short. The Baldwin apple, Bartlett pear, Crawford peach, Doolittle and Franconia raspberries, Wilson and Triomphe de Gand strawberry are the main dependence here for full crops. H. T. J.

ROME, Oneida Co.—In regard to the yield of wheat, rye, barley and potatoes in this section, the prospect is favorable. Corn, oats and potatoes are most largely grown with us. Oats are of unusual growth for the season. Corn also is a good stand and well advanced and looks promising. Potatoes are looking fine. All these crops are better than our average, at the present time, and fully an average acreage has been sown and planted to them. Of wheat but little is grown. Of rye and barley, too, very little is grown in this section. No sorghum is raised here, so far as I know. The potato mostly grown for market is the Early Rose. Many other sorts are grown in smaller quantities and many farmers grow the Snowflake, which is considered the best table potato, and commands the best price in market. Some purchasers for family use pay five to ten cents per bushel extra for that variety and find them the cheapest, on account of their smoothness and superior quality. In fruits, strawberries have been very abundant, the Wilson taking the lead as a market berry. Prices have been as low as seven or eight cents per quart for good berries and less for second-class or berries that have been kept over a day or two in market. Apples, which are our standard fruit, had a profuse bloom, and will, no doubt, give us an abundant crop, but it is too early in the season to predict whether the size and quality will be good or inferior. We hope for the best. Our orchards are mostly grafted fruit, and if the season is favorable for their growth and maturity, we shall most likely have a good crop to harvest this Fall. Grapes promise finely for the season, but few are grown here, though most farmers have a vine or two; there are no extensive vineyards. The crop of grass will be medium according to present appearances. Some farmers are now engaged in haying—the writer is one. We shall push the crop into the barn as fast as convenient, and hope to have all secured by the 15th of July. Then if rain comes we hope to have a second crop to harvest in August. J. T.

SENECA FALLS Seneca Co.—The crops grown here are wheat, barley, oats, corn and potatoes. The acreage of wheat is about the same as last year, but the crop is one-third heavier. Barley and oats will be the same as last year. Potatoes are looking fine as yet and bid fair to be a large crop. Corn is doing well; it is too early yet to tell how it is coming out. There is no sugar cane grown here. The prospects of fruit are good for about a fair crop of apples, plums and peaches. S. W.

SOUTH WESTERLO, Albany Co.—Wheat hereabouts will be very light; it stands thin on the ground. Corn looks very good now, but needs rain. Oats bid fair to be a good crop. Rye will be about half of a crop—there is no barley sown here. Potatoes look well now; but the bugs are coming on in great numbers. We must fight them sharply. The hay crop will be very light—I think not half a crop. Some have commenced to mow. Apples will be an extra-large crop—Baldwin and Greenings do best. Of pears there will be none to speak of. Cherries and plums will be light crops. Of sorghum there is none raised. Bees are doing first-rate. Taking all things together, farmers have no cause for complaint. E. J.

WEST MONROE, Oswego Co.—We have had but very little rain last month. Oats and grass are suffering most for the want of rain. Grass will be about half a crop; oats an average one. Corn and potatoes are looking well. Wheat is good so far; if it fills well the crop will be fair. Apples look very promising. R. P. M.

New Jersey.

ELIZABETH, Union Co.—The acreage of wheat is small in this locality, but the crop promises to be a fair one. Clawson and Fultz are the varieties mostly grown. Rye is good. Corn came up badly, owing to the drought, but it is now looking very well. There is a large acreage of potatoes, mostly Early Rose; they are likely to be a light crop. Oats are little grown. No barley or sorghum is grown here. Strawberries have been a light crop. Cherries are plentiful and good. The pear crop will be light. Apples are falling off the trees in consequence of the drought. In this locality the farms are small. The farmers are mostly engaged in raising milk for the Newark and Elizabeth markets. The pastures are drying up; the hay crop is less than one-half that of ordinary years, consequently farmers are having a hard time of it for so early in the season. N. W. P.

HARBOURTON, Mercer Co.—There is about the usual acreage of wheat, rye, oats and corn. The Early Rose is the most profitable potato for us. No sorghum grown. The prospect is good for peaches and fair for apples. The drought has hurt all of our crops. Hay will not be more than half a crop. Oats is short yet but if the rains come soon it may be a fair crop can be had. Wheat will be about an average yield to the acre. There is not any of the Army worms with us yet, we hear they are only five miles off, however. Here is about the usual number of potato beetles, and Paris-green is the best thing to kill them that I have tried. D. F. D.

MAYWOOD, Bergen Co.—The prospects for wheat are very good. Red Winter wheat is chiefly grown, but it is not an extensive crop in this district. Corn is very good, considering the drought. We have found Blount's Prolific to stand best, but it is not generally grown. Corn is only grown here for home consumption. Potatoes are looking well, but are in great want of rain. The chief variety grown is Early Rose; but potatoes have been grown much less since the advent of the bug. Oats are very little grown. Rye is first-class, but little of it is raised except for home consumption. The Winter kind is chiefly grown; but it is known by no special name. Barley is not grown at all; neither is sorghum. Apples are very good. The chief kind is the Sour Bough. For pears this is a bad year, the chief kinds raised are Bartletts and Belles. Cherries are very good. The chief varieties grown are the red and white Ox-Hearts. Grapes are very good. The kind chiefly raised is the Concord. Melons (musk) are good, considering drought. The favorite variety is that known as the Hackensack. The hay crop is a total failure, owing to extreme dryness. The crops chiefly depended on by the farmers are sweet corn, musk-melons, and Lima beans. The latter is grown very extensively. J. T.

Pennsylvania.

BADEN, Beaver Co.—We have just finished cutting our wheat; it is a good average crop. The dry weather did some damage to the crops in this section, but there have been some good rains of late which have changed the appearance of the crops greatly. The hay crop in general is short about one-half. Oats are good. Corn is looking well, and so are potatoes. Fruit is a good crop, particularly apples. I have planted one acre of Blount's White Prolific corn. It is doing well. It ripened well with me last year, yielding from three to nine ears to a stalk. I planted the cow-peas sent by the RURAL and they are doing very well. I think they will be more of a success than the Pearl Millet which was a failure with me. I planted all my Beauty of Hebron potatoes about the 25th of April and I am now using them. They are of good size now. In fact we used some of them about June 20. My Cuthbert raspberries were killed by the dry spell in May. F. W. S.

CHAMBERSBURG, Franklin Co.—The wheat crop is better than last year. Corn is very promising. Hay is fairly good. Apples, peaches and small fruits are very promising. Pears are a very short crop. Fine rains, good health. No insect plagues of any kind and people satisfied with both Presidential candidates. A. S.

DERRY CHURCH, Dauphin Co.—The wheat harvest promises to be better than it has been for years in all respects; Clawson, Fultz, Mediterranean and Shumaker are generally cultivated. Corn is somewhat backward, but grows finely since the recent rains. Varieties in cultivation, white and yellow Dent principally, occasionally Chester Co. Mammoth and Flint. Oats are still growing and not far enough developed to decide as to crop. The panicles are only here and there seen; the Schurmen and common variety, no other name known are generally cultivated. Rye is not generally cultivated. About one per cent. of the cultivated land is planted to potatoes. Barley and sorghum are not at all cultivated. Corn, oats and wheat are grown in rotation in the order named, and there is an acreage of about 20 per cent. of each. About two per cent. of tobacco has been cultivated the last two or three years. The prospects for apples, pears and grapes, are good, and they have been successfully grown. Not so with peaches. Currants and gooseberries are the principal small fruits. E. E. B. S.

HILL'S GROVE, Sullivan Co. — Wheat half a crop: corn, potatoes, oats, full crops. Rye and barley not grown here. Fultz wheat, Redcob Dent corn, Early Vermont and Early Rose potatoes are the kinds grown here. The acreage under each is about the same as in previous years. I am trying the Minnesota Amber sugar cane for the first time, and mine is the only patch grown here yet. The prospect for plums is good; no peaches or cherries grown. There will be a third of a crop of apples probably. We have abundance of raspberries and blackberries. L. B. S.

LITCHFIELD, Bradford Co.—Fine growing weather. All through May there was a dronght; but since then we have had rains occasionally. Crops are looking well. Grass, however, will be rather light. The fruit prospects are good. My beets are doing nicely. The Beauty of Hebron potatoes are splendid; they blossomed two weeks earlier than the Early Rose planted at the same time. J. M.

MILFORD, Pike Co.—The Army worms have made their appearance here, and are doing much damage to the corn at Rosetown, where they were first discovered yesterday. A few have also been seen in rye-fields. As wheat and rye are about ripe, farmers will begin gathering at once, hoping to get their crops housed before any great damage can be done. Reports from Monroe, Northampton, and other counties bordering on the Pennsylvania shore of the Delaware River say the pests are making their appearance in great numbers, and entire fields of wheat, rye, corn, and grass are being destroyed. The farmers throughout the entire Delaware Valley express much alarm.. M. L. K.

NEW ALEXANDRIA, Westmoreland Co.—The drought during the early part of June checked the growth of all Spring crops. On good ground, however, wheat was not materially hurt. There is an increased acreage under it,

and an unusually good stand. Some of it was damaged by late frosts. Some of it was cut about June 26, at least a week in advance of other years. Late rains have brought forward the oats, potatoes, grass and corn quite rapidly. Although the rain came a trifle late for the grass, yet the crop will nearly double that of last year, which was a poor one. Corn, with a fair amount of rain in July, will do very well. In many fields it is now standing four or five feet high. Oats are now doing well, but will not follow wheat in the usual time of cutting; but this delay will give the farmer more time for his hay and root crops. The latter are hurt by the drought, except where they were planted quite early. Of apples and pears we have fine crops in prospect. Peaches are more than usually abundant, considering the full crop of last year, there being one good peach crop in four or five years. Grapes, unless attacked by some disease, will be very plentiful and cheap, and considering the healthfulness of grapes for all classes, I look upon an abundant crop of this fruit as a god-send to the poorer classes. The Ennobled oats look well and are tillering splendidly. The Golden Ovoid mangels measure three inches in diameter and look well. J. W. P.

NORTH EAST, Erie Co.—The wheat crop is very large and fine. I think I never saw it better in this section of country. From present prospects some pieces will go 40 bushels per acre. The acreage is five per cent. more than common. Oats and barley bid fair for heavy crops. Corn is doing finely, and looks fair. I think the acreage is not so large as in some other years. Potatoes also promise a fine crop, but the bugs are extremely busy. Very little rye is raised in this region. What I have seen is very good. The grape crop seems to be the largest and finest for years. Peaches will be a very fair crop. The apple crop a month ago promised to be a large one, but now the prospect is changed: the curculio has stung them so badly that very many are falling off, and our apple crop will be rather a short one. I felt afraid of this a month ago when I saw this enemy of our apple orchards so thick all around. There were legions of them. I have seen them by the millions hovering around and on the fruit trees. Sorghum, or Northern sugar-cane is not grown here, but it would do well, judging from my own experience. Some years ago I obtained some seed, planted it, and raised some cane, and those who professed to know all about it said it was the finest they had ever seen. It grew large, tall, and very full of juice. The cattle eat it very greedily. The apples that do the best here are the Rhode Island Greening and the Baldwin. H. R. B.

WAYNESBORO, Franklin Co.—The harvest of wheat in this part of the county will be less than last year for various reasons. Wheat is our principal product, and it is said our county produces more than any other in the State. Rye is good. Oats will be rather poor. Potatoes promise well. The principal varieties grown are: of wheat, the Fultz and the bearded varieties; of corn, the common yellow; of potatoes, the Early Rose, Peerless, Farmer's Favorite and Snowflake. The acreage is somewhat of an increase over last year. We are having a good fruit crop. Apples are most successful, and of these we will have a large crop. D. B. M.

WEST GROVE, Chester Co.—Wheat is now being harvested and I believe it is considered to be in this section a full average crop. Weather good. Corn and potatoes are promising well. Oats are probably short. Rye and barley not much raised. We have fully the usual acreage of all the crops named. Sorghum is not much raised here, only an occasional small patch is seen. Fruit is promising well. The season has been very dry, but late rains have partially made amends. A. F. C.

Delaware.

MILFORD, Kent Co.—The wheat crop in this vicinity is excellent; no pests have seriously troubled it, nor has it been seriously damaged by the drought. Corn is looking remarkably well and a fine yield will be gathered. Oats are short and poor, being affected early in the season by the dry weather. The beetle has done but little injury and potatoes promise well. The acreage of wheat has been large, perhaps 20 per cent. more than ever before, and that of corn, oats and potatoes is about as usual. Strawberries this season have been almost a total failure, and raspberries have done fairly well. The prospect for peaches, apples and blackberries is fine; we will have a good yield of peaches and blackberries, and a full crop of apples. In our immediate neighborhood there are 15 fruit evaporators and five canning establishments which will be in operation during the season, so that most of our fruit can be consumed at home, making us quite independent of the city markets. M. H. D.

Maryland.

EASTON, Talbot Co.—The wheat harvest is about finished; it was commenced about the 5th of June. The general average of the crop will be equal to last year's, though the drought in May shortened the yield on thin soils. The acreage of wheat is five per cent. greater than last year; the grain is plump and solid; Fultz and Longberry are the principal varieties. Oats, rye and barley are not grown here. Corn looks well. The sorghum interest has not been revived in this section, though a few are trying the cane this year. Small fruits are plentiful as usual; but our main fruit crop, peaches, will not be more than one-fourth of what it should be, as they continue to fall off badly. H. C. S.

MASSEY'S CROSS ROADS, Kent Co.—The wheat harvest is about over. Fultz has been a favorite variety but owing to weak straw it will be abandoned; Mediterranean, Amber and Blue Chaff will be the leading varieties in the future. Corn looks well. Potatoes are only raised for family use; no oats, rye or barley grown. Sorghum is not raised here. Of peaches the white will give a full crop, and the yellow only half a crop. The yellow peach is preferred by the New York market and canneries. Peaches have been our best paying crop, but we have had several failures of late years. C. H. B. M.

ST. MICHAELS, Talbot Co.—The prospects for wheat and corn are good. Wheat is ready for thrashing, some have shipped their crop. Fultz and California Red are mostly sown here; of corn both yellow and white Dent and Flint are grown. Early Rose, Peerless and Sweet potatoes are grown in abundance. I don't know of any sorghum being grown here. Fruit is abundant. Large quantities of cherries have been shipped this year. All crops compare favorably with other years notwithstanding the early part of the season was very dry. F. R. T.

TRAPPE, Talbot Co.—We shall have about two-thirds of a crop of wheat. The prospects for corn are good; potatoes are medium and oats very light. Barley is not grown here and but very little rye. The varieties of wheat are Longberry, Amber and Fultz; of potatoes, Early Rose, Peachblow and Peerless. The acreage of wheat is one-quarter larger than usual. Sorghum is not grown here. We shall have one-half a crop of peaches and apples, and a large crop of cherries and berries, except strawberries. Of fruits, the peach is here the most successful. W. C. JR.

WILNA, Harford Co.—Wheat is not as well filled as last year, but the acreage is 10 per cent. more; Fultz and red Mediterranean are the principal kinds grown. Corn looks well, but it is too soon to tell what the yield will be; acreage about an average; Mammoth, and Chester Co., are the principal kinds grown. Oats are a short crop. Potatoes are not eaten and seldom grown. No sorghum grown at present. Cherries are a full crop. Other kinds of fruit will yield well. T. M.

Ohio.

BELLEFONTAINE, Logan Co.—Of wheat the acreage is above an average; and the quality is good and the yield promises to be large. Farmers commenced cutting about June 20th. Corn is a little backward, but healthy and strong, and it promises well. About the usual acreage. Of oats, but little is raised, less than usual this year on account of wet weather at sowing time. About the usual acreage of potatoes is planted and they look well, but the Colorado beetle is getting in its work to a considerable extent, and will, no doubt, interfere with the crop. Of rye and barley little, if any, is grown. Strawberries are a large crop and of fine quality. Raspberries give a large yield. Blackberries will be good. Peaches and pears will be quite short. Apples promised a large yield; but they are falling from the trees, and growers estimate the crop at less than half. White wheat is mostly raised, though Clawson has been introduced and yields well, but millers do not like it. J. C.

BELLEVUE, Huron Co.—If the United States turned out proportionately as much Winter wheat as Huron county will this year, there would be no use of raising any more for the next five years. Last Fall a very large breadth was sown to Winter wheat, and now about one-fourth of it is cut, and such another harvest won't be seen, probably, very soon. The barley is very fine and I should judge the most of it would average not far from 30 bushels per acre. It is about two weeks earlier than in former years. Not much will be left out by July 4th. Corn, oats and barley all look fine, and so do potatoes. Grass will be a short crop owing to too much cold rains in the Spring and not enough warmth. Timothy hay will mostly be cut after haying. Harvest hands command, on an average, $2 20 a day and board. No Army worms or grasshoppers to amount to anything in this vicinity. F. B. R.

CADIZ, Harrison Co.—Up to the 10th of June the season was very dry here, and consequently some of the Spring crops will be very short, particularly hay and roots. Wheat and rye are average crops in yield, and about one-fourth more acreage than usual has been sown to them. Fultz is the wheat usually sown, and the barley is light. Corn and potatoes promise fairly. Very little sorghum is sown here. There is an abundant crop of all kinds of fruit. T. C G.

CARDINGTON, Morrow Co.—Wheat average, 29.28 bushel per acre. The usual amount has been sown. Corn will yield 40 bushels. Potatoes furnish a large yield; so do oats. But little rye, and no barley. Fultz wheat; Yellow Dent corn; Early Rose, Peachblow, Snowflake, and Early Ohio potatoes. Sorghum is not generally grown. The opinion is that it doesn't pay. There are a good many peaches and cherries, and an average crop of apples—not a large one. J. N. D.

CHARDON, Geauga Co.—The prospects are that we shall have an abundant supply of all kinds of grain. Rather more grain than common is being raised in this locality this season. The principal varieties of wheat are Fultz, Diehl, Clawson, Treadwell, Michigan White and Mediterranean; corn, yellow Dent; oats, common white. But very little rye or barley is raised. No sorghum. Fruit prospects are good. Of apples, Baldwins and Greenings are the most successful. The hay crop is good. Everybody is cheerful. A. T.

DAYTON, Montgomery Co.—We are now cutting the greatest and best wheat harvest ever ent in this county. Oats, barley, potatoes and corn are all doing well and promise big crops. The acreage of wheat is above the average. But little sorghum is grown here. Good prospects for fruit of all kinds, except a few varieties of apples and pears. Berries are a big crop, N. O.

DELAWARE, Delaware Co.—The prospects for an abundant harvest were never better in this vicinity, nor throughout the State, generally. Wheat is now ready for harvest, and is everywhere looking well, and promising even a larger yield than last year. It is in admirable condition, and the close of the present week will find the most of it in the shock. There is probably a larger acreage, and there will doubtless be a larger yield than ever before in this portion of Central Ohio. The old red Mediterranean, the Fultz, and Clawson, are the principal varieties sown. Rye and barley are not largely grown here. Oats are perhaps not quite in usual quantity, but they are looking well, and promising a good yield. Corn is also looking well and has about the same acreage as last season; probably a little less than in former years, the attention of farmers being more largely diverted to the growing of wheat, which is now the leading agricultural product. Potatoes, I think, are planted in more than average quantity, and at this time are remarkably promising. The old Jersey Peachblow and the Early Rose are probably most largely planted, while the newer kinds—Extra-Early Vermont, Snowflake, Early Ohio, and Ohio Beauty—are also grown in considerable quantities. Sorghum is now but little grown in this vicinity—indeed there is none worth mentioning. The prospects for fruit are generally good. The apple crop will be fair: yield, medium; not excessive, although this is what is called the "bearing" year. Trees are not, generally, overloaded, and this will probably insure a better crop than usual for the next or "non-bearing" year. Pears were injured by late Spring frosts, and are scarce in this vicinity, though in other parts of the State a moderate supply is reported. Strawberries have been very abundant, and the promise for raspberries, blackberries, and other small fruits is equally good. Of the newer varieties of strawberries Cumberland Triumph and Sharpless seem most promising. The Crescent Seedling has also succeeded well in many localities, and is perhaps the best "lazy man's berry," having the character of taking care of itself, and giving fair results of berries medium in size and quality, even under neglect and careless culture. Somewhat similar in character is the Turner raspberry. The Gregg raspberry, for a large, productive, and strong-growing Black-cap, medium-late in ripening, and of fair quality, probably has no superior in its class for a market berry. Peaches promise also an abundant yield in many parts of the State, and the supply will probably be equal to the demand. Cherries and plums will be only in moderate supply. Grapes are also unusually promising; and although it is too early to speak with certainty, it may be said that unless unfavorable weather hereafter should induce mildew and rot, the grape crop will be unusually large and excellent. G. W. C.

GYPSUM, Ottawa Co.—The wheat crop is at least one-third greater than last year. We are just in the midst of harvest—two weeks earlier than I ever remember. The kinds of wheat chiefly grown are Clawson, Fultz, and a kind called Patent Office. Clawson predominates. The acreage is one-third greater, and I think the yield will be fully up to that of last year. Of barley and oats but little is grown, and that little looks well. I do not think there are over 50 acres of sorghum planted in this county. It is rather early to estimate the corn crop as yet, as it is very backward, on account of the dry May. The acreage is, perhaps, one-third less than last year. Potatoes are looking well where the bugs were kept off. About as many were planted as usual. The earlier sorts are nice and large. I have been using them for the last two weeks. The fruit crop promises to be above an average, pears alone excepted. I do not remember having ever seen so few as this year—only about one-twentieth as many as last year. The apples principally raised here are Baldwins, on account of their good shipping qualities. Almost all varieties do well. The peach crop will be an enormous one, if they don't get hurt by severe storms. The hay crop has been very light, owing to dry weather—not over two-thirds of a crop. J. B.

MULBERRY CORNERS, Geauga Co.—The acreage of wheat and corn is greater than usual; that of oats perhaps a little less. Wheat is somewhat affected with rust, but the harvest will be early and an average yield per acre is anticipated. Oats are beginning to head and look well. Corn is somewhat backward. Potatoes are looking fair, and are receiving little injury from the beetle. The hay crop is good and early. H. B.

NORWALK, Huron Co.—The acreage of wheat put in last Fall was the largest ever sown in this country, and the stand never was better. Harvest has commenced. The varieties principally grown here are Fultz, Clawson and Lancaster. Corn and oats will yield about average crops; rye and barley are but little grown; sugar cane has been more extensively planted than for several years. All kinds of fruit are abundant. C. A. M.

TOLEDO, Lucas Co.—This is the greatest original winter wheat market in the world, and all reports are most flattering. The yield will average as high as last year's, and the acreage is 20 per cent. more. No seed has been put into the ground that has failed. Fruits of all kinds are very abundant. Sorghum is not much planted. G. E. P.

WESTERN STATES.

Michigan.

ANN ARBOR, Washtenaw Co.—Of wheat there is a larger acreage than usual; it never looked finer; it stands up well, and will be more than an average crop. Treadwell is most prevalent. Corn is not forward, owing to cold and very wet weather; but recent warm weather is bringing it on. It will be a fair crop. Dent and eight-rowed yellow are generally planted. Potatoes look well, though the Colorado beetles are abundant. There will be full average crops of these and of corn. The Early Rose is most abundant. Of oats, rye, and barley, about the usual amount has been put in, and they look well. Sorghum is but little grown here. The fruit prospects were never better. Apples will be a large crop, and are quite free from the Codling moth. The Baldwin is mostly grown, then the Northern Spy, R. I. Greening, and Golden Russet. Peaches will be a full crop. Your correspondent has 4,000 bearing trees. Early Crawford, Hill's Chili, and Old Mixon Free are the most prevalent. Pears not doing well; strawberries are about half a crop. All other small fruits promise a full crop. J. D. B.

JACKSON, Jackson Co.—Wheat will be harvested early and be a fair crop. Corn is looking pretty well, and potatoes ditto. The latter are not much troubled by the beetle, especially if planted late. Early-sown oats look well and will be an ordinarily good crop. Clawson, Diehl, and Treadwell are our principal varieties of wheat, and Early Rose, Peachblow, Brownell's Beauty, and occasionally some of the newer varieties of potatoes are those mostly grown here. The acreage under tillage is fully up to last year's. No sorghum is grown here, to my knowledge. It has occasionally been tried here, with small success. The fruit crop of all kinds will be large. All apples, pears, cherries, and plums (if cared for) do well, and all hardy peaches. R. T. M'N.

KALAMAZOO, Kalamazoo Co.—All crops look well. The prospect of wheat is fine; the varieties principally raised are Clawson and Fultz, which yield an average of about 30 bushels per acre. Of rye and barley we raise none; sorghum ditto. Oats will be a good average crop of about 65 bushels per acre. Maine oats chiefly sown. Of corn for late planting we generally use small Dent and Hockberry—average yield 65 bushels. The fruit outlook is good. We use a great many varieties of apples; but Northern Spy and Baldwin do especially well. Of peaches good varieties are Hale's Early and Crawford, Snow and Orange. Potatoes look well, but do not yield over 30 bushels per acre, the bugs have so damaged them. The Ennobled oats look splendid; the raspberries are all right; the garden seeds good; but the flowers are a failure—too much rain I think. J. B. O.

LANSING, Ingham Co.—From present prospects in this vicinity wheat will be a fine crop; corn light, on account of too much rain this Spring; potatoes also light for the same reason; oats good. Of rye and barley but little is raised. The favorites are: Clawson wheat, yellow Dent corn, black or white oats of mixed

sorts. There is, however, some white Flint and some yellow Flint corn. A little sorghum is raised—a very little about here. Apples are abundant; so are peaches and pears where there are trees. Small fruits are abundant, though strawberries were light. The red rust is unusually troublesome on blackberries and raspberries. W. J. B.

LEBANON, Clinton Co.—The harvest of wheat will be very light in this locality, it having been badly injured by the Hessian fly. It will not yield more than half a crop. The kind that is mostly sown is Clawson. Corn, oats, and potatoes are looking well, but they are not so forward as usual, owing to a very wet Spring. Of potatoes probably the Early Rose is grown most extensively. Numerous other varieties are grown to some extent. Of corn and oats there are many different sorts grown. It is hard to say which one takes the lead. Rye and barley are not grown to any extent in this locality. The acreage of each is about the same as last year. Sorghum is grown but little here. The prospects for fruit are very flattering, indeed. Almost everything in the shape of a fruit-tree is loaded. Apples, pears, and all kinds of small fruits are raised in abundance. Peaches and plums are not sure crops every year. J. T.

MAPLE RAPIDS, Clinton Co.—Wheat here is about half the usual crop. Potatoes are a good crop. Hay is very fair. Apples are a splendid crop, as are peaches, pears, currants, grapes and all small fruits. Wheat was hurt by the open Winter and the Hessian fly. J. A. M.

PAW PAW, Van Buren Co.—Wheat is very poor and but very little is raised here. Corn is a very good crop and looks promising. Oats are good. Of rye and barley but very little is raised. Sorghum is not raised now to any extent. Small fruits of all kinds are very good. Apples will not be more than half a crop. The trees were loaded with the small fruit, but the hard winds have whipped off at least half. J. R. S.

PONTIAC, Oakland Co. — The acreage of wheat, corn, oats and potatoes in this section is larger than last year, and the yield of each will be much greater; in fact, we shall have an abundant harvest. Clawson wheat largely predominates. Oats are mainly the white sorts. Of corn the yellow and King Philip are the favorites. It is not raised for shipment. Potatoes are mostly Early and Late Rose. Barley and rye are but little grown. Sorghum is not raised. Fruits of all kinds promise large yields. A great many apples are shipped from here. Our principal varieties are Greenings, Spitzenburgh, Baldwins, Steele's Red, Winter and Golden Russets. Oakland county is surpassed by but a few counties in the Union for grain or fruit. S. H. N.

SCHOOLCRAFT, Kalamazoo Co.—Grass one-fourth better than last year and half of it is cut. Wheat has a heavy growth of straw; but I don't think it will yield as well as last year. Barley is not promising. There's a large growth of oats. Corn is a good stand, but weedy on low ground. Potatoes are looking well. The prospect for fruit is good. The weather is warm and wet. G. H. P.

SOUTH HAVEN, Van Buren Co.—Wheat has an increased acreage and is a more than average crop. Constant wet weather has delayed the planting and cultivation of corn, which is backward. Favorable weather in the future may yet afford a fair crop. Potatoes are in a condition similar to that of corn. Oats when sowed early and on dry lands are doing well. Rye and barley are but little grown here. The wheat grown here is mainly Clawson. Of corn, the earlier varieties are of Dent. Sorghum is rarely grown. The prospect for fruit is excellent. The peach, our staple crop, promises better than for several years. Strawberries were somewhat injured by cold, wet weather after setting the fruit. T. T. L.

UTICA, Macomb Co.—The wheat crop is looking fine and promises to exceed our former crops. The kinds sown are mostly the Clawson and some of the red wheats. Rye is looking fine and there is a considerable amount sown hereabouts. Oats will be a small crop owing to the drought we are having. Corn is looking fine, though a great deal was planted late. Potatoes are good and quite extensively grown about here. We are troubled with the potato beetle a great deal. The prospects for the fruit crop are very good. Apples and peaches are large crops. Cherries and all of the smaller fruits are going to be quite plentiful. As to barley and sorghum there is not any raised in this section. J. P. Y.

Indiana.

HARRISBURG, Fayette Co.—Wheat is mostly cut from ten days to two weeks earlier than usual. The quality is good, though it is not as well filled as last year. The acreage was considerably over that of last year and there will be a full average yield. It is mostly of the Fultz and Michigan Amber varieties. Corn is doing tolerably well, but the early harvest and heavy rains have much hindered the usual cultivation. Favorable weather in the future will probably make a fair average crop—about the usual amount is in cultivation. Oats and barley are not extensively sown, but bid fair for a good yield. Sorghum not much cultivated except in small patches for family use. Apples and peaches are not generally abundant; they are in fair supply. Berries, grapes, etc. are plentiful. With favorable weather for securing and maturing crops the prospects are highly favorable for an abundance of all sorts. W. W. S.

INGALLSTON, Marion Co.—The wheat crop is good and will yield heavily. The Fultz variety is mostly used, and it gives better crops than any other variety. Corn is fair. Wet early in the season rusted it a little; now it is too dry. No sorghum is raised here. Wheat will yield 20 to 35 bushels per acre. The fruit prospects are first-rate. Lots of peaches, apples and pears. No barley or rye is raised in this neighborhood. G. J.

LA PORTE, La Porte Co.—In this locality the acreage of wheat is larger than last year, but the yield will be less. Variety, Winter Amber. Corn promises a fair average crop; acreage about the same as last year. Oats a good crop; acreage larger than last year. With regard to rye, barley and sorghum, very little of either is raised. Potatoes promise an average crop, they are injured to some extent by the Colorado beetle. The prospect is good for a large crop of apples, with some peaches and pears. Of apples the Baldwin and King of Tompkins County succeed well. W. S. R.

LIMA, Lagrange Co.—Wheat is better than usual; quality very good. Corn looks well; about the usual acreage. No rye or barley is sown here. Oats are first-rate. Potatoes are doing well—the usual acreage. Very little sorghum is grown. In wheat, Fultz and Egyptian take the lead. Clawson is grown to some extent but it is not so hardy as the others. J. S.

SOUTH BEND, St. Joseph Co.—The wheat crop is very promising in this locality, and will, in all probability, be 10 per cent. larger than last year's, which we considered large. Red and white smooth and bearded of many different names are grown—all Winter wheat. Corn is looking exceedingly well on the high lands. It has been rather wet on the low lands, and especially on the clay soil. The acreage is fully up to that of former years. Potatoes are doing well in some localities; but they are injured somewhat by bugs. Many different varieties are grown. Among the leading ones are the Peachblow and Early Rose. Rye is not raised to a great extent, but what there is looks well. Barley looks well—not a great deal raised. Of sorghum I am of the opinion that there is not as much grown as in former years; the small crop looks well. The apple crop is small; a great deal are dropping off damaged by the curculio. Peach trees are full, and promise a good crop, though this is not a peach country. Cherries are in abundance. J. E. M.

Illinois.

CHICAGO, Cook Co.—From Cleveland, O., to Lansing, Mich and thence to Chicago by L. S. and M. S. R. R. wheat will yield less than 15 bushels per acre. Potatoes, corn and oats are A. No. 1. Rye and barley are not raised much. Clawson largely predominates in Mich. and Fultz in Ind. Winter wheat is not raised at all in this part of Illinois. Spring wheat not much. Wheat is the main crop in Southern and Central Mich., and wheat and corn in Northern Indiana. Flax is raised quite largely near Chicago. I saw but little sorghum on the route I came. Wheat is No. 1 in Ohio. W. I. C.

ELMIRA, Stark Co.—Winter wheat is almost an entire failure. Of Spring wheat but little was sown for fear of chinch bugs. What there is looks well. The varieties sown are the white Russian, Rio and Italian. Of oats more than an average amount was grown, and the crop bids fair for a heavy yield. Of corn, fully the average acreage was planted. I have never seen a better stand of corn than this year. The prospects are favorable for an abundant harvest. Corn is our staple product here. Rye is good—not a large amount sown. Of barley none is sown here. Of sorghum—Early Amber—a little has been planted as an experiment. The prospect for fruit is fair, but the trees were injured somewhat by the May beetles. Ben Davis, Willow Twig and Jennetting are the chief apples grown. Potatoes are good—not injured by the beetles yet. E. R. B.

GALESBURG, Knox Co.—Wheat is nearly a failure. Corn is a splendid crop now. The potato crop is good. Oats and rye are very good. We sow the white sorts. Of barley none was sown. We plant Peachblow and Early Rose potatoes and many other varieties. Many farmers have broken up their meadows and consequently more land than usual is now in cultivation. Hay crop is very light. Sorghum is grown "some"—enough to supply the demand. Small fruits have done very well. Apples are a poor crop this year. O. H.

KANKAKEE, Kankakee Co.—Wheat in this county will not be over half a crop. The Winter wheat is winter-killed badly, and the Spring wheat is not doing well—too much rain. Corn is backward and much of it is in a bad condition in consequence of continued rains. Oats look well and rye will be a fair average crop. Barley, very little raised. Potatoes look well. I had my first mess of the Beauty of Hebron a week ago. The varieties mostly raised are Peachblow, Early Rose and Snowflake. Fruit of all kinds promises a fair crop. Strawberries and the May cherry are just over. Apples, raspberries, blackberries and currants promise good crops. J. M.

Wisconsin.

MADISON, Dane Co.—Our crops are all looking unusually well. We have had a great deal of rain. Corn is a little backward; but it is coming on finely. Corn, oats, wheat, in the order named, are our leading crops. In spite of an open Winter, Winter wheat is looking very well. We shall probably cut two good crops of hay. The above are our most important crops. Rye and barley but sparsely grown. Potatoes, apples and the smaller fruits are unusually promising. But little sorghum is planted here; more attention will soon be paid to it do doubt; there is much talk of "Amber cane." The class of fruits known as "iron-clads" is the only one we trust. W. B.

SHEBOYGAN FALLS, Sheboygan Co.—Winter wheat is better than we expected earlier; acreage three or four times as great as usual. A middling-good crop is expected. Variety, White Russian. Spring wheat is backward, but has a good stand; usual acreage. Nearly all varieties are raised. Corn is up and has a good stand. It has been cultivated once—variety, mostly yellow Flint. Potatoes look well, usual acreage. Early Rose and Snowflake predominate. Oats, rye and barley are looking fine. No sorghum of any account is raised in this county. The prospect for fruit is excellent, especially for apples. There will be a heavy crop of small fruit. Hay will be light, on account of the clover being killed out and lack of rain in May. J. A.

Minnesota.

PLAINVIEW, Wabash Co.—The present prospect for crops is good—seldom better for this time of the year. Our principal varieties of wheat are:—Fife, Brooks'—nearly as good as Fife—and Rio Grande. Of corn we use an early variety of Dent, and four-rowed barley. Of potatoes we plant the Early Rose and Snowflake. I don't know any special name for our oats, but it is a white sort, and weighs from 36 to 40 pounds to the bushel. We grow no rye. The acreage under these crops is about the same as in former years. In this immediate neighborhood there are about 15 acres of sorghum; heretofore none was grown. This climate is not good for apples and but few are raised—none but the hardiest, such as the Duchess of Oldenburgh, Tetofsky, Wealthy, Haas, Rollins's Pippin, Rollins's Russet and Elgin Beauty. The three last are seedlings propagated by Mr. Rollins of this county. We also have several sorts of crabs. Small fruits are good. R. B.

ST. PAUL, Ramsey Co.—Never before, even in this favored region, where the crops have been bountiful for the past five or six years, has the promise been so excellent as it now is. After seeding, the weather was cool and the wheat acquired great strength in its roots. The warm bright weather, and the frequent copious rains of the past two weeks have developed it rapidly and now a stronger, more promising stand never was seen. Unless something unusual should occur, the yield will be largely in excess of that in any previous year. The best judges claim that the average per acre will not fall short of 30 bushels. All other crops, both grain and vegetable, are as good as wheat. In 1879 we had a trifle over 266,000 acres in wheat. There were 173,000 acres broken in that year, and at least 125,000 of that amount are in wheat this season. Thus the acreage in wheat alone is 391,000, insuring, we feel confident, an aggregate yield of nearly 10,000,000 bushels. The entire area under cultivation on the line of the Northern Pacific is 550,000 acres, and this year there will be at least 250,000 acres broken. Scotch Fife wheat is mostly grown, but Lost Nation and Clawson do well. Early Dent corn and other hardy New England varieties do well. Wheat is, of course, the staple, oats being the next crop in extent of cultivation. But little has, as yet, been done outside of these, although some farmers are paying more attention to barley this year as this grain grows to great perfection here, and is eagerly sought. I have known of but one instance of an attempt to grow sorghum, and that was within a few miles of Bismarck—it proved a decided success. In some places fruit has been successfully raised; but the country along the Northern Pacific Railroad is not old enough to have given time for a full experiment. I have seen good apples grown near Moorhead on the Red River, they were of New England varieties, and were large and of extremely fine flavor; crab apples reach high perfection, as do all small fruits and berries. Vegetables are wonderful both in yield and size. M. J. B.

Iowa.

CLARINDA, Page Co.—The wheat harvest will be light, but of good quality. The same will be the case with all small grain. Corn and potatoes are doing finely. Our principal varieties of spring wheat are Doty, Mediterranean and Odessa; of winter wheat, Red May, Odessa and Mediterranean. Corn is of the Dent variety and comprises two-thirds of the acreage under tillage. Sorghum is raised to a small extent, but does well. Prospects for fruit were never better except in orchards that were exposed to the high winds and had small apples blown off. Our most successful apples are:—Ben Davis, Willow Twig, Red June and Summer Queen; grapes, Concord; cherries, Early Richmond. Nearly all small fruits do well. C. O. C.

HAZELTON, Buchanan Co.—Very little of either Winter or Spring wheat is grown here, perhaps not more than three to five acres to a farm. The Hessian fly is very destructive. Some Winter wheat had to be turned under, and corn planted instead. Corn and oats cover a large acreage, and the prospects are good for a large crop. A great deal of flax has been sown, and some sugar-cane, but we lack machinery to work up the latter. Potatoes are good, but they are grown on a rather small scale. Of raspberries, the Doolittle and Mammoth Cluster do well, but the Cuthberts you sent are dead. They started, but went back. All the other seeds sent by the RURAL are doing well. Of apples the Ben Davis, Red Astrachan, Otto, Fameuse, Nodhead, Shaker, Greening, Walbridge, and others do well. The Early Richmond cherry blossomed, but it is a failure. C. H.

OSKALOOSA, Mahaska Co.—We have had but very little rain in this part of Mahaska Co. for one year. Winter wheat is almost a failure. People sowed largely of the Grass variety; it is tender as a winter sort. We have a variety which has been grown for years and which is the best for this location. It is mixed bald and bearded. [Some specimens sent resemble Clawson.—EDS.] Everything in the spring variety is tried more or less. On the whole we have a poor outlook for wheat. Early-planted corn is splendid, I think we shall have heavier crops than usual. Early-planted potatoes are looking well, but we must have more rain to have them mature. Barley and rye are not raised to any extent: our yield will not vary much from that of other years. Grass is not half a crop. We shall have a fair crop of apples and plenty of small fruit—strawberries, raspberries and currants. H. B.

STORY CITY, Story Co.—The prospects for wheat (Spring), oats, flax, corn and potatoes are excellent; in fact, better than for years. Winter wheat was killed out entirely last Winter; but this is not a wheat-growing section, the farmers only wishing to raise enough for home consumption. Corn is an excellent stand in this locality and will soon be "laid by." The appearance of the crop is about 10 per cent. above the average; the acreage is also in excess of previous years. Long-continued and violent winds have blown off a large proportion of the apples, but yet the prospect is flattering for a good crop. The varieties that do the best with me at present, are: Early Harvest, Red Astrachan, Red June, Fameuse and Winesap. Cherries are not of much account this year. The potato beetle is doing no damage in this immediate locality and has not troubled me for two years past. I have used no artificial destroyers. W. A. W.

WATERLOO, Black Hawk Co.—There was quite an acreage of Winter wheat sown in this county, which is an entire failure. Spring wheat promises well, but the acreage sown was one-third less than last year—variety, the Minnesota Fife, and Mammoth Tea. Oats have an increased acreage and are looking unusually well. Corn promises an abundant yield. The number of acres planted is about the same as in '79. The prospect for fruit of all kinds is very flattering. Of sorghum there is not much raised. I planted one acre of Early Amber this Spring, and it is looking well. Rains have been frequent during the season. L. R. O.

Missouri.

BETHANY, Harrison Co.—Wheat here is a very poor crop. Corn and oats are good. Oats will yield 35 bushels per acre; corn, 45 to 50. Sorghum is grown only for molasses for home consumption. Apples are good and plentiful. C. C.

CARTHAGE, Jasper Co.—The wheat in this section is cut and being rapidly put in the stack. It is by far the largest crop, both in in acreage and yield, ever raised in this county. The Mediterranean is grown principally, with some Walker and Fultz. The corn, oats and potato crops are good. But little rye and no barley is raised here. Sorghum does well here, but only a little is raised except for home consumption. W. H. P.

OREGON, Holt Co.—The Fall wheat harvest has commenced. The yield will be an average one and the acreage is very large. Spring wheat looks very good, and under it there is

the largest acreage ever sown. Oats, rye and barley are good. Corn looks very well for this time of the year. Fruits of all kinds are abundant. The apple crop will be very heavy from the present outlook. We have had plenty of rain, and all vegetation is making an extraordinary growth. All in all, the year 1880 has a better outlook than several previous years. Immigration has reached our part of the West, and many are making their future homes with us. Still we have room for more, and to all we say "Come." J. W. M.

ROCKVILLE, Bates Co.—Wheat is rather light on account of the chinch bugs; some of the best pieces will yield 15 bushels per acre. There are several varieties raised. The leading variety now, is the bearded Egyptian. Corn is very promising now, but it is too early to give an estimate as to the yield. The general average is about 40 bushels per acre; all sorts are raised. Oats will be a good crop, several varieties are raised. The general average is from 30 to 40 bushels per acre. Rye and barley are not raised to any extent. Early Rose and Peachblow are the leading varieties of potatoes Early Rose is a good crop; Peachblows will not be dug until November. Sorghum is raised for the home market only; Early Amber is the leading variety this year. The prospect for fruit is good for an abundance of all kinds. I think grapes are the surest fruit crop here. There has been but one failure in them during the last 13 years. J. N. C.

Kansas.

ARVONIA, Osage Co.—Wheat, oats, rye and barley are almost complete failures owing to dry weather. Early potatoes are a light crop; late ones will be a failure if the drought continues. The acreage under corn is four times that under wheat. Not much sorghum is grown here. Apples are one-third of a crop. The dry winds and weather caused them to drop off. Peaches are only a short crop. Grapes, cherries, raspberries and blackberries are good crops. The weather is very dry now, and the corn crop will be a failure if it keeps so for two weeks longer. J. C. B.

EDGERTON, Johnson Co. — Winter wheat throughout the country is good, and most of it is harvested in good shape. It was too far advanced to be injured much by the bugs; the yield per acre will not be up to that of last year, but the acreage is one-third larger, and the quality better. On June 26 we had a good rain, and the outlook for crops is very flattering. Oats are good. There is but little rye, and no barley raised here. A great quantity of flax is grown throughout this county for the seed which generally brings from 90 cents to $1 per bushel. It is looking well and the late rain will make it. The dry weather for two weeks before the late rain hurt the potatoes, but they will do better now. Corn never looked better at this season of the year, and a few more good rains will insure a heavy crop. Strawberries were a little scarce. Raspberries and cherries are plentiful. Blackberries promise well. Peach and apple trees are loaded down with fruit; so are the grape vines. Alexander and Amsden June peaches are getting ripe. Farmers' faces look bright and we are all thankful, contented and happy.

A. B. D.

MANHATTAN, Riley Co.—The prospect for the principal farm crops in this section is about as follows:—Wheat a half crop, say eight to twelve bushels per acre, and the crop is now nearly harvested in fine condition. Corn is very promising—the best stand I ever saw. Potatoes are good, but the area planted is small. Oats and rye will be about half crops. Of barley I know nothing, as none is grown in this locality. The principal variety of wheat grown is the Early Red May, and I should think that fully three-fourths of all the wheat grown in this section is of that sort. A small amount of Fultz, Lancaster, and Blue Stem is also grown. In this section the great staple is corn, and I should say that over one-half of all the cultivated land is given over to this crop. If we save our corn crop we are contented and happy, even though all others fail. The corn crop requires no expensive machinery, and its growth involves no expensive harvest help or thrashers' bills. The prospects for fruit are not the brightest. Apples are a very light crop, and peaches are not much better. Of small fruits, with the single exception of strawberries, there is promise of a remarkable yield, blackberries and raspberries being especially good. Of grapes, chiefly "Concord," the yield will be above an average, but then, grapes are always a full crop here.

E. M. S.

PARSONS, Labette Co.—Winter wheat only is raised here. The crop was injured somewhat by the chinch bugs, but it will be equal to last season's, which was good. Acreage 100 per cent more. Been in shock two weeks. The acreage under corn is the same as last year. Crop very promising and earlier than last year. One-half of the crop is white, and half yellow and mixed. The potato crop promises well. Acreage 100 per cent more than last year. Early Rose and Peachblow are the leading sorts. The oat crop is very short and poor. Acreage larger than ever before. Of rye and barley none is raised here. The acreage under castor beans is the same as last year. Crop early and promising. The Texodusters have been putting in cotton crops and may or may not raise a crop. Strawberries were a big crop. Peach crop is less than an average. Apples this year are the best crop for this locality and promise fairly. Not much interest is taken here in the sorghum boom. I think our people should look into the matter. The season is cool—neither wet nor dry; but drier than usual. The chinch bugs are leaving the wheat fields for the corn; and during their time in the corn fields they have done a good deal of damage. Whether the destruction will prove general I don't know, but some farmers are alarmed. J. B.

PARKERVILLE, Morris Co.—Fall wheat is harvested. Several kinds were sown—Fultz, Clawson, Little May, Big May and Odessa. None will make over half a crop here, but in some parts of the county the wheat is good, and some fields will yield 25 bushels per acre. The causes of the light crop of Fall wheat are hard, dry Winter, dry Spring and chinch bugs. Spring wheat will not be a full crop on account of dry weather and chinch bugs; not a large acreage sown. Oats are about same as Spring wheat. No barley or rye is sown. We have the largest acreage of corn ever planted and it is looking well. If we have rain soon and the remainder of the season is good the corn crop will be immense. A few acres were destroyed by chinch bugs. Early potatoes are not a good crop, but late may make one. Quite a large acreage was planted. Gardens are not in good condition on account of dry weather, and what vegetables there are, are being destroyed by worms, which are a new pest to this section. They are also eating the corn and potatoes to some extent. Sorghum is planted quite extensively, nearly every farmer having enough to make sirup for his own use. It grows with but little care or cultivation, and is not injured by any kind of insects to any extent. Dhoura is planted to some extent. About 50 acres were planted in this county last Spring. The fruit of this locality, with the exception of small fruits, was mostly killed by late frosts in the Spring. Dry weather made the strawberry and raspberry crops short. Wilson's Albany strawberry and the Black Cap raspberries are planted. Those who had Early Richmond cherry trees large enough to bear had cherries this season. The season here so far has been the worst we have had for several years. We have not had rain enough to raise the streams since last November, and no rain at all for more than a month, yet this is not the case with other parts of Kansas, and even in parts of this county heavy rains have fallen.

J. E. R.

Nebraska.

CRETE, Saline Co.—Corn is looking fine—a very large acreage of it this year. Wheat is not very good. The early drought and high winds injured it. Rye is a fair acreage; it looks well. Barley is poor. Oats are fair. Potatoes are fine. Of Amber cane but little is grown; I have an acre that is looking well. My cow-peas are poor. I have some Pearl barley that is looking well. Fruit is not very plentiful in this section. The high winds this Spring injured it very much. Peaches and apples do well here. Corn bids fair for 50 to 75 bushels per acre. Some wheat that is cut will go from 25 to 30 bushels per acre. The weather is warm with frequent showers—splendid for corn. M. B. M.

GRAFTON, Fillmore Co.—Barley oats and rye will be very light crops—from 50 to 75 per cent below the average, owing to drought. From the end of Nov. '79 to the end of May, '80, we had neither rain nor snow enough to wet the ground two inches deep, and not half a dozen storms even of that size. Spring wheat and barley are our main crops of small grain. Corn planted before the rains came up unevenly—one-third of it failing to make its appearance until June. Since then the crop has done well, and we are in hope that July and August will give us an average crop. Potatoes planted in April or about the first of May and cut very small dried up and gave a very uneven stand; yet where the Colorado beetle was fought off, the crop looks fair now. Our acreage under corn, wheat and oats is larger than in any previous years—say one-third more. Sorghum culture is in its infancy here. I made 800 gallons of sirup last year, and most likely there will be another mill in this town this year. I expect we have sown double the amount of cane we put in last year. Our fruit prospect is away in the future—the trees are not yet grown. We are in what our school atlases called The Great American Desert, and this settlement can date back only eight years. Young fruit trees at first died badly; but they have been doing better for the last two years and will, doubtless, be a success yet. Grapes, strawberries are now successfully cultivated, but they need great care. D. A.

HARVARD, Clay Co.—The prospects for harvest in this county are not very flattering, on account of the continued drought. Our first Spring rain having fallen May 13, the wheat crop will be reduced about one-half. Spring wheat is raised almost exclusively here, as the Winters are too open for Winter wheat. The varieties of Spring wheat raised are Sea Island, White Russian, Tea or Mammoth, and Grass. Although White Russian is prefered, the Sea Island variety is the one mostly sown. Barley, oats and rye this year are failures, with few exceptions. The six-rowed barley, common white oats, and white Winter rye are generally sown. Potatoes that have been "doctored" with Paris-green are looking fine. The Early Rose does best here. There is a large area planted to corn this year, most of which looks well. The dry weather having caused the failure of fields of small grain, they have been plowed up and planted to corn. The yellow Dent is generally planted. The average yield is about 60 bushels per acre. Sorghum is not much grown here; but a few farmers are trying the Early Amber cane this year. There is not much fruit raised in this section as yet. Numerous orchards were planted this Spring, but the dry weather finished them. Of small fruit the most successful kinds are the Wilson strawberry, the Mammoth Cluster raspberry, and the Snyder and Kittatinny blackberries.

D. A. K.

OMAHA, Douglas Co.—The wheat crop for this State will result, for 1880, about as follows: Winter wheat, 70,306 acres—400,000 bushels; Spring wheat, 1,256,996 acres—10,000,000 bushels. Corn crop, 1,256,000 acres, producing 42,000,000 bushels. Oats, 200,000 acres, producing 6,000,000 bushels. Flax, 10,642 acres, yielding 85,000 bushels of seed. Potatoes, 20,000 acres, producing 1,362,351 bushels. Rye, 96,000 acres—1,000,000 bushels. Barley, 115,000 acres—500,000 bushels. Cultivated timber, 80,000 acres. This estimate, made with no little care, will be found correct and it covers the State of Nebraska. The sorghum crop will be good, and sufficient molasses will be manufactured to supply one half the consumers in the State. R. R. R.

PURPLE CANE, Dodge Co.—Extremely dry weather up to the last of May has so nearly ruined all small grain, that but little can be said of such crops now. We shall possibly from June rains get half a crop of wheat; potatoes the same. Corn is doing well, but is very backward and weedy. I cannot give the acreage or varieties; nearly every variety is planted. Of sorghum but little is grown for want of mills. No strawberries this year, plenty of raspberries; no tree fruit is grown here. Vegetables will be very scarce. Grass very short, but stock are looking well. We have rains enough now, and often in floods; washouts too common. S. R. M.

Dakota Territory.

SIOUX FALLS, Minnehaha Co.—The wheat is strong, thick and heavy, and occupies an acreage of about 40 per cent. The principal kinds are the Fife and Lost Nation. Oats are heavy, and cover an acreage of 20 per cent. of the land under cultivation. Corn makes a fine stand. The white and yellow Dent are the varieties grown; acreage, 15 per cent. Barley is good; acreage six per cent. An acreage of 15 per cent. is sown with flax, which makes a good stand. Rye, was Winter-killed, and is rather thin. Potatoes are good, but only about one per cent. of the cultivated land is devoted to potatoes and garden vegetables. Sorghum is raised in small quantities. We have to pay too much for fuel to evaporate the juice by, or burn hay. But very little fruit is raised here as yet, and this only of hardy varieties. W. J. C.

Colorado.

FORT COLLINS, Larimer Co.—The wheat crop will be short, owing to lack of rain, high winds, and an open Spring. Oats will be good and so will potatoes, especially in the mountains. Rye is not raised extensively nor is barley. Our principal varieties of wheat are Mexican, Australian, Siberian and Sonora; of oats, black and white; of barley, both kinds four and six-rowed; of potatoes, E. Rose, Noshawack, Beauty of Hebron. Sorghum, this year is being raised in small quantities by 50 or more farmers in the county. Fruit promises fair. A. E. B.

SOUTHERN STATES.

Virginia.

BENNETT'S MILL, Montgomery Co.—Wheat not more than half a crop—Fultz and Mediterranean. Corn is looking well at present and bids fair to be a full crop. Potatoes are good; not many grown in this section. Oats are an average crop, but not matured yet. Rye not good—poor in head, but plenty of straw. No barley is grown in this section. About the same acreage as in former years for all the above. Sorghum is raised on a limited scale; it did very well last season, and looks well at this time. The fruit prospect is good for apples; no peaches this season. M. D. B.

CHULA, Amelia Co.—One good rain, only, in two months. Wheat half a crop; Lancaster and Fultz do best here. Winter oats looking fair, Spring oats are a failure. Barley and rye are not grown here. No sorghum grown. Peaches and apples are entirely killed. Cherries are good, and pears very good; only a few plums are grown. Dewberries are abundant. Corn looks well, it has not suffered from drought as yet. No tobacco planted this year; plants failed owing to frost and the fly. Few Irish potatoes are raised, and they are very poor owing to drought. We are all praying for rain. F. A. W.

FAIRVIEW, Scott Co.—Owing to the drought in the first part of the season we have or will have, short crops, except wheat, which is about a usual crop and on an average quantity of acres. Corn looks very poor for the season. Oats are very short. What rye there is looks well, but rye is not much grown in this vicinity. Barley is not raised at all here. Potatoes have been planted in large plots this year and look pretty well. Hay will not be much over one-third of a crop. A great many meadows are not better than good pasture fields. Sorghum is not grown here. Fruit will be about one half a crop, except pears and plums, of which there will be none. Peaches will be a moderate crop. The apple is our most successful fruit here. There is a fruit-house here that holds about 30,000 barrels, and that makes apples profitable. The Willows are the leading apples here. They sell now for $5.50@6 a barrel. F. S. E.

FINNEYWOOD, Mecklenburgh Co.—We are in the midst of a severe drought so that a great deal of vegetation is entirely scorched up. The tobacco crop is about half planted and what has been set out is constantly dying. The wheat crop is all harvested, and some are thrashing. The yield is poor and the quality inferior. The crop through our section is from 25 to 50 per cent. below last year's. Winter oats sowed last Fall, are a very good crop—over an average. Of oats sown in the Spring large fields are not worth cutting—a good many won't get their seed back. Corn looks very well, and rather over an average crop. Gardens and vegetables generally are very poor. The hay crop is very short and sorry—not over a third or a half a crop. J. L. T.

SILCOTT SPRINGS, Loudoun Co.—Much disappointment is felt in this vicinity in regard to wheat, which, early in the season, promised an abundant yield, but it is now believed that there will not be more than half a crop. Harvest commenced here on the 10th of June, which is about two weeks earlier than usual. The wheat seemed to ripen or rather *dry up*—prematurely. The varieties grown here are Fultz and Lancaster, the latter a red, bearded variety. The Lancaster will make a better yield with us this season than the Fultz—which is very unusual. No wheat is thrashed yet, but it is certain that the average will be low—probably 10 or 12 bushels per acre. It is too early yet to speak with much certainty of the corn. At present the prospect is not at all flattering. In this place a large amount of corn planted on sod land was destroyed by the cut-worm, many farmers (myself among the number) having to furrow out and plant a second time. With seasonable weather through July and August we may have a fair yield, if the season is unfavorable, the crop will be very short. Potatoes are not grown here as a market crop. Oats are filled pretty well, but the straw is very short and will be difficult to gather. The "Mold's Ennobled Oats" sent out by the RURAL were planted in the garden about the 10th of April. I have just examined them and find they have made a fine growth of straw—a little over two feet high. No heads are yet visible. Sorghum and barley are not grown here, and rye, only in very small quantities. The prospect for fruit is very poor in this section. Peaches will not be more than a third of a crop—in many places there will be one at all. Apples of all varieties will, I think, be very scarce. "Wine-sap" is "*the*" winter apple of this locality. Our strawberry and raspberry gardens have done very much towards compensating for the loss of the larger fruits. Our first picking of the "Gregg" raspberry was on June 2; the fruit is considerably larger than that of the Monmouth Cluster; and very firm. I consider this berry first-class. The canes, however, were winter-killed rather more than other varieties. S. T. P.

West Virginia.

BEDINGTON, Berkeley Co.—Wheat in this county will yield an average of about 15 bushels per acre; rye, about the same; oats about 25, and barley 50 bushels. We don't grow many potatoes down here for sale, but they give about 80 bushels per acre. Corn looks short and from present appearances it won't make over 30 bushels. The varieties of wheat raised here are numerous, the chief among them being: Amber, smooth and beardy; Clawson, Fultz, Gipsey, Lancaster Mediterannean, and Zimmermann or Blue Stem. Of corn we grow Yellow Dutton, Chester County Mammoth, and several other kinds of white. Black and white rye are also raised, and white barley Of potatoes we grow Early Rose and Goodrich for early; white Peerless and Peachblow are

the leading sorts for late. With regard to the acreage under the various crops, taking six as the standard for wheat, then there will be four of corn; two of rye; four of oats and one of potatoes. No sorghum is grown here. Apples are scarce in some parts of the county, while other parts have half a crop. Of cherries and peaches, too, there will hardly be more than half a crop. There seems to be little difference about the kind of fruit here; all seem to thrive about the same. H. L.

Kentucky.

MILTON, Trimble Co.—Wheat is now in the shock, and I may safely say that 15 per cent. was lost by the fly, and the crop is not so good by 10 per cent. as we all thought it would be. Corn, oats and potatoes are doing splendidly. Peaches will be half a crop, notwithstanding the frost while they were in bloom. Blackberries will be in overwhelming abundance. S. E. H.

Tennessee.

HUMBOLDT, Gibson Co.—Geographically, we are about the center of West Tennessee. Wheat is very nearly a failure—not one-fourth of a crop. Fortunately, the acreage sown was very small. Oats are sorry; rusted like wheat. Corn and cow-peas now look promising; forward corn is tasseling and shooting; it needs rain, though we have had slight showers. Cotton looks fine; it is fruiting and blossoming earlier than usual; the Fall months will determine the yield with us. Potatoes are good. Clover, Herd's grass, and Orchard grass, millet, etc., are all good. Hay, both in quality and quantity is above the average; it was about all saved during the past few weeks of dry weather. Our gardens furnish in abundance cabbage, "roasting ears," beans, cucumbers, squash, tomatoes, etc., etc. The quality of our fruits is good; we have had strawberries all along from May to the middle of June. Raspberries and blackberries are plentiful. There is nearly half a crop of cherries, peaches and plums. May and Early Harvest apples are now about gone. Red June, High Top, and Astrachan are coming in. There are but few of the late varieties, owing to severe frosts during March and April. If we have rain by the Fourth of July, and the "later rains," we shall be blessed, and our harvest will be plenteous. The health of our country is good, and now we may report our prospects bright. B. F. T.

North Carolina.

BROOKSTON, Warren Co.—"What will the harvest be?" Judging from the present standpoint it will be most excellent. Of wheat the Fultz and a variety known here as "Little Red" are generally grown; all harvested and mostly thrashed. Acreage, 100; yield, 100. Corn never gave better promise at this date than now—variety, a general mixture under the name of "Southern White;" acreage, 100; present prospect, 105; cotton, ditto. Too early to have any idea of the yield of Sweet potatoes. Oats are injured by drought in April—acreage, 100; condition, 50. Taking it all in all the fruit prospect is about an average—very few peaches but more apples and pears than for several years. We shall have our usual full crop of grapes. As yet I hear of no rot or other casualty. All varieties of American origin thrive, though we have yet to find the one that pays as well for shipping as the Ives. Although we had a backward and quite dry spring, vegetation is now far in advance of the same time last year; wheat ripened nearly a week earlier. We have watermelons as large as a half gallon measure. Cotton blooms will be found in many fields at least a week before the regular time of their first appearance—July 4. M. B. P.

FLINTY BRANCH, Mitchell Co.—Wheat is the best for years; one-fourth more acreage has been sown to it than last year or ever before. There is about the same area of corn as of wheat. This, too, is looking very well. We grow common varieties of wheat and corn that have been raised here for years. Rye looks well. Buckwheat is not sown yet. No barley is raised here. No cotton is grown here, as it is too high up in the mountains. Irish potatoes look well. The most common, and that which yields the best, is called Shady. Early Rose is used for garden purposes. The apple crop is the best for years. S. W.

HENDERSON, Granville Co.—Owing to drought Fall wheat will not average over seven bushels per acre. Potatoes, oats, rye and barley are less than half a crop. The acreage under all these is very small—about one to 50 of cotton. Cotton is looking very well and the acreage under it is about 30 per cent. more than last year. Corn, too, is very promising; acreage about the same as last year. Budded peaches are nearly an entire failure owing to our March frosts. Pears are mostly a full crop, especially Bartletts. Grapes are also mostly a full crop; very healthy, having been troubled by no insect enemies. These are the best and surest fruit crop in this section, and next to them come pears, which are generally very good. Peaches, too, do finely when not injured or destroyed by Spring frosts. In some places apples, also, turn out very well this year. English cherries blight a great deal, and raspberries and cherries are worthless, but strawberries do well, although they have failed nearly entirely this season from drought. H. S.

ISLAND FORD, Rutherford Co.—Wheat half a crop; causes of failure, fly and rust. One-fifth less was planted than last year. Corn will be much better than for years, if the season continues good. Three-tenths more planted. Cotton is looking well now. One-third more was planted than last year. Oats are a complete failure—White Winter, Spring, Black, and Rust-proof. One-half less ground was seeded this year than last. Rye, half crop—the black, or common rye of the country. No barley is ever seen here. Potatoes—Irish—only enough for family use; almost a complete failure caused by drought. Two-fifths more Sweet potatoes were planted than usual. Fruit a failure; only a few peaches, apples, pears, or small fruits—injured by late frosts. Apples: House, Sweet Pearmain, Limber Twig and June. Pears—Sugar, Harvest and Belle, and another sweet pear that ripens in November. J. L. MC D.

Georgia.

HERNDON, Burke Co.—Wheat and barley enter very little into the aggregate of our products. Cotton, corn, oats, and potatoes are now suffering intensely from the drought, which has been prevailing for three weeks with intense hot suns and winds that evaporate all moisture. Rains, however, before this month is out, will secure a large yield of these crops. As the wet May and previous Spring months had started a rich crop of weeds and grass, which are now being eradicated, the cultivated crops will be in good condition for rain. An inferior oat crop has been harvested. There was a general destruction of grain crops by rust, with no exception, save where the land was filled with rich plant food and the seed put in last Fall and Winter with the utmost care on finely prepared ground. Occasional exceptions occur in oats, but only with the Mexican bearded, red rust-proof oats—all Northern and Western grain failed here completely. Our seeds do better apparently when acclimated from south to north, more especially the cereals, as in case of the rough Mexican oats and Nicaragua wheat. The same is true of the grapes that withstand our climate and become, as it were, indigenous. The acreage under cotton and corn and oats is about the same as last year, and it is yet too soon to estimate the yield. W. B. J.

MARIETTA, Cobb Co.—Wheat is one-quarter of a crop, oats a failure, except rust-proof, fall-sown oats. Of cotton a large crop has been planted, but owing to a wet May and great scarcity of help much of the crop is late and poorly worked. About five to ten per cent. of it has been abandoned. The prospect for it is not as good by ten per cent. as last year. Upland corn is good. Bottom corn is late; some very poor, and some has been abandoned. Fruit, a light crop, though apples are better than peaches. Wages 75c to $1 per day and dinner with some "blockade" whiskey now and then. Fifty cents per day and dinner has been the best price since the war; everything dates here *since the war*. The negro is getting more and more independent and lazy, and is by nature thievish, with few exceptions, though he takes to books more than the low class of whites. J. I. C.

WARTHEN, Washington Co.—Wheat is one-third of a crop. The prospects for corn are very poor. Unless we have rain soon, it will not make one-third of a crop. Cotton is suffering from lack of rain. Very few potatoes have been set out as yet—too dry. Oats and rye will be half crops. Of fruits we have none; all kinds do well here, but they are neglected for cotton. G. I. H.

Alabama.

TALASSEE, Elmore Co.—The wheat crop in our section is almost an entire failure from rust. The corn crop will also fall short of expectations. As to cotton, it is too early to form anything like a correct idea as to the yield; indications, though, are all quite favorable. W. E. S.

Mississippi.

OKOLONA, Chickasaw Co.—The wheat, rye and barley harvest is very light and the acreage small. Corn and cotton acreage about the same as last year with worse labor to cultivate them. In consequence of the indifferent labor system, and too much dry weather through the latter part of May and all June, neither of the crops can be counted on to give an average yield, without unprecedented seasons, including a late open Fall. Potatoes are very good but a small planting. Fruit promises well so far. Peaches, apples, plums, pears, figs, cherries, etc., are grown successfully in our section. T. J. B.

Louisiana.

CLINTON, East Feliciana Parish.—Of wheat none is grown here. Corn will give from 15 to 20 bushels per acre. Cotton will average one bale—400 pounds—to two acres. Potatoes, Irish, a good crop—say 150 bushels per acre. They will not keep well in this climate. Potatoes, Sweet, 200 bushels per acre. These are the best. Of oats not much is grown. It will yield about 20 bushels per acre. Rye none. Apples, peaches and pears are not good this year. Figs are always good. Plums of all kinds are good and do well—not much variety, however. H. S.

Texas.

DALLAS, Dallas Co.—Wheat a failure. It will average only from six to eight bushels per acre and that of poor quality. Corn has a larger acreage and better prospect than ever before. Cotton ditto—splendid, a week ahead of last year. Potatoes—Early Rose a good crop. Oats, generally very good, large acreage. Rye, good, only a little sowed. Barley very good; small acreage. Of fruits there is very little except Chickasaw and Wild Goose plums and peach trees are doing very well. Apples not so well. Vegetables of every kind very abundant. The Army worms have ruined the wheat. J. R.

DAYTON, Liberty Co.—The prospects for corn, cotton and Sweet potatoes are very fine—they could not be better. We have had an abundance of seasonable rain, just the reverse of last Summer. Wheat and barley are not grown here, and but little oats or rye. In fact, this is not much of a farming or fruit country; it it mostly a stock raising section. Cotton grows better than anything else; it flourishes like a weed. I think there is double the acreage of the staple growing this year, compared with last season. I have gathered my patch of Mold's Ennobled oats and will replant in September or October. The yield was nothing extra, though I am not much of a judge in the matter. The mangels are doing finely. It has been quite cool for about a week; this is something astonishing for Summer in this latitude, and I have had a fire in the sitting-room two or three times. Usually from May until October fires are dispensed with, except in the kitchen stove. Something strange is always turning up in this country, and during my residence of a third of a century here, I do not remember a like occurrence. G. G.

ELGIN, Bastrop Co.—Crop prospects in this county were never known to be better. The corn crop is made, and the yield will be enormous. All of it is now in full roasting ears, some of which are getting hard. The cotton crop bids fair to make a bale per acre, provided the worm does not infest it before September or October. The wheat and oat crops have been the best known for years, wheat making from 20 to 30 bushels per acre, and oats from 75 to 100 bushels. E. E. B.

JEFFERSON, Marion Co.—In this section of our great State we do not grow wheat; but out in the prairies it is grown to perfection. There wheat yields from 20 to 30 bushels per acre; oats, 40 to 50 bushels. We grow oats, barley, rye, and our yield is moderate, and not much of each is raised. This Northeastern Texas is a cotton and corn country. Cotton gives half a bale per acre; corn 20 bushels per acre. This is a fine fruit country; but this year the fruit crop has failed, owing to the hard Winter and late frost. The berry and grape crops, however, are fine this year. We have pine forests, rich iron ore, fine water and good health. J. R. B.

LAWRENCE, Kaufman Co.—Wheat is a fair crop here this season. The acreage is not large, but the grain is good. Corn and oats are both good, and the acreage under each is larger than usual. Cotton is looking well, and under it there is an acreage much larger than ever before in this county. What fruit there is growing here is doing well. Grapes and blackberries are good. Peaches, however, are a short crop. J. R.

LOCKHART, Caldwell Co.—Crops look well but are beginning to suffer from drought. S. R. M.

NECHESVILLE, Anderson Co.—No wheat raised here, and no rye or barley of any account. There is an increased acreage of about 10 per cent. of cotton and the prospects for a full crop have not been so good for 10 years. Potato crop, both of sweet and Irish is good. Fruit crop in this section is almost a total failure this year, owing to the late freeze, though this is one of the best fruit counties in the State. Peaches grow to the greatest perfection. M. S. E.

CANADA.

CHATEAGUAY BASIN, Province of Quebec.—The season is too backward to state what the promise of the harvest is in this locality. Wheat is not extensively grown, and there is no rye; barley and oats forming our staple cereal crops. Potatoes, too, are largely grown and promise well. Farmers here found London-purple successful last season mixed with plaster, the latter being a useful fertilizer, and in this respect having the advantage over coal ashes. Early Rose, Brownell's Beauty, Early Vermont and Chili are the varieties most in favor. Corn looks well. The principal kinds are: Yellow, Pop and Minnesota, the latter being our earliest sweet corn, generally ready for the table the last week of July. Sorghum is not grown at all. The prospects for fruit were never so poor, the winter, owing to its lack of steady severity, constantly freezing and thawing having done great injury not only to fruit, but to trees of certain kinds. The small fruits are badly killed and apples are a total failure—even our favorite and most successful kind, the Fameuse, this season has suffered both in wood and fruit. Wild strawberries are plentiful; but raspberries, both wild and cultivated, had the bearing canes killed. Of grapes our old stand-by, the Concord, has succumbed in many instances, especially old vines that could not be so well covered in the Autumn. Hay needs rain, otherwise it looks fair, and early-sown grain has a promising appearance. A. L. J.

CORNWALLIS, Kings Co., Nova Scotia.—The small quantity of winter wheat sown here is looking very well and is now in full head. Spring wheat is much more cultivated than heretofore, owing to the disappearance of the weevil, and it also has a very favorable appearance. The same may be said of oats, barley and rye. Corn is not much cultivated. Potatoes, one of our principal crops, have been largely planted this year, and, so far as I can judge, are likely to be a good yield. They seldom fail in Nova Scotia. The potato is the leading crop here; next I may mention oats, and wheat. Sorghum is not cultivated with us. I do not see why it would not succeed, as corn in most seasons ripens well and is a good crop; but it is not considered as profitable as potatoes. As regards fruit, it is rather soon to predict what it may be. I never saw the trees make a better appearance, as far as blossoming, but our weather has been rather cold and dry so far. We are now having showers which are reviving all kinds of crops. As far as I can judge at present, our apple crop may be considered an average one. We have but few Canker worms or caterpillars this season. The kinds of apples mostly cultivated and which are considered the most profitable are: Gravenstein, Yellow Bellflower, Ribston Pippin, Baldwin and Nonpareil. Many other sorts are cultivated, however. Pears are being much more largely cultivated than formerly. Cherries and plums are almost a failure this season. C. C. H.

LOWER KINGSLAND, New Brunswick Co.—Crops are beginning to look up, after having been blessed with the rain we had on Sunday last. If the drought had continued much longer I think there would be a failure in most of the crops. Hay is going to be very light. C. E. M.

PETERBOROUGH, Ont.—Fall wheat, with few exceptions, has been winter-killed. Spring wheat, if not injured in any way, will be about an average crop—about 25 bushels per acre. The following are the varieties grown in this district: Fultz, Clawson, Soule and Treadwell; Spring, Club, China or Beardy, and Rio Grande, Scotch, or Fife, Red Chaff, Wild-goose. Of corn not much grown here. Potatoes, judging by present appearances, will be an abundant crop. Ashleaf, Kidney, Imperial and Early and Late Rose are largely grown in this neighborhood. The Colorado beetle is very troublesome. Oats and barley will be abundant crops. Our varieties of oats, are: California, White Tartarian, Black Tartarian, White Scotch and some other varieties with no names. Rye will be an excellent crop. Neither sorghum nor any sort of sugar cane is grown in this district. The fruit prospects are good, though not so good as last year. The Codling moth and the borer are very destructive in this section. Plums are a very precarious crop on account of the curculio. Pears don't fruit well here, though there are a great number of successful growers. Strawberries grow well and are wonderfully productive. The varieties grown in this section are: Bishop's No. 3 Seedling, Triomphe de Gand, Early Scarlet, Walker's Seedling, Boston Pine and Hovey's Seedling. The Wilson, Black Prince, Iowa, Hooker's Seedling, Genesee, Hudson, Crimson Cone and some others, the names of which I don't recollect. The following are the best varieties of apples grown in this district: Winter apples—King of Tompkins County, Roxbury Russet, Northern Spy, Fameuse, Ribston Pippin, Golden Pippin, Pineapple, Yellow Bellflower, Rawle's Genet, American Golden Russet, Red Canada: Summer apples—American Summer Pearmain, Tetofsky, Summer Queen, Red Astrachan; Autumn apples—Beauty of the West, Gravenstein, Duchess of Oldenburg, St. Lawrence, Colvert, Sherwood's Favorite, Fall Pippin, Spice Sweet. Some very fine specimens of the above are grown in this county. There will be a large crop of small fruits. Large crops of Mangel-wurzel and carrots in this section, as well as of turnips and parsnips. To get up this report I took a short run through the country, and found everywhere I went evidence that there is a fair prospect of an abundant harvest of everything. A. C. D.

ST. CATHARINE, Ont.—Wheat in this locality is good. Corn is looking pretty good. Potatoes, good. Oats very good. I don't know of any rye in this neighborhood. Barley is good. Hay is above the average. The kind of wheat sown most is Diehl; the acreage is rather larger than usual. I don't think there is any sorghum grown here. The prospect for apples is only middling. Peaches are very good. Strawberries and raspberries are very fine—the Wilson is always the best, J. B.

LATEST REPORTS.

EASTERN STATES.

Maine.

BOLSTER'S MILLS, Cumberland Co.—The weather has been very warm and dry this year. The wheat is looking well; the variety mostly sown is the Lost Nation. There is more sown every year. The corn is looking well for the time. Rye is but little raised, and I hear of no barley. Oats are looking well and so are potatoes. R. J. P.

BROOKS, Waldo Co.—The crop prospect is at present quite good. The past two weeks have been dry and a rain is much needed. Grass is nearly ready to cut. The promises are for an average yield. Wheat is looking well; the "Lost Nation" is the kind most largely sown. Potatoes are somewhat backward, The Colorado beetles are somewhat numerous and troublesome. Oats are looking well. But little barley or rye is grown; two-rowed barley is sown mostly. Sorghum is not grown at all. Fruit prospects are good and apples will be plentiful. The "Naked Limbed Greening" apple is growing much in favor and importance. Strawberries are but little cultivated. Butter is 12 cents per pound. Cheese factories not operating. J. W. L.

New Hampshire.

ACWORTH, Sullivan Co.—There will be an average harvest. Of wheat we raise the Lost Nation. Rye, barley and oats are of the kind usually sown in New England. Potatoes are Early Rose and Brooks's Seedling. Acreage in this town; wheat 50, rye 8, barley 200, oats 150, corn 200, potatoes 150. Sorghum not grown. Fruit prospects are good. Our chief apples are Baldwin, R. I. Greening, Russet, Porter, King of Tompkins Co., etc. J. S G.

NORTH WOLFBOROUGH, Carroll Co.—There is about the same amount of grain sown in this locality as usual, and it is looking uncommonly well. The kind of wheat which is proving most successful is the Lost Nation. I have a piece of it which I think will produce forty bushels to the acre. There is nearly twice the amount of corn planted as usual, but only about half as many potatoes, owing to the potato bug being so plentiful. The principal kind of potatoes planted are the Early Rose, Prolific and Davis's Seedling. There will not be much fruit in this section, owing, I presume, to the unusually large crop last year. Sorghum is not grown here. G. A. H.

WEST LEBANON, Grafton Co.—It has been very dry in this locality; wheat and oats are suffering in consequence. Corn is looking well; rain would insure an average crop. Potatoes are fair, though well covered with beetles. There is a prospect of an abundant fruit crop. Grass light. H.

Vermont.

CHELSEA, Orange Co.—The harvest prospects for wheat, corn, potatoes, and oats are very fine, indeed. Wheat is only grown on the "hill farms." Lost Nation wheat is grown to some extent. Our corn is mostly an early eight-rowed variety. Of potatoes, the Early Rose is the principal crop; Prolific, Peerless, Early Vermont, etc., come next. We raise no sorghum in this section. The fruit prospects are very good. Our crops rank in regard to acreage as follows—potatoes, corn, oats, wheat, barley, rye. E. G. T.

GEORGIA, Franklin Co.—All our Spring crops may be said to be in a fair condition, though much retarded in their growth by the severe and protracted drought. It is too early yet to say what the outcome will be farther than that we are sure to have a short hay crop. Last year's fruit crop was enormous; this year's promises to run to the other extreme, through their dropping from the effect of the drought. I do not know of any sorghum, except a few little plots grown from curiosity. O. T, B.

NEWPORT, Orleans Co.—The prospect now is for good crops of wheat, corn, potatoes, oats, rye and barley. An average acreage of each has been planted, but of potatoes rather less than in 1879. A few experimental patches only of Northern sugar cane have been planted. The fruit crop is under the average both in small and tree fruits. Currants almost cut off (a rare thing), and strawberries badly winter-killed. Wilson strawberry, Red Dutch currant, Black-Cap raspberries, Duchess of Oldenburg, Wealthy and Scott's Winter apples are the most successful varieties grown here. The grass crop is a full average, and haying is begun in many places. T. H. H.

VERNON, Windham Co.—We are just commencing our haying. The crop will be the lightest for several years, being dwarfed by dry weather in May. Corn is looking well. Winter wheat (what lived through the Spring) is looking well. Spring wheat is good, just heading out. Oats are a heavy growth so far. Rye is fully an average. Potatoes are good, and not damaged by the bug as yet. Apple-trees are hanging full, and the fruit is looking fair. Raspberries are plentiful. E. P. J.

WILLIAMSTOWN, Orange Co.—Wheat is looking well, but not very much is sown here, and that is of the Spring sorts. Corn is planted in a small way. Potatoes are the largest crop and they are looking fine. Some bugs are about. Early Rose is the kind mostly grown. Oats will be a fair crop; more of these are grown than of the other grains. The hay crop will not be as large as usual, owing to the want of rain. Apples a good crop. H. F. E.

Massachusetts.

BROCKTON, Plymouth Co.—Wheat is not cultivated here at all. Corn will be an an average crop—Longfellow and common varieties of yellow. Oats and rye also will be about as usual—common sorts. Potatoes will be quite as good as they usually are—chiefly the Early Rose. Grass was injured by drought in May, yet it promises a fair crop of hay. The fruit prospects are good. There will be an abundant yield of apples, for this is the "bearing" year. The ravages of the Canker worm are becoming more extensive in this section every year. D. M. O. P.

Rhode Island.

ADAMSVILLE, Newport Co.—I know of no wheat having been raised in this section for a great many years. The corn harvest will probably be good, as corn looks well. The Rhode Island White Flint is the only variety grown, except sweet corn; perhaps one-third of all the land is devoted to corn. The potato harvest will be below the average. A larger area was planted to potatoes than usual, but owing to some unknown cause they did not come up well. Pieces planted under the same conditions acted differently: one piece would thrive splendidly, while another would grow so poorly that it had to be plowed up. Early Rose, Late Rose, Early Ohio and Early Vermont are the principal varieties grown; the acreage is about the same as for corn. The oat crop is good; no particular variety is grown. Oats are raised only in connection with grass, when laying down grass lands in the Spring. Very little rye is sown—no particular variety; it promises fairly. Barley promises well; but little is sown—the common two-rowed variety. Perhaps two-thirds of all the arable land in this section is devoted to grass, which will fall a little below the average. Sorghum is not raised here. Fruit will not be half a crop—this is the apple year in this locality. Peaches set first-rate, but are falling off badly, and the Rose bugs are attacking them; with cherries the same is the case. Pears not above an average. Peaches, pears and cherries are but little grown. Peaches are an uncertain crop. Small fruits are not quite an average owing to the dry weather. Apples are the the principal fruit grown; the most successful varieties being the Rhode Island Greening, Baldwin and Talman Sweet. Of the Army worms there are very few in this neighborhood, but they have swept whole fields in the next town. Rose bugs quite troublesome. W. W.

Connecticut.

BRIDGEPORT, Fairfield Co.—Barley and rye will be fair crops. Potatoes look well, but drought may destroy them. It is too early to speak about corn definitely. Rye and oats are the principal Winter grain crops hereabouts. Wheat and barley are sparsely grown. Potatoes are a large crop. But little attention has been given to sorghum. The apple and pear crops are promising, especially the apple. Pears were light of bloom, but they hold on and look well. Almost any kind of either succeeds. W. H. N.

GEORGETOWN, Fairfield Co.—Wheat is looking splendid; but only little is raised in this section. Corn is very small, in consequence of the drought, as we have had but little rain for two months. Hay is very light; old meadows are hardly worth the mowing. Oats and potatoes are suffering for want of rain. The prospect for apples is good, if we have rain soon. Hay is worth $22, and milk two cents per quart. How can farmers live? G. T. O.

MIDDLE HADDAM, Middlesex Co.—Rye is looking very well. Wheat is but little grown. Corn is looking well for the date. Hay will be about two-thirds of a crop. Potatoes too are looking well. Barley not raised. Apples promise a fair crop; peaches a good crop; cherries were all taken by Rose bugs which have been very destructive. No sorghum is raised in this vicinity. Pears will be scarce. Berries are plentiful. A. B. W.

WOODMONT, New Haven Co.—The weather has been very hot and dry; we have had no rain of any account for six weeks. Wheat is not grown extensively in this section, but what there is is looking very fine, and will be harvested before the Fourth of July. Corn is very backward, and unless we have rain it will be a failure. Rye is looking well and will be more than an average crop; it is grown here quite extensively. Oats are looking well, but will have to have rain soon or they will not amount to much. Barley is not grown in this section. Very little sorghum is raised about here. Potatoes are looking well, but will be suffering from drought soon. The hay crop is light, from one-half to three-quarters of a crop. Hay brings $25 per ton in the New Haven market. There are no pears of any account in this section. Apples set well, but are dropping off for want of rain. E. P.

MIDDLE STATES.

New York.

AFTON, Chenango Co.—Wheat will be three-quarters of a crop; Clawson is chiefly grown—acreage about the same as last year. Corn looks far better than at the same time in '79—acreage a quarter more. Dutton is the main sort. Potatoes are an average crop—Rose and Snowflake are the favorites. The beetles have been uncommonly numerous. Oats are more than an average in area and yield—the small white are generally grown. Rye, none; barley, none to speak of. Apples are a large crop, R. I. Greening, Spitzenburgh, Northern Spy and the Pippins. Our best pears are the Bartlett and one called the Belle (Lucrative?.) Owing to the dry weather grain is only half a crop. J. P.

BESEMER'S DEPOT, Tompkins Co.—The weather is now, and has been for several weeks, very dry, but wheat, corn, rye and barley promise good crops. Oats fair. Potatoes are excellent. Only a small amount of rye and barley are sown, but of the other grains quite a large amount. Fultz and Clawson wheat and common white oats and the small field corn are the kinds raised here. Early and Late Rose and the Albany Seedling potatoes are grown extensively. No sorghum. Hay is very light indeed. Fruit prospects are good. Apples only are grown extensively, but a few peaches, plums, pears, cherries, etc., are cultivated, and all bear plentifully this year. J. B.

COBLESKILL, Schoharie Co.—Wheat was somewhat winter-killed, so that it will make only from half to two-thirds of a full crop. Corn is looking and promising well. Potatoes, ditto, ditto. Oats look well and promise fairly. Rye is the same as wheat. Barley is a fair stand; but only very little grown. Probably four times more wheat is grown in this section than was two years ago, and one-fourth more corn and potatoes. No sorghum can be found in this country. Apples are abundant; plums a quarter of a crop. Apples, plums and cherries have been our most successful fruits. The different varieties of strawberries and raspberries thrive well. So do grapes, and some are trying peaches. Of those I have raised some very nice specimens. German prunes are becoming quite popular. J. VAN V. C.

CORNING, Steuben Co.—The wheat crop promises to be a good yield, as do rye and oats. Clawson is the variety of wheat usually grown. Potatoes look splendid—Snowflake, Early Rose and Early Vermont take the lead. Corn looks good also, but not quite so forward as usual at this time. The acreage of the above crops is about as last year, except of oats, which I think is larger. A large share of the farmers are growing from one-eighth of an acre to one acre, and some more, of sorghum. The apple crop promises to be a very good one. Northern Spy, R. I. Greening and Baldwin are our best market apples. F. H. D.

DEPOSIT, Broome Co.—We are having a severe drought. Hay will not be more than one half a crop. Wheat and oats look very well. Corn and potatoes are extra and if we get rains soon they will be good crops. Fruit is falling off in consequence of the dry weather. It is the driest Spring and Summer since 1875. A. J. H.

EAST SHELBY, Orleans Co.—Wheat looks well, and some will be ready to harvest by July 1st. Barley is good. No appearance of Hessian fly yet. Oats as a general thing, look fine. Beans are looking tip-top. Grass is very light. Cherries not many, and of very poor quality; but the prospect is good for a good crop of apples. P. W. C.

FLUVANNA, Chautauqua Co.—Our wheat is chiefly Clawson. It looks well on the whole, and will be a heavier crop than usual. Oats look promising, chiefly Poland, running from 36 to 38 pounds to the bushel. Barley is extremely rank, and of a good color—usually six-rowed. Potatoes are fine, and there are less beetles than usual to trouble them. Of them we grow 100 or so varieties, but principally Early and Late Rose and Snowflake. No rye is raised in this section. The fruit crop is good. Our pears are chiefly Bartlett, Flemish Beauty and Tyson. Grapes are not an average crop. H. A. W.
